In apparatus of the class described, the combination of a mandrel formed of curvilinear sections adapted to be applied to the walls of a flexible tube, a pair of semi-circular, separable members in engagement with said mandrel, each of said members consisting of inner and outer semi-circular shells shaped to form a closed chamber therewithin, and means for connecting each end of one shell to the adjacent end of the other shell, separate means along the lateral sides of said members and within the outer surfaces of the outer shells for detachably connecting said members together, the outer surfaces of the outer shells forming a wall over which portions of the tube are folded, an electrical resistance mounted in said chamber of that member related to that portion of the tube to be treated, and having electrical terminals leading through one end wall of said member for connection to a source of electrical current supply, whereby the adjacent member may be heated, an elongated inflatable member formed of non-porous, non-resilient flexible material convolutely wrapped around the folded over portions of the tube, non-extensible means surrounding and removably binding said inflatable member while deflated in wrapped position, and a valve mounted in the outer end portion of said inflatable member adapted to be connected with a source of fluid supply under pressure, whereby said inflatable member may be inflated to effect inward radial pressure on the folded over portions of the tube against said heated member.

2,454,667

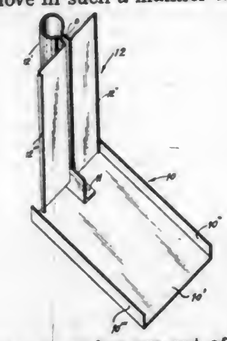
ATTACHMENT CORD ANCHORAGE WITH BALL CONTACT SWITCH

Shirley P. Morse, East Haven, Conn., assignor to The A. C. Gilbert Company, New Haven, Conn., a corporation of Maryland

Application June 7, 1945, Serial No. 597,998
6 Claims. (Cl. 200—157)

1. In a hand-maneuvered appliance to be supplied with current through an attachment cord, the combination of, a hollow appliance casing, a tubular conduit structure opening into said casing in a manner to admit and constrain an attachment cord entering the appliance, a wall extending crosswise said casing fixedly joining said conduit structure and said casing in substantially rigid relation, spaced current conductive contact balls shiftable simultaneously between circuit controlling spaced positions, a retaining head fixed on the outer end of said conduit structure, a hollow cup-shaped switch handle between said wall and said retaining head including means to impel said contact balls between their said positions, a current conductive pressor plate loosely contained in the hollow of said switch handle bearing against said balls, and a spring thrusting axially against said retaining head arranged to bias said pressor plate toward said balls.

2,454,668



SANDPAPER HOLDER

Moses Daniel Nissenbaum, Brooklyn, N. Y., assignor to Jesse Howard and Lena Howard, copartners, doing business as Hardware Products Co., New York, N. Y.

Application October 30, 1945, Serial No. 625,466
4 Claims. (Cl. 51—187)

1. In a device for holding a sheet of sand paper or other sheet material, a sheet metal body member formed as a channel; the walls of the channel being perpendicular to the bottom of said channel, a clamping member of sheet metal, formed as a channel and positioned inverted over the body member with the side walls of the clamping member within the body member and in contact with the walls of said body member respectively and a lug extending from the bottom member of the body, positioned between the side walls of said body member; the clamping member being hingedly mounted on said lug, and adapted

when swung about the axis of such hinged connection to move in such a manner that the walls

of the clamping member are out of contact with respect to the side walls of the body member.

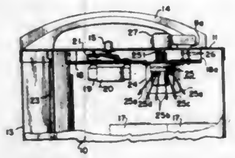
2,454,669

ANIMATED TOY BOOK

Eoina Nudelman, Chicago, Ill., assignor to Whitehall Publishing Company, Chicago, Ill., a corporation of Illinois

Application July 18, 1946, Serial No. 684,488
2 Claims. (Cl. 46—36)

1. In an animated picture a single page having different pictorial representations on opposite sides thereof, and a flat member mounted for limited pivotal movement on one side of said page and having its visible portions provided with a pictorial representation corresponding with and complementing the picture on the aforesaid side of the page, so as to produce an animated effect on its respective picture when rocked about its pivot, said rocking member also having portions extending through openings in said page, with those portions thereof visible from the opposite side of said page provided with pictorial representations corresponding with the picture on its respective side of the page, so as to produce an appropriate animated effect on the last-mentioned picture when said flat member is rocked.



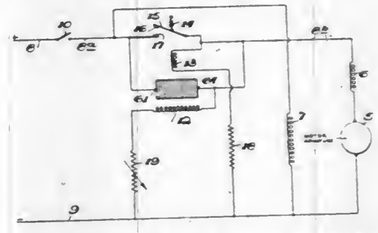
2,454,670

PORTABLE FLUORESCENT LAMP CONTROL SYSTEM

Israel Pollack, Brooklyn, N. Y., assignor to Paramount Industries, Inc., a corporation of New York

Application July 5, 1947, Serial No. 759,267
4 Claims. (Cl. 315—175)

1. A control system for a portable fluorescent lamp included in a housing and adapted to be energized selectively from self-contained battery means or from an external electric supply circuit, comprising: a unitary control panel including devices for starting the lamp, a switch having battery terminals and external supply circuit terminals and contact means movable therebetween and biased into engagement with said battery



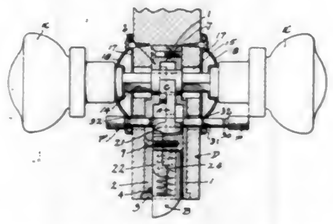
terminals, and an external circuit fixture connected to said supply circuit terminals and exposed to the outside of said housing; and an operating member for said switch normally covering said fixture but movable away therefrom to permit connection of an external line-cord fixture.

2,454,671

ELECTRIC MOTOR CONTROL

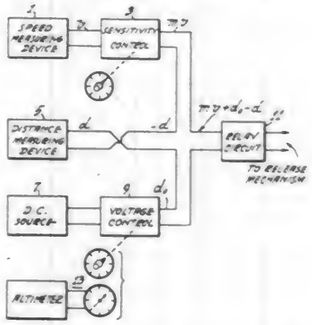
Jean M. Roberts, Ridgewood, N. J., assignor to Bendix Aviation Corporation, Bendix, N. J., a corporation of Delaware

Application May 20, 1943, Serial No. 487,783
4 Claims. (Cl. 318—278)



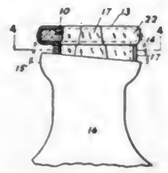
1. In combination with a motor armature and a source of current, means for inserting in series with said armature a continuously varying resistance of the class including a variable resistance carbon pile connected in series with the motor armature, a first member fixedly mounted at one end of said carbon pile, a second member adjustably bearing upon the opposite end of said carbon pile, an electromagnet connected across the motor armature circuit, an armature for said electromagnet, and a spring opposing movement of the last mentioned armature by the electromagnet; the improvement comprising a rod extending through said carbon pile and movably mounted therein, one end of said rod affixed to said armature adjacent said first member, a second spring positioned between the opposite end of the rod and said second member for applying an initial compressive force to said carbon pile which force increases with the electromagnetic force applied to said armature by the electromagnet so as to progressively decrease the resistance of said carbon pile.

3. A device of the character described, comprising, in combination, a variable resistance carbon pile, a first member fixedly mounted at one end of said carbon pile, a second member adjustably bearing upon the opposite end of said carbon pile, an electromagnet, an armature positioned between the fixed end of said carbon pile and said electromagnet and movable in response to



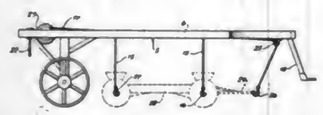
said electromagnet, a spring opposing the movement of said armature by the electromagnet, a rod extending longitudinally through said carbon pile and freely mounted therein, said rod connected at one end to said armature, and resilient means connecting the opposite end of said rod to the adjustable second member in such a manner as to effect a decrease in the resistance of the carbon pile in response to energization of the electromagnet.

2,454,672
DOOR LATCH
Lawrence L. Rosenthal, Los Angeles, and Robert B. Spencer, Huntington Park, Calif., assignors to Technical Glass Company, Los Angeles, Calif., a corporation of California
Application January 1, 1945, Serial No. 570,846
2 Claims. (Cl. 292—150)



1. A door latch comprising: a housing, a knob rotatable on the housing and a bolt formed of longitudinally alined members, operatively connected for retracting said members together upon the turning of the knob, but permitting the independent retraction of the latching member without turning the knob, and two transversely disposed, coaxially aligned, latching members operable from opposite sides of the housing and having their adjacent ends arranged for selective engagement with the bolt for locking the same in extended or retracted positions.

2,454,673
RADIO BOMB RELEASE SYSTEM
Royden C. Sanders, Jr., Hightstown, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application March 2, 1944, Serial No. 524,795
4 Claims. (Cl. 343—7)

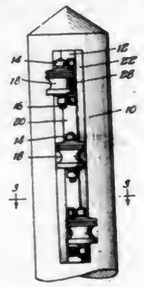


1. The method of providing response to the occurrence of a predetermined relationship between the speed of a mobile craft with respect to a reflecting object and the distance of said craft from said object, comprising the steps of producing a first voltage having a magnitude bearing a predetermined relationship to said speed, producing a second voltage having a magnitude bearing a second predetermined relationship to said distance, combining said first and second voltages to produce a resultant voltage, and producing a response to the attainment by said resultant voltage of a predetermined magnitude.

2,454,674
RECEPTACLE AND CLOSURE THEREOF
Wendall H. Schrader, Des Plaines, Ill.—
Application March 7, 1946, Serial No. 652,638
4 Claims. (Cl. 215—38)

1. The combination with a container having a mouth and a neck provided with an annular groove of variable height and depth on its outer circumference, having an upper and lower surface, the lower surface formed at an angle to said neck portion, said lower surface of said groove forming an upper surface for a shoulder, the upper surface of said groove being substantially in the same plane as the mouth and top surface of the container while said shoulder is of an inclined contour relative to said mouth, and a closure including a top and a depending skirt of uniform length with a peripheral edge, said skirt having folds extending longitudinally thereof, a portion of said skirt with the folds being compressed within said groove, with its peripheral edge in contact with said inclined surface of the shoulder, thereby creasing said folds circumferentially and preventing the expansion of said fold and the withdrawal of said skirt and folds from said groove.

2,454,675
DISK HARROW CARRIER
Galen R. Showalter, Roanoke, Va.
Application May 6, 1946, Serial No. 667,559
2 Claims. (Cl. 214—75)

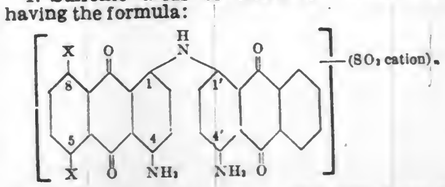


1. A trailer comprising a frame, pulleys journalled at the sides of the frame with their axes inclined forwardly of the frame, a single pulley at one end of the frame, a drum mounted at an opposite end of the frame, a main cable attached to the drum for winding thereon and trained over said single pulley, and branch cables attached to the main cable and trained over said side pulleys, said cables being adapted for attaching to an object for hoisting the same into position under the frame.

2,454,676
ADHESIVE COMPOSITIONS
Norman A. Skow, Strafford, Pa., and Charles J. Seiler, Bloomfield, Richard A. Oriani, Montclair, and Joseph S. Whitaker, East Orange, N. J., assignors to the United States of America as represented by the Secretary of War
No Drawing. Application August 29, 1945, Serial No. 613,448
3 Claims. (Cl. 106—240)

1. A slow aging adhesive capable of attachment to wet and oily surfaces and of supporting substantial loads for an extended period of time from the instant of application, said adhesive consisting of the following ingredients substantially in the proportions specified, limed rosin 31.9%, triethyleneglycol di-2-ethylbutyrate 30.1%, ground asbestos 9.5% and bentonite 28.5%.

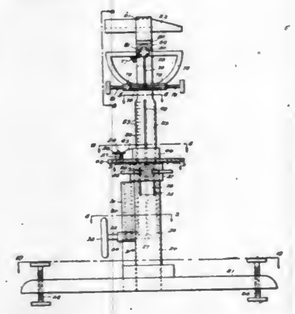
2,454,677
SECONDARY RACK
Burt M. Smalley, Chicago, Ill., assignor to Joslyn Mfg. and Supply Co., Chicago, Ill., a corporation of Illinois
Application April 8, 1946, Serial No. 660,398
6 Claims. (Cl. 174—149)



1. A secondary rack comprising a back of elongated configuration having a longitudinal channel portion, a plurality of spaced insulator support pins mounted on said channel portion with the bases of all said pins being substantially in alignment, and a plurality of insulators mounted on said pins, said back having two mounting holes for receiving screws, each of said holes being positioned between and in alignment with the bases of a pair of said pins supporting an end insulator, the end pairs of pins being so arranged that said end insulators are displaced from a plane normal to the surface of said channel portion whereby screws may be inserted in said mounting holes without removal of said insulators.

2,454,678
MIXTURE OF A POLYVINYL ACETAL WITH A DIISOCYANATE-MODIFIED POLYESTER OR POLYESTER-AMIDE
Walter Fairbairn Smith and Henry George White, Blackley, Manchester, England, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application February 15, 1946, Serial No. 648,002. In Great Britain February 28, 1945
4 Claims. (Cl. 260—45.4)

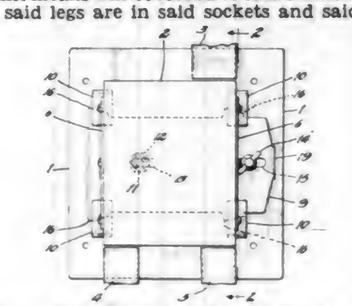
1. A product comprising 15 to 200 parts of polyvinyl formal and 100 parts of a reaction product of a hydrocarbon diisocyanate and a linear polymer selected from the class consisting of polyesters containing recurring intralinear carboxylic ester groups and polyester-amides containing recurring intralinear carboxylic ester groups and recurring intralinear carbonamide groups, the ratio of said ester groups to said carbonamide groups being at least 1:1.



2,454,679
GRAY ACID ANTHRAQUINONE DYESTUFFS
Glen M. Smyth, Plainfield, N. J., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application September 11, 1946, Serial No. 696,381
4 Claims. (Cl. 260—367)

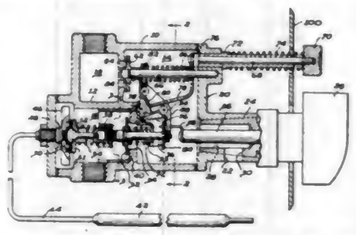
1. Sulfonic acids of triamino dianthrimides having the formula:

in which one X stands for a hydrogen atom and the other X for an amino group, the cation is selected from the group consisting of hydrogen and alkali metals, and *n* is a whole number included in the group consisting of 1, 2 and 3.



2,454,680
POST-ADJUSTING MEANS FOR WIRE AND NAIL DIRECTING APPARATUS
Marion F. Stephens, Sullivan, Ind.
Application January 22, 1945, Serial No. 573,954
4 Claims. (Cl. 248—161)

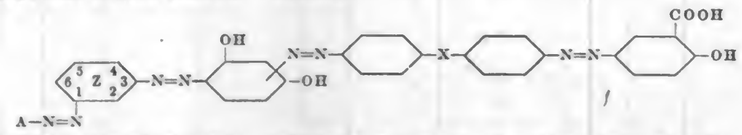
1. In an apparatus of the class described, a post, a bearing rotatably mounting said post, a track concentric with said bearing means fixedly securing said track to said bearing, one radial arm connected with said post for rotation with the latter, said one arm extending to said track, a second radial arm circumferentially spaced from said one arm and having a hub rotatably surrounding said post, means connecting the two aforesaid arms with each other and effective to cause said second arm to move with said one arm while said post is being turned in said bearing to an approximate desired position, and means for securing said second arm to said track after said post has been turned to said approximate position, said arm-connecting means including manually operable adjusting means for moving said one arm toward or from said second arm after the latter has been secured to said track, to obtain a fine angular adjustment of said post.



2,454,681
CLAMPING APPARATUS
Fred E. Wallin, St. Louis, Mo., assignor to National Slug Rejectors, Inc., St. Louis, Mo., a corporation of Missouri
Application October 15, 1945, Serial No. 622,437
3 Claims. (Cl. 248—225)

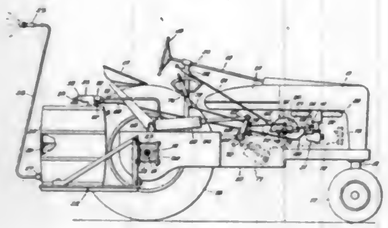
1. A clamping apparatus comprising a fixed frame means having a plurality of sockets therein, a lock member slideably positioned on said frame means, said member provided with a plurality of integral wedge-shaped projections corresponding in number and positioned to intersect said sockets when said member is moved in one direction, removable unit means including a plurality of projecting legs corresponding in number and position to engage said sockets whereby said unit means will be locked to said frame means when said legs are in said sockets and said lock

member is moved in one direction to engage its said wedge-shaped projections with said legs.



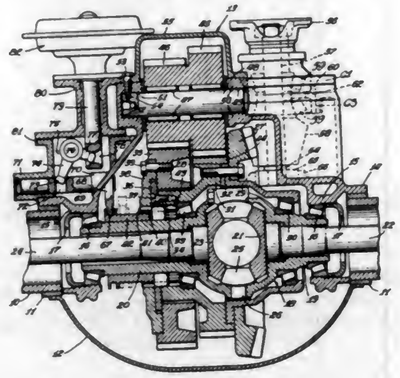
2,454,682
TEMPERATURE CONTROLLING DEVICE
Victor Weber, Greensburg, Pa., assignor to Robertshaw-Fulton Controls Company, a corporation of Delaware
Application September 28, 1944, Serial No. 556,209
9 Claims. (Cl. 236—99)

1. A temperature control apparatus for dual burners comprising a casing having a fuel chamber with separate outlets for the burners, a valve movable between open and closed positions relative to one of said outlets, a thermostatic operator for said valve, an auxiliary valve movable between open and closed positions relative to the other said outlet and being biased toward closed position, manually operable means for opening said auxiliary valve, latching means operatively associated with said manually operable means for maintaining said auxiliary valve open, and means carried by said thermostatic valve for releasing said latching means and causing said auxiliary valve to close under said bias upon movement of said thermostatic valve toward closed position.



2,454,683
METALLIZABLE POLYAZO DYESTUFFS
Walter Wehrli and Charles Petitjean, Basel, Switzerland, assignors to Sandoz Limited, Basel, Switzerland
No Drawing. Application April 12, 1946, Serial No. 661,863. In Switzerland April 16, 1945
6 Claims. (Cl. 260—166)

1. A metallizable polyazo dyestuff of the formula

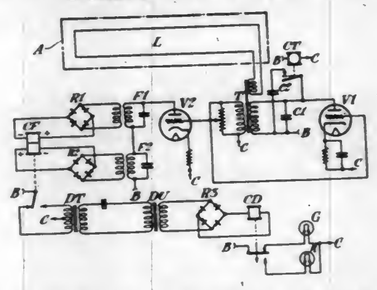


wherein A stands for a radical free from diazotizable amino groups and containing no carbon atoms capable of coupling, this radical being selected from the group consisting of substituted and unsubstituted benzene and naphthalene radicals, the benzene nucleus Z contains one hydroxy group in ortho-position to the azo group present in position 3, the free positions of the benzene nucleus Z being substituted by a member selected from the class consisting of hydrogen and alkyl, and X stands for a member selected from the group consisting of —NH.CO— and —CO.NH—.

2,454,684
TRACTOR POWER DEVICE
Russel D. Acton, Chicago, Ill.
Application November 22, 1946, Serial No. 711,595
7 Claims. (Cl. 230—38)

1. A power take-off device for a tractor having a power plant having an engine, a carburetor and a manifold, a power lift arm, and a power supplying device operable by the power plant of the tractor to operate said power lift arm, an oscillating control lever operatively associated with said power supplying device for causing the movement of said arm in opposite angular directions, and in combination therewith, a reciprocable working member mounted on the tractor and connected to the power lift arm for movement thereby, a motor mounted on the tractor and operated from the power plant thereof, said motor having an oscillating operating arm, and means for connecting said motor arm to the control lever for the power supplying device.

2,454,685
DRIVE AXLE FOR VEHICLES
Frank W. Avila, Columbia City, Ind., assignor to International Harvester Company, a corporation of New Jersey
Application September 28, 1946, Serial No. 700,046
6 Claims. (Cl. 74—327)

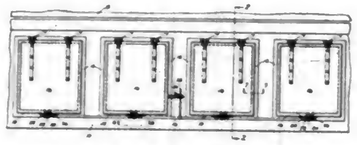


1. A dual ratio mechanism for axle structures comprising, in combination with an axle housing having a differential carrier rotatably mounted therein and drive axles extending from said differential carrier, axially spaced bearing assemblies mounted on said carrier, an auxiliary carrier rotatably mounted on said bearing assemblies, a driven gear fixed to said auxiliary carrier, a first spur gear also fixed to said auxiliary carrier adjacent the driven gear, a second spur gear adjacent said first spur gear and journaled on the auxiliary carrier, a gear cluster including two gears in engagement with said spur gears, an axially shiftable sleeve mounted on and for rotation with the differential carrier at the side thereof at which said gears are located, a dental clutch element carried by said sleeve, a first dental clutch member formed on said auxiliary carrier adapted to be engaged by the dental clutch element on said sleeve, a second dental clutch member secured to the second spur gear, said second dental clutch member being engageable by the dental clutch elements on said sleeve, and means to move said sleeve axially of the differential carrier to engage either the first or the second dental clutch member, sufficient space being provided between said dental clutch members to provide a neutral position for said sleeve.

2,454,686
VARIFOCAL LENS FOR CAMERAS
Frank G. Back, New York, N. Y.
Application July 30, 1946, Serial No. 687,135
7 Claims. (Cl. 88—57)

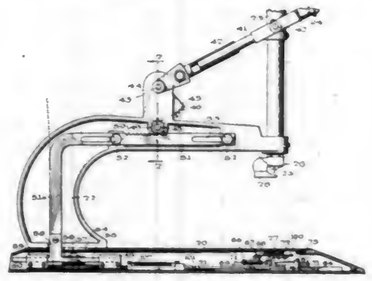
1. A varifocal lens construction for motion picture cameras, comprising a fixed outer barrel, a fixed inner barrel and a longitudinally movable intermediate barrel disposed between said outer and inner barrels, a front lens assembly and a rear relay lens assembly carried by said fixed outer barrel, an erector lens assembly carried by said fixed inner barrel, and a variator lens assembly and a compensator lens carried by said movable intermediate barrel, said variator lens assembly being disposed between said front and erector lens assemblies and said compensator lens being disposed between said erector and relay lens assemblies.

2,454,687
APPROACH SIGNAL SYSTEM
George W. Baughman, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application August 13, 1947, Serial No. 768,289
5 Claims. (Cl. 177—352)



4. A system for detecting the presence of a vehicle in a protected area comprising a conductor normally energized by alternating current and arranged in the form of a loop surrounding at least a portion of said area to create a magnetic field which varies in the presence of a vehicle therein, an electron tube oscillator normally supplied with energy and having a resonant output circuit coupled to said loop for supplying said alternating current thereto and having an input circuit coupled to said resonant circuit to maintain the tube in oscillation at a frequency corresponding to the natural period of said resonant circuit, coding means for periodically varying the natural period of said resonant circuit to cause the frequency of the current supplied to the loop to alternate between two closely related frequencies both of which are subject to variation in the presence of a vehicle in said area, a sensitive relay, two frequency responsive circuits energized by said oscillator for supplying currents differentially to said relay to effect its operation in opposite directions depending upon whether the frequency of the current supplied thereto is above or below the mean of said two frequencies, a detector relay, means for selectively energizing said detector relay in response to the periodic operation of said sensitive relay, and traffic governing means controlled by said detector relay.

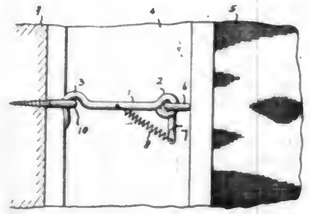
2,454,688
HATCH COVER AND MEANS FOR LOCKING THE SAME
Wilfred A. Beauchamp, Chicago, Ill., assignor to The Youngstown Steel Door Company, Cleveland, Ohio, a corporation of Ohio
Application September 25, 1944, Serial No. 555,730
12 Claims. (Cl. 105—377)



1. In a covered railway hopper car having a roof formed with a series of spaced hatches and hatch frames secured to said roof around said hatches, covers hingedly secured to said hatch frames, locking means pivotally fastened to the free ends of said covers, members secured to said hatch frames, said members having locking detents, a shaft rotatably supported by said mem-

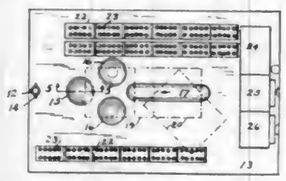
bers below said detents, a lever secured to said shaft for imparting rotation thereto, and a plurality of fingers secured to said shaft adjacent to

said detents, said fingers lying on opposite sides of and being engageable with said locking means when the latter are engaged with said detents, and means for locking said shaft against rotation.



2,454,689
KNOT TYING MECHANISM
Robert L. Dashew, deceased, late of Baltimore, Md., by Ruth L. Dashew, administratrix, Pittsburgh, Pa.
Application January 25, 1945, Serial No. 574,529
3 Claims. (Cl. 289—2)

1. In a knot tying machine, a pair of rotatable, pivotally associated jaws, a shaft, an arm on said shaft, a thread engaging member on said arm located below said jaws, means for rocking said shaft to move said member in one direction to engage a thread at one side of said jaws and to move said member in the opposite direction to draw the thread past and beneath the jaws to the opposite side of the latter, a second thread engaging member located above and at the first mentioned side of the jaws, means for revolving the jaws to engage the thread at a point intermediate the jaws and upper thread engaging member to loop the thread around the jaws, means for opening and closing said jaws to grip the thread at a point intermediate the loop and the lower thread engaging member, and a plate movable longitudinally of the jaws and engageable with said thread to remove said loop from around the jaws, and means for maintaining said jaws closed during removal of the loop whereby the thread held between said jaws is drawn through the loop.

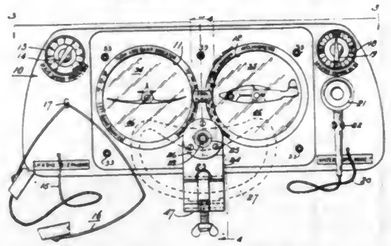


2,454,690
DOOR HOOK
Troy O. Dean, Houston, Tex.
Application June 18, 1945, Serial No. 600,011
1 Claim. (Cl. 292—128)

A fastener for doors comprising, an elongated hook shank having an eye at one end and a hook at the other end, an eye formed with an extended threaded shank, said eye being provided with an extended arm disposed at substantially right angles to the plane of the eye, said eyes being linked together and a pull spring one end of which is

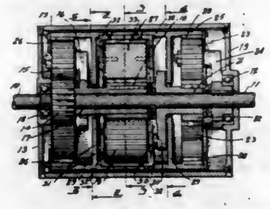
connected to the free end of said arm and whose other end is connected to said shank of the hook.

2,454,691
CARD SHUFFLING AND PLACEMENT BOARD
Martin A. Ellingson, McCook, Nebr.
Application August 4, 1944, Serial No. 548,033
2 Claims. (Cl. 273—149)



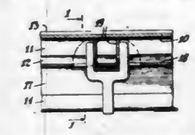
1. A device for use in shuffling cards, comprising a board having a plurality of depressed areas, two of which are so spaced that the distance between their farthest outer edges is greater than the width of a playing card, the distance between their inner edges being less than the width of a playing card, and two other depressed areas positioned on the perpendicular bisector of the line joining the centers of the first mentioned depressions, the maximum distance between the farther outer edges of the depressions on the perpendicular bisector being substantially equal to twice the length of the cards, one of the last named depressed areas having a length slightly greater than the length of the cards.

2,454,692
PREPARATION OF TOCOPHEROL CONCENTRATE
Norris D. Embree and Noel H. Kuhrt, Rochester, N. Y., assignors to Distillation Products, Inc., Rochester, N. Y., a corporation of Delaware
No Drawing. Application May 31, 1946, Serial No. 673,616
5 Claims. (Cl. 260—333)



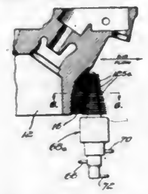
4. The process of preparing a tocopherol concentrate from deodorizer sludge and similar material obtained in the gas carrier treatment of tocopherol-containing glyceride oils which comprises dissolving the sludge in liquefied propane, heating the resulting solution to its phase point temperature, whereby there is produced a liquid propane phase rich in tocopherol and another liquid phase less rich in tocopherol, separating the tocopherol-rich phase from the phase less rich in tocopherol and removing the propane content of the tocopherol-rich phase.

2,454,693
AIRPLANE CONTROL TOY
Charles H. Foster, New York, N. Y.
Application August 9, 1948, Serial No. 43,264
1 Claim. (Cl. 46—1)



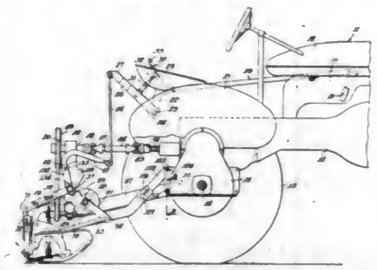
An airplane control toy comprising a panel having a pair of spaced openings therethrough, a back member spacedly attached to and positioned behind and substantially parallel to said panel, a pair of spaced turntables rotatably attached to said back member and respectively positioned behind said spaced openings of the panel, said turntables each bearing a representation of an airplane, a plate attached to said panel, a sleeve attached to the face of said plate, a column having its rear portion movably positioned within said sleeve, a handle attached to the front end of said column, an angular extension attached to the rear portion of said column and extending rearwardly therebeyond, a pivot member pivotally attached to said back member and having a plurality of gear teeth, an undercarriage attached to the surface of one of said turntables, said undercarriage having a plurality of gear teeth engaging the gear teeth of said pivot member, said pivot member having a key-way, said angular extension extending into said key-way, said handle adapted to turn and upon being turned adapted to move said column, said angular extension, said pivot member and the turntable geared thereto to move said airplane representation thereon, a cord attached at one end to said column and at the other end to the other of said turntables, said handle upon being moved forwardly moving the column likewise and pulling the cord whereby to turn the other turntable and move the airplane representation thereon, a spring member attached to said other turntable to move the turntable in the reverse direction when the handle is moved rearwardly.

2,454,694
AUTOMATIC FLUID CONTROLLED TRANSMISSION
Robert F. Grebb, Boise, Idaho
Application July 9, 1945, Serial No. 603,921
2 Claims. (Cl. 74—293)



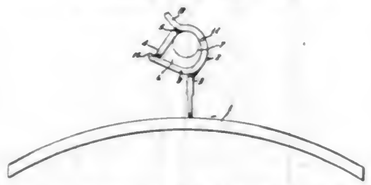
1. An automatic power transmission comprising: a drive shaft; a drive gear on said drive shaft; a first set of planet gears surrounding and in mesh with said drive gear; a first planet gear spider supporting said first planet gears; a hub on said spider; a sun gear mounted on said hub; a second set of planet gears surrounding and in mesh with said sun gear; a second planet gear spider supporting said second set of planet gears; a driven shaft operatively connected with said second spider; a drum surrounding all of said gears; a first ring gear positioned in and carried by said drum in mesh with the first set of said planet gears; a second ring gear fixed in said drum in mesh with said second set of planet gears; and an annular side plate secured to and extending inwardly from said drum at each side of said second set of planet gears; an annular rotatable ring plate positioned inside of each side plate and forming a continuation thereof to form, in combination with said side plates, a fluid chamber to retain fluid about said second planet gears and said second ring gear.

2,454,695
FASTENING MEANS AND COMBINATION
Samuel Hammer, New York, N. Y., assignor to United Metal Box Co., Inc., Brooklyn, N. Y., a corporation of New York
Application August 14, 1944, Serial No. 549,445
12 Claims. (Cl. 189—34)



1. A panel fastener comprising a frame to receive the panel to be fastened, a shoulder carried by the frame at one edge thereof to engage one side of the panel, a U formed at the other edge of the frame, an angle member received in the U providing an inwardly extending flange spaced from the shoulder on the frame, at least one bendable tongue carried by the flange and adapted to be bent into contact with the panel to secure the same to the frame between the shoulder and the bent tongue.

2,454,696
ENGINE COOLING MEANS
Axel L. Highberg, West Hartford, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application December 6, 1944, Serial No. 566,870
3 Claims. (Cl. 123—171)



1. In an internal combustion engine having a cylinder provided with cooling fins and having a variable speed fan for moving a stream of cooling air through said fins, thermostatic means for controlling the speed of the fan including a heat absorbing chamber containing a temperature expansible fluid and located in the cooling stream set up by the fan, said heat absorbing means being located in the lee of the cylinder relative to said cooling air stream and having external heat conducting fins the adjacent peripheral portions of which are interleaved with the cooling fins of the cylinder.

2,454,697
TRACTOR MOWER
Samuel E. Hilblom, Chicago, Ill., assignor to International Harvester Company, a corporation of New Jersey
Application October 18, 1943, Serial No. 506,661
1 Claim. (Cl. 56—25)

In a mower adapted to be quickly attached to a tractor; the tractor being provided with horizontally and vertically spaced cap screws on a fixed portion thereof; the combination comprising: a transversely disposed frame spaced rearwardly of the tractor; a cutter bar connected to said frame and extending outwardly with respect thereto; means for connecting said frame to the tractor whereby said cutter bar extends laterally outwardly with respect to the tractor including arms fixed to said frame and extending forwardly thereof in substantial alignment with certain of said cap screws; said arms having V-shaped slotted openings in one end thereof with the wide portions of said openings at the forward ends of the arms, whereby the arms at their openings may easily engage the aligned cap screws; combination brace and implement supporting members pivotally attached to the spaced arms; said members including portions extending above and below said pivotal attachment and having a V-shaped notch in the upper portion of each such member; said combination members being adapted, in one position, to have their lower portions engage the ground for supporting the arms fixed to the frame in a substantially aligned position with respect to certain of the cap screws prior to attachment to a tractor, and, in another position, to have the upper portions thereof swung into engagement with the vertically spaced cap screws on the tractor whereby the ground engaging portion is supported in an out of ground engaging position.

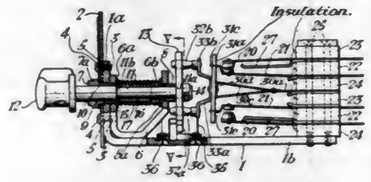
2,454,698
HOOK GUARD
Hans Hippler, North Hollywood, Calif.
Application March 18, 1947, Serial No. 735,476
4 Claims. (Cl. 223—85)

1. A garment hanger hook having a crown, a point and a shank, a guard therefor comprising a substantially U shaped member having a crown and upper and lower legs, a pivotal connection between the upper leg of said member and said hook at the shank side of the apex of the crown of said hook, said member being movable to one position where said upper leg conforms to the crown of said hook with said lower leg obstructing the gap of said hook, said member being movable to another position where the pole entrance to said member between said legs overlaps the pole entrance to said hook, and means operative upon movement of said member to said one position for retaining same in said position.

2,454,699
COMPOSITE CHAIR
Frederic Hirsch, New York, N. Y., assignor, by mesne assignments, to Astra Bent Wood Furniture Company, New York, N. Y., a partnership
Application February 12, 1945, Serial No. 577,532
5 Claims. (Cl. 155—194)

1. A composite chair, comprising in combination: a member which comprises two seat supporting portions substantially parallel and spaced from each other for a distance and horizontally disposed for providing a seat support, two front legs integrally connected to an end of said seat supporting portions and at right angle therewith, two back portions integrally connected to the other end of said seat supporting portions and at right angle therewith and arranged in an upward direction therefrom, and a back connected to said back portions and extending therebetween; a second member which comprises two portions substantially parallel and spaced from each other for the same distance as said seat supporting portions of said first member and each disposed below a seat supporting portion of said first member and detachably connected with relation to the underside thereof and forming a small angle therewith, two rear legs integrally connected to an end of said two portions and at right angle therewith, and a connecting portion integrally extending between said two portions and connecting the other ends thereof and horizontally disposed below said two seat supporting portions of said first member and spaced therefrom and adjacent said front legs of said first member and detachably connected with relation thereto; and a seat secured to the upper side of said seat supporting portions of said first member.

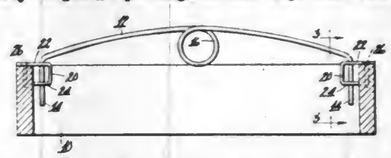
2,454,700
DUPLICATING INKS
Melville J. Holik, Berwyn, Ill., assignor to Ditto, Incorporated, Chicago, Ill., a corporation of West Virginia
No Drawing. Application April 15, 1946, Serial No. 662,400
3 Claims. (Cl. 106—22)



1. A duplicating ink comprising a mixture of dyes in proportionate amounts in parts by weight as follows: crystal violet 6 to 8, chrysoidine 12 to 17, brilliant green 10 to 15, rhodamine 6 to 9, basic brown 9 to 13.

2,454,701
LEVER
William A. Hyland, Horicon, Wis., assignor to John Deere Van Brunt Company, a corporation of Wisconsin
Application December 13, 1945, Serial No. 634,815
6 Claims. (Cl. 74—523)

1. A lever comprising a lever handle having an opening therethrough, a generally U-shaped attachment clip disposed in said opening and having shouldered portions disposed at one side of said lever handle, a hand grip extending through said opening and between the sides of said U-shaped member, and a pivot member connecting the hand grip to the U-shaped member and disposed adjacent the other side of said lever handle for holding the grip and U-shaped member in position on the lever handle.

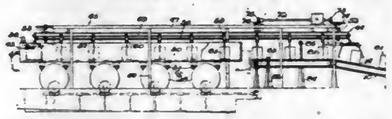


2,454,702
CIRCUIT CONTROLLER
Glen V. Jefferson, Edgewood, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application February 23, 1946, Serial No. 649,599
5 Claims. (Cl. 200—1)

1. A circuit controller comprising an operating shaft rotatable between an intermediate and two extreme positions and movable longitudinally between an intermediate and two extreme positions, means biasing said shaft to its intermediate longitudinal position, cam means including a cam plate secured to said shaft, contacts operated to different positions by said cam means in response to rotation of said shaft between its intermediate and two extreme positions, and other cam means formed in part on said cam plate for preventing rotation of said cam shaft between its intermediate and its one extreme angular position except when said shaft is moved to its one extreme longitudinal position and for preventing rotation of said cam shaft between its intermediate and other extreme angular position except when said shaft is moved to its other longitudinal extreme position.

2,454,703
SPRING CONSTRUCTION
Joseph O. La Fond, Gardner, Mass.
Application November 7, 1946, Serial No. 708,357
2 Claims. (Cl. 267—1)

1. A spring construction for cushioned upholstered furniture or the like comprising a length of wire having a vertical coil intermediate its ends, the ends being down-turned, and a pair of spaced substantially U-shaped clips, each clip having a short and a long leg, each long leg being secured to a support with the short leg depending into engagement with the support, the closed end of the U being spaced from the support, and vertically aligned openings in the legs between the

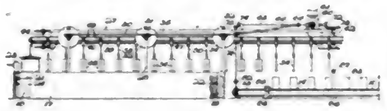


closed end of the U and the support receiving one of said down-turned ends.

2,454,704
METHOD AND APPARATUS FOR COOLING PRODUCE BY ALTERNATE DIPPING AND DRAINING
Floyd J. McMichael, Orlando, Fla.
Application October 2, 1944, Serial No. 556,843
8 Claims. (Cl. 62—170)

1. The method of treating comestibles which comprises introducing into a cooling zone including a pool of liquid refrigerant a suspended comestible mass penetrable by said liquid refrigerant, moving said mass through said zone, and, while it is moving through said zone, alternately lowering and submerging said mass beneath the surface of said refrigerant so that the refrigerant will enter into said mass and wet the comestibles and raising the mass from the lowest points of submersion sufficiently to permit drainage of refrigerant therefrom.

2,454,705
METHOD AND APPARATUS FOR COOLING PRODUCE BY ALTERNATE DIPPING AND DRAINING
Floyd J. McMichael, Orlando, Fla.
Application November 9, 1944, Serial No. 562,636
8 Claims. (Cl. 62—170)

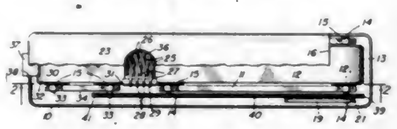


1. The method of treating comestibles which comprises introducing said comestibles while suspended from above into a cooling zone including a pool of liquid refrigerant, and moving said comestibles through said zone and, while said comestibles are in transit therethrough, alternately raising and lowering said pool bodily and thereby dipping the comestibles in said pool and retracting the pool sufficiently from its highest points of elevation to permit drainage of refrigerant from said comestibles.

2,454,706
METHOD AND APPARATUS FOR COOLING PRODUCE BY ALTERNATE DIPPING AND DRAINING
Floyd J. McMichael, Orlando, Fla.
Application November 9, 1944, Serial No. 562,637
7 Claims. (Cl. 62—104)

1. The method of treating comestibles which comprises introducing said comestibles into a

cooling zone including a pool of liquid refrigerant while suspended from above at points substantially in a plane common to all of said points, maintaining all of said suspension points in said plane, and moving said comestibles through said

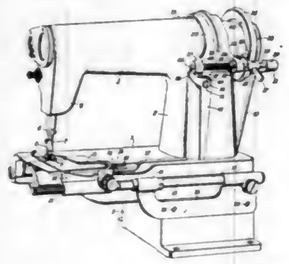


zone and, while they are moving therethrough, alternately raising and lowering said points and thereby dipping said comestibles in said pool and raising them sufficiently from the lowest points of dipping to permit drainage of refrigerant therefrom.

2,454,707
MOUNTING FOR SPINNING RINGS AND THE LIKE
George L. Meyers, Willoughby, and John C. Shutt, Wickliffe, Ohio, assignors to The Ohio Rubber Company, Willoughby, Ohio, a corporation of Ohio
Application August 23, 1946, Serial No. 692,650
6 Claims. (Cl. 57—122)

1. In mechanism of the character described, the combination with a support having an opening and a ring adapted to be mounted in such opening, of a grommet of resilient material interposed between said ring and the edge of such opening, said ring being formed with an encircling recess and said grommet with an inwardly directed rib adapted to seat in such recess and with a peripheral groove adapted to engage such edge.

2,454,708
APPARATUS FOR HEATING CERAMICS
John M. Middleton, Harrisburg, Pa., assignor of fifty per cent to A Glyn Francis, Camp Hill, Pa.
Application August 15, 1947, Serial No. 768,759
2 Claims. (Cl. 25—142)

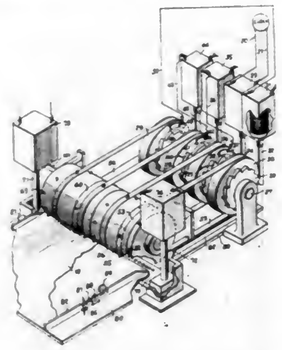


1. An apparatus or machine for the manufacture of ceramics such as brick, tile, pottery and allied products, consisting of an enclosure, a horizontal conveyor supported within the enclosure, means for driving said conveyor, said enclosure having a receiving opening at the receiving end of the conveyor for receiving the crude products shaped and cut to size thereon continuously, a dehydrating means consisting of infra-red lamps positioned at the top of the housing over said conveyor, for driving the moisture therefrom and drying said ceramics, a high frequency induction coil positioned at the discharge end of said conveyor within said housing, an exhaust outlet at the top of the housing over said heating coil, said enclosure having rollers at the bottom thereof between said coils along which the ceramics are passed through the coils from the conveyor to instantaneously bake the same, a second conveyor receiving the ceramics from the coil, means for discharging the ceramics from the end of the enclosure, and means associated with the first driving means for driving said second conveyor.

2,454,709
ALGINATE IMPRESSION MATERIAL CONTAINING CHROMIC SULFATE
Eugene J. Molnar, Toledo, Ohio, assignor to Montclair Research Corporation, a corporation of New Jersey
No Drawing. Application January 9, 1946, Serial No. 640,135
12 Claims. (Cl. 18—47)

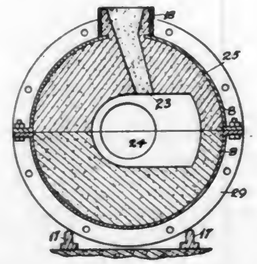
1. An impression material comprising water soluble alginate and a green chromic sulphate in proportions to give gel structure when set from a paste with water.

2,454,710
STOP MECHANISM FOR SEWING MACHINES
Walter Myers, Stratford, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey
Application June 12, 1945, Serial No. 598,949
3 Claims. (Cl. 112—219)



1. A unitary stop mechanism attachment adapted for use on a sewing machine having a belt-driven rotary actuating member, comprising, a supporting bracket formed with a guide-slot, a belt-shipper rod provided with a notch and journaled in said supporting bracket for endwise movement into a machine-stop position and a machine-running position, a belt-engaging member fixed on said rod, a brake-element also fixed on said rod, a latch pivotally mounted on said supporting bracket and adapted to enter the notch in said belt-shipper rod to hold said rod in its machine-running position, a spring for biasing said rod into its machine-stop position, in which position the brake-element is adapted to engage said belt-driven rotary actuating member, and a guide carried on said rod and cooperating with said guide-slot for maintaining said belt-engaging member in cooperative relationship with the belt.

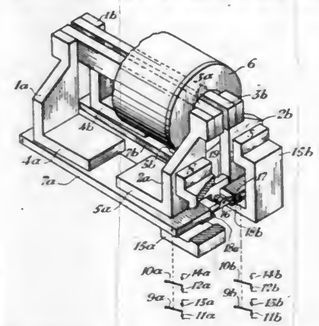
2,454,711
MEANS FOR USE IN COMPUTING ELAPSED TIME AND THE LIKE
George W. Odell, Rutherford, N. J.
Application April 21, 1943, Serial No. 483,913
7 Claims. (Cl. 346—104)



7. Apparatus for producing a pattern of the numerical value of an interval in an incremental

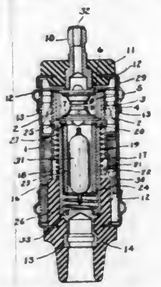
progression comprising, in combination, pattern-forming means representing collectively the numerical values of successive stages in said progression, said means being adjustable whereby a selection of said means may be coordinated to represent respective stages in said progression; adjusting means to adjust the pattern-forming means progressively into positions at a pattern-

forming station, in successive coordinations representing consecutive stages in said progression; means for presenting a pattern-receiving medium at said station; and operating means to cause selected coordinations of pattern-forming means to form on said medium patterns of respective stages in said progression, correlated in a physically-operable pattern of the numerical value of the differential between said stages.



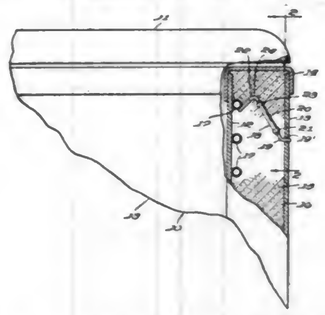
2,454,712
MOLD FOR PRODUCING CRANKSHAFTS
Ivan Olsen, Muskegon, Mich.
Application January 12, 1945, Serial No. 572,528
1 Claim. (Cl. 22—130)

A crank shaft mold comprising, a plurality of open end cylindrical mold boxes secured together end to end, each mold box comprising a pair of semi-cylindrical flasks secured together, a sand mold and mold cavity within each mold box for forming one crank arm and the adjacent cylindrical portions of the crank shaft, the parting line between the flasks being coincident with the angle of the crank arm and a sprue opening extending from the exterior of each mold box to the mold cavity therein, the mold boxes being secured together so that the parting line of the flasks lie in different angular planes with respect to the central axis of the crank shaft.



2,454,713
POLARIZED ELECTRICAL RELAY
Thomas J. O'Meara, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application October 17, 1944, Serial No. 559,076
10 Claims. (Cl. 175—339)

1. A relay comprising two pairs of pole pieces, means including an energizing winding and a back strap for supplying flux to the pole pieces of both pairs, two armatures one pivotally mounted for swinging movement toward and away from the pole pieces of each pair, two permanent magnets one secured directly to the pole piece located at the free end of each armature and having its



one pole disposed in such a position with respect to the associated armature that when it is swung away from the associated pole pieces it will be swung toward said one pole of the associated magnet, and mechanical means effective upon the picking up of either armature for locking the other armature in its released position.

2,454,714
CONVERTER FOR IGNITION SYSTEMS
Joseph T. Osterman, Northampton, Mass., assignor to American Bosch Corporation, Springfield, Mass., a corporation of New York
Application November 9, 1946, Serial No. 709,021
12 Claims. (Cl. 315—57)

1. In a device of the character described, a tubular casing, molded cap members of insulating material adapted to overlie the opposite ends of said casing, said cap members having inserts forming terminal members for connection to leads of an ignition system, and also having flanged inserts secured to said casing for securing said terminals and cap members in position thereon, spark gap, and a transformer comprising primary and secondary coil members in said casing for forming a high frequency converter adapted to be interposed in the ignition lead of an internal combustion engine.

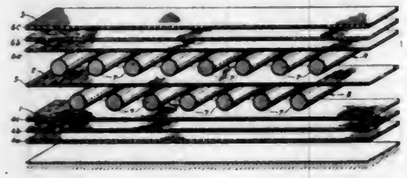
2,454,715
DEVICE FOR PREVENTING EXCESSIVE CONDENSATION IN THE INSULATING SPACE OF REFRIGERATORS
John S. Palmer, Chicago, Ill., assignor to International Harvester Company, a corporation of New Jersey
Application March 8, 1946, Serial No. 653,045
9 Claims. (Cl. 62—89)

1. A refrigerator wall construction having inner and outer walls forming an insulating chamber, a heat insulating material disposed within said chamber, a cooling element for cooling said chamber, and a conduit in communication with the uncooled atmosphere and said chamber, said conduit including a portion in heat exchange relationship with said cooling element for condensing water in the atmosphere passing through said conduit and for freezing the same therein.

2,454,716
TREATING ANIMAL TISSUE
John M. Ramsbottom and Levi Scott Paddock, Chicago, Ill., assignors to Swift & Company, Chicago, Ill., a corporation of Illinois
No Drawing. Application June 18, 1945, Serial No. 600,220
16 Claims. (Cl. 99—175)

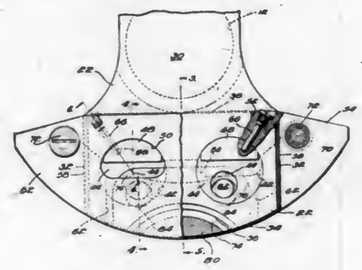
1. A method of preparing animal casings for use in sausage manufacture comprising: subjecting the casings to treatment with a liquid containing a small amount of proteolytic enzyme whereby the enzyme is associated with the said casings and said casings are conditioned for tenderizing, and treating said casings to inhibit the enzymic action prior to complete tenderization.

2,454,717
MODIFIED ALKYD SIZING COMPOSITION
John W. Robertson, Englewood, N. J., assignor, by direct and mesne assignments, of one-half to Ellis-Foster Company, a corporation of New Jersey, and one-half to Montclair Research Corporation, a corporation of New Jersey
No Drawing. Application December 11, 1945, Serial No. 634,412
2 Claims. (Cl. 260—22)



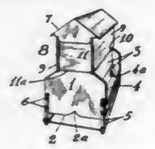
1. An emulsifiable resinous composition adapted for application to jute fibers to impart sizing, reinforcing and heat-sealing properties thereto, which comprises in homogeneous combination, a resinous extract of pinewood consisting of the gasoline-insoluble resinous portion of the aromatic hydrocarbon-soluble constituents of pinewood, tallow and a reaction product of 1 mole phthalic anhydride, ¾ to 2 moles glycerol and ½ to 1½ moles tall oil; said resinous pinewood extract and tallow together amounting to from 10% to a maximum addition of from 40% to 150% of the said reaction product, the relative amounts of pinewood extract and tallow at the maximum addition thereof ranging from a ratio of 1:1 to 5:1, and the maximum amount of pinewood extract and tallow and the ratio thereof in the mixture varying directly with the amount of tall oil in said reaction product.

2,454,718
LIPSTICK HOLDER
Giuseppe Russo, New York, N. Y.
Application June 6, 1945, Serial No. 597,881
2 Claims. (Cl. 206—46)



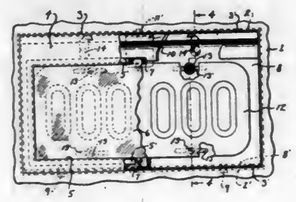
2. A cosmetic applicator sealed in its own individual airtight container, said applicator comprising a round stick having a reduced, rounded tapered point tipped with a cosmetic, said stick having a wax ring formed around it adjacent its tapered point, the outer diameter of said wax ring being greater than the outer diameter of the cosmetic tip, said cosmetic-tipped end of the stick being mounted within its said container, said container comprising a tubular member which is sealed off with wax at one end and which is open at the other end to provide ingress or egress for the cosmetic-tipped stick, said wax ring on the stick being sufficiently large to provide a seal between said stick and the inner wall of said tubular container, said wax ring being also sufficiently large to space the cosmetic tip on said stick from the inner wall of the tubular container and to provide a bearing on which said stick may be moved into and out of said container and preventing contact from being made between the cosmetic tip and the inner wall of the container.

2,454,719
METHOD OF MAKING CORED LAMINATED PLASTIC SHEETS
Charles A. Scogland, South Bend, Ind., assignor to The Studebaker Corporation, South Bend, Ind., a corporation of Delaware
Application November 11, 1943, Serial No. 509,838
12 Claims. (Cl. 154—110)



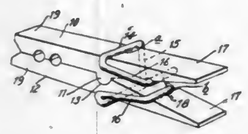
2. The method of forming a laminated structure comprising, arranging in substantially parallel spaced rows a plurality of deformable cores of substantially circular cross-section in substantially uniformly spaced parallel relation with respect to each other in each row between alternate layers of plastic impregnated sheet material, the cores of each row being spaced apart a distance equal at least to the diameter of the cores and with the cores of adjacent rows in staggered relation with respect to each other, and compressing the body thus formed to deform said cores and provide the layer between them with a plurality of channels of polygonal cross-sectional configuration.

2,454,720
CRANKSHAFT TORSIONAL VIBRATION DAMPER
John C. Selden, Farmington, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application January 31, 1947, Serial No. 725,589
4 Claims. (Cl. 74—604)



1. In a crankshaft damper for suppressing torsional vibrations, an arm extended from the crankshaft in a plane normal to the crankshaft axis, said arm having two bores therein extending parallel with said axis, counterweight means including plates on opposite sides of said arm, means for supporting said plates on said arm including annular members having a sliding fit in said bores, said plate supporting members being rigidly connected with said plates and spacing the latter from said arm to permit limited movement of said arm relative to said plates due to bending vibrations in said crankshaft, a U-shaped bifilial torsional vibration damper supported between said plates and embracing the end of said arm, said damper having bores therein parallel with the passages in said annular supporting members and pins loosely received in the bores in said dampers and in said passages.

2,454,721
POULTRY FEEDER
Vernon Severance, Saginaw, and Charles L. Severance, Akron, Mich.
Application November 1, 1946, Serial No. 707,158
3 Claims. (Cl. 119—52)



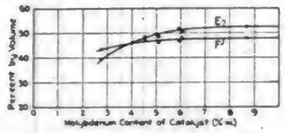
1. A feeder having a main feed bin comprising side walls, end walls, and feeding troughs communicating with the bin; in combination with an end panel hinged to the top of each end wall, adapted to be folded downwardly against such end walls, or extended upwardly to present an upper extension wall of said bin; a side panel hinged to the upper end of each side wall of said main feed bin and adapted to be swung into position outwardly and downwardly therefrom, and also extended upwardly to present an upper side wall extension of said bin; and a cover for the main bin when the side and end walls are in their respective down positions, and for the upper extension of the main bin when the end and side panels are raised; the said side panels in their down position presenting water shedding roofs to protect said feed troughs from the weather, and adapted when raised to reduce the over-all width of the feeder, and to increase the storage capacity of the bin.

2,454,722
LICENSE PLATE HOLDER
Joseph S. Slamka, Milwaukee, Wis.
Application March 25, 1946, Serial No. 657,032
1 Claim. (Cl. 40—130)

In a motor vehicle having an inturned flanged opening in its body; the combination of a license plate holder comprising a hood having inturned ends fitted in the flanges of the body opening and provided with a flanged opening in its front wall having a glass fitted therein, a panel having a bottom inturned flange secured to the flanges of the hood and body opening, the upper end of the panel being curved outwardly in circular form and in contact with a flange of the hood opening, an angular strip being adapted to engage and confine the circular portion of the panel, a license plate secured to said panel, and a light bulb mounted in the circular portion of the same.

2,454,723
CLOTHESPIN
Leslie W. Stinne, Dallas, Tex.
Application August 21, 1945, Serial No. 611,736
5 Claims. (Cl. 24—137)

4. As a new article of manufacture, a clamp including complementary clamp members held against lateral displacement at their mid-sections, a loop of resilient material partially embracing the mid-section of said clamp members to bind the same in assembly and having arms extending towards the tail portions of said members whose extremities are disposed at right angles to the major axes of said members to bear against and exert outward pressure upon the tail portions of said members.



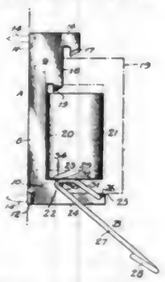
2,454,724

MOLYBDENA CATALYSTS, THEIR PREPARATION AND USE

Mirosiav W. Tamele, Oakland, Vanan C. Irvine, Richmond, and James F. Mahar, Berkeley, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware

Application February 15, 1943, Serial No. 476,032
3 Claims. (Cl. 252—465)

1. Process for the production of granular molybdena-alumina catalysts of the type described



which comprises breaking massive alumina prepared from an alkali aluminate solution into granules between two mesh and eight mesh, activating the granules by partial dehydration to a water content between 5 per cent and 14 per cent by weight as determined by loss on ignition, removing alkali metal salts from the activated granules by leaching until the concentration of alkali metal is below 1.11×10^{-5} grams per square meter of available surface, further dehydrating the substantially alkali-free alumina granules to a water content below 5 per cent, and impregnating the substantially alkali-free alumina granules with between 2.7×10^{-4} and 3.5×10^{-4} grams of molybdenum as molybdenum oxide per square meter of surface.

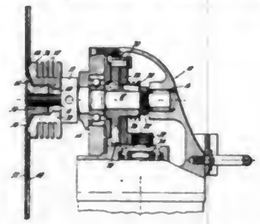
2,454,725

CAN PIERCER

Joseph E. Thomas, Los Angeles, Calif.

Application January 26, 1948, Serial No. 4,382
10 Claims. (Cl. 30—8)

1. A can piercer comprising a bracket and a pusher, said bracket being stamped from heavy sheet metal and including a waist portion the forward edge of which provides a positioning abutment for engagement with the side of a can, a head portion overhanging said forward edge and having a downwardly extending piercing point, and a can seat portion extending beneath said head portion and having a fulcrum in which said pusher is pivoted for upward movement against the bottom of the can.



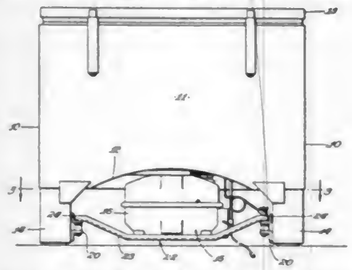
2,454,726

SUPPORTING HEAD FOR ABRASIVE DISKS

Edwin H. Tott, San Leandro, Calif.

Application December 23, 1946, Serial No. 717,901
10 Claims. (Cl. 51—197)

1. In a grinder device having a spindle, power means to rotate said spindle, a hub secured to the spindle for rotation therewith, an abrasive disk secured to the hub for rotation therewith, and a backing plate mounted on said hub in juxta-



position to said disk, the improvement comprising means embodied in the hub adapted to seat said backing plate for free slippage with respect to said hub.

2,454,727

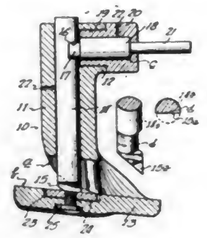
REFRIGERATING APPARATUS

Isaac M. Wherry, Evansville, Ind., assignor to International Harvester Company, a corporation of New Jersey

Application April 4, 1947, Serial No. 739,431
3 Claims. (Cl. 62—116)

1. In a refrigerating unit, the combination of: a cabinet having end and side walls and a bottom; means including a base having spaced apart end elements, disposed vertically, arranged to support the cabinet with its bottom spaced above the floor, the bottom and the end elements defining a machinery space open at at least one side; bracket means carried by the end elements within the machinery space; a supporting frame associated with the brackets and of such size as to be confinable within the machinery space; refrigerant-liquefying means carried by the frame, also of such size as to be confinable within the machinery space; and means including slotted connections mounting the frame on the bracket means for limited horizontal sliding movement of the frame with respect to the cabinet through the aforesaid open side of the machinery space from a first position, in which the frame and refrigerant-liquefying means are confined within the machinery space, to a second and operative position, in which at least part of the refrigerant-liquefying means extends outside of the machinery space horizontally beyond the proximate side wall of the cabinet.

2,454,728



CUTTING TOOL

John L. White, Dallas, Tex.

Application March 23, 1945, Serial No. 584,417
1 Claim. (Cl. 164—58)

In a metal cutting tool, a reciprocable plunger therefor provided with a shear blade on one end and whose shank is ground to produce a work

deflecting radius originating approximately in line with and above the center of the shear blade

and extending in a gradual curve about the axis of said plunger to a terminus at approximately 45° from its points of origin.

2,454,729

METHOD OF MOLDING HALFTONE VALUES IN PRINTING SURFACES

Francisco G. Yanes, New York, N. Y.; Anne F. Goddard executrix of said Francisco G. Yanes, deceased

Application September 27, 1945, Serial No. 618,951
9 Claims. (Cl. 101—401.2)

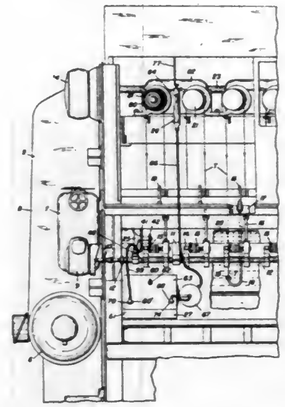
1. Method of forming a surface, which consists in first, producing on a thickness of matter susceptible of being shaped by pressure a superficial elevation of equally distributed and similar minute projections; second, selectively arranging upon and around said projections different amounts of a second matter variedly reinforcing their resistance to pressure; third, flattening the whole until it shows a substantially even face; and fourth, removing the second matter.

2,454,730

PROCESS FOR REFINING KERATIN-CONTAINING MATERIAL

Stefan Bakonyi, Tovaros, Hungary; vested in the Attorney General of the United States

No Drawing. Application August 26, 1939, Serial No. 292,158. In Germany August 26, 1938
5 Claims. (Cl. 260—112)



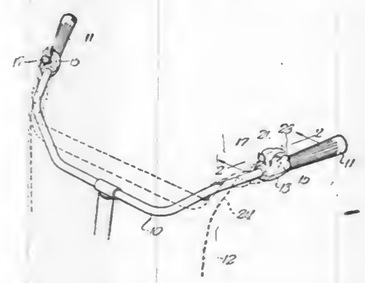
1. Process for refining keratin-containing material to render it more suitable for incorporation with a condensation product from formaldehyde and a substance selected from the group consisting of urea and thiourea into a moulding powder, which process comprises refining cleaned comminuted keratin-containing material by treatment firstly with mild hydrogen peroxide solution and then with a mild hydrosulphite solution.

2,454,731

APPARATUS FOR COORDINATING THE OPERATING RATE OF FORMING THREAD WITH THE DRAWING THEREOF

Alden H. Burkholder, Cleveland, Ohio, assignor to Industrial Rayon Corporation, Cleveland, Ohio, a corporation of Delaware

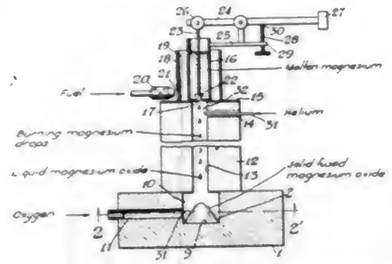
Application November 21, 1942, Serial No. 466,432
7 Claims. (Cl. 18—8)



1. In apparatus for the manufacture of thread or the like of synthetic origin by an extrusion process employing thread-forming means and take-up means, a device for directly comparing the operating rate of one of said means with that of the other comprising a stroboscopic light emanating device and control therefor, said control being associated with and actuated by one of said means for producing an intermittent light emission at a predetermined frequency, said stroboscopic light being directed at and illuminating the other of said means.

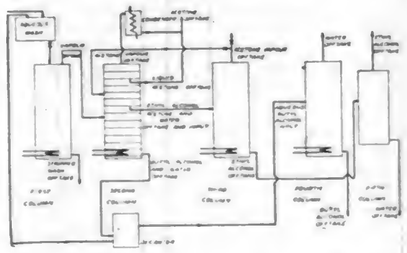
2,454,732

SUPPORT FOR NEWSPAPER BAGS



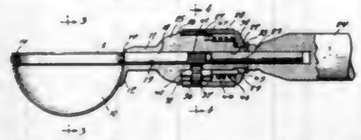
Robert S. Cathey and Lewis D. Clarke, Portland, Oreg.; said Clarke assignor to said Cathey

Application February 19, 1946, Serial No. 648,747
4 Claims. (Cl. 224—42)



1. A device of the class described, consisting of a clamp adapted to be mounted upon the handle bar of a bicycle, in combination with a backwardly turned hook forming a part thereof, and a reflector imbedded in the front of said hook.

2,454,733
METHOD OF MAKING DENSE MAGNESIUM OXIDE
Alvin D. Dahl, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
Application March 13, 1947, Serial No. 734,325
5 Claims. (Cl. 23—201)

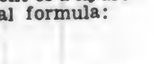


3. The method of making magnesium oxide in solidified fused form which comprises dripping molten magnesium into an atmosphere of oxygen whereby the drops of magnesium burn forming fused magnesium oxide, introducing oxygen into the said oxygen atmosphere at a rate 30 to 70 per cent greater than that corresponding to the stoichiometrical proportions of magnesium and oxygen, and solidifying and collecting the resulting magnesium oxide product.

2,454,734
DISTILLATION OF ACETONE, ETHANOL, AND BUTANOL FROM AQUEOUS SOLUTIONS THEREOF
Harold Nunnerley Darlington, Birkenhead, and Harold Holdsworth, Wirral, England, assignors to Commercial Solvents (Great Britain) Limited, Bromborough Port, England, a British company
Application November 21, 1947, Serial No. 787,400
In Great Britain November 25, 1946
8 Claims. (Cl. 202—40)

1. A process for the recovery of butyl alcohol, ethyl alcohol and acetone from an aqueous solution thereof which comprises stripping said aqueous solution of said alcohols and acetone in a stripping column of the nature of a beer column, withdrawing said alcohols and acetone from the head of said column in the vapour phase, introducing the vapours into a second column at an intermediate point therein, withdrawing acetone from the head of said second column, withdrawing a liquid mixture of ethyl alcohol, acetone and water from said second column at a point between the inlet of said vapours and the head thereof, and withdrawing a mixture of butyl alcohol and water, substantially free from other organic solvents, from the bottom of said second column, conducting said liquid mixture of ethyl alcohol, acetone and water into a third column, withdrawing from the head of said third column acetone with a greatly reduced ethyl alcohol content, and withdrawing from the bottom of said third column ethyl alcohol substantially free from acetone.

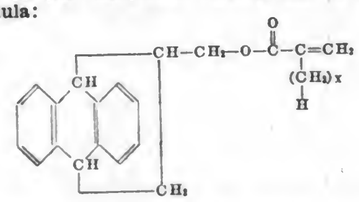
2,454,735
ICE-CREAM SCOOP
Joseph J. Deutsch, Norwalk, Conn., and John Vigilante, New York, N. Y.; said Vigilante assignor to said Deutsch
Application July 20, 1946, Serial No. 685,221
7 Claims. (Cl. 107—48)



1. An ice cream scoop comprising a tubular shank, a dispensing bowl and a handle mounted, respectively, at opposite ends of the shank, a wiper pivotally mounted within the bowl, a shaft journalled within the shank and connected at one end thereof to the wiper and a pinion mounted at its opposite end, a manually-rotatable sleeve journalled externally of the shank and operatively connected with the wiper shaft to rotate the same.

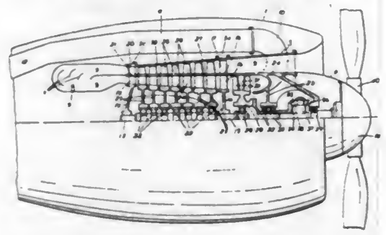
2,454,736
ALKALINE EARTH METAL PETROLEUM SULFONATE COMPOSITIONS
Jacob Faust, Belleville, N. J., assignor to L. Sonneborn Sons, Inc., a corporation of Delaware
No Drawing. Original application May 17, 1945, Serial No. 594,369. Divided and this application December 10, 1946, Serial No. 715,337
9 Claims. (Cl. 252—33.4)

1. A substantially non-gelling alkaline earth metal petroleum sulfonate solution in mineral oil which comprises a petroleum hydrocarbon oil, a substantially oil soluble alkaline earth metal petroleum sulfonate dissolved in said hydrocarbon oil in normally gel forming amounts, and at least one member selected from the group consisting of substantially oil soluble, phthalic acid esters of alkylene glycol ethers and alkyl phthalates in amount sufficient to substantially prevent gelling of said alkaline earth metal petroleum sulfonate-petroleum hydrocarbon solution.



2,454,737
COPOLYMERS OF HYDROCARBON DIENES AND ACRYLATES OF ALPHA-HYDROXYMETHYLETHANO-9,10-DIHYDROANTHRACENE
Earl W. Gluesenkamp and Alfred B. Craig, Dayton, Ohio, assignors to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application December 4, 1947, Serial No. 789,775
4 Claims. (Cl. 260—84.5)

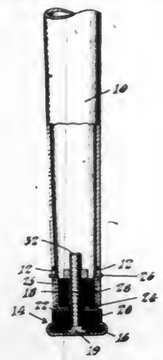
1. A synthetic rubber composition which comprises a copolymer of 40 to 90 percent of a hydrocarbon diene having the structural formula:



wherein X is a radical of the group consisting

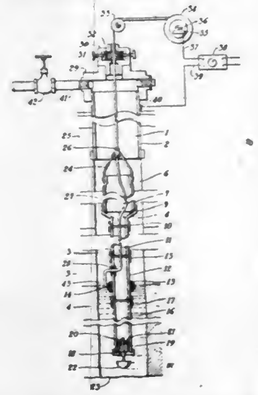
of hydrogen and methyl, and from 10 to 60 percent of the compound having the structural formula:

wherein X is a small whole number from 0 to 1 inclusive.



2,454,738
INTERNAL-COMBUSTION TURBINE POWER PLANT
William Rede Hawthorne, Silver Spring, Md., assignor to Power Jets (Research and Developments) Ltd., London, England, a British company
Application January 31, 1945, Serial No. 575,540
In Great Britain January 31, 1944
9 Claims. (Cl. 170—135.6)

1. An internal combustion turbine power plant for aircraft operating on the constant pressure cycle with continuous flow comprising an axial flow compressor, an axial flow primary turbine coaxially nested within and driving the compressor, duct means and combustion chamber means providing communication from the outlet of the compressor to the inlet of the primary turbine the direction of flow being reversed through 180° in said duct and combustion chamber means, means including compressor and turbine blading providing compressor and turbine flow channels through which the flow occurs in opposite axial directions, an independent axial flow turbine in close coaxial tandem relationship with the primary turbine and operated by the exhaust therefrom, and an airscrew propeller coaxial with said compressor and turbines and driven by said independent turbine.



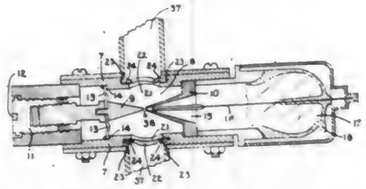
2,454,739
DETACHABLE GLIDE UNIT FOR FURNITURE LEGS
Severin B. Hendrickson, Templeton, Mass., assignor to Heywood-Wakefield Company, Gardner, Mass., a corporation of Massachusetts
Application January 3, 1948, Serial No. 432
6 Claims. (Cl. 16—42)

1. A detachable glide unit for a tubular chair leg having apertures in the wall thereof, comprising a metal button having a bottom face adapted to engage the floor, a supporting stem carried by and extending upwardly from the button, a cushion on the stem above and cooperating with the button, and locking means carried by the stem and including opposed fingers above the

cushion for engaging said apertures in the tubular leg.

2,454,740
APPARATUS FOR TREATING WELLS
Philip J. Lehnhard, Jr., Midland, Tex., assignor to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
Application January 31, 1945, Serial No. 575,404
2 Claims. (Cl. 166—1)

1. An apparatus for introducing a liquid agent into a well containing fluid and depositing the same on the bottom thereof so as to fill the well from the bottom to a predetermined depth, comprising the combination of a cylindrical container adapted to hold a charge of liquid agent and having an outlet at the bottom, a tail pipe attached to the outlet and having a smaller cross section than that of the container, said tail pipe having a length exceeding the depth of the portion of the well to be filled, a foot valve on the lower end of the tail pipe adapted to be opened by contact with the bottom of the well to release the liquid agent from the container, an electrode mounted externally on the tail pipe and electrically insulated therefrom at a distance above the lower end corresponding to the predetermined depth of the filling of the well by the liquid agent, an insulated cable connected to the electrode, means for suspending the container on the insulated cable, and a circuit means including an electric current indicating means, connected to



the cable and a ground connection, adapted to indicate the difference in resistivity of the circuit when the liquid agent makes or breaks contact with the electrode.

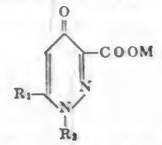
2,454,741

ULTRA HIGH FREQUENCY ELECTRONIC TUBE

Henry J. McCarthy, Danvers, Mass., assignor to Sylvania Electric Products Inc., Salem, Mass., a corporation of Massachusetts

Application May 24, 1944, Serial No. 537,145
1 Claim. (Cl. 315—5)

A high frequency electronic device having a rigid metallic body member, a space charge chamber therein whose walls present a resonator system said body having a plurality of apertures communicating from said chamber to the outside, glass windows for said openings, sheet metal bezels in which said windows are hermetically sealed, said bezels having a bevelled peripheral edge, a coating repellant to solder covering all but the peripheral edge of said bezels, a solder joint hermetically sealing said bezels along their peripheral edge in said apertures including metallic rings extending around the periphery of the bezels engaging the walls of said apertures and the bevelled edge of the bezels, said rings acting to reinforce the solder joint and means forming part of the bezels acting to impart radial resiliency thereto whereby thermally imposed radially acting forces are absorbed without damage to the windows.



2,454,742

PYRIDAZONE DERIVATIVES AND METHOD OF PREPARING THE SAME

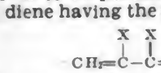
Jack F. Morgan, Phillipsburg, N. J., assignor to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware

No Drawing. Application September 14, 1945, Serial No. 616,462
20 Claims. (Cl. 260—250)

1. Compounds of the formula:

wherein R_1 is selected from the class consisting of aliphatic, benzyl, menaphthyl and aromatic radicals, R_2 is an aromatic radical free from sulfonic acid groups and M is selected from the class consisting of H and alkali metals.

8. The process of producing 4-pyridazones which comprises heating in the presence of an aqueous solvent-diluent an azo dye the coupling component of which is a pyronone and the aromatic diazo component of which is free from sulfonic acid groups.



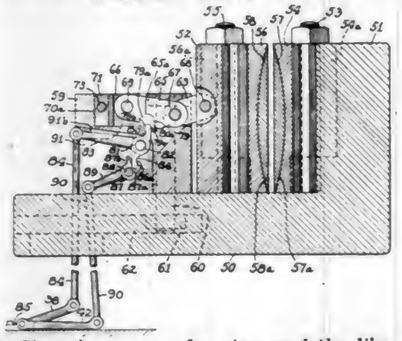
2,454,743

COPOLYMER OF A CONJUGATED HYDROCARBON DIENE AND AN ACRYLATE OF A CYCLOPENTADIENYL ALCOHOL

David T. Mowry and Alfred B. Craig, Dayton, Ohio, assignors to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware

No Drawing. Application December 4, 1947, Serial No. 789,772
5 Claims. (Cl. 260—84.5)

1. A synthetic rubber which comprises a copolymer of 40 to 90 percent of a conjugated hydrocarbon diene having the structural formula:



wherein X is a radical of the group consisting of hydrogen or methyl and from 10 to 60 percent of a dicyclopentadienyl alcohol ester of an acid of the group consisting of acrylic acid and methacrylic acid.

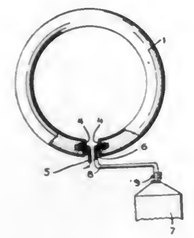
2,454,744

MULTIPLE TOGGLE CLAMPING MEANS FOR VISES AND THE LIKE

Anton U. Peterson, Chicago, and August J. Meyer, River Forest, Ill.; said Meyer assignor to said Peterson

Application June 7, 1945, Serial No. 597,992
5 Claims. (Cl. 81—26)

1. Clamping means for vises and the like, including in combination a base, a first jaw member carried by said base, a second jaw member mounted for movement towards and from said first jaw member, a thrust block carried by said base, a plurality of sets of toggle links pivotally connected to said thrust block and to said movable jaw member for operating the latter, a common operating member, and similar operating connections between said operating member and each of said sets of toggle links, whereby all of said sets of toggle links are simultaneously and similarly operated by operation of said operating member, said operating member comprising a rotary shaft carried by said thrust block, and said operating connections comprising pressure-multiplying links between said shaft and each of said sets of toggle links.



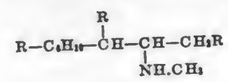
2,454,745

METHOD AND MEANS FOR PROTECTING FLUORESCENT COATINGS AND THE LIKE

Gerald S. Quinn, Salem, Mass., assignor to Sylvania Electric Products Inc., Salem, Mass., a corporation of Massachusetts

Application January 3, 1946, Serial No. 638,747
6 Claims. (Cl. 316—17)

1. A method of temporarily protecting from contamination an element within the envelope of a thermionic device comprising, introducing a protective gaseous atmosphere into the envelope, forming a seal to keep the gas therein, subsequently performing added operations upon the device including heating the device to a temperature sufficient to break said seal, and cooling the device sufficiently to effect a re-sealing of the broken seal.



2,454,746

CYCLOHEXYLALKYLAMINES

Glenn E. Ullyot, Philadelphia, Pa., assignor to Smith, Kline & French Laboratories, Philadelphia, Pa., a corporation of Pennsylvania

No Drawing. Application May 13, 1947, Serial No. 747,857
4 Claims. (Cl. 260—563)

1. A compound selected from the group consisting of secondary β-cyclohexylalkylamines having the following general formula:

where R is a member of the group consisting of hydrogen and a methyl radical; and salts thereof.

2,454,747

MIXED ALKYL ESTERS OF ASCORBIC ACID

David I. Weisblat, Donald R. Myers, and Edwin C. Wise, Kalamazoo, Mich., assignors to The Upjohn Company, Kalamazoo, Mich., a corporation of Michigan

No Drawing. Application April 16, 1945, Serial No. 588,722
5 Claims. (Cl. 260—344.5)

2. Triacetyl, monolauroyl ascorbic acid.

2,454,748

ASCORBIC ACID TETRAESTER PREPARATION

David I. Weisblat and Donald R. Myers, Kalamazoo, Mich., assignors to The Upjohn Company, Kalamazoo, Mich., a corporation of Michigan

No Drawing. Application August 2, 1945, Serial No. 608,602
1 Claim. (Cl. 260—344.5)

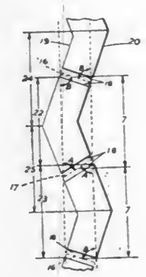
The method for the production of monoacetyl tripalmitoyl ascorbic acid which includes the step of reacting tripalmitoyl ascorbic acid with acetic anhydride in a substantially anhydrous non-reactive organic medium, in the presence of zinc chloride, and separating monoacetyl tripalmitoyl ascorbic acid from the reaction product.

2,454,749

LOWER ALKYL ESTERS OF ASCORBIC ACID

Edwin C. Wise, Kalamazoo, Mich., assignor to The Upjohn Company, Kalamazoo, Mich., a corporation of Michigan

No Drawing. Application March 16, 1945, Serial No. 583,180
5 Claims. (Cl. 260—344.5)



1. A 2.3.5.6.-ascorbic acid tetra-ester of a lower aliphatic acid containing from two to seven carbon atoms, inclusive.

2,454,750

TIRE FOR VEHICLES

Edgar Charles Woods, Gravesend, England, assignor to Henley's Tyre & Rubber Company, Darking, England, a British company

Application May 21, 1945, Serial No. 594,816
In Great Britain May 31, 1944
6 Claims. (Cl. 152—209)

6. A tire having a rubber tread comprising a rib periodically deflecting laterally in opposite directions from a straight circumferential line, said rib being divided transversely in the regions midway between the points at which it changes direction by straight parallel-sided channels at uniform pitch measured circumferentially between the mid-points of adjacent channels, some of which channels make with the circumferential centre line of the tread, angles different from the angles made by the other channels with the said centre line.

2,454,751

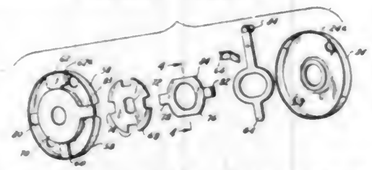
PROCESS OF PREPARING 6-METHYL PTERIDINES

James H. Boothe, Pearl River, N. Y., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine

No Drawing. Application July 27, 1946, Serial No. 686,717
9 Claims. (Cl. 260—251)

1. A method of preparing 2-amino-4-hydroxy-6-methyl pyrimido [4,5-b] pyrazine which comprises treating a 2-amino-4-hydroxy pyrimido [4,5-b] pyrazine having as a substituent at the 6-position the group $-CH_2Y$ in which Y is a nitrogen atom having additional substituents of the group consisting of those constituting tertiary amines and quaternary ammonium compounds with a reducing agent comprising metallic zinc and an alkali whereby the group represented by Y is removed and replaced with hydrogen and thereafter recovering 2-amino-4-hydroxy-6-methylpyrimido [4,5-b] pyrazine.

2,454,752
PRODUCTION OF ANTIBODIES
Arthur F. Coca, Oradell, N. J., assignor, by mesne assignments, to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application December 20, 1944, Serial No. 569,112
11 Claims. (Cl. 167—78)



1. The method of producing blood serum containing a high titer of a specific hemagglutinin, the steps of which comprise obtaining blood substance having hemagglutinogenic properties, mixing therewith hemagglutinins effective against the hemagglutinogenic substances other than those of the desired specific hemagglutinin whereby the undesired hemagglutinogenic substances are rendered substantially impotent to stimulate the production of antibodies, introducing into the blood stream of a higher animal an effective amount of the thus treated hemagglutinogenic substance, allowing the formation of corresponding hemagglutins to take place and thereafter removing at least part of the blood of said animal to obtain blood serum containing the desired hemagglutinin.

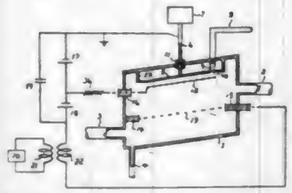
2,454,753
INOCULUM AND PROCESS OF PREPARING AND USING SAME
Floyd D. Hager, Pearl River, N. Y., assignor, by mesne assignments, to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application May 20, 1944, Serial No. 536,609
8 Claims. (Cl. 195—56)

2. A dry powdered inoculum comprising finely-divided sterile calcium stearate in intimate contact with viable spores of *Penicillium notatum*.

5. A method of inoculating a nutrient growth medium with a mold spore which comprises the steps of agitating a sterile finely-divided compound of the group consisting of alkali metal and alkaline earth metal salts of saturated fatty acids having from 12 to 18 carbon atoms inclusive said compound having a melting point of at least 120° C. over a surface having viable mold spores of a single species thereon to contact the spores with the said particles and thereafter dusting the mold spores-bearing particles over the surface of a nutrient growth medium.

2,454,754
DOOR LATCH
Franz Netschert, Glendale, Calif., assignor to Technical Glass Company, Los Angeles, Calif., a corporation of California
Application December 21, 1946, Serial No. 717,644
2 Claims. (Cl. 292—359)

1. Latch mechanism for a door including: an outside handle; latching means for said door; a spindle on which said outside door knob is secured and rotatable to retract said latch and extending on the opposite side of the door; an inside door knob secured to said spindle; locking means operable from inside the door to prevent rotation of said spindle; resilient means normally operative to hold said spindle in position to be held by said locking means when operated but enabling said spindle to be moved axially by an axial pull on said outer handle to be released from said locking means while remaining in engagement with said latching means to enable the door to be opened from the outside notwithstanding that the locking means remain in locking position.

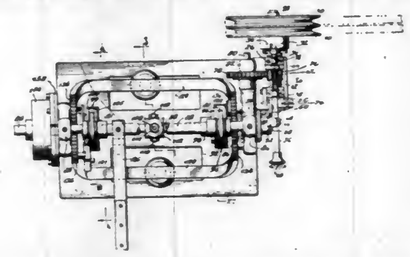


2,454,755
PRODUCTION OF TOXINS AND TOXOIDS
Ivan A. Parfentjev, Nyack, and Alfred J. Weil, Pearl River, N. Y., assignors, by mesne assignments, to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application February 7, 1945, Serial No. 576,704
6 Claims. (Cl. 167—78)

1. The process of separating bacterial antigens from toxins of the group consisting of diphtheria, tetanus, staphylococus, and perfringens which comprises mixing a bacterial filtrate containing one of said toxins and bacterial antigens in solution with an aqueous suspension of magnesium hydroxide in an amount equivalent to about 1 to 5% by weight of dry magnesium hydroxide, agitating the mixture, whereby the magnesium hydroxide selectively adsorbs bacterial antigens present in the solution without substantial adsorption and alteration of the toxin, and separating the magnesium hydroxide with the adsorbed bacterial antigens from the toxin solution.

2,454,756
PROCESS FOR THE POLYMERIZATION OF FURFURYL ACRYLATE
Chessie E. Rehberg, Philadelphia, and Charles H. Fisher, Abington, Pa., assignors to the United States of America as represented by the Secretary of Agriculture
No Drawing. Original application December 27, 1943, Serial No. 515,798, now Patent No. 2,433,866, January 6, 1948. Divided and this application December 18, 1945, Serial No. 635,812
4 Claims. (Cl. 260—84)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

3. A copolymer the polymerizable constituents of which are at least 95% methyl acrylate and the balance being furfuryl acrylate.



2,454,757
ELECTRIC SPACE-CHARGE DEVICE
Lester H. Smith, Maplewood, N. J.
Application October 1, 1943, Serial No. 504,531
6 Claims. (Cl. 204—312)

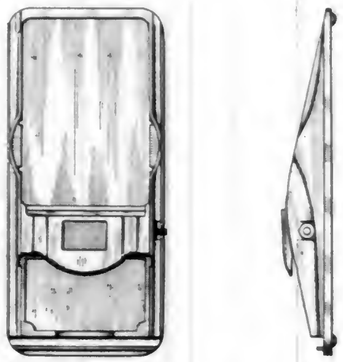
2. Gaseous phase electric space charge device comprising an emitting electrode, means associated with said emitting electrode for projecting mechanically a stream of physical particles from the surface of said emitting electrode, an intermediate grid electrode formed to provide a path for physical particles projected from said emitting electrode, means for maintaining said intermediate grid electrode at such an electrical potential relative to said emitting electrode that certain of the particles leaving the surface of said emitting electrode carry an electric charge and retain this charge in passing through said intermediate grid electrode, a collecting electrode and means for maintaining said collecting electrode at such an electrical potential relative to said emitting electrode and said intermediate grid electrode as to cause a drift of electrically charged particles toward said collecting electrode, said electric space charge device also comprising means for setting up a high frequency field within said electric space charge device and means for introducing gaseous material to be processed into and for withdrawing the processed material from said device.

2,454,758
FLEXIBLE COVER FORMING MACHINE
Alfred Vischer, Jr., Park Ridge, Ill., assignor, by mesne assignments, of twelve-thirtieths to Alfred Vischer, Jr., two-thirtieths to William Vischer, two-thirtieths to Alfred Vischer, III, two-thirtieths to Alfred Vischer, Jr., as trustee, four-thirtieths to Walter W. Zitzewitz, four-thirtieths to Elmer K. Zitzewitz, one-thirtieth to Gertrude J. Zitzewitz, one-thirtieth to Barbara O. Zitzewitz, and two-thirtieths to Gertrude V. Bouton
Application August 1, 1945, Serial No. 608,105
6 Claims. (Cl. 153—54)

1. In a machine of the class described, the combination of a pair of spaced driving rollers, means to press a disc against said rollers to secure frictional engagement therewith and thus to cause rotation of the disc, a drive shaft, a train of gearing connecting said drive shaft to said rollers to cause the latter to rotate in opposite directions, a pulley mounted on said drive shaft, a disengageable clutch connecting said pulley to the drive shaft, a manual control element, means for latching said element in a position to cause engagement of the clutch, a pair of forming rollers engageable with the upper surface of the disc at points near the periphery thereof and intermediate the points at which the driving roller

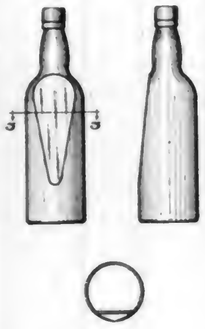
engages the disc, means driven through said gearing for swinging said forming rollers downwardly and inwardly with respect to the center of the disc thereby to bend the disc into inverted trough shape successively along angularly incremental diameters as the disc is rotated and thereafter to swing the forming rollers upwardly and outwardly, and a latch releasing member operated by said last named means when the forming rollers have passed through a complete oscillatory cycle, thereby to release said manual control element and cause disengagement of said clutch.

DESIGNS



NOVEMBER 23, 1948

151,805
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Claude Arpels, New York, N. Y.
Application April 27, 1948, Serial No. 145,983
Term of patent 3½ years
(Cl. D45—19)

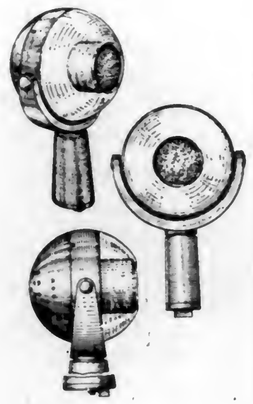


The ornamental design for a brooch or similar article, substantially as shown.

151,806
DESIGN FOR A COMBINED TELEPHONE STAND AND PAD HOLDER
Sol J. Beitch and Samuel Fine, New York, N. Y.
Application September 8, 1947, Serial No. 141,240
Term of patent 7 years
(Cl. D26—14)

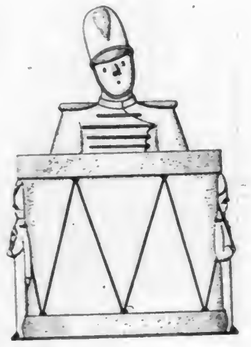
The ornamental design for a combined telephone stand and pad holder, substantially as shown.

151,807
DESIGN FOR A WINE BOTTLE
Hyman C. Berkowitz, Newton, Mass.
Application March 7, 1947, Serial No. 137,445
Term of patent 14 years
(Cl. D58—8)



The ornamental design for a wine bottle, substantially as shown.

151,808
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Marcel Boucher, New York, N. Y.
Application February 14, 1948, Serial No. 144,478
Term of patent 3½ years
(Cl. D45—9)



The ornamental design for an earring or similar article, as shown.

151,809
DESIGN FOR A TELEPHONE TRANSMITTER
Henry Dreyfuss, Pasadena, Calif., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application November 25, 1947, Serial No. 142,802
Term of patent 14 years
(Cl. D26—14)

The ornamental design for a telephone transmitter, as shown.

151,810
DESIGN FOR A COOKY JAR
Rolf J. Falk, Zanesville, Ohio, assignor to Shawnee Pottery Company, Zanesville, Ohio, a corporation of Ohio
Application March 14, 1947, Serial No. 137,610
Term of patent 14 years
(Cl. D58—25)

151,810—Continued

The ornamental design for a cooky jar, as shown.

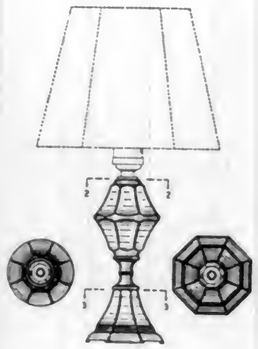
151,811
DESIGN FOR A SUIT
Jules Freedman, New York, N. Y., assignor to Morris W. Haft & Bros., Inc., New York, N. Y.
Application January 21, 1948, Serial No. 143,939
Term of patent 3½ years
(Cl. D3—4)

The ornamental design for a suit, substantially as shown.

151,812
DESIGN FOR A SUIT
Jules Freedman, New York, N. Y., assignor to Morris W. Haft & Bros., Inc., New York, N. Y.
Application January 21, 1948, Serial No. 143,940
Term of patent 3½ years
(Cl. D3—4)

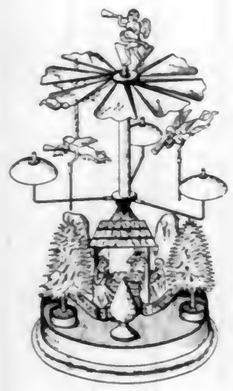
The ornamental design for a suit, substantially as shown.

151,813
DESIGN FOR A JACKET
Jules Freedman, New York, N. Y., assignor to Morris W. Haft & Bros., Inc., New York, N. Y.
Application January 21, 1948, Serial No. 143,942
Term of patent 3½ years
(Cl. D3—4)



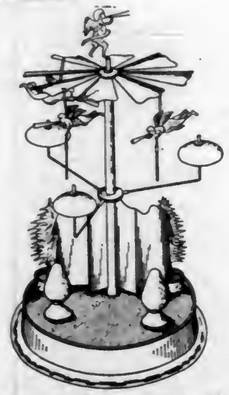
The ornamental design for a jacket, substantially as shown.

151,814
DESIGN FOR A JACKET
Jules Freedman, New York, N. Y., assignor to Morris W. Haft & Bros., Inc., New York, N. Y.
Application January 21, 1948, Serial No. 143,943
Term of patent 3½ years
(Cl. D3—4)



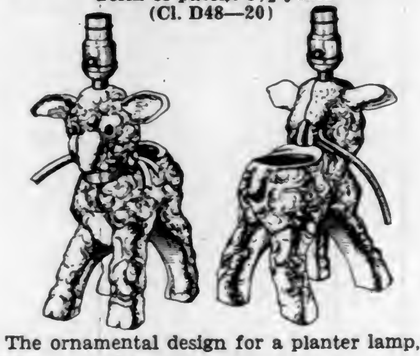
The ornamental design for a jacket, substantially as shown.

151,815
DESIGN FOR A LAMP OR SIMILAR ARTICLE
Lawrence J. Gagnon, Bay Village, Ohio, assignor to J. Schrader Company, a partnership composed of J. Schrader and Lawrence J. Gagnon
Application September 11, 1947, Serial No. 141,328
Term of patent 3½ years
(Cl. D48—20)



The ornamental design for a lamp or similar article, substantially as shown and described.

151,816
DESIGN FOR A CHRISTMAS ORNAMENT
Theodore L. Gehr, St. Petersburg, Fla.
Application October 15, 1947, Serial No. 141,904
Term of patent 3½ years
(Cl. D29—1)



151,816—Continued

The ornamental design for a Christmas ornament, as shown.

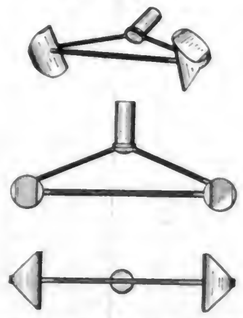
151,817
DESIGN FOR A PLANTER LAMP
Robert E. Gifford, Farnsworth, Ill.
Application June 20, 1947, Serial No. 139,837
Term of patent 3½ years
(Cl. D48—20)

The ornamental design for a planter lamp, as shown.

151,818
DESIGN FOR A COAT
Harry Goldberg, New York, N. Y., assignor to Morris W. Haft & Bros., Inc., New York, N. Y.
Application January 21, 1948, Serial No. 143,927
Term of patent 3½ years
(Cl. D3—4)

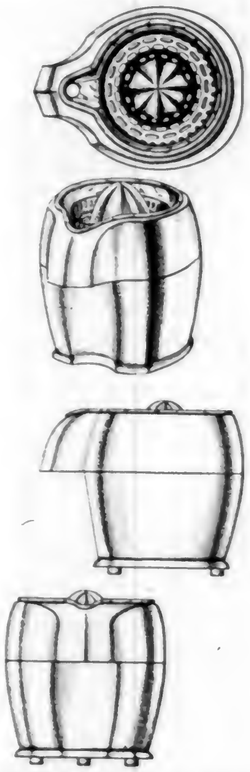
The ornamental design for a coat, substantially as shown.

151,819
DESIGN FOR A COAT
Harry Goldberg, New York, N. Y., assignor to Morris W. Haft & Bros., Inc., New York, N. Y.
Application June 7, 1948, Serial No. 146,806
Term of patent 3½ years
(Cl. D3—4)



The ornamental design for a coat, substantially as shown.

151,820
DESIGN FOR A COAT
Harry Goldberg, New York, N. Y., assignor to Morris W. Haft & Bros., Inc., New York, N. Y.
Application June 7, 1948, Serial No. 146,809
Term of patent 3½ years
(Cl. D3—4)



The ornamental design for a coat, substantially as shown.

151,821
DESIGN FOR A SHUFFLEBOARD CUE HEAD
Carl E. Gunklach, Oakwood, Ohio
Application July 25, 1946, Serial No. 131,928
Term of patent 7 years
(Cl. D34—5)

The ornamental design for a shuffleboard cue head, as shown.

151,822
DESIGN FOR A JUICER
Oscar E. Hammers, Chicago, Ill.
Application December 27, 1946, Serial No. 135,793
Term of patent 14 years
(Cl. D44—29)

The ornamental design for a juicer, as shown.

151,823
DESIGN FOR A SANITARY JUICE COLLECTOR
Oscar E. Hammers, Chicago, Ill.
Application December 27, 1946, Serial No. 135,794
Term of patent 14 years
(Cl. D44—10)

The ornamental design for a sanitary juice collector, as shown.

151,824
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application July 15, 1948, Serial No. 147,585
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,825
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application July 15, 1948, Serial No. 147,588
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

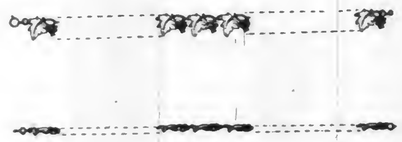
151,826
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application July 15, 1948, Serial No. 147,589
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,827
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application July 15, 1948, Serial No. 147,591
Term of patent 7 years
(Cl. D45—19)

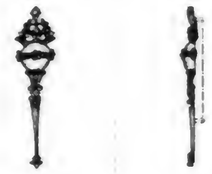
The ornamental design for a brooch or similar article, substantially as shown.

151,828
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application July 15, 1948, Serial No. 147,592
Term of patent 7 years
(Cl. D45—19)



The ornamental design for a brooch or similar article, substantially as shown.

151,829
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application July 15, 1948, Serial No. 147,593
Term of patent 7 years
(Cl. D45—19)



The ornamental design for a brooch or similar article, substantially as shown.

151,830
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application July 15, 1948, Serial No. 147,597
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

151,831
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application July 15, 1948, Serial No. 147,598
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,832
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application July 15, 1948, Serial No. 147,599
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,833
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application July 15, 1948, Serial No. 147,601
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,834
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application July 15, 1948, Serial No. 147,603
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,835
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application July 15, 1948, Serial No. 147,606
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

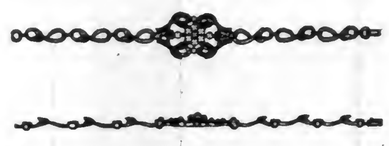
151,836
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application July 20, 1948, Serial No. 147,681
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

151,837
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application July 20, 1948, Serial No. 147,682
Term of patent 7 years
(Cl. D45—16)

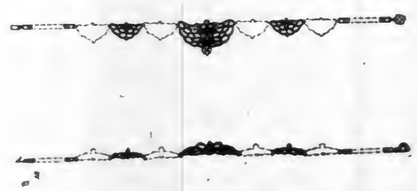
The ornamental design for a necklace or similar article, substantially as shown and described.

151,838
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application July 20, 1948, Serial No. 147,684
Term of patent 7 years
(Cl. D45—16)



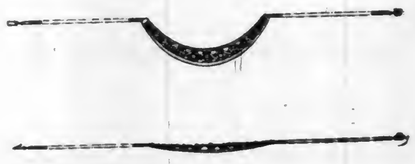
The ornamental design for a necklace or similar article, substantially as shown and described.

151,839
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application July 20, 1948, Serial No. 147,686
Term of patent 7 years
(Cl. D45—16)



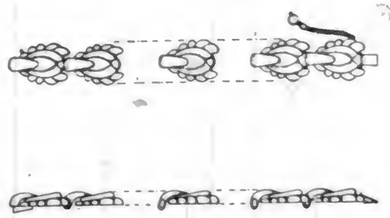
The ornamental design for a necklace or similar article, substantially as shown and described.

151,840
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application July 22, 1948, Serial No. 147,716
Term of patent 7 years
(Cl. D45—4)



The ornamental design for a bracelet or similar article, substantially as shown.

151,841
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application July 22, 1948, Serial No. 147,719
Term of patent 7 years
(Cl. D45—16)

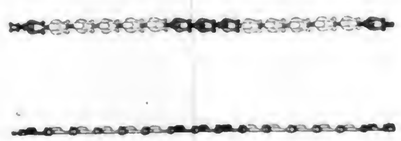


The ornamental design for a necklace or similar article, substantially as shown and described.

151,842
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application July 24, 1948, Serial No. 147,757
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

151,843
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application July 24, 1948, Serial No. 147,758
Term of patent 7 years
(Cl. D45—4)



The ornamental design for a necklace or similar article, substantially as shown and described.

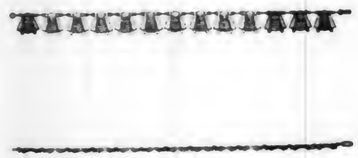
151,844
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application July 29, 1948, Serial No. 147,829
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a bracelet or similar article, substantially as shown and described.

151,845
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application August 2, 1948, Serial No. 147,884
Term of patent 7 years
(Cl. D45—16)

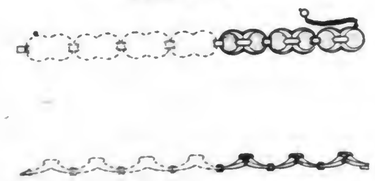
The ornamental design for a necklace or similar article, substantially as shown.

151,846
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application August 2, 1948, Serial No. 147,886
Term of patent 7 years
(Cl. D45—16)



The ornamental design for a necklace or similar article, substantially as shown and described.

151,847
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application August 11, 1948, Serial No. 148,059
Term of patent 7 years
(Cl. D45—16)



The ornamental design for a necklace or similar article, substantially as shown.

151,848
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application August 11, 1948, Serial No. 148,058
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

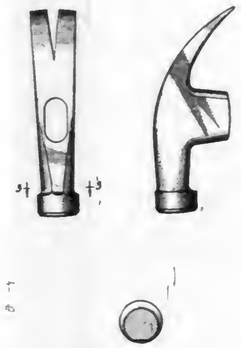
151,849
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application August 2, 1948, Serial No. 147,887
Term of patent 7 years
(Cl. D45—4)

The ornamental design for a bracelet or similar article, substantially as shown and described.

151,850
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application August 12, 1948, Serial No. 148,084
Term of patent 7 years
(Cl. D45—4)

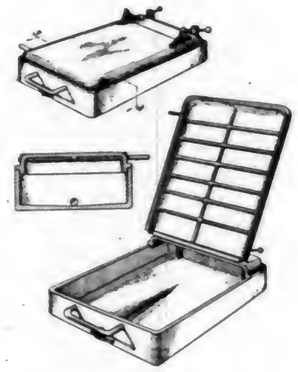
The ornamental design for a bracelet or similar article, substantially as shown and described.

151,851
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application August 12, 1948, Serial No. 148,085
Term of patent 7 years
(Cl. D45—4)

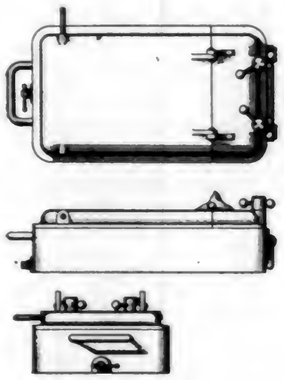


The ornamental design for a bracelet or similar article, substantially as shown.

151,852
DESIGN FOR AN ADJUSTABLE SCREEN DOOR PANEL OR SIMILAR ARTICLE
Augusta A. Klingbiel, Los Angeles, Calif.
Application October 15, 1946, Serial No. 133,964
Term of patent 3½ years
(Cl. D13—2)

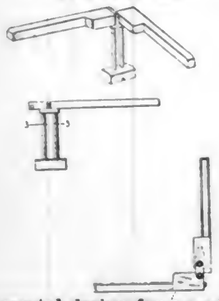


The ornamental design for an adjustable screen door panel or similar articie, as shown.



151,853
DESIGN FOR A HAMMER HEAD
William L. Ludwick, Mount Carmel, Conn., assignor to The Peck, Stow & Wilcox Company, Southington, Conn., a corporation of Connecticut
Application March 1, 1946, Serial No. 126,990
Term of patent 14 years
(Cl. D93—4)

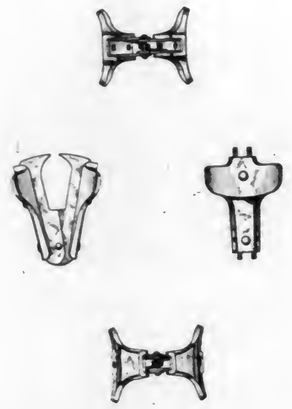
The ornamental design for a hammer head, substantially as shown and described.



151,854
DESIGN FOR A CHICKEN FRYER
Emil O. Mehline, Seattle, Wash.
Application March 7, 1947, Serial No. 137,428
Term of patent 7 years
(Cl. D44—1)

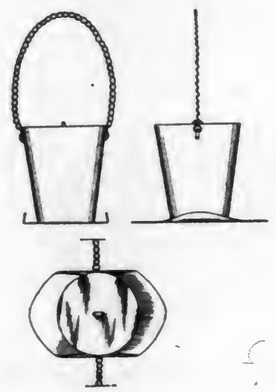
The ornamental design for a chicken fryer, as shown.

151,855
DESIGN FOR AN ADJUSTABLE FLUORESCENT LIGHTING FIXTURE
Carl Nitardy, New York, N. Y., assignor to Sylvania Electric Products Inc., Salem, Mass., a corporation of Massachusetts
Application September 15, 1945, Serial No. 122,112
Term of patent 14 years
(Cl. D48—20)



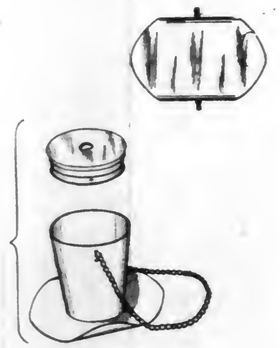
The ornamental design for an adjustable fluorescent lighting fixture, as shown and described.

151,856
DESIGN FOR A VEGETABLE SLICER
Arthur William Norman, Largo, Fla., assignor to The Hobart Manufacturing Company, Troy, Ohio, a corporation of Ohio
Application May 7, 1947, Serial No. 138,865
Term of patent 14 years
(Cl. D89—1)



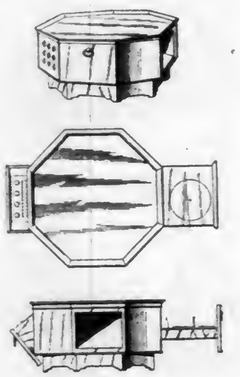
The ornamental design for a vegetable slicer, as shown and described.

151,857
DESIGN FOR A WIRE STAPLE REMOVING TOOL
William G. Pankonin, Chicago, Ill.
Application July 21, 1947, Serial No. 140,434
Term of patent 14 years
(Cl. D74—1)

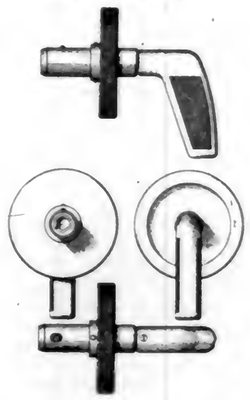


The ornamental design for a wire staple removing tool, as shown.

151,858
DESIGN FOR A COMBINED HANDBAG AND COMPACT
Frank H. Rath, Garden City, N. Y.
Application January 30, 1948, Serial No. 144,155
Term of patent 14 years
(Cl. D87—3)

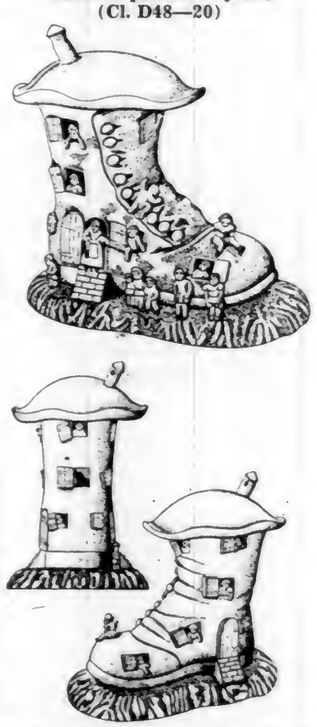


151,858—Continued



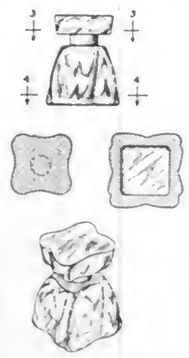
The ornamental design for a combined handbag and compact, substantially as shown and described.

151,859
DESIGN FOR A CABINET FOR RADIO-PHONOGRAPH COMBINATION
Wallace Schier, Forest Hills, and David L. Doggett, Mount Kisco, N. Y., assignors to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application January 11, 1947, Serial No. 136,077
Term of patent 3½ years
(Cl. D56—4)



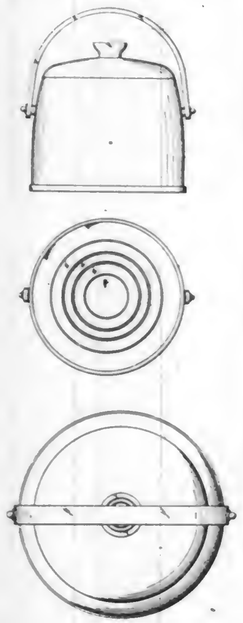
The ornamental design for a cabinet for radio-phonograph combination, substantially as shown and described.

151,860
DESIGN FOR A MOMENTUM WRENCH
Raymond L. Stoyer, Lebanon, Pa.
Application August 7, 1947, Serial No. 140,758
Term of patent 14 years
(Cl. D54—13)



The ornamental design for a momentum wrench, as shown.

151,861
DESIGN FOR A LAMP
Abraham Troskin, Brooklyn, N. Y.
Application July 3, 1947, Serial No. 140,073
Term of patent 14 years
(Cl. D48—20)



The ornamental design for a lamp, as shown.

151,862
DESIGN FOR A BOTTLE
Josephine von Miklos, New Canaan, Conn., assignor to Jacqueline Cochran, Indio, Calif.
Application April 19, 1947, Serial No. 138,502
Term of patent 14 years
(Cl. D58—6)

The ornamental design for a bottle, substantially as shown.

151,863
DESIGN FOR AN ICE BUCKET
Manuel S. Ziskin, University Heights, Ohio, assignor to Kromex Corporation, Cleveland, Ohio, a corporation of Ohio
Application October 9, 1946, Serial No. 133,838
Term of patent 14 years
(Cl. D44—21)

The ornamental design for an ice bucket, substantially as shown.

MANUFACTURER—PRODUCER—BANKER—LAWYER
TEACHER—STUDENT—AVERAGE CITIZEN

Patents expiring: Patent Numbers 1,833,887 to 1,834,917, inclusive, issued December 1, 1931, expire December 1, 1948

Condition of Applications Under Examination at Close of Business Nov. 12, 1948

Total number of patent applications awaiting action, 153,255. Date of oldest new application, October 28, 1946; date of oldest amended application, April 16, 1946.

PATENT EXAMINING DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTION	Oldest new application and oldest action by applicant awaiting Office action: New	Amended	Applications awaiting action
1. GOLDBERG, A. J., Closure Operators; Fences; Gates; Planters; Plows; Harrows and Diggers; Plant Husbandry; Scattering Unloaders; Baths, Closets, Sinks, and Spittoons; Sewerage.	6-14-47	5-12-47	2804
2. HERRMANN, D., Fishing, Trapping and Vermin Destroying; Presses; Tobacco; Textile Wringers	3-11-47	10-3-46	2976
3. MARMELSTEIN, N., Metal Founding and Treatment; Metallurgy (Process and Apparatus)	2-7-48	2-10-48	1331
4. BISHOP, WALTER O., Conveyors; Hoists; Handling Apparatus; Excavating; Elevators; Fire Escapes; Ladders; Scaffolds; Pneumatic Dispatch; Store Service; Mining, Quarrying, and Ice Harvesting.	3-27-47	2-8-47	4180
5. ROBINSON, C. W., Harvesters; Bee Culture; Dairy; Knotters; Animal Husbandry; Butchering	5-29-47	12-5-46	1689
6. SURLE, H., Carbon Chemistry (part)	12-4-47	11-12-47	1785
7. HANLIN, GEORGE, Optics; Photographic Apparatus	2-17-48	11-10-47	1506
8. LEWIS, R. O., (Acting), Furniture; Racks and Cabinets	3-11-47	11-4-46	4457
9. BENSON, R. B., Pumps and Fans; Fluid and Fluid-Current Motors	7-9-47	2-6-47	2430
10. ANDRUS, L. M., Radiant Energy (part, e. g., Portable Radio Sets, Radio Accessories, Detectors, Oscillation Generators, Wave Meters, Tuners); Music; Modulators; Piezo-electric Crystals.	2-21-48	1-2-48	1676
11. BENHAM, E. V., Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whip Apparatus.	1-23-48	2-19-48	796
12. SPINTMAN, S., Machine Elements (part); Engine Starters; Motor Control with Clutch or Brake; Transmission with Clutch or Brake.	11-17-47	9-27-46	2276
13. BEALL, T. E., Gear Cutting, Milling, Planing, Metal Working (part); Needle and Pin Making; Turning	11-6-46	11-14-46	2413
14. FREEHOF, H. B., Metal Working (Bending; Sheet-Metal; Wire; Misc. Processes); Wire Fabrics; Farriery	2-5-48	11-6-47	1335
15. HENKIN, B., Plastics; Plastic Block and Earthenware Apparatus; Glass	6-9-47	5-26-47	2057
16. LOVEWELL, N. N., Television; Telephony	1-7-48	8-15-47	1560
17. HABECKER, LEON B., Paper Manufactures; Typewriters; Printing; Type Casting and Setting; Sheet Material Associating or Folding; Sheet or Web Feeding.	4-26-47	10-25-46	2083
18. KURZ, J. A., Motors, Expansible-Chamber Type; Power Plants; Speed Responsive Devices; Rotary Internal-Combustion Engines.	8-27-47	9-14-46	2053
19. PATRICK, P. L., Liquid and Gaseous Fuel Burners; Stoves and Furnaces	9-26-47	2-3-47	1857
20. BROWN, L. M., Miscellaneous Hardware; Closure Fasteners; Locks; Undertaking; Bread, Pastry, and Confection Making; Bank Protection; Safes; Tents, Canopies, Umbrellas and Canes.	5-6-47	1-31-47	2055
21. MADER, R. C., Textiles	12-9-47	9-18-47	1240
22. CARPENTER, B. H., Aeronautics; Firearms; Ordnance	11-14-47	1-3-47	1543
23. LEWIS, J. B., Cash Registers; Calculators and Counters; Education	11-12-47	12-13-46	1768
24. LUSBY, CHARLES, Apparel; Apparel Apparatus; Package and Article Carriers; Sewing Machines	10-17-47	9-12-47	2511
25. BLAKELY, C. F., Classifying Solids; Centrifugal-Bowl Separators; Mills; Threshing; Vegetable and Meat Cutters and Comminutors; Distillation.	2-12-48	3-3-47	1736
26. YOUNG, R. R., Electricity—Generation and Motive Power	2-14-48	3-7-47	1140
27. JAMES, S., Brushing, Scrubbing; Fluid Treatment of Textiles (Apparatus); Liquid Treatment of Solids; General Cleaning; Ironing; Brush, Broom and Mop Making.	7-18-47	1-20-47	3607
28. BRAUNER, R. H., (Acting), Internal-Combustion Engines (part); Cylinders; Pistons; Spring, Weight and Horsepower Motors; Land Vehicles, Dumping, Wheel Substitutes; Vehicle Fenders.	11-20-47	10-28-47	964
29. SKLARIN, J. B., Baggage; Cloth, Leather, and Rubber Receptacles; Button Making; Woodworking; Tools	4-3-47	2-29-47	3195
30. BISHOFF, A., Automatic Temperature and Humidity Regulation; Thermostats and Humidostats; Heating and Heating Systems; Illuminating Burners; Ammunition and Explosive Devices.	2-4-48	11-29-47	1535
31. DUNCOMBE, C. S., Mineral Oils; Carbocyclic or Acyclic Carbon Compounds (part)—e. g., Ketones, Aldehydes, Ethers, Hydroxy Compounds, Hydrocarbons, Halogenated Hydrocarbons.	3-3-48	3-1-48	2121
32. LESH, KARL R., Gas and Liquid Contact Apparatus; Heat Exchange; Gas Separation; Agitating; Wells; Earth Boring.	4-22-47	11-5-46	3200
33. KAUFFMAN, H. E., Bridges; Hydraulic and Earth Engineering; Building Structures; Roads and Pavements	3-12-47	12-4-46	3558
34. SAPERSTEIN, S., Electricity—Transmission of Vehicles; Railways; Track Sanders; Signals and Indicators	5-2-47	1-10-47	1464
35. BROMLEY, E. D., Card and Sign Exhibiting; Dispensing; Filling and Closing Portable Receptacles; Ammunition and Explosive Charge Making.	7-19-47	12-4-46	3467
36. McFADYEN, A. D., Automatic Weighers; Measuring and Testing; Force Measuring	1-3-47	10-6-46	2012
37. WEAVER, M. E., Electricity, Circuit Makers and Breakers	2-28-48	4-23-47	1318
38. ARNOLD, D., Coating Processes and Apparatus; Coating or Plastic Compositions (part); Rubber	9-9-47	7-15-47	1685
39. WHITNEY, F. I., Fluid-Pressure Regulators; Valves; Water Distribution	6-16-47	10-2-46	3043
40. DRUMMOND, E. J., Receptacles (part); Packages	12-9-47	1-20-47	3240
41. GURLEY, R. B., Check-controlled Apparatus; Coin Handling; Article Dispensing Cabinets; Deposit Receptacles; Buckles, Buttons, Clasps.	2-7-48	11-8-46	2280
42. MARANS, H., Telegraphy (part); Electric Signaling; Electricity, Voltage Magnitude and Phase Control Systems; Variable Transformer and Reactor Structure.	3-4-48	2-13-48	1204
43. STONE, I. G., Medicines, Poisons and Cosmetics; Explosive Compositions; Sugar and Starch; Bleaching and Dyeing; Fluid Treatment of Textiles; Hides, Skins and Leathers.	2-2-48	10-22-47	1242
44. HARVEY, L. P., Refrigeration; Preserving	10-28-46	9-27-46	1127
45. MANTER W. B., Shafting and Flexible Shaft Couplings; Wheels, Tires and Axles; Railway Wheels and Axles; Lubrication; Bearings and Guides; Belt and Sprocket Gearing; Spring Devices; Animal Draft Appliances.	4-18-47	10-21-46	2534
46. MUSHAKE, W. I., Concentrating Evaporators; Fluid Sprinkling, Spraying and Diffusing; Fire Extinguishers; Liquid Heaters and Vaporizers; Kitchen and Table Articles.	8-7-47	11-29-46	1820

Condition of Applications Under Examination—Continued

Total number of patent applications awaiting action, 153,255. Date of oldest new application, October 28, 1946; date of oldest amended application, April 16, 1946.

PATENT EXAMINING DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTION	Oldest new application and oldest action by applicant awaiting Office action		Applications awaiting action
	New	Amended	
47. KANOF, WM. J., Motor Vehicles; Land Vehicles (part); Fluid Pressure Brakes	1-16-48	8-2-47	2163
48. BERNSTEIN, S., Electricity, General Applications; Electric Igniters	2-24-48	6-2-47	1450
49. SHEFFIELD, E. L., Drying and Gas or Vapor Contact with Solids; Ventilation; Liquid Separation or Purification.	10-22-47	8-30-47	1576
50. LEVIN, SAMUEL, Synthetic Resins	3-1-48	11-21-47	2154
51. FRIEDMAN, M. H., Radiant Energy (part, e. g., Radio Transmission and Reception, Transmitters, Receivers, Antennae); Radiant Energy Communications.	2-14-48	9-8-47	1773
52. KNOTTS, M. K., Supports; Chucks; Joint Packing; Pipe and Rod Joints or Couplings; Tool-Handle Fastenings; Pipes and Tubular Conduits.	11-17-47	1-7-47	3844
53. BRINDISI, M. V., Label Pasting and Paper Hanging; Book Making; Manifolding; Printed Matter, Stationery; Paper Files and Binders; Cutlery; Closures, Partitions and Panels, Flexible and Portable.	5-29-47	10-14-46	3565
54. STRACHAN, O. W., Electric Lamp and Discharge Devices, Systems, Structure, Manufacture and Repair; Light Sensitive Circuits; Ray Energy Applications.	2-14-48	8-7-47	1675
55. HERTZ, M., Artificial Body Members; Dentistry; Surgery; Toilet	10-31-47	11-4-47	1869
56. COCKERILL, S., Electrical and Wave Energy Chemistry; Paper Making; Heating and Illuminating Gas	2-12-48	11-26-47	969
57. MILLER, A. B., Cutting and Punching; Bolt, Nut, Rivet, Nail, Screw, Chain, and Horseshoe Making; Driven and Screw Fastenings; Nut and Bolt Locks; Jewelry; Toys	5-31-47	1-23-47	3577
58. DOWELL, E. F., Abrading; Food Apparatus; Bottles and Jars; Stone Working; Making Metal Tools and Implements.	1-3-47	3-11-47	2132
59. SHEPARD, P. W., Chemistry; Fertilizers; Gas, Heating and Illuminating; Heterocyclic Compounds (part)	10-9-47	5-28-47	2064
60. GLASS, R. L., Electricity—Heating; Welding; Furnaces; Battery Charging and Discharging; Consumable Electrode Lamp and Discharge Devices; Resistances and Rheostats; Prime Mover Dynamo Plants.	3-16-48	9-10-47	1337
61. LANNAN, J., Winding and Reeling; Pushing and Pulling; Horology; Time-Controlling Apparatus; Railway Mail Delivery; Boats, Buoys, Ships and Marine Propulsion.	1-8-47	8-27-46	3769
62. PUGH, E. C., Games; Tables; Amusement and Exercising Devices; Mechanical Guns and Projectors	8-26-47	9-26-46	1779
63. WINKELSTEIN, A. H., Fermentation; Foods and Beverages; Heterocyclic Compounds (part); Oils and Fats.	1-19-48	9-23-47	1263
64. NASH, P. M., Compositions—Coating or Plastic (part); Fuel and Miscellaneous	4-16-48	4-12-48	1521
65. McDERMOTT, F. P., Batteries; Electrical Conductors, Conduits, Insulators and Connectors; Illumination	2-19-48	8-2-47	2222
66. LISANN, L., Geometrical Instruments	9-2-47	4-16-46	2030
67. KRAFFT, C. F., Laminated Fabrics; Photographic Processes and Products; Ornamentation	11-1-47	5-14-47	1960
68. BERMAN, H., Brakes, Boring and Drilling; Clutches and Power Stop Control	3-18-48	9-12-47	1493
69. GALVIN, D. J., Electricity—Wave Transmission, Repeaters and Relays (e. g., Amplifiers), Galvanometers and Meters; Acoustics, Sound Recording; Recorders.	4-9-47	1-16-47	2065

Liniment. W. F. Young. 89,786, Jan. 7, 1913. Republished Nov. 30.
Lotion, Face, hand lotion, foot lotion, etc. Maria Hornes, Ltd. 504,429, Nov. 30; Serial No. 543,184, published Aug. 31, 1948.
Lotion make-up foundation. Carter Products, Inc. 504,432, Nov. 30; Serial No. 543,775, published June 1, 1948.
Medicinal preparation containing calcium, iron, and vitamins. J. B. Roerig and Company. 504,326, Nov. 30; Serial No. 531,147, published Aug. 17, 1948.
Medicinal preparation containing ferrous sulphate, vitamins, etc. J. B. Roerig and Company. 504,327, Nov. 30; Serial No. 531,148, published Aug. 17, 1948.
Medicinal preparation, lactalbumin hydrolysate. J. B. Roerig and Company. 504,328, Nov. 30; Serial No. 531,149, published Aug. 17, 1948.
Medicinal preparations. Schering-Kahlbaum A. G. 252,529, renewed Feb. 12, 1949. O. G. Nov. 30.
Medicine, Mange. Polk Miller Products Corporation. 504,266, Nov. 30; Serial No. 515,785, published Aug. 31, 1948.
Milk of magnesia, magnesia tooth paste, and aspirin tablets. Walgreen Co. 504,323, Nov. 30; Serial No. 531,065, published Aug. 31, 1948.
Nail polish, nail polish remover, basecoat, etc. Northam Warren Corporation. 504,412, Nov. 30; Serial No. 541 329, published Aug. 31, 1948.
Oils, Processed, synthetic oils, resins, etc. Reichhold Chemicals, Inc. 414,133, May 29, 1945. Republished Nov. 30.
Ointment. Sargeant Acnoid Pharmaceutical Co. Inc. 254,076, renewed Mar. 12, 1949. O. G. Nov. 30.
Perfume. K. Daumit. 441,440, Nov. 30; Serial No. 489,716, published June 24, 1947.
Perfume, cologne, deodorant, pomades, etc. Bo-Kay Perfume Co. 504,403, Nov. 30; Serial No. 540,979, published Aug. 24, 1948.
Perfumes, toilet water, cologne, etc. Benard & Honnorat. 504,525, Nov. 30; Serial No. 548,318.
Pest control materials. C. C. Delk. 441,455, Nov. 30; Serial No. 502,807, published Aug. 31, 1948.
Pomades, Scalp and hair dressing. F. B. Mike. 416,795, Sept. 25, 1945. Canceled Oct. 29, 1948. O. G. Nov. 30.
Powder foundation, Creamy. Elizabeth Arden Sales Corporation. 504,405, Nov. 30; Serial No. 541,068, published Aug. 24, 1948.
Preparation for killing moths. R. Galowin. 280,147, Feb. 10, 1931. Canceled Oct. 29, 1948. O. G. Nov. 30.
Protein preparation. George A. Breon & Company. 504,453, Nov. 30; Serial No. 547,610, published Aug. 31, 1948.
Reagents, Chemical. Urbana Laboratories. 301,663, Mar. 7, 1933. Republished Nov. 30.
Resins, Synthetic. Monsanto Chemical Company. 504,479, Nov. 30; Serial No. 554,582, published Sept. 7, 1948.
Shampoo, Liquid cream. Jon Henri Inc. 441,493, Nov. 30; Serial No. 517,846, published Aug. 31, 1948.
Sodium penicillin, Veterinarian. Cutter Laboratories. 504,436, Nov. 30; Serial No. 544,331, published Aug. 24, 1948.
Solution for testing soils for acidity. Urbana Laboratories. 286,228, Aug. 25, 1931. Republished Nov. 30.
Solutions and preparations used for permanent waving, hair drying, etc. Eugene, Ltd. 504,388, Nov. 30; Serial No. 539,143, published Aug. 31, 1948.
Solutions and preparations used for permanent waving, hair drying, etc. Eugene, Ltd. 504,389, Nov. 30; Serial No. 539,145, published Aug. 31, 1948.
Spray and gargle, Nose and throat. McKesson & Robbins, Incorporated. 243,902, renewed July 3, 1948. O. G. Nov. 30.
Spray and gargle, Nose and throat. McKesson & Robbins, Incorporated. 243,913, renewed July 3, 1948. O. G. Nov. 30.
Spray used as an insecticide and germicide, Liquid. Van Camp Hardware & Iron Company. 219,670, Oct. 19, 1926. Republished Nov. 30.
Stomach tonics and bitters. Soc. A. R. L. De Vecchi. 441,501, Nov. 30; Serial No. 519,572, published Aug. 31, 1948.
Sulfadiazine buffered with sodium citrate. Ames Company, Inc. 504,449, Nov. 30; Serial No. 547,416, published Aug. 31, 1948.

Sulfaguanidine buffered with sodium citrate. Ames Company, Inc. 504,450, Nov. 30; Serial No. 547,417, published Aug. 31, 1948.
Sulfathiazole buffered with sodium citrate. Ames Company, Inc. 504,451, Nov. 30; Serial No. 547,418, published Aug. 31, 1948.
Tablets, Digestive. McCoy's Laboratories, Inc. 236,755, renewed Dec. 20, 1947. O. G. Nov. 30.
Talcum, after shave lotion, cologne, etc., Men's. R. Hudnut. 441,469, Nov. 30; Serial No. 509,003, published Aug. 31, 1948.
Thyroid products, Brominated. Van Patten Pharmaceutical Co. 425,673. Nov. 26, 1946. Republished Nov. 30.
Tonic, Hair. Conti Products Corporation. 504,401, Nov. 30; Serial No. 540,779, published Aug. 31, 1948.
Tonic, Malaria chill and fever. J. C. Mendenhall Medicine Co., Incorporated. 504,447, Nov. 30; Serial No. 547,014, published Sept. 7, 1948.
Ulcer inhibiting preparation. Parke, Davis & Company. 504,452, Nov. 30; Serial No. 547,478, published Aug. 17, 1948.

CLASS 7

Clothesline. Industrial Synthetics Corporation. 504,444, Nov. 30; Serial No. 546,774, published Aug. 31, 1948.
Clothesline. Industrial Synthetics Corporation. 504,461, Nov. 30; Serial No. 540,148, published Aug. 31, 1948.
Clotheslines and seine twine. Frank W. Winne & Son, Inc. 504,409, Nov. 30; Serial No. 541,244, published Aug. 17, 1948.
Cordage. Duro-Persian Mfg. Co., Inc. 504,506, Nov. 30; Serial No. 521,571.
Rope and twine. Tubbs Cordage Company. 504,283, Nov. 30; Serial No. 527,139, published Aug. 10, 1948.
Rope, Manila. Edwin H. Fitler Co. 504,418, Nov. 30; Serial No. 542,200, published Aug. 10, 1948.
Rope, Wire. Wire Rope Manufacturing & Equipment Company. 504,463, Nov. 30; Serial No. 549,314, published Sept. 7, 1948.
Ties, Wire. St. Regis Paper Company. 504,336, Nov. 30; Serial No. 532,172, published Aug. 31, 1948.
Twine. Bemis Bro. Bag Company. 504,279, Nov. 30; Serial No. 526,837, published Aug. 17, 1948.
Twines, rope, seine twine, trot line, etc. J. E. Fricke Co. 504,351, Nov. 30; Serial No. 533,722, published Aug 10, 1948.

CLASS 8

Ash trays, Smokers'. Harper-Wyman Company. 504,270, Nov. 30; Serial No. 518,293, published Sept. 7, 1948.

CLASS 9

Firearms. Remington Arms Company, Inc. 441,503, Nov. 30; Serial No. 520,055, published Aug. 17, 1948.
Fireworks. E. H. Robertson. 504,455, Nov. 30; Serial No. 548,409, published Aug. 17, 1948.
Gun cases. Schoellkopf Company. 504,386, Nov. 30; Serial No. 538,821, published Aug. 17, 1948.
Gun wadding. American Hair Felt Company. 247,789, Oct. 2, 1928. Republished Nov. 30.
Matches. Ohio Match Company. 106,662, Oct. 26, 1915. Republished Nov. 30.
Matches. Ohio Match Company. 186,690, July 22, 1924 Republished Nov. 30.
Matches. Ohio Match Company. 211,533–4, Apr. 13, 1926. Republished Nov. 30.

CLASS 10

Plant-fertilizing materials. Wilson & Toomer Fertilizer Co. 70,947, re-renewed Oct. 20, 1948. O. G. Nov. 30.

CLASS 11

Carbon paper and inked ribbons. Manifold Supplies Company. 504,448, Nov. 30; Serial No. 547,136, published Aug. 31, 1948.
Etching enamel for engravers' plates. Chemco Photoproducts Company. 338,047, Aug. 25, 1936. Republished Nov. 30.
Lacquers, Printing, for use on plastic sheetings. Heribert, Inc. 504,490, Nov. 30; Serial No. 501,740.
Oils, Processed, synthetic oils, resins, etc. Reichhold Chemicals, Inc. 413,965, May 22, 1945. Republished Nov. 30.

CLASS 12

Building material, etc. Logan-Long Company. 295,718, July 12, 1932. Corrected. O. G. Nov. 30.
Doors that open into an overhead position. Frantz Manufacturing Company. 282,609, Apr. 28, 1931. Republished Nov. 30.
Insulating material. Keystone Hair Insulator Co. 88,090, Aug. 27, 1912. Republished Nov. 30.
Insulating material, Felt. American Hair Felt Company. 169,332, June 12, 1923. Republished Nov. 30.
Insulating-sheeting. Keystone Hair Insulator Company. 144,592, July 12, 1921. Republished Nov. 30.

Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 151,891, Nov. 30.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 151,892, Nov. 30.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 151,893, Nov. 30.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 151,894, Nov. 30.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 151,895, Nov. 30.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 151,896, Nov. 30.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 151,897, Nov. 30.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 151,898, Nov. 30.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 151,899, Nov. 30.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Earring or similar article. 151,900, Nov. 30.
Katz, Adolph, Providence, R. I. Necklace or similar article. 151,901, Nov. 30.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Separable brooch or similar article. 151,902, Nov. 30.
Katz, Adolph, Providence, R. I. Bracelet or similar article. 151,903, Nov. 30.
Katz, Adolph, Providence, R. I. Bracelet or similar article. 151,904, Nov. 30.
Kronmiller, Carl G., Edina, assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Clock thermostat. 151,905, Nov. 30.
La Barre, Dwight, near Pontiac, and T. Ornas, Ferndale, assignors to Air-O-Tomic, Inc., Detroit, Mich. Space heater. 151,906, Nov. 30.

Landers, Frary & Clark, assignee: *See*—
Metz, Harry E.
McDonald, James D., Los Angeles, Calif. Switch escutcheon. 151,907, Nov. 30.
McElderry, Maurice M., Duluth, Minn. Pulpwood tongs or similar article. 151,908, Nov. 30.
Medgyes, Ladislas, assignor to Helena Rubinstein, Inc., New York, N. Y. Bottle. 151,909, Nov. 30.
Mellor, Adrien R., Loma Linda, Calif. Riding stick toy. 151,910, Nov. 30.
Metz, Harry E., assignor to Landers, Frary & Clark, New Britain, Conn. Electrical switching device or similar article. 151,911, Nov. 30.
Minneapolis-Honeywell Regulator Company, assignee: *See*—
Kronmiller, Carl G.
Myers, Lawrence: *See*—
Rose, Leo, Myers, and Richter.
Negbaur, H., & Co., assignee: *See*—
Treiss, Herman G.
Ornas, Theodore: *See*—
La Barre, Dwight, and Ornas.
Parker, Samuel C.: *See*—
Hardeman, William E., and Parker.
Partlow, James P., Youngstown, Ohio. Combined cigarette case and lighter. 151,912, Nov. 30.
Perfection Stove Company, assignee: *See*—
Raymond, David L.
Petry, Edward J., Jefferson City, Mo. Electric motor generator. 151,913, Nov. 30.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Brooch or similar article. 151,914, Nov. 30.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Brooch or similar article. 151,915, Nov. 30.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Brooch or similar article. 151,916, Nov. 30.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Brooch or similar article. 151,917, Nov. 30.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Earring or similar article. 151,918, Nov. 30.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Earring or similar article. 151,919, Nov. 30.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Necklace or similar article. 151,920, Nov. 30.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Necklace or similar article. 151,921, Nov. 30.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Necklace or similar article. 151,922, Nov. 30.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Necklace or similar article. 151,923, Nov. 30.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Brooch or similar article. 151,924, Nov. 30.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Earring or similar article. 151,925, Nov. 30.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Brooch or similar article. 151,926, Nov. 30.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Brooch or similar article. 151,927, Nov. 30.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Brooch or similar article. 151,928, Nov. 30.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Brooch or similar article. 151,929, Nov. 30.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Brooch or similar article. 151,930, Nov. 30.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Brooch or similar article. 151,931, Nov. 30.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Brooch or similar article. 151,932, Nov. 30.
Philippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Brooch or similar article. 151,933, Nov. 30.
Plehn, Henry M., New York, N. Y. Brassière. 151,934, Nov. 30.
Pyle, Richard M., Dallas, Tex. Heating casing. 151,935, Nov. 30.
Raymond, David L., South Euclid, assignor to Perfection Stove Company, Cleveland, Ohio. Water heater casing. 151,936, Nov. 30.
Reiner, Samuel J., New York, N. Y. Brassière. 151,937 Nov. 30.
Reinstein, Harry, Rye, N. Y. Necklace. 151,938, Nov. 30
Reinstein, Harry, Rye, N. Y. Necklace. 151,939, Nov. 30.
Richter, Moses: *See*—
Rose, Leo, Myers, and Richter.
Rose, Alexander, New York, assignor of one-half to J. M. D'Arcy, Brooklyn, N. Y. Brooch or similar article. 151,940, Nov. 30.
Rose, Leo, L. Myers, and M. Richter, Mount Gilead, N. C., assignors to United Mills Corporation. Slip. 151,941, Nov. 30.
Rothweiler, Charles O., Milwaukee, Wis. Astrolabe. 151,942, Nov. 30.
Rubinstein, Helena, Inc., assignee: *See*—
Medgyes, Ladislas.
Sapin, Bernard, New York, N. Y. Knitted sweater. 151,943, Nov. 30.
Shackelford, George E., West Columbia, Tex. Kite. 151,944, Nov. 30.
Smith, Frasier, Wheeling, W. Va., assignor to Jewett & Sherman Co., Inc., Milwaukee, Wis. Jar. 151,945, Nov. 30.
Spear Novelty Co., assignee: *See*—
Bogoff, Henry.
Treiss, Herman G., Brooklyn, assignor to H. Negbaur & Co., New York, N. Y. Table lighter. 151,946, Nov. 30.
Trifari, Krussman & Fishel, Inc., assignee: *See*—
Philippe, Alfred.
United Mills Corporation, assignee: *See*—
Rose, Leo, Myers, and Richter.
Van Dyck, Kenneth A., assignor to Eastman Kodak Company, Rochester, N. Y. Optical comparator. 151,947, Nov. 30.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 30TH DAY OF NOVEMBER, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abeles, Paul W., London W. 11, England. Composite structural member. 2,455,153, Nov. 30.
Action Buffs, Inc., assignee: *See*—
Seelenfreund, Louis M.
Aerojet Engineering Corporation, assignee: *See*—
Mace, Harry W., and Chamberlain.
Vegt, Ernest J.
Agriculture, United States of America, as represented by the Secretary of, assignee: *See*—
Fevold, Harry L., and Dimick.
Air Reduction Company, Incorporated, assignee: *See*—
Hoover, Charles O.
Aircraft-Marine Products, Inc., assignee: *See*—
Neijstrom, Kenneth.
Allen, Howard B., Jr., Chatham, assignor to National Union Radio Corporation, Newark, N. J. Cathode for electronic discharge devices. 2,455,287, Nov. 30.
Allen, Neal C. S., Bennington, Vt. Fruit juice extractor. 2,454,905, Nov. 30.
Allied Chemical & Dye Corporation, assignee: *See*—
Collins, George T.
Teeters, Wilber O., and Mueller.
Allis, Louis, Company, The, assignee: *See*—
Wieseman, Theodore R.
Alter, Harry, Company, The, assignee: *See*—
Cahensli, Martin T., Jr.
Alvarez, Octavio J., assignor to Alvarez Patent Corporation, New York, N. Y. Umbrella. 2,455,288, Nov. 30.
Alvarez Patent Corporation, assignee: *See*—
Alvarez, Octavio J.
Amberg, Walter E., Beverly Shores, Ind., assignor, by mesne assignments, to Lily-Tulip Cup Corporation, New York, N. Y. Paper cup and handle thereof. 2,454,906, Nov. 30.
American Can Company, assignee: *See*—
Nordquist, Ronald E. J.
American Car and Foundry Company, assignee: *See*—
Shields, Robert A.
American Cyanamid Company, assignee: *See*—
Pietzsch, Kurt F.
Scalera, Mario, and Forster.
Scalera, Mario, Lester, and Hardy.
Thurston, Jack T.
American Enka Corporation, assignee: *See*—
Meerdink, Gerhard J.
American Gas Association, Inc., assignee: *See*—
Starkey, Robert L., and Wight.
American Laundry Machinery Company, The, assignee: *See*—
Matthews, Albert, and Geriach.
Shaw, Julian C., and Blettner.
American Locomotive Company, assignee: *See*—
Weber, Theodore R.
American Optical Company, assignee: *See*—
Guellich, Gustav E.
American Seal-Kap Corporation of Delaware, assignee: *See*—
Goodwin, Carl W., and Martin.
American Seating Company, assignee: *See*—
Morgan, Erving B., and Clay.
American Viscose Corporation, assignee: *See*—
Kreamer, William H., Klingener, and Bauer.
Whytlaw, Graeme G.
Amino Acids, Inc., assignee: *See*—
Reyniers, James A.
Anderson, Earl I.: *See*—
Stolze, William J., and Anderson.
Anderson, George M., Highlands, N. J. Electrical connector. 2,454,760, Nov. 30.
Anderson, Joseph B., Washington, D. C. Apparatus for disseminating weather information. 2,455,209, Nov. 30.
Anderson, Joseph B., Washington, D. C. Apparatus for disseminating weather information. 2,455,210, Nov. 30.
Andersson, Sven W. E., Evansville, Ind., assignor to Servel, Inc., New York, N. Y. Ice tray. 2,454,958, Nov. 30.
Apex Tool & Cutter Company, assignee: *See*—
Catlin, Louis F., Sr., Rourke, and Catlin, L. F., Jr.
Armco Steel Corporation, assignee: *See*—
Loveless, Donald L.
Armstrong, Wesley G., Yardville, N. J. Water fountain for poultry. 2,455,211, Nov. 30.
Arnall, Paul E., assignee: *See*—
Hayslip, Homer C.
Arnolt Corporation, assignee: *See*—
Larson, Raymond T.
Atlas Imperial Diesel Engine Co., assignee: *See*—
Laxo, Ed.
Attorney General of the United States: *See*—
Crespi, Silvio B.
Mayer, Ernest.
Atwood Vacuum Machine Company, The, assignee: *See*—
Schofield, Earl L., and Lustig.
Auda, Valentine, executor: *See*—
Ravella, Jean A.
Automatic Electric Laboratories, Inc., assignee: *See*—
McCreary, Harold J.
Avakian, Souren: *See*—
Martin, Gustav J., and Avakian.
Bader, Edward G., Hawthorne, assignor to Mitchell Camera Corporation, West Hollywood, Calif. Contractile film spool. 2,454,984, Nov. 30.
Baierlein, George W., Springfield, Mass., assignor, by mesne assignments, to Niles-Bement-Pond Company, West Hartford, Conn. Fuel injection pump. 2,455,289, Nov. 30.
Baierlein, George W., Springfield, Mass., assignor to Niles-Bement-Pond Company, West Hartford, Conn. Discharge valve assembly for fuel injector pumps. 2,455,290, Nov. 30.
Bailey, James R., Fort Worth, Tex. Shelf elevating mechanism for food containers. 2,455,154, Nov. 30.
Baima, Dominick B., Detroit, Mich. Fish lure. 2,455,155, Nov. 30.
Bakst, Myron: *See*—
Warner, Arthur J., and Bakst.
Balzi, Clemente, P. Juravcoff, and C. H. Ristenpart, San Francisco, Calif., said Balzi and said Juravcoff assignors to said Ristenpart. Desk drawer for typewriters, including elevating typewriter supports. 2,455,156, Nov. 30.
Barkley & Dexter, assignee: *See*—
Dexter, Robert G.
Barnes, Norman F., Schenectady, N. Y., assignor to General Electric Company. Optical apparatus for showing rotating parts at rest. 2,454,959, Nov. 30.
Barrow, Wilmer L., Concord, Mass., and W. W. Mieher, Mineola, N. Y., assignors to The Sperry Corporation. Ultra high frequency device. 2,454,761, Nov. 30.
Bartle, George R.: *See*—
Schoot, Donald E., and Bartle.
Barton, George G., assignor to Hartmann Company, Racine, Wis. Frame construction for soft-sided luggage. 2,454,985, Nov. 30.
Bauer, Alexander, assignee: *See*—
Hurst, George L.
Bauer, Ernest K.: *See*—
Kreamer, William H., Klingener, and Bauer.
Bauman, John J., Abington, assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa. Refrigerator humidity control. 2,454,855, Nov. 30.
Baumner, William L., Jr., Jenkintown, Pa. Dispenser. 2,455,212, Nov. 30.
Bausch & Lomb Optical Company, assignee: *See*—
Flint, Edward F.
Oughton, Charles A., Sterling, and Turner.
Beals, Gillson W., assignor to The Miller Company, Meriden, Conn. Lighting fixture cover. 2,455,107, Nov. 30.
Beauregard, Hector, Utica, Mich. Electrode holder. 2,455,108, Nov. 30.
Becker, George L., assignee: *See*—
Mungall, Thomas, Sr.
Beckman, Arnold O., Altadena, assignor to National Technical Laboratories, South Pasadena, Calif. Variable resistance device. 2,454,986, Nov. 30.
Beckwith, Edwin L., West Newton, and C. P. MacIver, Stow, Mass., assignors to Beckwith Manufacturing Company, Dover, N. H. Process of making molded scabbards. 2,455,215, Nov. 30.
Beckwith Manufacturing Company, assignee: *See*—
Beckwith, Edwin L., and MacIver.
Beech Aircraft Corporation, assignee: *See*—
Pelley, Perry H.
Vint, Jesse L., Jr.
Bell Telephone Laboratories, Incorporated, assignee: *See*—
Bode, Hendrik W.
Edwards, Paul G., and Herrington.
Fisher, Harold J.
Griest, Raymond H.
Pierce, John R.
Samuel, Arthur L.
Bell, Thomas W., Washington, D. C. Towel rack. 2,455,213, Nov. 30.
Belluche, Frank R., assignor to The Christensen Machine Company, Racine, Wis. Sheet feeding method and apparatus therefor. 2,454,762, Nov. 30.

Bendix Aviation Corporation, assignee: *See*—
Buxton, James E.
Holmes, William R.
Lawrence, Donald M.
Miller, Donald L.

Bendix-Westinghouse Automotive Air Brake Company, assignee: *See*—
Eaton, Wilfred A.
Vorech, Stephen.

Bennekou, Ingolf, Frederiksberg, assignor to Lovens Kemiske Fabrik v/Aug. Kongsted, Copenhagen, Denmark. Production of such glucosides of polyoxy compounds with cyclopentane-polyhydro-phenanthrene ring system as have at least one free oxy group in the sterine skeleton. 2,455,214, Nov. 30.

Benoit, Leon, assignor, by mesne assignments, to Robert Gair Company, Inc., New York, N. Y. Cellular carton. 2,455,291, Nov. 30.

Berkeley, Harrison C., Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich. Ice tray. 2,454,960, Nov. 30.

Better Packages Incorporated, assignee: *See*—
Sharpe, Everett E.

Bible, Paul, Hollis, Okla. Safety coupling pin for trailer hitches. 2,454,836, Nov. 30.

Biewen, John W.: *See*—
Stewart, Raymond R., and Biewen.

Bigelow, Charles A., Houston, Tex. Emergency aircraft exit for transport aircraft. 2,455,157, Nov. 30.

Bish, Edwin E., East Detroit, Mich. Clamp bracket. 2,454,857, Nov. 30.

Bishop, Herbert S., London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y. Electrical system for gauging a dimension by the width of a spark gap. 2,454,763, Nov. 30.

Blanton, Ray E., Tulsa, Okla. Vehicle wheel mounting. 2,455,216, Nov. 30.

Blettner, Harry E.: *See*—
Shaw, Julian C., and Blettner.

Blumenthal, Sol: *See*—
Smith, Cleveland S., Jr., and Blumenthal.

Bode, Hendrik W., Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Averaging mechanism. 2,455,035, Nov. 30.

Boeing Airplane Company, assignee: *See*—
Tatom, Raymond F.

Booth, Morris F., Alden, Mich. Method and apparatus for casting aluminum. 2,454,961, Nov. 30.

Borden, David M., Royal Oak, assignor to Chrysler Corporation, Highland Park, Mich. Control apparatus. 2,455,292, Nov. 30.

Borges, Alberto, Rio de Janeiro, Brazil. Joints of hollow beams. 2,455,217, Nov. 30.

Bowditch, Hoel L., Sharon, assignor to The Foxboro Company, Foxboro, Mass. Mechanism for moving movable members. 2,455,326, Nov. 30.

Bowers, Frederick H., Kalamazoo, Mich. Fabricating merchandise holders and display devices. 2,455,109, Nov. 30.

Boyer, Hugh N., Canfield, Ohio. Traction device for tractors. 2,455,110, Nov. 30.

Boylan, Gypsy A., Rocky River, Ohio. Brassière. 2,455,036, Nov. 30.

Bradley Pulverizer Company, assignee: *See*—
Gibson, William A., and Mayer.

Bradley, William E., Swarthmore, assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa. Wave guide coupling device. 2,455,158, Nov. 30.

Bradner, Donald B., Cincinnati, Ohio. Calculating machine. 2,454,987, Nov. 30.

Branstrator, Clem G., Fort Wayne, Ind. Door for vehicles. 2,455,293, Nov. 30.

Brassert, H. A., & Company, assignee: *See*—
Ramseyer, Charles F., and Brassert.

Brassert, Herman A.: *See*—
Ramseyer, Charles F., and Brassert.

Braucher, Harvey M., Baltimore, Md. Milling tool. 2,454,764, Nov. 30.

Braunsdorff, Reginald K., East Orange, assignor to Tung-Sol Lamp Works, Inc., Newark, N. J. Electric headlamp projector and incandescent lamp therefor. 2,454,765, Nov. 30.

Bremer, Emil R., Alameda, Calif. Lawn washer and sprinkler support. 2,455,037, Nov. 30.

Bremner, John G. M., and D. G. Jones, Norton-on-Tees, England, assignors to Imperial Chemical Industries Limited. Purification of tetrahydrofurfuryl alcohol containing furfural and furfuryl alcohol as impurities. 2,455,159, Nov. 30.

Breth, Walter J., assignor to The General Tire & Rubber Company, Akron, Ohio. Apparatus for building tires. 2,455,038, Nov. 30.

Briggs, Richard S., North Beverly, assignor to Sylvania Electric Products Inc., Salem, Mass. Ultra high frequency tube. 2,455,218, Nov. 30.

Briggs & Stratton Corporation, assignee: *See*—
Jacobi, Edward N.

Brillouin, Leon N., Providence, R. I., assignor to Federal Telephone and Radio Corporation, Newark, N. J. Broad band antenna. 2,454,766, Nov. 30.

Britten, Edwin F., Jr., Short Hills, assignor to Monroe Calculating Machine Company, Orange, N. J. Compass follower. 2,455,219, Nov. 30.

Broderick, Frederick C., Glencoe, Ill. Hot-water heating system. 2,455,039, Nov. 30.

Broderick, Frederick C., Glencoe, Ill. Heating system. 2,455,040, Nov. 30.

Brody, Samuel C., Newton, Mass. Blast torch. 2,455,220, Nov. 30.

Brody, Samuel C., Newton, Mass. Blast torch. 2,455,221, Nov. 30.

Brody, Samuel C., Newton, Mass. Blast torch. 2,455,222, Nov. 30.

Brody, Samuel C., Newton, Mass. Blast torch perforated combustion burner. 2,455,223, Nov. 30.

Brown, George H., Princeton, N. J., assignor to Radio Corporation of America. Radio-frequency network. 2,454,907, Nov. 30.

Brown, James V., Anderson, Ind., assignor to General Motors Corporation, Detroit, Mich. Container for electrical apparatus. 2,454,962, Nov. 30.

Brushaber, Herman J., deceased, Milwaukee, Wis.; R. E. Brushaber, executor. Conduit fitting. 2,454,767, Nov. 30.

Brushaber, Ralph E., executor: *See*—
Brushaber, Herman J.

Bryan, Rochelle D., Glenmore, La. Pipe wrench having a pivoted and adjustable outer jaw. 2,455,041, Nov. 30.

Bryant Heater Company, assignee: *See*—
Higley, Frank R.

Buchwalter, Louise, Hallsville, Ohio, and G. G. Harvey, Boston, Mass., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War. Antenna. 2,455,224, Nov. 30.

Buescher Band Instrument Co., assignee: *See*— —
Comer, Floyd E.

Buffalo Electro-Chemical Company, Inc., assignee: *See*—
Dawsey, Lynn H., Umhoefer, and Muehlhausser.

Buffum, Donald C.: *See*—
Van Winkle, Delbert M., and Buffum.

Bullard Company, The, assignee: *See*—
Lobdell, Franklin H.

Bunker, Vincent W., assignor to Gallmeyer & Livingston Company, Grand Rapids, Mich. Grinder speed control. 2,454,988, Nov. 30.

Burroughs, Gordon S., Forest Hills, assignor to Federal Telephone and Radio Corporation, New York, N. Y. Direction finding antenna system. 2,454,768, Nov. 30.

Burroughs, Samuel G., Pittsburgh, assignor to Pennsylvania Industrial Chemical Corporation, Clairton, Pa. Making styrene resin. 2,455,225, Nov. 30.

Burrow, Bob, Maricopa County, Ariz. Load leveler for power scoops. 2,455,160, Nov. 30.

Burt, John C., Oakland, Calif. Garment hanger bin. 2,454,858, Nov. 30.

Busnel, Francoise A. M., Lyon, France, assignor to International Standard Electric Corporation, New York, N. Y. Piezoelectric crystal support. 2,454,769, Nov. 30.

Butt, Charles S., Jr.: *See*—
Kemmer, Paul H., Reichert, and Butt.

Buttner, Arnold, Flushing, N. Y. Switch control device. 2,455,161, Nov. 30.

Buttress, George A., Los Angeles, Calif. Lath board. 2,455,016, Nov. 30.

Buxton, Frederick L., Burbank, Calif. Hanger. 2,454,908, Nov. 30.

Buxton, James E., Elmira, N. Y., assignor to Bendix Aviation Corporation. Engine starter gearing. 2,455,327, Nov. 30.

Buxton, James E., Elmira, N. Y., assignor to Bendix Aviation Corporation. Engine starter gearing and control. 2,455,328, Nov. 30.

Bylund, Eric, Genoa, Ill., assignor to John Oster Manufacturing Company, Racine, Wis. Brush mounting for electric motors. 2,454,909, Nov. 30.

Cabes, Lucien A. B., Antwerp, Belgium, assignor to International Standard Electric Corporation, New York, N. Y. Identification circuit arrangement for automatic or semiautomatic telephone systems. 2,454,770, Nov. 30.

Cahenzli, Martin T., Jr., assignor to The Harry Alter Company, Chicago, Ill. Combination metering device and heat exchanger for refrigerators. 2,455,298, Nov. 30.

Calhoun, Ann E., administratrix: *See*—
Calhoun, Taylor P.

Calhoun, Taylor P., deceased, Worcester, Mass.; A. E. Calhoun, administratrix. Clothes cleansing and fluid extracting apparatus having a flexible clothes squeezing diaphragm. 2,455,043, Nov. 30.

Cannistra, Joseph J.: *See*—
Thurnell, Orville D., and Cannistra.

Cantrell, Troy L.: *See*—
Smith, Herschel G., Cantrell, and Peters.

Caplan, Harry, Los Angeles, Calif. Parachute. 2,455,044, Nov. 30.

Carbone, Joseph F., Everett, and M. N. Fairbank, Belmont, assignors to Polaroid Corporation, Cambridge, Mass. Self-developing camera. 2,455,111, Nov. 30.

Carey, Cecil: *See*—
Cartmell, Harold, and Carey.

Carlson, Carl H., and W. Russell, Chicago, Ill. Auxiliary tool handle. 2,454,989, Nov. 30.

Carr, Sarah J., assignee: *See*—
Carr, Walter E.

Carr, Walter E., assignor by decree of distribution to S. J. Carr, Spokane, Wash. Drill bit assembly. 2,454,771, Nov. 30.

Carr, William P., Rossford, assignor to The De Vilbiss Company, Toledo, Ohio. Applying coatings to molded or cast articles. 2,454,910, Nov. 30.

Cartmell, Harold, and C. Carey, Chilliwack, British Columbia, Canada. Vacuum scuffler. 2,455,226, Nov. 30.

Case, J. I., Company, assignee: *See*—
Hansen, Charles W., and Kranick.
Heth, Sherman C.
Russell, Stanley D.

Case, Percival H., assignor to Universal Camera Corporation, New York, N. Y. Water- and weatherproofing construction of casings for binoculars. 2,454,859, Nov. 30.

Case, Rogers, Orange, N. J., assignor to Transadean Associates, Inc., New York, N. Y. Wire transposing device. 2,455,227, Nov. 30.

Case, Rogers, Orange, N. J., assignor to Transadean Associates, Inc., New York, N. Y. Transposition bracket. 2,455,228, Nov. 30.

Case, Rogers, Orange, N. J., assignor to Transadean Associates, Inc., New York, N. Y. Transposition bracket. 2,455,229, Nov. 30.

Catlin, Louis F., Jr.: *See*—
Catlin, Louis F., Sr., Rourke, and Catlin.

Catlin, Louis F., Sr., R. Rourke, and L. F. Catlin, Jr., assignors to Apex Tool & Cutter Company, Shelton, Conn. Milling tool. 2,455,230, Nov. 30.

Celanese Corporation of America, assignee: *See*—
Simpson, William J., and Finlayson.

Chain Belt Company, assignee: *See*—
Lind, Arthur C.

Chamberlain, Beverly H.: *See*—
Mace, Harry W., and Chamberlain.

Chatterjea, Prafulla K., and L. W. Houghton, London, W. C. 2, assignors to Standard Telephones and Cables Limited, London, England. Pulse echo system for distance measuring. 2,454,772, Nov. 30.

Chatterjea, Prafulla K., and L. W. Houghton, assignors to Standard Telephones and Cables Limited, London, England. Pulse multiplex transmitter employing a cathode-ray tube time modulator. 2,454,773, Nov. 30.

Chesus, Frank O., Jackson Heights, and F. G. Thomas, Islip, assignors to Federal Telephone and Radio Corporation, New York, N. Y. Antenna. 2,454,774, Nov. 30.

Chindlund, Cecil W., Storm Lake, Iowa. Implement seat support. 2,454,990, Nov. 30.

Christensen Machine Company, The, assignee: *See*—
Belluche, Frank R.

Christison, William F., Gadsden, Ala. Door guard. 2,455,112, Nov. 30.

Chrysler Corporation, assignee: *See*—
Borden, David M.
Saunders, Seymour G.
Slack, Frederic W., and Utz.

Clamp Nail Company, assignee: *See*—
Scianna, Anthony.

Clark, James R., Mobile, Ala. Portable elevator for loading trucks. 2,454,860, Nov. 30.

Clausing, George, assignor to Vulcan Corporation, Portsmouth, Ohio. Shoe last. 2,455,294, Nov. 30.

Clay, Royce W.: *See*—
Morgan, Erving B., and Clay.

Clayton, Martin M., Enon Valley, assignor to National Electric Products Corporation, Pittsburgh, Pa. Electrical raceway. 2,455,231, Nov. 30.

Cleveland Welding Company, The, assignee: *See*—
Mueller, Homer L.

Clewell, Dayton H., Dallas, Tex., assignor, by mesne assignments, to Socony-Vacuum Oil Company, Incorporated, New York, N. Y. Geological exploration system. 2,454,911, Nov. 30.

Coates, Neligh C., Kansas City, Mo. Masonry saw. 2,455,113, Nov. 30.

Coates, Neligh C., Kansas City, Mo. Latching device. 2,455,163, Nov. 30.

Cobb, Emerson G., Mitchell, S. Dak., assignor to United Aircraft Corporation, East Hartford, Conn. Protecting metal surfaces. 2,455,114, Nov. 30.

Cohrt, Eigil, Copenhagen, Denmark, assignor to International Standard Electric Corporation, New York, N. Y. Electric alarm signaling system. 2,454,775, Nov. 30.

Coker, Alva C., San Antonia, Tex. Machine for cutting handholes. 2,454,861, Nov. 30.

Coleman, George L., assignor of one-half to W. O. Huske, Fayetteville, N. C. Apparatus for resurfacing meat blocks. 2,454,992, Nov. 30.

Collins, George T., Philadelphia, Pa., assignor to Allied Chemical & Dye Corporation, New York, N. Y. Product and process of reacting alkenyl succinic esters with sulfur. 2,454,862, Nov. 30.

Combs, Ida, Philadelphia, Pa. Undergarment construction. 2,454,963, Nov. 30.

Comer, Floyd E., Briston, assignor to Buescher Band Instrument Co., Elkhart, Ind. Saxophone key mounting. 2,455,232, Nov. 30.

Commercial Solvents Corporation, assignee: *See*—
Morey, Glen H.

Conant, Harold B., Lincoln, Nebr. Indicating circuit for alternating-current bridges. 2,454,776, Nov. 30.

Conmar Products Corporation, assignee: *See*—
Jones, Lester L.

Continental Can Company, Inc., assignee: *See*—
Coyle, John.
Gray, Harry C.
Jackson, George F.

Continental Oil Company, assignee: *See*—
Jones, William A.

Contos, Harry A., assignee: *See*—
Papas, Gus S.

Cook, Lyman, assignor to The Foxboro Company, Foxboro, Mass. Mechanical linkage. 2,455,329, Nov. 30.

Cooke, Grady C., Winston-Salem, N. C. Variable-speed transmission. 2,454,991, Nov. 30.

Cooley, Perry E., assignor to Thompson Products, Inc., Cleveland, Ohio. Making valves. 2,455,299, Nov. 30.

Copeland, Shirley C., Mansfield, assignor of one-half to E. C. Porter, Dallas, Tex. Automatic throttle control. 2,455,233, Nov. 30.

Cox, John W., assignor, by mesne assignments, to Shellmar Products Corporation, Chicago, Ill. Cellular carton. 2,455,295, Nov. 30.

Coyle, John, Baltimore, Md., assignor to Continental Can Company, Inc., New York, N. Y. Hand sealer for containers. 2,455,045, Nov. 30.

Crawford, Charles P., Chicago, Ill. Cooking unit. 2,454,993, Nov. 30.

Crede, Charles E.: *See*—
Grogan, Charles H., and Crede.

Crespi, Silvio B., Milan, Italy; vested in the Attorney General of the United States. Process and apparatus for treating milk, blood, and other globular liquids. 2,455,235, Nov. 30.

Crick, Cyril C., Pittsburgh, Pa. Conserving and delivering water. 2,455,234, Nov. 30.

Crippen, Basil H., Titusville, Pa. Coupling. 2,454,994. Nov. 30.

Crocker, Guy J., New Brunswick, N. J., assignor to Industrial Tape Corporation. Web tension equalizing device. 2,454,863, Nov. 30.

Crompton & Knowles Loom Works, assignee: *See*—
Turner, Richard G.

Cronan, Walter I., assignor to Federal Telephone and Radio Corporation, New York, N. Y. Manufacturing piezo crystals. 2,454,777, Nov. 30.

Cunningham, Marion M., South Bend, assignor to Mishawaka Rubber and Woolen Manufacturing Company, Mishawaka, Ind. Springy adjustable seating structure. 2,454,912, Nov. 30.

Curran, Elwood M., Los Angeles, Calif. Disposable tooth cleaning kit. 2,454,995, Nov. 30.

Current, Philip M., Fort Wayne, Ind. Case for firearms. 2,455,296, Nov. 30.

Curry, Herman H., United States Coast Guard. Electrical control system. 2,454,778, Nov. 30.

Curtis, Russell R.: *See*—
Curtis, William H. and R. R.

Curtis, William H., Los Angeles, Calif., and R. R. Curtis, Dayton, assignors, by mesne assignments, to Thompson Products, Inc., Cleveland, Ohio. Sliding vane air pump lubrication. 2,455,297, Nov. 30.

Dahleen, Francis L., Los Angeles, Calif. Spring holding device for vehicles. 2,454,996, Nov. 30.

Dan River Mills, Incorporated, assignee: *See*—
Newton, Russell B.

Darvie, Irving: *See*—
Darvie, Samuel and I., and Pearlman.

Darvie, Samuel and I., and S. Pearlman, New York, N. Y. Clasp. 2,455,236, Nov. 30.

Davidson, David, New York, N. Y., and S. J. Kahn, Rutherford, assignors to The Trubek Laboratories, Incorporated, East Rutherford, N. J. Method for the preparation of methallylbenzene and related compounds. 2,454,779, Nov. 30.

Davis, Frank L., College Point, N. Y. Cargo blanket. 2,455,237, Nov. 30.

Dawsey, Lynn H., and R. R. Umhoefer, Kenmore, and C. R. Muehlhausser, assignors to Buffalo Electro-Chemical Company, Inc., Tonawanda, N. Y. Manufacture of hydrogen peroxide. 2,455,238, Nov. 30.

Deakin, Gerald, assignor to International Standard Electric Corporation, New York, N. Y. Telecommunication switching system. 2,454,780, Nov. 30.

Deakin, Gerald, assignor to International Standard Electric Corporation, New York, N. Y. Matched potential control system. 2,454,781, Nov. 30.

De Armond Harry, assignor to Rowe Industries, Toledo, Ohio. Guitar magnetic microphone. 2,455,046, Nov. 30.

De Lancey, Ralph W., assignor to The Miller Company, Meriden, Conn. Liquid fuel burner. 2,455,115, Nov. 30.

De Marco, Louis, Cleveland, Ohio. Centrifugal governor. 2,454,913, Nov. 30.

De Marco, Louis, Cleveland, Ohio. Speed control mechanism. 2,454,914, Nov. 30.

Den Hertog, Martinus: *See*—
Kruithof, Jacob, Kozma, and den Hertog.

Denison, William C., Jr., Delaware, Ohio. Hydraulic apparatus. 2,455,330, Nov. 30.

De Rosa, Louis A., Staten Island, N. Y., assignor to Federal Telephone and Radio Corporation, Newark, N. J. Adjustable expanded sweep for radar oscilloscopes. 2,454,782, Nov. 30.

Detroit Engineering Laboratories, Inc., assignee: *See*—
Du Brie, Stanley R.
Devaney, Lawrence W.: *See*—
McBee, Earl T., and Devaney.
De Vilbiss Company, The, assignee: *See*—
Carr, William P.
Dewhirst, Paul A., assignee: *See*—
Hamer, Leland S.
Dexter, Robert G., Lexington, assignor to Barkley & Dexter, Boston, Mass. Package of individual cleansing tissue. 2,454,864, Nov. 30.
Diamond, Doris, assignee: *See*—
Diamond, Israel.
Diamond, Herbert H., assignee: *See*—
Diamond, Israel.
Diamond, Israel, assignor of one-fourth to R. Diamond, one-fourth to D. Diamond, one-fourth to M. Diamond, and one-fourth to H. H. Diamond, Washington, D. C. Forming eyes on wire. 2,454,997, Nov. 30.
Diamond Match Company, The, assignee: *See*—
Madigan, William A.
Diamond, Mildred, assignee: *See*—
Diamond, Israel.
Diamond, Ruth, assignee: *See*—
Diamond, Israel.
Dimick, Adele L.: *See*—
Fevold, Harry L., and Dimick.
Dingley, Edward N., Jr., Arlington, Va. Radio direction finder. 2,454,783, Nov. 30.
Distillation Products, Inc., assignee: *See*—
Hickman, Kenneth C. D.
Distillers Company, Limited, The, assignee: *See*—
Duval, Bruce, and Tuerck.
Di Toro, Michael J., Brooklyn, N. Y., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill. Time-delay network. 2,454,865, Nov. 30.
Dodge Manufacturing Corporation, assignee: *See*—
Firth, David.
Dole Valve Company, The, assignee: *See*—
Kempton, Leslie A.
Donnelly, Daniel, Milwaukee, assignor to Universal Milking Machine Company, Waukesha, Wis. Spray cooling apparatus for milk cans. 2,455,162, Nov. 30.
Dosker, Cornelius D., assignor to Gamble Brothers, Louisville, Ky. Lighter shell and making same. 2,454,998, Nov. 30.
Doussain, Robert, Villerubane, France. Device for regulating the pitch of two counterrotating coaxial propellers. 2,455,239, Nov. 30.
Dowell, Henry L.: *See*—
Shelton, George L., and Dowell.
Doyle, Charles C., Willoughby, Ohio. Adjustable heater support. 2,455,047, Nov. 30.
Draper Corporation, assignee: *See*—
Nichols, Edward C.
Du Brie, Stanley R., assignor to Detroit Engineering Laboratories, Inc., Detroit, Mich. Attachment for trailer boat caster units. 2,455,048, Nov. 30.
Dupler, Raymond R., Toledo, Ohio, assignor to Sun Oil Company, Philadelphia, Pa. Feed valve. 2,455,240, Nov. 30.
Du Pont, E. I., de Nemours & Company, assignee: *See*—
Hitt, Ira V.
Vaala, Gordon T.
Duval, Bruce, and K. H. W. Tuerck, Banstead, England, assignors to The Distillers Company, Limited, Edinburgh, Scotland. Manufacture of ethylhexoic acid. 2,455,241, Nov. 30.
Dwyer, Martin, Hewlett Harbor, Long Island, N. Y. Emergency day and night signaling device. 2,455,242, Nov. 30.
Eastman Kodak Company, assignee: *See*—
Glass, Dudley B., Vittum, and Weissberger.
Eaton, Wilfred A., Oakville, Conn., assignor to Bendix-Westinghouse Automotive Air Brake Company, Elyria, Ohio. Combined brake and steering mechanism. 2,454,999, Nov. 30.
Ebeling, James A., Charleston, W. Va. Radio position finding system. 2,455,164, Nov. 30.
Eckel, Joseph C., Ingram, and H. E. Romine, Crafton, Pa. Enameling. 2,455,331, Nov. 30.
Eclipse Moulded Products Company, assignee: *See*—
Nash, James.
Edwards, Paul G., and H. W. Herrington, Verona, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Shockproof electromagnetic circuit controller. 2,455,049, Nov. 30.
Eisenberger, Sidney, New York, and S. Machila, New Rochelle, assignors to O. D. Chemical Corporation, New York, N. Y. Nondusting detergent compositions. 2,455,050, Nov. 30.
Elder, Charles J., assignor to The Moore Company, Muncie, Ind. Bed spring. 2,454,964, Nov. 30.
Elder, Charles J., assignor to The Moore Company, Muncie, Ind. Bed spring. 2,454,965, Nov. 30.
Engel, James S., New Rochelle, assignor to Federal Telephone and Radio Corporation, New York, N. Y. High-frequency power supply to multiple loads. 2,454,784, Nov. 30.
Engle, Loy S., Harrington Park, E. Sheridan, South Bound Brook, N. J., and E. K. Fischer, Long Island City, assignors to Interchemical Corporation, New York, N. Y. Making urea-aldehyde resin dispersions. 2,454,785, Nov. 30.
Eppig, Henry J.: *See*—
Hart, David, and Eppig.
Epprecht, Edward H., Cheswick, assignor to Gulf Research & Development Company, Pittsburgh, Pa. Apparatus for automatic control of heat input to stillpots. 2,455,243, Nov. 30.
Evans, Charles S., Atherton, Calif., assignor, by mesne assignments, to Morton Gregory Corporation. Stud for welding. 2,455,244, Nov. 30.
Evans, Theodore W.: *See*—
Hearne, George W., Evans, and Yale.
Fabricon Products, Inc., assignee: *See*—
Welk, Karl.
Fairbank, Murray N.: *See*—
Carbone, Joseph F., and Fairbank.
Fairbanks, Henry N., Beverly Hills, assignor to Mitchell Camera Corporation, West Hollywood, Calif. Film sprocket clamp. 2,455,051, Nov. 30.
Fairey Aviation Company Limited, The, assignee: *See*—
Forsyth, Archibald G.
Fansteel Metallurgical Corporation, assignee: *See*—
Holmes, Carl E.
Farles Manufacturing Company, assignee: *See*—
Masterson, William F.
Faus, Harold T., Lynn, Mass., assignor to General Electric Company. Heated stylus inkless recorder. 2,454,966, Nov. 30.
Faust, Jacob: *See*—
Liberthson, Leo, and Faust.
Faust, Jacob, Belleville, N. J., assignor to L. Sonneborn Sons, Inc. Viscosity reduction of petroleum mahogany sulfonate hydrocarbon solutions. 2,454,825, Nov. 30.
Faust, Jacob, Belleville, N. J., assignor to L. Sonneborn Sons, Inc. Viscosity reduction of petroleum mahogany sulfonate hydrocarbon solutions. 2,454,828, Nov. 30.
Federal Telephone & Radio Corporation, assignee: *See*—
Sherman, Vernon W., and Wheeler.
Federal Telephone and Radio Corporation, assignee: *See*—
Brillouin, Leon N.
Burroughs, Gordon S.
Chesus, Frank O., and Thomas.
Cronan, Walter I.
De Rosa, Louis A.
Engel, James S.
Frink, Frederick W., and Kaplan.
Grieg, Donald D.
Hartstein, Sidney R., and Stolte.
Israelski, Ignatius J.
Kandolan, Armig G.
Kennedy, Arthur.
Labin, Emile.
Labin, Emile, and Grieg.
Libby, Lester L.
Richardson, Avery G., and Kaplan.
Skinker, Murray F.
Warner, Arthur J., and Bakst.
Feitl, Rudolf, Brooklyn, assignor to Waldes Koh-I-Noor, Inc., Long Island City, N. Y. Tool for handling retaining rings. 2,455,165, Nov. 30.
Fevold, Harry L., and A. L. Dimick, assignors to United States of America as represented by the Secretary of Agriculture. Isolation of lipovitellenin from egg yolk. 2,454,915, Nov. 30.
Filbert, John P., assignee: *See*—
Zimmerman, Ernest F.
Finlayson, Donald: *See*—
Simpson, William J., and Finlayson.
Firth, David, South Bend, assignor to Dodge Manufacturing Corporation, Mishawaka, Ind. Shaft bearing. 2,455,166, Nov. 30.
Fischer, Earl K.: *See*—
Engle, Loy S., Sheridan, and Fischer.
Fisher, Harold J., Port Washington, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Signal receiving system. 2,455,052, Nov. 30.
Flint, Edward F., Brighton, assignor to Bausch & Lomb Optical Company, Rochester, N. Y. Optical method and apparatus for checking propeller blades. 2,455,053, Nov. 30.
Ford Motor Company, assignee: *See*—
Jovanovich, Milton, and Wharam.
Wharam, John J., and Jovanovich.
Forster, Warren S.: *See*—
Scalera, Mario, and Forster.
Forsyth, Archibald G., Cheam, assignor to The Fairey Aviation Company Limited, Hayes, Middlesex, England. Electrically operated pitch changing mechanism. 2,455,000, Nov. 30.
Fortin, Victor, La Tuque, Quebec, Canada. Chimney scraper. 2,455,001, Nov. 30.
Foudy, Francis W., assignor to Norton Company, Worcester, Mass. Crankpin grinding machine. 2,455,002, Nov. 30.
Foulkes, Christopher H., assignor to Standard Telephones and Cables Limited, London, England. Electron discharge apparatus. 2,454,786, Nov. 30.
Foxboro Company, The, assignee: *See*—
Bowditch, Hoel L.
Cook, Lyman.
Francek, Joseph R., Fox River Grove, assignor to E. J. Sheehan, Chicago, Ill. Dry expansion of wood veneer. 2,454,787, Nov. 30.
Francis, Louis, Union City, N. J. Expansible chamber motor with valved flexible piston. 2,455,245, Nov. 30.

Franklin, Albert W., New York, N. Y. Radio tube socket. 2,455,300, Nov. 30.
French Oil Mill Machinery Company, The, assignee: *See*—
Stacy, Thomas F.
Frese, Joseph F., assignor to The Monitor Controller Company, Baltimore, Md. Multiple contactor. 2,454,788, Nov. 30.
Frey, Frederick E., Bartlesville, Okla., assignor to Phillips Petroleum Company. Alkylation of paraffins in presence of hydrofluoric acid. 2,455,003, Nov. 30.
Frink, Frederick W., East Orange, N. J., and M. Kaplan, Brooklyn, assignors to Federal Telephone and Radio Corporation, New York, N. Y. Tuning control mechanism. 2,454,789, Nov. 30.
Frost, Leslie R., Southhampton, England. Electric selective signaling system. 2,454,967, Nov. 30.
Fuge, Harry B., Somerville, assignor to The Singer Manufacturing Company, Elizabeth, N. J. Single-phase induction-motor control system. 2,454,968, Nov. 30.
Gaines, Walter S.: *See*—
Meyers, Ellwood H., and Gaines.
Gair, Robert, Company, Inc., assignee: *See*—
Benoit, Leon.
Gallaher, Andrew J., St. Louis, Mo. Boiler of tubular-section type. 2,454,866, Nov. 30.
Gallmeyer & Livingston Company, assignee: *See*—
Bunker, Vincent W.
Gamble Brothers, assignee: *See*—
Dosker, Cornelius D.
Gamble, Ralph M., assignor to Jones & Lamson Machine Company, Springfield, Vt. Machine tool. 2,454,916, Nov. 30.
Gamrath, Harry R., assignor to Monsanto Chemical Company, St. Louis, Mo. Plasticizers for polyvinyl acetal resins. 2,455,301, Nov. 30.
Garrett, Emil, United States Marine Corps. Firing mechanism. 2,454,790, Nov. 30.
Garrett, Joseph W., Detroit, Mich. Bus bar bender. 2,454,867, Nov. 30.
Garside, John I., West Boylston, assignor to Norton Company, Worcester, Mass. Grinding machine. 2,455,004, Nov. 30.
Geddes, George A., Minneapolis, Minn. Brake and clutch mechanism for transmissions. 2,454,917, Nov. 30.
Geddes, George A., Minneapolis, Minn. Spinning top. 2,454,918, Nov. 30.
Geiger, Lyle M., Edgewood, and D. L. Marsh, Avalon, assignors to The Neville Company, Neville Island, Pittsburgh, Pa. Water dispersible phenothiazine and producing same. 2,455,054, Nov. 30.
General Electric Company, assignee: *See*—
Barnes, Norman F.
Faus, Harold T.
Lafferty, James M.
Langmuir, Robert V.
Mason, Charles R.
Norgaard, Donald E.
Safford, Moyer M.
Snell, De Witt S., and Grobel.
Sobell, Morton.
General Industries Company, The, assignee: *See*—
Sweighert, David V.
General Motors Corporation, assignee: *See*—
Berkeley, Harrison C.
Brown, James V.
McCormick, Francis H.
Sullivan, Franklin S.
Wallace, De Loss D.

Breth, Walter J.
Gerlach, Frank A.: *See*—
Matthews, Albert, and Gerlach.
Gibson, Austin A.: *See*—
Morgan, Leslie B., Russell, Gibson, Kinnear, and Heyes.
Gibson, William A., and C. W. Mayer, Allentown, Pa., assignors to Bradley Pulverizer Company, Boston, Mass. Removable drive shaft unit for pulverizing mills. 2,454,868, Nov. 30.
Gibson, William T., assignor to Standard Telephones and Cables Limited, London, England. Vacuum tube and mounting therefor. 2,454,791, Nov. 30.
Gilbert, Roswell W., Montclair, assignor to Western Electrical Instrument Corporation, Newark, N. J. Dual electric instrument. 2,455,167, Nov. 30.
Gilmore, Roy E., Portland, Oreg. Folding child's vehicle. 2,455,168, Nov. 30.
Gittus, Virgil O., Brooklyn, N. Y. Method of and apparatus for measuring the color quality of light. 2,455,116, Nov. 30.
Glass, Dudley B., P. W. Vittum, and A. Weissberger, assignors to Eastman Kodak Company, Rochester, N. Y. Colored couplers. 2,455,169, Nov. 30.
Glass, Dudley B., P. W. Vittum, and A. Weissberger, assignors to Eastman Kodak Company, Rochester, N. Y. Colored couplers. 2,455,170, Nov. 30.
Glavis, Frank J., Elkins Park, and H. T. Neher, Bristol, assignors to Rohm & Haas Company, Philadelphia, Pa. Noncombustible hydraulic fluid. 2,455,117, Nov. 30.
Glidden Company, The, assignee: *See*—
Hampton, Burt L.
Goldsby, Arthur R., Beacon, and C. W. Watson, Tuckahoe, assignors to The Texas Company, New York, N. Y. Alkylation method. 2,454,869, Nov. 30.
Goodrich, B. F., Company, The, assignee: *See*—
Hunter, Willson H.
Goodwin, Carl W., Plainfield, N. J., and H. W. Martin, Malverne, N. Y., assignors to American Seal-Kap Corporation of Delaware, Wilmington, Del. Cap applying machine. 2,455,246, Nov. 30.
Gotti, George A., New York, A. Killian, Elmhurst, and N. Volpicelli, Astoria, N. Y. Extension clasp for bands such as bracelets. 2,455,302, Nov. 30.
Grate, Earl L., Salem, Ohio. Rotary pump. 2,455,303, Nov. 30.
Gray, Harry C., Chicago, Ill., assignor to Continental Can Company, Inc., New York, N. Y. Curing frame for resin impregnated stock sheets. 2,455,055, Nov. 30.
Gregor, Edmund L.: *See*—
Hagen, John A., Prendergast, and Gregor.
Gregory, Morton, Corporation, assignee: *See*—
Evans, Charles S.
Grieg, Donald D.: *See*—
Labin, Emile, and Grieg.
Grieg, Donald D., Forest Hills, assignor to Federal Telephone and Radio Corporation, New York, N. Y. Pulse multiplex communication system. 2,454,792, Nov. 30.
Griest, Raymond H., Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Electric motor control apparatus. 2,455,247, Nov. 30.
Grisanti, Frank J., Forrestville, N. Y. Apparatus for use in applying wire to rows of plants. 2,454,870, Nov. 30.
Grobel, Lloyd P.: *See*—
Snell, De Witt S., and Grobel.
Grogan, Charles H., West Falls Church, Va., and C. E. Crede, Winchester, Mass. Shock gauge. 2,454,793, Nov. 30.
Guellich, Gustav E., Buffalo, N. Y., assignor, by mesne assignments, to American Optical Company, Southbridge, Mass. Adhesive and joining elements therewith. 2,455,118, Nov. 30.
Gulf Oil Corporation, assignee: *See*—
Smith, Herschel G., Cantrell, and Peters.
Gulf Research & Development Company, assignee: *See*—
Epprecht, Edward H.
Versaw, Forest F.
Gunderson, Norman R., Pasadena, Calif. Nonlinear electrooptical system. 2,454,871, Nov. 30.
Gustin-Bacon Manufacturing Company, assignee: *See*—
Stephens, Joseph F.
Guyer, Reynolds, assignor to Waldorf Paper Products Company, St. Paul, Minn. Sealing cartons. 2,455,304, Nov. 30.
Haantjes, Johan, Eindhoven, Netherlands, assignor, by mesne assignments, to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. System for magnetic deflection in cathode-ray tubes. 2,455,171, Nov. 30.
Hagan, Cora L., South Ozone Park, N. Y., assignor to The Lord Baltimore Press, Baltimore, Md. Multiply container with dispensing outlet secured thereto. 2,454,919, Nov. 30.
Hagdahl, John E., assignor to Telefonaktiebolaget L. M. Ericsson, Stockholm, Sweden. Accumulator meter. 2,455,056, Nov. 30.
Hagen Corporation, assignee: *See*—
Markson, Alfred A.
Hagen, John A., Glen Rock, L. Prendergast, Passaic, and E. L. Gregor, Ramsey, assignors to Molded Latex Products, Inc., Passaic, N. J. Balloon. 2,455,248, Nov. 30.
Hakanson, Alfred, Alhambra, Calif. Sash holder. 2,454,794, Nov. 30.
Hall, Bertie R., El Cerrito, Calif. Collapsible gocart. 2,455,119, Nov. 30.
Hall, Lee R., Tonasket, Wash. Internal pipe wrench. 2,455,005, Nov. 30.
Haller, Lawrence F., San Antonio, Tex. Rotary hydraulic coupling with automatic speed control. 2,455,249, Nov. 30.
Hallinan, William W., Racine, Wis. Heating system. 2,455,250, Nov. 30.
Hamer, Leland S., Long Beach, assignor of one-fourth to P. A. Dewhirst, Los Angeles, Calif. Pipe-line fitting. 2,455,120, Nov. 30.
Hamer, Leland S., Long Beach, assignor of one-fourth to P. A. Dewhirst, Los Angeles, Calif. Fitting for pipe lines. 2,455,121, Nov. 30.
Hampton, Burt L., Jacksonville, Fla., assignor, by mesne assignments, to The Glidden Company, Cleveland, Ohio. Polymerization of rosin. 2,454,795, Nov. 30.
Hampton, Burt L., Jacksonville, Fla., assignor, by mesne assignments, to The Glidden Company, Cleveland, Ohio. Polymerization of rosin. 2,454,796, Nov. 30.
Hansen, Charles W., and F. N. G. Kranick, assignors to J. I. Case Company, Racine, Wis. Windrow device. 2,455,122, Nov. 30.
Hanson, Frank E.: *See*—
Richa, John H., and Hanson.
Hardy, Elizabeth M.: *See*—
Scalera, Mario, Lester, and Hardy.
Hardy, René, Lyon, France, assignor to International Standard Electric Corporation, New York, N. Y. Radioelectric receiver, particularly for watch on broad frequency bands. 2,454,797, Nov. 30.

Hare, Donald G. C., Roslyn, N. Y., assignor to the United States of America as represented by the Secretary of the Navy. Wide-range audio-frequency amplifier. 2,455,332, Nov. 30.

Harrington, Joseph, Riverside, Ill. Centrifugal separation of solids according to specific gravity. 2,454,798, Nov. 30.

Harris, Alexander, Scobeyville, N. J., assignor to Ronson Art Metal Works, Inc. Fuel indicating lighter. 2,454,872, Nov. 30.

Harris Langenberg Hat Co., assignee: *See*—
Kohler, Oliver and William Rieder.

Harris, Milton A., Gloucester, assignor to Sylvania Electric Products Inc., Salem, Mass. Fluorescent lamp locking device. 2,455,333, Nov. 30.

Hart, David, and H. J. Eppig, Dover, N. J. Producing protective coatings on magnesium powder. 2,454,799, Nov. 30.

Hart, Kenneth V., Cleveland, Ohio. Electric welding apparatus. 2,455,057, Nov. 30.

Hartford National Bank and Trust Company, trustee, assignee: *See*—
Haantjes, Johan.

Hartmann Company, assignee: *See*—
Barton, George G.

Hartstein, Sidney R., New Brunswick, N. J., and F. Stolte, St. Albans, assignors to Federal Telephone and Radio Corporation, New York, N. Y. Insulated electric cable and insulation therefor. 2,454,800, Nov. 30.

Hartwick, Louis M.: *See*—
Kinney, Selwyne P., and Hartwick.

Harvey, George G.: *See*—
Buchwalter, Louise, and Harvey.

Hays, Russell R., Lawrence, Kans. Counter torque mechanism for helicopters. 2,455,006, Nov. 30.

Hayslip, Homer C., Atlanta, assignor of one-half to P. E. Arnall, Griffin, Ga. Marking system. 2,455,007, Nov. 30.

Hazeltine Research, Inc., assignee: *See*—
Di Toro, Michael J.

Hearne, George W., El Cerrito, T. W. Evans, Oakland, and H. L. Yale, Berkeley, assignors to Shell Development Company, San Francisco, Calif. Production of 2-monosubstituted pyrimidines. 2,455,172, Nov. 30.

Heideman, Fred J., assignee: *See*—
Johnson, George L.

Heineman, Emil J., Chicago, Ill., assignor, by mesne assignments, to Kell Lock Co. Inc., Charlestown, N. H. Lock construction. 2,454,920, Nov. 30.

Heinemann, Heinz, Upper Darby, assignor to Porocel Corporation, Philadelphia, Pa. Production of aluminum fluoride gels. 2,454,921, Nov. 30.

Herman, Daniel F., assignor to Publicker Industries Inc., Philadelphia, Pa. Reacting acetylene and potassium hydroxide. 2,455,058, Nov. 30.

Herrington, Harold W.: *See*—
Edwards, Paul G., and Herrington.

Hersey, Donald S., assignor to United Aircraft Corporation, East Hartford, Conn. Constant thrust fan. 2,455,251, Nov. 30.

Heth, Sherman C., assignor to J. I. Case Company, Racine, Wis. Air cleaning device for motor vehicles. 2,455,252, Nov. 30.

Heva, Jack A., Seattle, Wash. Thermostatic device for draining condensate from steam cylinders and the like. 2,455,305, Nov. 30.

Heyes, Reginald G.: *See*—
Morgan, Leslie B., Russell, Gibson, Kinnear, and Heyes.

Hickman, Kenneth C. D., assignor to Distillation Products, Inc., Rochester, N. Y. Vacuum unobstructed path distillation apparatus. 2,445,059, Nov. 30.

Higley, Frank R., Cleveland Heights, Ohio, assignor to Bryant Heater Company. Thermally responsive unit. 2,455,306, Nov. 30.

Hill, Thomas C., Parkville, and W. A. Schmidt, assignors to The Glenn L. Martin Company, Middle River, Md. Constant volume expansible brake line. 2,455,334, Nov. 30.

Himmer, Harold H., Aberdeen, Md. Rotating band. 2,454,801, Nov. 30.

Hipps, Herbert E., U. S. Navy. Portable surgical table. 2,454,802, Nov. 30.

Hite, Everett C., assignor to The Timken Roller Bearing Company, Canton, Ohio. Basic refractory structures. 2,454,922, Nov. 30.

Hitt, Ira V., Waynesboro, Va., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Yarn treating apparatus. 2,455,173, Nov. 30.

Hitt, Ira V., Waynesboro, Va., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Free fall fiber. 2,455,174, Nov. 30.

Hohl, John, Toledo, Ohio, assignor to Owens-Illinois Glass Company. Capping machine. 2,455,175, Nov. 30.

Hollins, Abraham and J., New York, N. Y. Control switch assembly. 2,454,873, Nov. 30.

Hollins, Jesse: *See*—
Hollins, Abraham and J.

Holmes, Carl E., La Crescenta, Calif., assignor to Fansteel Metallurgical Corporation, North Chicago, Ill. Selenium rectifier element. 2,455,176, Nov. 30.

Holmes, William R., New York, N. Y., assignor to Bendix Aviation Corporation, Teterboro, N. J. Reverse current relay and system. 2,455,060, Nov. 30.

Hood, Arthur J., Reno, Nev. Surgical cast cutter. 2,455,008, Nov. 30.

Hood, Arthur J., Reno, Nev. Surgical cast shears. 2,455,009, Nov. 30.

Hoover, Charles O., Houston, Tex., assignor to Air Reduction Company, Incorporated, New York, N. Y. Treatment of liquid hydrocarbons. 2,455,061, Nov. 30.

Houghton, Leslie W.: *See*—
Chatterjea, Prafulla K., and Houghton.

Howell, Alleyne C., Jr., Dallas, Tex. Emergency wheel. 2,454,923, Nov. 30.

Hoyer, Arnold, Conshohocken, Pa., assignor to Owens-Illinois Glass Company, Toledo, Ohio. Thermohydrometer. 2,455,010, Nov. 30.

Huetten, Clarence, assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind. Vibrator and circuit therefor. 2,455,253, Nov. 30.

Hunter, Willson H., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Covering for preventing ice formation on aircraft. 2,454,874, Nov. 30.

Hurd, Loren C., Jenkintown, A. J. Vander Weyden, and J. D. Stroupe, assignors to Rohm & Haas Company, Philadelphia, Pa. Zirconia opacifiers and method of making. 2,455,123, Nov. 30.

Hurst, George L., assignor of one-half to A. Bauer, and one-half to E. Thompson, San Francisco, Calif. Barrel washer. 2,454,924, Nov. 30.

Huske, William O., assignee: *See*—
Coleman, George L.

Hyde, Robert W., Englewood, N. J. Soldering iron. 2,454,875, Nov. 30.

Ifield, Richard J., Ealing, London, assignor to Joseph Lucas Limited, Birmingham, England. Variable stroke pump. 2,455,062, Nov. 30.

Imperial Chemical Industries Limited, assignee: *See*—
Bremner, John G. M., and Jones.
Jones, Elwyn.
Morgan, Leslie B., Russell, Gibson, Kinnear, and Heyes.
Whetstone, John, and Taylor.

Induction Heating Corp., assignee: *See*—
Levin, Nathan.

Industrial Tape Corporation, assignee: *See*—
Crocker, Guy J.

Ingels, Clarence W., St. Albans, N. Y. Thermal alarm apparatus. 2,455,011, Nov. 30.

Interchemical Corporation, assignee: *See*—
Engle, Loy S., Sheridan, and Fischer.

International Standard Electric Corporation, assignee: *See*—
Cabes, Lucien A. B.
Bishop, Herbert S.
Busnel, Francoise A. M.
Cohrt, Eigil.
Deakin, Gerald.
Hardy, René.
Kruithof, Jacob, Kozma, and den Hertog.
Lalande, Marc A.
Lehmann, Gerard J.
Levy, Maurice M.
Powers, Stephen J.
Searle, Arthur M.

Interval Instruments, Inc., assignee: *See*—
Rieber, Frank.

Irish, Russell E., Pittsburgh, Pa. Mechanical mixing bowl. 2,455,177, Nov. 30.

Irvin, Basil D., Ottawa, Ontario, assignor of one-half to N. Samuel, Toronto, Ontario, Canada. Traction device for wheeled vehicles. 2,455,307, Nov. 30.

Israelski, Ignatius J., Jersey City, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y. Connecting base plate. 2,454,803, Nov. 30.

Jackson, George F., Baltimore, Md., assignor to Continental Can Company, Inc., New York, N. Y. Forming metal closures for paper containers. 2,455,063, Nov. 30.

Jacobi, Edward N., assignor to Briggs & Stratton Corporation, Milwaukee, Wis. Automatic keyhole lock cover. 2,454,925, Nov. 30.

Jacobi, Edward N., assignor to Briggs & Stratton Corporation, Milwaukee, Wis. Lock device for compartment doors. 2,454,926, Nov. 30.

Janette, John T., Kenilworth, assignor to Janette Manufacturing Company, Chicago, Ill. Centrifugally operated electric governor. 2,455,335, Nov. 30.

Janette Manufacturing Company, assignee: *See*—
Janette, John T.

Jarowski, Charles I., Springfield, assignor to Wyeth Incorporated, Philadelphia, Pa. Antioxidant. 2,455,256, Nov. 30.

Jarowski, Charles I., Springfield, and E. T. Stiller, assignors to Wyeth Incorporated, Philadelphia, Pa. Antioxidants. 2,455,254, Nov. 30.

Jarowski, Charles I., Springfield, E. T. Stiller, Philadelphia, and M. B. Williamson, Lansdowne, assignors to Wyeth Incorporated, Philadelphia, Pa. Preparing an antioxidant from rice bran. 2,455,255, Nov. 30.

Johnson, George L., assignor of one-fourth to F. J. Heideman, Detroit, Mich. Special purpose file. 2,455,064, Nov. 30.

Johnson, Henry A., Kansas City, Mo. Collapsible container. 2,455,124, Nov. 30.

Johnson, Robert, Verona, assignor to Koppers Company, Inc., Pittsburgh, Pa. Manufacture of tetralol. 2,454,804, Nov. 30.

Jones, David G.: *See*—
Bremner, John G. M., and Jones.

Jones, Elwyn, Ardrossan, Scotland, assignor to Imperial Chemical Industries Limited. Delay action initiator for explosive charges. 2,455,336, Nov. 30.

Jones & Lamson Machine Company, assignee: *See*—
Gamble, Ralph M.

Jones, Lester L., Oradell, assignor to Conmar Products Corporation, Newark, N. J. Winglock slider for slide fasteners. 2,455,178, Nov. 30.

Jones, William A., assignor to Continental Oil Company, Ponca City, Okla. Addition agent for lubricants. 2,455,337, Nov. 30.

Jovanovich, Milton: *See*—
Wharam, John J., and Jovanovich.

Jovanovich, Milton, Detroit, and J. J. Wharam, assignors to Ford Motor Company, Dearborn, Mich. Concentric steering column gearshift. 2,455,179, Nov. 30.

Juravcoff, Paul: *See*—
Balzi, Clemente, Juravcoff, and Ristenpart.

Justi, H. D., & Son, Inc., assignee: *See*—
Slack, Fred A., Jr.

Kahn, Samuel J.: *See*—
Davidson, David, and Kahn.

Kalwo, Ludwig J., Bronx, N. Y., assignor, by mesne assignments, to Keil Lock Co. Inc., Charlestown, N. H. Knob construction for locks. 2,454,927, Nov. 30.

Kalwo, Ludwig J., Bronx, N. Y., assignor, by mesne assignments, to Keil Lock Co. Inc., Charlestown, N. H. Lock construction. 2,454,928, Nov. 30.

Kandolan Armig G., assignor to Federal Telephone and Radio Corporation, New York, N. Y. Vertical scanning antenna-reflector system. 2,454,805, Nov. 30.

Kaplan, Murray: *See*—
Frink, Frederick W., and Kaplan.
Richardson, Avery G., and Kaplan.

Kaufman, Philip, and R. Stovall, Kansas City, Mo. Footrest and pedal extension. 2,454,969, Nov. 30.

Kearney, James R., Corporation, assignee: *See*—
Oaklwy, Thurman.

Keil Lock Co., Inc., assignor: *See*—
Heineman, Emil J.
Kalwo, Ludwig J.

Keller, Spencer R., Handley, W, Va. Adjustable internal expansion grinder. 2,455,065, Nov. 30.

Kemmer, Paul H., Fairfield, and C. E. Reichert, and C. S. Butt, Jr., Dayton, Ohio. Mounting machine guns in airplanes. 2,454,806, Nov. 30.

Kempf, Paul S., Brookline, Mass. Garment hanger. 2,455,066, Nov. 30.

Kempton, Leslie A., assignor to The Dole Valve Company, Chicago, Ill. Flow control. 2,454,929, Nov. 30.

Kennedy, Arthur, Wood-Ridge, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y. Control circuits. 2,454,807, Nov. 30.

Kennedy, Frank J., Brooklyn, N. Y., assignor to National Electric Products Corporation, Pittsburgh, Pa. Thinwall tubing connector. 2,455,180, Nov. 30.

Killian, Andrew: *See*—
Gotti, George A., and Killian, and Volpicelli.

Kimberlin, Charles N., Jr.: *See*—
Pierce, Jerry A., Kimberlin.

King, Frederick H., Detroit, Mich. Marble game. 2,455,012, Nov. 30.

Kinnear, Robert A.: *See*—
Morgan, Leslie B., Russell, Gibson, Kinnear, and Heyes.

Kinney, S. P., Engineers, Inc., assignee: *See*—
Kinney, Selwyne P., and Hartwick.

Kinney, Selwyne P., Crafton, and L. M. Hartwick, Beaver, assignors, by mesne assignments, to S. P. Kinney Engineers, Inc., Pittsburgh, Pa. Strainer. 2,455,181, Nov. 30.

Kirkpatrick, Willard H., and D. L. Wilson, Sugar Land, assignors to Visco Products Company, Houston, Tex. Reagent and resolving emulsions. 2,454,808, Nov. 30.

Klingener, John C.: *See*—
Kreamer, William H., Klingener, and Baner.

Klinicki, Anthony S., Detroit, Mich. Fish hook remover. 2,455,013, Nov. 30.

Kohler, Oliver, and W Rieder, Lebanon, Ill, said Kohler assignor to Harris Langenberg Hat Co., St. Louis, Mo. Plant for the rapid manufacture of straw hats. 2,455,257, Nov. 30.

Koppers Company, Inc., assignee: *See*—
Johnson, Robert.

Kozma, Ladislas: *See*—
Kruithof, Jacob, Kozma, and den Hertog.

Kranick, Frank N. G.: *See*—
Hansen, Charles W., and Kranick.

Kreamer, William H., J. C. Klingener, and E. K. Bauer, Meadville, Pa., assignors to American Viscose Corporation, Wilmington, Del. Apparatus for treating filamentary material. 2,454,930, Nov. 30.

Kruithof, Jacob, L. Kozma, and M. den Hertog, Antwerp, Belgium, assignors to International Standard Electric Corporation, New York, N. Y. Telephone system utilizing register controlled final selector switches. 2,454,809, Nov. 30.

Kyle, William D., Jr., Milwaukee, and C. Schindler, Wauwatosa, Wis., assignors to Line Material Company. Automatic reclosing circuit breaker. 2,455,067, Nov. 30.

Labin, Emile, New York, N. Y., assignor to Federal Telephone and Radio Corporation, Newark, N. J. Radio transmitting and receiving system. 2,454,810, Nov. 30.

Labin, Emile, New York, and D. D. Grieg, Forest Hills, assignors to Federal Telephone and Radio Corporation, New York, N. Y. Pulse signaling system. 2,454,811, Nov. 30.

Lafferty, James M., Colonie, N. Y., assignor to General Electric Company. Ultra high frequency electric discharge device. 2,454,970, Nov. 30.

Lalande, Marc A., Lyon, France, assignor to International Standard Electric Corporation, New York, N. Y. Electromechanical amplifier. 2,454,812, Nov. 30.

Land, Edwin H., assignor to Polaroid Corporation, Cambridge, Mass. Apparatus for exposing and processing photographic film. 2,455,125, Nov. 30.

Land, Edwin H., assignor to Polaroid Corporation, Cambridge, Mass. Apparatus for exposing and processing photographic film. 2,455,126, Nov. 30.

Landry, Victor E., Pittsburgh, Pa. Tonsillar instrument. 2,455,068, Nov. 30.

Langley, Sarah L., administratrix: *See*—
Neely, Charles A.

Langmuir, Robert V., Schenectady, N. Y., assignor to General Electric Company. Frequency modulation. 2,454,971, Nov. 30.

Larson, Charles O., Sterling, Ill. Picture hanger. 2,454,813, Nov. 30.

Larson, Raymond T., Park Ridge, Ill., assignor, by mesne assignments, to Arnolt Corporation. Automotive spotlight. 2,454,931, Nov. 30.

Launder, William D., Los Angeles, Calif. Tube lock. 2,455,069, Nov. 30.

La Vallee, Oscar A., Wolf Point, Mont. Refrigerator drawer. 2,455,182, Nov. 30.

La Valliere, Walter J., Sheboygan, Wis. Spring supported rocking chair. 2,454,932, Nov. 30.

Lawrence, Donald M., Wood-Ridge, assignor to Bendix Aviation Corporation, Teterboro, N. J. Synchronizing mechanism. 2,455,070, Nov. 30.

Lawson, Robert H., Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Gripper mechanism. 2,454,876, Nov. 30.

Laxo, Ed, assignor to Atlas Imperial Diesel Engine Co., Oakland, Calif. Conveyer gripper member for can bodies. 2,455,127, Nov. 30.

Lee, Leighton, II, assignor, by mesne assignments, to Niles-Bement-Pond Company, West Hartford, Conn. Control apparatus for internal-combustion engines. 2,455,308, Nov. 30.

Lee, Theodore, Bejou, Minn. Axe sharpening device. 2,455,014, Nov. 30.

Lehmann, Gerard J., assignor to International Standard Electric Corporation, New York, N. Y. Interference reducing radio receiver. 2,454,814, Nov. 30.

Lenski, Stanley S., La Salle, Ill. Unit-type flush box and toilet construction. 2,455,128, Nov. 30.

Leone, Joseph C., Roxbury, Mass. Lathe dog. 2,455,071, Nov. 30.

Lepperhoff, John H., New York, N. Y. Apparatus for coating the threaded portion of bushings and nuts. 2,455,129, Nov. 30.

Lester, Charles T.: *See*—
Scalera, Mario, Lester, and Hardy.

Levin, Nathan, Brooklyn, assignor to Induction Heating Corp., New York, N. Y. Soldering bourdon tubes and the like. 2,455,309, Nov. 30.

Levitin, Benjamin, Roselle, N. J. Garment hanger. 2,455,258, Nov. 30.

Levy, Maurice M., assignor to Standard Telephone and Cables Limited, London, England. Multichannel pulse communication system employing complex multivibrator modulators. 2,454,815, Nov. 30.

Levy, Maurice M., London, England, assignor to International Standard Electric Corporation, New York, N. Y. Potentiometer. 2,454,816, Nov. 30.

Lewis, William M., Brownfield, Tex. Christmas tree stand. 2,454,877, Nov. 11.

Libby, Lester L., East Orange, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y. Mixer circuit arrangement. 2,454,817, Nov. 30.

Liberthson, Leo, New York, N. Y., and J. Faust, Belleville, N. J., assignors to L. Sonneborn Sons, Inc. Viscosity reduction of petroleum mahogany sulfonate hydrocarbon solutions. 2,454,826, Nov. 30.

Lilly, Eli, and Company, assignee: *See*—
Rohrmann, Ewald.
Shonle, Horace A., and Van Arendonk.

Lily-Tulip Cup Corporation, assignee: *See*—
Amberg, Walter E.

Lind, Arthur C., assignor to Chain Belt Company, Milwaukee, Wis. Scum removing apparatus. 2,455,338, Nov. 30.

Lindley, Curtis, Jr., Empire, Calif. Fruit cutter and pitter with rotary blades. 2,455,072, Nov. 30.

Line Material Company, assignee: *See*—
Kyle, William D., Jr., and Schindler.

Lobdell, Franklin H., Naugatuck, Conn., assignor to The Bullard Company. Tool. 2,455,183, Nov. 30.

Lomax, Frank B., Chicago, Ill., deceased; M. P. Lomax, executrix, assignor to M. P. Lomax, Chicago, Ill. Method of and apparatus for filtering. 2,455,130, Nov. 30.

Lomax, Mary P., assignee, executrix: *See*—
Lomax, Frank B.
Lord Baltimore Press, The, assignee: *See*—
Hagan, Cora L.
Lorentzen Hardware Mf'g. Corp., assignee: *See*—
Nelson, Harry.
Loveless, Donald L., Baltimore, Md., assignor, by mesne assignments, to Armco Steel Corporation. Production of stainless steel. 2,455,073, Nov. 30.
Loveless, Donald L., Baltimore, Md., assignor to Armco Steel Corporation. Production of stainless steel. 2,455,074, Nov. 30.
Lovens Kemiske Fabrik v/Aug. Kongsted, assignee: *See*—
Bennekou, Ingolf.
Lucas, Joseph, Limited, assignee: *See*—
Ifield, Richard J.
Lucht, Victor F., Washington, D. C. Gun recoil spring surge dampener. 2,454,818, Nov. 30.
Luck, David G. C., Hightstown, N. J., assignor to Radio Corporation of America. Frequency modulation. 2,454,933, Nov. 30.
Lummus Company, The, assignee: *See*—
Reed, Carl S.
Lustig, Walter R.: *See*—
Schofield, Earl L., and Lustig.
Mace, Harry W., Glendale, and B. H. Chamberlain, Pasadena, assignors to Aerojet Engineering Corporation, Azusa, Calif. Igniting propellant in rocket motors. 2,455,015, Nov. 30.
Machinefabriek Reineveld N. V., assignee: *See*—
Van Riel, Pieter.
Machlis, Samuel: *See*—
Eisenberger, Sidney, and Machlis.
MacIver, Charles P.: *See*—
Beckwith, Edwin L., and MacIver.
Madigan, William A., Barberton, Ohio, assignor to The Diamond Match Company, New York, N. Y. Printing plate and base mount therefor. 2,455,075, Nov. 30.
Magealson, Harry G., Kokomo, Ind. Single contact dial indicator. 2,455,076, Nov. 30.
Mallory, P. R., & Co., Inc., assignee: *See*—
Huetten, Clarence.
Smith, Cleveland S., Jr., and Blumenthal.
Markson, Alfred A., Mount Lebanon, assignor, by mesne assignments, to Hagan Corporation, Pittsburgh, Pa. Totalizing device. 2,455,184, Nov. 30.
Marler, Albert R., Forest Park, assignor to C. C. Sittler, Chicago, Ill. Fuse puller. 2,454,878, Nov. 30.
Marlin Firearms Company, The, assignee: *See*—
Robinson, Thomas R., Jr.
Marmor, Ralph A.: *See*—
Moyer, Wendell W., and Marmor.
Marsh, Donald L.: *See*—
Geiger, Lyl M., and Marsh.
Martin, George W., Eau Claire, Wis. Mounting for outboard motors. 2,454,972, Nov. 30.
Martin, Glenn L., Company, The, assignee: *See*—
Hill, Thomas C., and Schmidt.
Martin, Gustav J., Philadelphia, and S. Avakian, Oreland, assignors to The National Drug Company, Philadelphia, Pa. 2-Methyl-3-hydroxy-4-hydroxymethyl pyridine and its acid salts. 2,455,259, Nov. 30.
Martin, Harold: *See*—
Goodwin, Carl W., and Martin.
Mason, Charles R., Ballston Spa, N. Y., assignor to General Electric Company. Polarized electromagnetic control device. 2,454,973, Nov. 30.
Masterson, William F., Decatur, assignor, by mesne assignments, to Faries Manufacturing Company, Chicago, Ill. Lamp base assembly. 2,455,131, Nov. 30.
Mastrangelo, Bianca, assignee: *See*—
Mastrangelo, Frank.
Mastrangelo, Faustina, assignee: *See*—
Mastrangelo, Frank.
Mastrangelo, Frank, Fitchburg, assignor of one-half to F. Mastrangelo, Lunenburg, and one-half to B. Mastrangelo, Fitchburg, Mass. Detachable sash fastener. 2,455,077, Nov. 30.
Mathis, John A., and R. W. Milan, Pickneyville, Ill. Electrical oxygen vaporizer and protecting cover. 2,454,934, Nov. 30.
Matthews, Albert, and F. A. Gerlach, Cincinnati, assignors to The American Laundry Machinery Company, Norwood, Ohio. Door securing means. 2,455,132, Nov. 30.
Mattingly, Benjamin J., Center Point, Tex. Fishing tackle. 2,454,879, Nov. 30.
May, Mike D., Durham, N. C. Pitch and chip golf game. 2,455,185, Nov. 30.
Mayer, Charles W.: *See*—
Gibson, William A., and Mayer.
Mayer, Ernest, Leipzig, Germany; vested in the Attorney General of the United States. Mold. 2,454,819, Nov. 30.
McBee, Earl T., West Lafayette, Ind., and L. W. Devaney, Beacon, N. Y., assignors to Purdue Research Foundation, West Lafayette, Ind. Making hexachlorobutadiene. 2,454,820, Nov. 30.
McCarthy, Henry J., Danvers, assignor to Sylvania Electric Products Inc., Salem, Mas. Ultra high frequency tube. 2,455,310, Nov. 30.
McCormick, Claud E., Snyder, Tex. Storage tank rack. 2,455,017, Nov. 30.
McCormick, Francis H., Oakwood, assignor to General Motors Corporation, Dayton, Ohio. Domestic electric heater. 2,455,186, Nov. 30.
McCreary, Harold J., Lombard, assignor to Automatic Electric Laboratories, Inc., Chicago, Ill. Frequency changer. 2,455,078, Nov. 30.
McKee, Philip L., assignor to National Greenhouse Co., Pana, Ill. Glazing and caulking material. 2,454,821, Nov. 30.
McKeown, Irma B., Charlotte, N. C. Gate operating means. 2,455,018, Nov. 30.
McNeill, Robert M., Hollywood, Calif. Pencil holder. 2,455,019, Nov. 30.
McQuaid, Harry W., Los Angeles, Calif. Ecliptic flasher lamp. 2,455,020, Nov. 30.
Meaker Company, The, assignee: *See*—
Miller, Constantine G.
Meerdink, Gerhard J., Arnhem, Netherlands, assignor to American Enka Corporation, Enka, N. C. Regeneration of activated carbon by inorganic liquid treatment. 2,455,260, Nov. 30.
Mennesson, André, Neuilly-sur-Seine, assignor to Société Anonyme Solex, Neuilly-sur-Seine (Seine), France. Liquid distributing device. 2,454,974, Nov. 30.
Mercer, Warren H., Anaheim, Calif. Safety eyeglass case. 2,455,079, Nov. 30.
Meyers, Ellwood H., Brecksville, and W. S. Gaines, Chagrin Falls, Ohio, assignors, by mesne assignments, to Republic Industries, Inc., New York, N. Y. Conduit connection for tanks. 2,455,311, Nov. 30.
Michelman, Nathan, New York, N. Y. Driving means for rolling doors. 2,454,880, Nov. 30.
Michelman, Nathan, New York, N. Y. Adjustable stroke eccentric mechanism. 2,454,881, Nov. 30.
Mieher, Walter W.: *See*—
Barrow, Wilmer L., and Mieher.
Milan, Roland W.: *See*—
Mathis, John A., and Milan.
Milas, Nicholas A., Belmont, Mass., assignor to Research Corporation, New York, N. Y. Ethers of 5-hydroxy, 3-methyl, penta-3-en-yne-1. 2,455,261, Nov. 30.
Miller Company, The, assignee: *See*—
Beals, Gilison W.
De Lancey, Ralph W.
Runge, Richard M.
Miller, Constantine G., assignor to The Meaker Company, Chicago, Ill. Continuous wire and strip electroprocessing machine. 2,454,935, Nov. 30.
Miller, Donald L., Pine City, N. Y., assignor to Bendix Aviation Corporation. Engine starter gearing. 2,455,339, Nov. 30.
Miller, Ralph W., Topango, and E. B. Powell, San Diego, assignors of 75 per cent to said Powell, Pasadena, Calif., and 25 per cent to said Miller. Ordnance chambrage and cartridge case. 2,455,080, Nov. 30.
Milling, Martin A., assignee: *See*—
Wolpert, Walter J.
Mishawaka Rubber and Woolen Manufacturing Company, assignee: *See*—
Cunningham, Marion M.
Mitchell Camera Corporation, assignee: *See*—
Bader, Edward G.
Fairbanks, Henry N.
Moffat, John H., Indianapolis, Ind., Parking device. 2,455,133, Nov. 30.
Molded Latex Products, Inc., assignee: *See*—
Hagen, John A., Prendergast, and Gregor.
Monitor Controller Company, The, assignee: *See*—
Frese, Joseph F.
Monroe Calculating Machine Company, assignee: *See*—
Britten, Edwin F., Jr.
Monsanto Chemical Company, assignee: *See*—
Gamrath, Harry R.
Seymour, Raymond B.
Moore Company, The, assignee: *See*—
Elder, Charles J.
Morey, Glen H., assignor to Commercial Solvents Corporation, Terre Haute, Ind. Preparing unsaturated alcohols. 2,454,936, Nov. 30.
Morf, Ernest, La Chaux-de-Fonds, Switzerland. Shock absorbing bearing. 2,455,081, Nov. 30.
Morgan, Erving B., and R. W. Clay, assignors to American Seating Company, Grand Rapids, Mich. Spring pivot chair structure. 2,455,262, Nov. 30.
Morgan, Leslie B., Baugley, P. Russell, A. A. Gibson, R. A. Kinnear, and R. G. Heyes, Welwyn, Garden City, England, assignors to Imperial Chemical Industries Limited. Plasticizing polyvinyl chloride compositions. 2,455,042, Nov. 30.
Morith, Franklin J., Huntington Park, Calif. Variable speed and power transmission. 2,455,082, Nov. 30.
Moscowitz, Abraham, New York, N. Y., assignor to L. Sonneborn Sons, Inc. Lubricants for textile materials. 2,454,822, Nov. 30.
Moscowitz, Abraham, New York, N. Y., assignor to L. Sonneborn Sons, Inc. Viscosity reduction of petroleum mahogany sulfonate hydrocarbon solutions. 2,454,823, Nov. 30.
Moscowitz, Abraham, New York, N. Y., assignor to L. Sonneborn Sons, Inc. Viscosity reduction of petroleum mahogany sulfonate hydrocarbon solutions. 2,454,824, Nov. 30.

Moscowitz, Abraham, New York, N. Y., assignor to L. Sonneborn Sons, Inc. Viscosity reduction of petroleum mahogany sulfonate hydrocarbon solutions. 2,454,827, Nov. 30.
Motiograph, assignee: *See*—
Wienke, Emil J.
Moyer, Wendell W., and R. A. Marmor, assignors to A. E. Staley Manufacturing Co., Decatur, Ill. Treating glyceride oils with activated magnesium oxide. 2,454,937, Nov. 30.
Muelhausser, Carl R.: *See*—
Dawsey, Lynn H., Umhoefer, and Muehlhausser.
Mueller, Homer L., assignor to The Cleveland Welding Company, Cleveland, Ohio. Kick stand. 2,455,312, Nov. 30.
Mueller, Max B.: *See*—
Teeters, Wilber O., and Mueller.
Mullard Radio Valve Company Limited, assignee: *See*—
Richards, Claude L.
Mungall, Thomas, Sr., assignor of one-half to G. L. Becker, Cleveland, Ohio. Synchronous electric motor. 2,455,134, Nov. 30.
Musser, David M., Orange, N. J., assignor to Pacific Mills, Boston, Mas. Cellulose ethers of 3,4 epoxy 1-butene and their oxidation products. 2,455,083, Nov. 30.
Nash, James, assignor to Eclipse Moulded Products Company, Milwaukee, Wis. Edge for T-square and the like. 2,454,938, Nov. 30.
National Drug Company, The, assignee: *See*—
Martin, Gustav J., and Avakian.
National Electric Products Corporation, assignee: *See*—
Clayton, Martin M.
Kennedy, Frank J.
National Greenhouse Co., assignee: *See*—
McKee, Philip L.
National Technical Laboratories, assignee: *See*—
Beckman, Arnold O.
National Union Radio Corporation, assignee: *See*—
Allen, Howard B., Jr.
Schneider, Gerhard G.
Navy, United States of America, as represented by the Secretary of, assignee: *See*—
Hare, Donald G. C.
Watt, Bob E.
Werner, Frank D.
Neely, Charles A., deceased, Seattle, assignor of forty per cent to H. J. Sweeney, Everson, Wash.; S. L. Langley, administratrix of said C. A. Neely. Deep well pump 2,455,084, Nov. 30.
Neher, Harry T.: *See*—
Glavis, Frank J., and Neher.
Neijstrom, Kenneth, Harrisburg, Pa., assignor to Aircraft-Marine Products, Inc., Elizabeth, N. J. Electrical connector. 2,454,829, Nov. 30.
Nelson, Harry, assignor to Lorentzen Hardware Mf'g. Corp., New York, N. Y. Venetian blind head-bar organization. 2,455,135, Nov. 30.
Neville Company, The, assignee: *See*—
Geiger, Lyle M., and Marsh.
Newman, Barbara, Forest Hills, N. Y. Crib and bed guard. 2,455,340, Nov. 30.
Newton, Russell B., Danville, Va., assignor, by mesne assignments, to Dan River Mills, Incorporated. Tensioned roving and forming same. 2,454,830, Nov. 30.
Niagara Blower Company, assignee: *See*—
Olstad, Martin H., and Williams.
Nicholls, Kenneth H.: *See*—
Rose, Alfred G., and Nicholls.
Nichols, Edward C., Upton, assignor to Draper Corporation, Hopedale, Mass. Harness motions. 2,455,263, Nov. 30.
Niles-Bement-Pond Company, assignee: *See*—
Baierlein, George W.
Lee, Leighton, II.
Noffsinger, Fred P., Greeley, Colo. Potato digger attachment for tractors. 2,455,264, Nov. 30.
Nordquist, Ronald E. J., Maplewood, N. J., assignor to American Can Company, New York, N. Y. Conveyer to fish canning machine. 2,454,831, Nov. 30.
Norgaard, Donald E., Schenectady, N. Y., assignor to General Electric Company. Pulse radar system. 2,455,265, Nov. 30.
Norton Company, assignee: *See*—
Foudy, Francis W.
Garside, John I.
Nudelman, Eoina, Chicago, Ill. Children's amusement device. 2,455,266, Nov. 30.
O. D. Chemical Corporation, assignee: *See*—
Eisenberger, Sidney, and Machlis.
Oakes, Raymond S., Brookfield, Ill. Coin and disk projector for amusement devices. 2,454,939, Nov. 30.
Oakley, Thurman, Belleville, Ill., assignor to James R. Kearney Corporation, St. Louis, Mo. Obtaining load and voltage recordings of electrical distribution systems on a single recorder. 2,454,882, Nov. 30.
Obert, Maximilian J., North Merchantville, N. J., assignor to Radio Corporation of America. Securing leads to electrical capacitors. 2,455,136, Nov. 30.
Olstad, Martin H., Port Washington, and A. E. Williams, White Plains, assignors to Niagara Blower Company, Buffalo, N. Y. Apparatus for cooling compressed gases. 2,454,883, Nov. 30.
Osofsky, Irving B., Buffalo, N. Y. Heat exchanging airplane propeller. 2,455,313, Nov. 30.
Oster, John, Manufacturing Company, assignee: *See*—
Bylund, Eric.
Oughton, Charles D., Rochester, S. Sterling, Irondequoit, and A. F. Turner, Brighton, assignors to Bausch & Lomb Optical Company, Rochester, N. Y. Apparatus for tempering glass articles. 2,455,085, Nov. 30.
Owens, Freeman H., New York, N. Y. Photographic film magazine. 2,455,187, Nov. 30.
Owens-Illinois Glass Company, assignee: *See*—
Hohl, John.
Hoyer, Arnold.
Oxford, William F., Jr., Beaumont, Tex., assignor to Sun Oil Company, Philadelphia, Pa. Drilling fluid. 2,455,188, Nov. 30.
Pacific Mills, assignee: *See*—
Musser, David M.
Pacotto, Joseph D., Dorchester, Mass. Potato ricer. 2,455,267, Nov. 30.
Papas, Gus S., assignor of one-third to H. A. Contos, Chicago, Ill. Centrifugally operated, expanding shoe type, automatic clutch. 2,455,086, Nov. 30.
Parke, Davis & Company, assignee: *See*—
Rawlins, Albert L.
Parker Appliance Company, The, assignee: *See*—
Parker, Arthur L.
Parker, Arthur L., assignor to The Parker Appliance Company, Cleveland, Ohio. Sealing element for valves. 2,455,087, Nov. 30.
Patterson, Wilbur I., Fairfax, Va., and M. B. Williamson, Darby, assignors, by mesne assignments, to Wyeth Incorporated, Philadelphia, Pa. Antioxidant. 2,455,088, Nov. 30.
Paulus, Charles L., Dayton, Ohio. Electric servo. 2,454,832, Nov. 30.
Peaden, William H., Muskogee, Okla. Cleaning device for conduits. 2,454,884, Nov. 30.
Pearlman, Samuel: *See*—
Darvie, Samuel and I., and Pearlman.
Pedersen, Alfred, Warren, Pa. Work holder for woodworking machines. 2,455,189, Nov. 30.
Pelley, Perry H., assignor to Beech Aircraft Corporation, Wichita, Kans. Window molding. 2,454,975, Nov. 30.
Pennington, Gordon R., Bloomfield Hills, Mich. Radio circuit selector switch. 2,455,137, Nov. 30.
Pennsylvania Industrial Chemical Corporation, assignee: *See*—
Burroughs, Samuel G.
Perez, Horacio E., Valhalla, N. Y. Windshield wiper motor. 2,455,089, Nov. 30.
Perkins, George C. H., Hamilton, Mass. Pivoted bender with reversible clamp and former. 2,455,138, Nov. 30.
Perry, Melvin W., Algoma, Wis. Holding frame for core strips. 2,455,268, Nov. 30.
Peters, Harry C., assignor to The T. L. Smith Company, Milwaukee, Wis. Seal for chutes of concrete mixers. 2,454,940, Nov. 30.
Peters, John G.: *See*—
Smith, Herschel G., Cantrell, and Peters.
Petro-Chem Process Company, Incorporated, assignee: *See*—
Wallis, John S., and Throckmorton.
Pfahl, Wilbert C., Silver Lake, Ohio. Truss. 2,454,833, Nov. 30.
Philco Corporation, assignee: *See*—
Bauman, John J.
Bradley, William E.
Phillips Petroleum Company, assignee: *See*—
Frey, Frederick E.
Vinyard, Roy E., Roach, and Skinner.
Pierce, Jerry A., and C. N. Kimberlin, Jr., Baton Rouge, La., assignors to Standard Oil Development Company. Drying hydrogel catalysts by distilling with butanol. 2,454,941, Nov. 30.
Pierce, Jerry A., and C. N. Kimberlin, Jr., Baton Rouge, La., assignors to Standard Oil Development Company. Preparation of spherical adsorbent particles. 2,454,942, Nov. 30.
Pierce, John R., Millburn, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Velocity variation apparatus. 2,455,269, Nov. 30.
Pietzsch, Kurt F., Pittsburgh, Pa., assignor to American Cyanamid Company, New York, N. Y. Fractional condensation of phthalic anhydride. 2,455,314, Nov. 30.
Pike, Robert D., Pittsburgh, Pa. Extracting potash from wyomingite. 2,455,190, Nov. 30.
Ploeger, Clyde E., Evansville, Ind., assignor to Servel, Inc., New York, N. Y. Compressor load protector. 2,454,976, Nov. 30.
Poirette Corsets Inc., assignee: *See*—
Robbins, Jack E.
Polaroid Corporation, assignee: *See*—
Carbone, Joseph F., and Fairbank.
Land, Edwin H.
Porocel Corporation, assignee: *See*—
Heinemann, Heinz.
Porter, Earl C., assignee: *See*—
Copeland, Shirley C.
Powell, Edward B., assignee: *See*—
Miller, Ralph W.

Powers, Stephen J., London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y. Manufacture of base assemblies for electric discharge tubes. 2,454,834, Nov. 30.

Prendergast, Laurence: *See*—
Hagen, John A., Prendergast and Gregor.

Prevost, Auxance N., Deep River, Conn. Piano mechanism. 2,455,139, Nov. 30.

Pritchard, Wilmot T., assignor to Stetson-Ross Machine Company, Seattle, Wash. Hydraulic marine steering gear for operating the rudders of ships. 2,455,090, Nov. 30.

Publicker Industries Inc., assignee: *See*—
Herman, Daniel F.

Purdue Research Foundation, assignee: *See*—
McBee, Earl T., and Devaney.

Radio Corporation of America, assignee: *See*—
Brown, George H.
Luck, David G. C.
Obert, Maximilian J.
Stoize, William J., and Anderson.
Townsend, Charles L.
Usselman, George L.

Ramsey, De Witt, Miami, Fla. Bearing assembly. 2,455,091, Nov. 30.

Ramseyer, Charles F., Old Greenwich, and H. A. Brassert, Washington, Conn., assignors to H. A. Brassert & Company, New York, N. Y. Apparatus for reacting finely divided solid material and a gas. 2,455,092, Nov. 30.

Ravella, Jean A., deceased, by Y. Auda, executrix, Lyon, assignor to Société à responsabilité limitée "Mermet & Virthner," Villeurbonne (Rhone), France. Automatic striking tool. 2,455,270, Nov. 30.

Rawlins, Albert L., Grosse Pointe Woods, assignor to Parke, Davis & Company, Detroit, Mich. N-propyl diaminodiphenylsulfone and obtaining same. 2,454,335, Nov. 30.

Raymond, Thomas E., assignor to Simplex Engineering Company, Zanesville, Ohio. Hydraulic apparatus. 2,455,271, Nov. 30.

Rayner, Philip D., New York, N. Y. Foot pad. 2,454,836, Nov. 30.

Reed, Carl S., assignor to The Lummus Company, New York, N. Y. Heater for hydrocarbon fluids. 2,454,943, Nov. 30.

Reiber, Frank, assignor to Interval Instruments, Inc., New York, N. Y. Pressure meter. 2,455,021, Nov. 30.

Reichert, Carl E.: *See*—
Kemmer, Paul H., Reichert, and Butt.

Republic Flow Meters Company, assignee: *See*—
Rosenberger, Albert J.

Republic Industries, Inc., assignee: *See*—
Meyers, Ellwood H., and Gaines.

Research Corporation, assignee: *See*—
Milas, Nicholas A.

Reynlers, James A., Niles, Mich., assignor to Amino Acids, Inc., Wilmington, Del. Solubilizing protogenous substances. 2,454,837, Nov. 30.

Reynolds, Harry E., Detroit, Mich. Garment hanger. 2,454,944, Nov. 30.

Reynolds, John M., Shreveport, La. Bailer. 2,454,945, Nov. 30.

Richa, John H., and F. E. Hanson, Kansas City, Mo. Adjustable shoulder support for garment finishing apparatus. 2,454,977, Nov. 30.

Richards, Claude L., assignor to The Mullard Radio Valve Company, London, England. Radio wave detector system. 2,455,191, Nov. 30.

Richardson, Avery G., Boonton, N. J., and M. Kaplan, Brooklyn, N. Y., assignors to Federal Telephone and Radio Corporation, Newark, N. J. Plug assembly. 2,454,838, Nov. 30.

Rieder, William: *See*—
Kohler, Oliver, and Rieder.

Ring, Roland, Houston, Tex., assignor to Sperry-Sun Well Surveying Company, Philadelphia, Pa. Retrieving apparatus. 2,454,839, Nov. 30.

Ristenpart, Chester H.: *See*—
Baizi, Clemente, Juravcoff, and Ristenpart.

Roach, Wendell W.: *See*—
Vinyard, Roy E., Roach, and Skinner.

Robbins, Jack E., assignor to Poirette Corsets Inc., New York, N. Y. Panty girdle. 2,455,272, Nov. 30.

Robertshaw-Fulton Controls Company, assignee: *See*—
Strobel, Charles K.

Robinson, Roy H., Chicago, Ill. Preheating installation in boilers for quick heating and steaming. 2,455,192, Nov. 30.

Robinson, Thomas R., Jr., Newton, assignor to The Marlin Firearms Company, New Haven, Conn. Detachable operating handle for retracting breech bolts. 2,454,885, Nov. 30.

Rohm & Haas Company, assignee: *See*—
Glavis, Frank J., and Neher.
Hurd, Loren C., Vander Weyden, and Stroupe.

Rohrmann, Ewald, assignor to Eli Lilly and Company, Indianapolis, Ind. Aldehyde derivatives of 2-aminoalkanes. 2,455,193, Nov. 30.

Romine, Hugh E.: *See*—
Eckel, Joseph C., and Romine.

Ronson Art Metal Works, Inc., assignee: *See*—
Harris, Alexander.

Rose, Alfred G., Gainsborough, and K. H. Nicholls, Freshford, England. Pilot operated hydraulic valve and dither mechanism therefor. 2,455,315, Nov. 30.

Rosenberger, Albert J., assignor to Republic Flow Meters Company, Chicago, Ill. Pressure transmitting instrument. 2,454,946, Nov. 30.

Roth, Arthur J., Detroit, Mich. Automobile towing device. 2,455,140, Nov. 30.

Rourke, Raymond: *See*—
Catlin, Louis F., Sr., Rourke, and Catlin.

Rowe Industries, assignee: *See*—
De Armond, Harry.

Ruben, Samuel, assignee: *See*—
Scudder, Cleveland, Scudder, Jr., and Blumenthal.

Rumsey, Edward C., deceased, Detroit, Mich.; L. G. Rumsey, executrix. Rotary flexible vane pump. 2,455,194, Nov. 30.

Rumsey, Lillian G., executrix: *See*—
Rumsey, Edward C.

Runge, Richard M., assignor to The Miller Company, Meriden, Conn. Wiring channel hanger. 2,455,141, Nov. 30.

Russell, Paul: *See*—
Morgan, Leslie B., Russell, Gibson, Kinnear, and Heyes.

Russell, Stanley D., assignor to J. I. Case Company, Racine, Wis. Combination drawbar and support structure. 2,455,195, Nov. 30.

Ryan, Warren W., Dayton, Ohio. Fighter airplane bomb lift. 2,454,840, Nov. 30.

Sackville, William, U. S. Army, Berkeley, Calif., assignor to United States of America as represented by the Secretary of War. Apparatus for detecting the presence and position of an invisible body by infrared radiation. 2,454,841, Nov. 30.

Sadusky, Edward, and H. T. Thompson, Staples, Minn. Hoist attachment for tractors. 2,455,093, Nov. 30.

Safford, Moyer M., Schenectady, N. Y., assignor to General Electric Company. Preparation of Dimethyl silicone gums. 2,454,759, Nov. 30.

Samuel, Arthur L., Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Velocity variation transmitter-receiver. 2,455,094, Nov. 30.

Samuel, Norman, assignee: *See*—
Irvin, Basil D.

Sapiro, Reuben H., Pinner, England. Prevention of mist and frost on glass and similar sheet material. 2,454,886, Nov. 30.

Saunders, Seymour G., Bloomfield Hills, assignor to Chrysler Corporation, Highland Park, Mich. Clamp for bonding brake lining to brake shoes. 2,455,341, Nov. 30.

Scalera, Mario, Somerville, N. J., C. T. Lester, De Kalb, Ga., and E. M. Hardy, Bound Brook, N. J., assignors to American Cyanamid Company, New York, N. Y. 4-alkylmorphonline sulfur trioxide compounds. 2,454,978, Nov. 30.

Scalera, Mario, and W. S. Forster, Somerville, N. J., assignors to American Cyanamid Company, New York, N. Y. 4-Amino-1,8-naphthalic imide disulfonic acids. 2,455,095, Nov. 30.

Schaefer, Frederic, Pittsburgh, Pa. Brake beam. 2,455,316, Nov. 30.

Schindler, Carl: *See*—
Kyle, William D., Jr., and Schindler.

Schmadlewsky, Paul, Portland, Oreg. Retouching frame. 2,455,096, Nov. 30.

Schmidt, Benjamin F., Los Angeles, Calif. Submersible double-acting fluid piston deep well pump. 2,455,022, Nov. 30.

Schmidt, William A.: *See*—
Hill, Thomas C., and Schmidt.

Schmiege, Herbert F., Chesaning, Mich. Photoalbum leaf. 2,455,023, Nov. 30.

Schneider, Gerhard G., Maplewood, assignor to National Union Radio Corporation, Newark, N. J. Tube sealing machine. 2,455,317, Nov. 30.

Schneider, Harold W., Terrell, Tex. Drill jig. 2,455,024, Nov. 30.

Schofield, Earl L., and W. R. Lustig, assignors to The Atwood Vacuum Machine Company, Rockford, Ill. Bicycle kick stand. 2,454,842, Nov. 30.

Schott, Donald E., Flushing, and G. R. Bartle, Woodside, assignors to Thomas C. Wilson, Inc., Long Island City, N. Y. Self-propelled tube cleaner having adjustable tube-engaging means. 2,455,273, Nov. 30.

Schott, Edgar R., Benton, Mo. Time switch. 2,454,887, Nov. 30.

Schroeder, Clarence J., Sheboygan, Wis. Christmas tree holder. 2,455,025, Nov. 30.

Schroeder, John F., South Bend, Ind. Wheel starter. 2,454,947, Nov. 30.

Sclanna, Anthony, assignor to Clamp Nail Company, Chicago, Ill. Adjustable radial kerfing saw. 2,455,097, Nov. 30.

Scovill Manufacturing Company, assignee: *See*—
Seyfried, Arthur W.

Scriver, Clarence A., Glens Falls, N. Y. Ski trainer and exerciser. 2,455,274, Nov. 30.

Searle, Arthur M., London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y. Metal rectifier. 2,454,843, Nov. 30.

Seelenfreund, Louis M., assignor to Action Buffs, Inc., Chicago, Ill. Buffing wheel. 2,455,098, Nov. 30.

Seelenfreund, Louis M., assignor to Action Buffs, Inc., Chicago, Ill. Buffing wheel. 2,455,099, Nov. 30.

Seltzer, Clifford S., assignor to The Taylor-Winfield Corporation, Warren, Ohio. Electric resistance seam welding apparatus. 2,454,948, Nov. 30.

Servel, Inc., assignee: *See*—
Andersson, Sven W. E.
Ploeger, Clyde E.
Simpson, Walter M.

Seyfried, Arthur W., Racine, Wis., assignor to Scovill Manufacturing Company, Waterbury, Conn. Motor-driven food mixer. 2,455,026, Nov. 30.

Seymour, Raymond B., Chattanooga, Tenn., assignor to Monsanto Chemical Company, St. Louis, Mo. Copolymers of fumarodinitrile and styrenes. 2,455,342, Nov. 30.

Shakowitz, Isidore, Philadelphia, Pa. Sled. 2,455,318, Nov. 30.

Sharpe, Everett E., Shelton, N. Y., assignor to Better Packages Incorporated. Dispenser for measured lengths of pressure sensitive tape. 2,454,844, Nov. 30.

Shaw, Julian C., and H. E. Blettner, assignors to The American Laundry Machinery Company, Cincinnati, Ohio. Garment finishing device. 2,454,888, Nov. 30.

Sheehan, Edmund J., assignee: *See*—
Francek, Joseph R.

Shell Development Company, assignee: *See*—
Hearne, George W., Evans, and Yale.

Shellmar Products Corporation, assignee: *See*—
Cox, John W.

Shelton, George I., and H. L. Dowell, Athens, Tex. Automobile service table. 2,454,889, Nov. 30.

Sheppard, Richard H., Hanover, Pa. Fuel pump drive for Diesel engines. 2,455,275, Nov. 30.

Sheridan, Edward: *See*—
Engle, Loy S., Sheridan, and Fischer.

Sherman, Vernon W., Summit, and C. M. Wheeler, Montclair, N. J., assignors to Federal Telephone & Radio Corporation, New York, N. Y. High-frequency oscillator circuit for induction heating apparatus. 2,454,845, Nov. 30.

Shields, Robert A., Bloomsburg, Pa., assignor to American Car and Foundry Company, New York, N. Y. Drop bottom mine car latch. 2,455,276, Nov. 30.

Shonle, Horace A., and A. M. Van Arendonk, assignors to Eli Lilly and Company, Indianapolis, Ind. 4-dialkylaminoalkylamino-6-methoxyquinoline. 2,454,949, Nov. 30.

Signal Oil and Gas Company, assignee: *See*—
Young, Garth L.

Simmon, Alfred: *See*—
Simmon, Rudolph and A.

Simmon Brothers, Inc., assignee: *See*—
Simmon, Rudolph and A.

Simmon, Rudolph and A., Jackson Heights, assignors to Simmon Brothers, Inc., Long Island City, N. Y. Condenser type photographic enlarger with exchangeable lenses and adjustable lamp housing. 2,455,142, Nov. 30.

Simplex Engineering Company, assignee: *See*—
Raymond, Thomas E.

Simpson, Walter M., Evansville, Ind., assignor to Servel, Inc., New York, N. Y. Air conditioning. 2,455,196, Nov. 30.

Simpson, William J., and D. Finlayson, Spondon, near Darby, England, assignors to Celanese Corporation of America. Stabilized cellulose acetate. 2,454,950, Nov. 30.

Singer Manufacturing Company, The, assignee: *See*—
Fuge, Harry B.

Sittler, Carl C., assignee: *See*—
Marler, Albert R.

Skinner, Murray F., Montclair, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y. Rectifier stack. 2,454,846, Nov. 30.

Skinner, Bradley: *See*—
Vinyard, Roy E., Roach, and Skinner.

Slack, Fred A., Jr., Penn Valley, assignor to H. D. Justi & Son, Inc., Philadelphia, Pa. Mold, mold charging, and molding process. 2,454,847, Nov. 30.

Slack, Frederic W., Detroit, and C. C. Utz, Magnolia, assignors to Chrysler Corporation, Highland Park, Mich. Joint. 2,455,343, Nov. 30.

Smith, Cleveland S., Jr., West Orange, N. J., and S. Blumenthal, Indianapolis, Ind.; said Smith assignor to S. Ruben, New Rochelle, N. Y., and said Blumenthal assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind. Selenium boiler. 2,455,277, Nov. 30.

Smith, Franklin N., Cedar Rapids, Iowa. Support means for idler rollers. 2,455,100, Nov. 30.

Smith, Herbert H., Bay Shore, N. Y. Spring heel for footwear. 2,454,951, Nov. 30.

Smith, Herschel G., Wallingford, T. L. Cantrell, Lansdowne, Pa., and J. G. Peters, Audubon, N. J., assignors to Gulf Oil Corporation, Pittsburgh, Pa. Antioxidants for mineral oil lubricants and compositions containing the same. 2,454,890, Nov. 30.

Smith, T. L., Company, The, assignee: *See*—
Peters, Harry C.

Snell, De Witt S., and L. P. Grobel, Schenectady, N. Y., assignors to General Electric Company. Gas filled machine. 2,454,979, Nov. 30.

Snyder, Ben, assignee: *See*—
Trowbridge, Charles A.

Snyder, Gerson, assignee: *See*—
Trowbridge, Charles A.

Snyder Mfg. Company, assignee: *See*—
Trowbridge, Charles A.

Sobell, Morton, Schenectady, N. Y., assignor to General Electric Company. Damper. 2,454,980, Nov. 30.

Société à responsabilité limitée "Mermet & Virthner," Villeurbonne, assignee: *See*—
Ravella, Jean A.

Société Anonyme Solex, assignee: *See*—
Mennesson, André.

Socony-Vacuum Oil Company, Incorporated, assignee: *See*—
Clewell, Dayton H.

Sonneborn, L., Sons, Inc., assignee: *See*—
Faust, Jacob.
Liberthson, Leo, and Faust.
Moscowitz, Abraham.

Sorensen, Edward M., deceased, Stamford, Conn.; H. S. Sorensen, administratrix. Cathode controlled electronic voltage regulator circuit. 2,455,143, Nov. 30.

Sorensen, Helen S., administratrix: *See*—
Sorensen, Edwin M.

Spause, Edward A., Philadelphia, Pa. Pocket football game apparatus. 2,454,891, Nov. 30.

Spencer, Clifford R., and D. G. Wilhelm, Buffalo, N. Y. Mechanism for effecting the regulation and automatic control of the temperature of bath water. 2,455,144, Nov. 30.

Sperry Corporation, The, assignee: *See*—
Barrow, Wilmer L., and Micher.

Sperry-Sun Well Surveying Company, assignee: *See*—
Ring, Roland.

Sprow, John H., Jackson, Ohio. Blast furnace tuyère. 2,454,892, Nov. 30.

Stacy, Thomas F., assignor to The French Oil Mill Machinery Company, Piqua, Ohio. Fluid operated motor. 2,454,893, Nov. 30.

Staley, A. E., Manufacturing Co., assignee: *See*—
Moyer, Wendell W., and Marmor.

Standard Oil Development Company, assignee: *See*—
Pierce, Jerry A., and Kimberlin.

Standard Telephones and Cables Limited, assignee: *See*—
Chatterjea, Prafulla K., and Houghton.
Foulkes, Christopher H.
Gibson, William T.
Levy, Maurice M.

Starkey, Robert L., New Brunswick, N. J., and K. M. Wight, Philadelphia, Pa., assignors to American Gas Association, Inc., New York, N. Y. Measurement of corrosive characteristics of the soil. 2,454,952, Nov. 30.

Stearns Magnetic Mfg. Co., assignee: *See*—
Stearns, Roswell H.

Stearns, Roswell H., Wauwatosa, assignor to Stearns Magnetic Mfg. Co., Milwaukee, Wis. Floor sweeping magnet device. 2,455,319, Nov. 30.

Stennitt, Thomas, Lansdowne, Ontario, Canada. Saw fitting device. 2,454,953, Nov. 30.

Stephens, Joseph F., Kansas City, Mo., assignor to Gustin-Bacon Manufacturing Company. Automatic condensation control apparatus. 2,455,320, Nov. 30.

Sterling, Scott: *See*—
Oughton, Charles D., Sterling, and Turner.

Stetson-Ross Machine Company, assignee: *See*—
Pritchard, Wilmot T.

Stevens, Douglas F., Pasadena, Calif. Rocket projector. 2,455,101, Nov. 30.

Stewart, Raymond R., and J. W. Biewen, assignors to Universal Producing Company, Fairfield, Iowa. Display stand for displaying merchandise. 2,455,278, Nov. 30.

Stewart-Warner Corporation, assignee: *See*—
Williams, Lynn A., Jr.

Stiller, Eric T.: *See*—
Jarowski, Charles I., and Stiller.
Jarowski, Charles I., Stiller, and Williamson.

Stolte, Fred: *See*—
Hartstein, Sidney R., and Stolte.

Stolze, William J., Astoria, Long Island, and E. I. Anderson, Manhasset, N. Y., assignors to Radio Corporation of America. Cathode-ray beam deflection system. 2,455,321, Nov. 30.

Stovall, Reyn: *See*—
Kaufman, Philip, and Stovall.

Strobel, Charles K., Pittsburgh, Pa., assignor to Robertshaw-Fulton Controls Company. Safety control system for fuel burners. 2,454,848, Nov. 30.

Stroup, Charles L., Oak Park, Ill. Electric circuit interrupter. 2,454,849, Nov. 30.

Stroupe, James D.: *See*—
Hurd, Loren C., Vander Weyden, and Stroupe.

Sullivan, Franklin S., Farmington, assignor to General Motors Corporation, Detroit, Mich. Material supporting pallet. 2,455,197, Nov. 30.

Sun Oil Company, assignee: *See*—
Dupler, Raymond R.
Oxford, William F., Jr.

Swanstrom, Klas A., Buckingham Township, Bucks County, Pa. Fastener. 2,455,145, Nov. 30.

Swatzell, Wilbert J., El Dorado, Ark. Long or short line assembly elevator stop. 2,455,279, Nov. 30.

Sweeney, Hugh J., assignee: *See*—
Neely, Charles A.

Sweighert, David V., Cleveland, assignor to The General Industries Company, Elyria, Ohio. Motor mount and motor drive means for phonographs. 2,455,280, Nov. 30.

Sylvania Electric Products Inc., assignee: *See*—
Briggs, Richard S.
Harris, Milton A.
McCarthy, Henry J.

Tann, David, Detroit, Mich. Yarn assembly. 2,455,146, Nov. 30.

Tatom, Raymond F., Seattle, Wash., assignor to Boeing Airplane Company. Hook. 2,454,894, Nov. 30.

Taylor, James: *See*—
Whetstone, John, and Taylor.

Taylor-Winfield Corporation, The, assignee: *See*—
Seltzer, Clifford S.

Teeters, Wilber O., River Edge, and M. B. Mueller, Dumont, N. J., assignors to Allied Chemical & Dye Corporation, New York, N. Y. Oxynitration of aromatic compounds. 2,455,322, Nov. 30.

Telefonaktiebolaget L M Ericsson, assignee: *See*—
Hagdahl, John E.

Temple, Sidney J., Forest Hills, assignor to Edwin L. Wiegand Company, Pittsburgh, Pa. Electric heating unit. 2,455,102, Nov. 30.

Teta, Angelo M., Manhasset, N. Y. Convertible tricycle. 2,455,281, Nov. 30.

Texas Company, The, assignee: *See*—
Goldsby, Arthur R., and Watson.

Thomas, Frank G.: *See*—
Chesus, Frank O., and Thomas.

Thompson, Ernest, assignee: *See*—
Hurst, George L.

Thompson, Helmer T.: *See*—
Sadusky, Edward, and Thompson.

Thompson Products, Inc., assignee: *See*—
Cooley, Perry E.
Curtis, William H. and R. R.

Thomson, Samuel G., Flushing, N. Y. Litter stretcher-bar assembly. 2,455,027, Nov. 30.

Throckmorton, John W.: *See*—
Wallis, John S., and Throckmorton.

Thurnell, Orville D., and J. J. Cannistra, Chicago, Ill. Flashlight. 2,454,895, Nov. 30.

Thurston, Jack T., Riverside, Conn., assignor to American Cyanamid Company, New York, N. Y. Preparing insolubilized sulfonates and products thereof. 2,455,282, Nov. 30.

Timken Roller Bearing Company, The, assignee: *See*—
Hite, Everett C.

Tinnerman, George A., assignor to Tinnerman Products, Inc., Cleveland, Ohio. Fastening device. 2,455,028, Nov. 30.

Tinnerman Products, Inc., assignee: *See*—
Tinnerman, George A.

Townsend, Charles L., Yonkers, N. Y., assignor to Radio Corporation of America. Phasing system. 2,455,323, Nov. 30.

Transadean Associates, Inc., assignee: *See*—
Case, Rogers.

Traub, Ellis, Worcester, Mass. Automobile position signal. 2,454,896, Nov. 30.

Traver, Harry G., Cranford, N. J. Means to connect tractor and trailer sections and for effecting steering thereof. 2,455,147, Nov. 30.

Traver, Harry G., Cranford, N. J. Motor-driven rotary digging apparatus. 2,455,148, Nov. 30.

Trowbridge, Charles A., Roxborough, assignor to B. and G. Snyder, co-partners trading as Snyder Mfg. Company, Philadelphia, Pa. Antenna mounting. 2,454,897, Nov. 30.

Trubek Laboratories, Incorporated, The, assignee: *See*—
Davidson, David, and Kahn.

Tuerck, Karl H. W.: *See*—
Duval, Bruce, and Tureck.

Tung-Sol Lamp Works, Inc., assignee: *See*—
Braunsdorff, Reginald K.

Turner, Arthur F.: *See*—
Oughton, Charles A., Sterling, and Turner.

Turner, Quilla T., Winnipeg, Manitoba, Canada. Ready-reference card index holder. 2,455,103, Nov. 30.

Turner, Richard G., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Bobbin magazine for weft replenishing looms. 2,455,149, Nov. 30.

Tuthill, Harry J., St. Louis, Mo. Shading process for photographs. 2,454,898, Nov. 30.

Twomey, Kathryn B., Chicago, Ill. Aid to art practice and instruction. 2,454,899, Nov. 30.

Umhoefer, Robert R.: *See*—
Dawsey, Lynn H., Umhoefer, and Muehlhausser.

United Aircraft Corporation, assignee: *See*—
Cobb, Emerson G.
Hersey, Donald S.
Waring, Dana B.

United-Carr Fastener Corporation, assignee: *See*—
Wagstaff, George.

United Shoe Machinery Corporation, assignee: *See*—
Lawson, Robert H.

Universal Camera Corporation, assignee: *See*—
Case, Percival H.

Universal Milking Machine Company, assignee: *See*—
Donnelly, Daniel.

Universal Producing Company, assignee: *See*—
Stewart, Raymond R., and Biewen.

Usselman, George I., Port Jefferson, N. Y., assignor to Radio Corporation of America. Frequency modulation. 2,454,954, Nov. 30.

Utz, Chester C.: *See*—
Slack, Frederic W., and Utz.

Vaala, Gordon T., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Making shaped articles. 2,455,198, Nov. 30.

Valley, George E., Jr., Cambridge, Mass., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War. Indicating system. 2,455,283, Nov. 30.

Van Allen, Lawrence R., Chicago, Ill. Blanching natural gums or resins. 2,455,199, Nov. 30.

Van Arendonk, Arthur M.: *See*—
Shonle, Horace A., and Van Arendonk.

Vander Weyden, Allen J.: *See*—
Hurd, Loren C., Vander Weyden, and Stroupe.

Vang, Alfred, Newark, N. J. Carbureting air for fuel mixtures. 2,454,900, Nov. 30.

Van Riel, Pieter, assignor to Machinefabriek Reineveld N. V., Delft, Netherlands. Centritugal machine. 2,455,284, Nov. 30.

Van Winkle, Delbert M., Newton, and D. C. Buffum, Cambridge, Mass. Torsion specimen and holder for same. 2,454,850, Nov. 30.

Varney, C. B., assignee: *See*—
Wilson, Charles R.

Verderber, Joseph, Cleveland, Ohio. Golf club. 2,455,150, Nov. 30.

Versaw, Forest F., Penn Township, Allegheny County, assignor to Gulf Research & Development Company, Pittsburgh, Pa. Strain gauge. 2,455,285, Nov. 30.

Vint, Jesse L., Jr., assignor to Beech Aircraft Corporation, Wichita, Kans. Aircraft control. 2,454,981, Nov. 30.

Vinyard, Roy E., and W. W. Roach, Borger, Tex., and B. Skinner, Bartlesville, Okla., assignors to Phillips Petroleum Company. Control of temperature in regeneration of solid hydrocarbon conversion catalysts 2,454,901, Nov. 30.

Visco Products Company, assignee: *See*—
Kirkpatrick, Willard H., and Wilson.

Vittum, Paul W.: *See*—
Glass, Dudley B., Vittum, and Weissberger.

Vogt, Ernest J., Pasadena, assignor to Aerojet Engineering Corporation, Azusa, Calif. Electrical control system. 2,455,029, Nov. 30.

Volpicelli, Nicholas: *See*—
Gotti, George A., Killian, and Volpicelli.

Vorech, Stephen, assignor to Bendix-Westinghouse Automotive Air Brake Company, Elyria, Ohio. Fluid pressure control mechanism. 2,455,030, Nov. 30.

Vulcan Corporation, assignee: *See*—
Clausing, George.

Wagstaff, George, Long Eaton, England, assignor to United-Carr Fastener Corporation, Cambridge, Mass. Holder for thermionic tubes. 2,455,324, Nov. 30.

Waldes Koh-I-Noor, Inc., assignee: *See*—
Feitl, Rudolf.

Waldorf Paper Products Company, assignee: *See*—
Guyer, Reynolds.

Wallace, Charles F., Westfield, assignor to Wallace & Tiernan Products, Inc., Belleville, N. J. Liquid level indicator. 2,455,200, Nov. 30.

Wallace, De Loss D., Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich. Filter element. 2,454,982, Nov. 30.

Wallace & Tiernan Products, Inc., assignee: *See*—
Wallace, Charles F.

Wallis, John S., Darien, and J. W. Throckmorton, Wilton, Conn., assignors to Petro-Chem Process Company, Incorporated. Furnace baffle. 2,455,201, Nov. 30.

War, United States of America as represented by the Secretary of, assignee: *See*—
Buchwalter, Louise, and Harvey.
Sackville, William.
Valley, George E., Jr.

Ware, Cecil, Houston, Tex. Packing. 2,455,202, Nov. 30.

Waring, Dana B., assignor to United Aircraft Corporation, East Hartford, Conn. Ignition control. 2,455,344, Nov. 30.

Warner, Arthur J., South Orange, N. J., and M. Bakst, Alexandria, Va., assignors to Federal Telephone and Radio Corporation, New York, N. Y. Insulating material containing polystyrene and plasticizer and making. 2,454,851, Nov. 30.

Warner, Douglas K., Sarasota, Fla. Fan blades in opening of rotary valve in two-cycle supercharged engines. 2,454,852, Nov. 30.

Warren, Henry E., Ashland, Mass. Speed governor. 2,454,902, Nov. 30.

Watson, Claude W.: *See*—
Goldsby, Arthur R., and Watson.

Watt, Bob E., Boston, Mass., assignor to the United States of America as represented by the Secretary of the Navy. Capacitive angular velocity measuring device. 2,455,345, Nov. 30.

Weber, Theodore R., Latrobe, Pa., assignor to American Locomotive Company, New York, N. Y. Journal box structure. 2,455,031, Nov. 30.

Welk, Karl, Detroit, assignor to Fabricon Products, Inc., River Rouge, Mich. Steaming or vaporizing means. 2,454,903, Nov. 30.

Weinberger, Joseph M., assignor of one-half to T. Weinberger, Brooklyn, N. Y. Stroboscopic apparatus for calibrating time indicating devices. 2,454,983, Nov. 30.

Weinberger, Tessie, assignee: *See*—
Weinberger, Joseph M.

Weinig, Friedrich S., Stuttgart-Moehringen, Germany. Ribbon parachute. 2,454,853, Nov. 30.

Weissberger, Arnold: *See*—
Glass, Dudley B., Vittum, and Weissberger.

Wells, Martin, Los Angeles, Calif. Heavy-duty electrode holder. 2,455,325, Nov. 30.

Werner, Frank D., Kansas City, Mo., assignor to United States of America as represented by the Secretary of the Navy. Antenna cap. 2,455,286, Nov. 30.

West, Clifford S., Adams, Mass. Clothesline apparatus. 2,455,203, Nov. 30.

Western Electrical Instrument Corporation, assignee: *See*—
Gilbert, Roswell W.

Wharam, John J.: *See*—
Jovanovich, Milton, and Wharam.

Wharam, John J., Dearborn, and M. Jovanovich, Detroit, assignors to Ford Motor Company, Dearborn, Mich. Concentric steering column gearshift operating mechanism. 2,455,204, Nov. 30.

Wheeler, Carson M.: *See*—
Sherman, Vernon W., and Wheeler.

Wheeler, William N., Paris, Ky. Eye opening and closing mechanism for dolls. 2,455,104, Nov. 30.

Whetstone, John, West Kilbride, and J. Taylor, Saltcoats, Scotland, assignors to Imperial Chemical Industries Limited. Compositions suitable for use as gas and power producing liquids. 2,455,205, Nov. 30.

Whytlaw, Graeme G., Swarthmore, Pa., assignor to American Viscose Corporation, Wilmington, Del. Drying wound packages. 2,454,854, Nov. 30.

Wickwire Brothers, Inc., assignee: *See*—
Wickwire, Charles C.

Wickwire, Charles C., assignor to Wickwire Brothers, Inc., Cortland, N. Y. Welder for wire mesh fabrics. 2,455,346, Nov. 30.

Wiegand, Edwin L., Company, assignee: *See*—
Temple, Sidney J.

Wienke, Emil J., Glen Ellyn, assignor to Motiograph, Chicago, Ill. Tension shoe mounting for projectors. 2,455,206, Nov. 30.

Wieseman, Theodore R., assignor to The Louis Allis Company, Milwaukee, Wis. Rotor for electric motors and making the same. 2,454,955, Nov. 30.

Wight, Kent M.: *See*—
Starkey, Robert L., and Wight.

Wilhelm, Donald G.: *See*—
Spencer, Clifford R., and Wilhelm.

Williams, Alfred O., Richland, Mich. Musical instrument. 2,455,032, Nov. 30.

Williams, Allan E.: *See*—
Olstad, Martin H., and Williams.

Williams, Lynn A., Jr., Indianapolis, Ind., assignor to Stewart-Warner Corporation, Chicago, Ill. Internal-combustion heater with nozzle heating means. 2,455,207, Nov. 30.

Williamson, Martin B.: *See*—
Jarowski, Charles I., Stiller, and Williamson.
Patterson, Wilbur I., and Williamson.

Wilson, Charles R., assignor of one-half to C. B. Varney, Road Fork, Ky. Coupling pin structure. 2,455,105, Nov. 30.

Wilson, Doyne L.: *See*—
Kirkpatrick, Willard H., and Wilson.

Wilson, Thomas C., Inc., assignee: *See*—
Schoot, Donald E., and Bartle.

Wirth, Rudolph, New York, N. Y. Door indicating device. 2,455,208, Nov. 30.

Wirtz, Robert W., Peoria, Ill. Toe creasing machine. 2,455,106, Nov. 30.

Wolpert, Walter J., assignor of one-half to M. A. Milling, Indianapolis, Ind. Safety razor. 2,455,152, Nov. 30.

Wood, Edward L., Detroit, Mich. Wheel trim. 2,455,151, Nov. 30.

Wright, Charles W., Tipton, Kans. Printer's knockout. 2,455,033, Nov. 30.

Wyeth-Incorporated, assignee: *See*—
Jarowski, Charles I.
Jarowski, Charles I., and Stiller.
Patterson, Wilbur I., and Williamson.

Wylie, John R., San Francisco, Calif. Door lock protector. 2,454,904, Nov. 30.

Yale, Harry L.: *See*—
Hearne, George W., Evans, and Yale.

Young, Garth L., assignor to Signal Oil and Gas Company, Los Angeles, Calif. System for corrosion protection. 2,454,956, Nov. 30.

Zimmerman, Ernest F., Orange, assignor of one-half to J. P. Filbert, Los Angeles, Calif. Water-cooling jacket. 2,454,957, Nov. 30.

Zoegall, Richard R., Los Angeles, Calif. Home barbeque device. 2,455,034, Nov. 30.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 30TH DAY OF NOVEMBER, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Adhesives from vegetable proteinous material. G. Davidson. Re. 23,052, Nov. 30.

Gear finishing. M. B. Mentley. Re. 23,053, Nov. 30.

LIST OF PLANT INVENTIONS

Rose plant. E. S. Boerner. 811, Nov. 30.

Rose plant. E. S. Boerner. 812, Nov. 30.

LIST OF DESIGN INVENTIONS

Astrolabe. C. O. Rothweiler. 151,942, Nov. 30.
Bathing suit. J. N. Hamilton. 151,885, Nov. 30.
Bottle. L. Medgyes. 151,909, Nov. 30.
Bracelet or similar article. C. Arpels. 151,866, Nov. 30.
Bracelet or similar article. A. Katz. 151,903–4, Nov. 30.
Brassière. H. M. Plehn. 151,934, Nov. 30.
Brassière. S. J. Reiner. 151,937, Nov. 30.
Brooch or similar article. C. Arpels. 151,864–5, Nov. 30.
Brooch or similar article. H. Bogoff. 151,868, Nov. 30.
Brooch or similar article. A. Katz. 151,888–9, Nov. 30.
Brooch or similar article. A. Philippe. 151,914–17, Nov. 30.
Brooch or similar article. A. Philippe. 151,924, Nov. 30.
Brooch or similar article. A. Philippe. 151,926–33, Nov. 30.
Brooch or similar article. A. Rose. 151,940, Nov. 30.
Brooch or similar article, Separable. A. Katz. 151,902, Nov. 30.
Casing, Heater. R. M. Pyle. 151,935, Nov. 30.
Casing, Water heater. D. L. Raymond. 151,936, Nov. 30.
Cigarette case and lighter, Combined. J. P. Partlow. 151,912, Nov. 30.
Clock thermostat. C. G. Kronmiller. 151,905, Nov. 30.
Container for perfumed bath tablets or the like. E. N. Graham. 151,884, Nov. 30.
Door knocker. H. Cohn. 151,873, Nov. 30.
Earring. H. Bogoff. 151,867, Nov. 30.
Earring or similar article. A. Katz. 151,900, Nov. 30.
Earring or similar article. A. Philippe. 151,918–19, Nov. 30.
Earring or similar article. A. Philippe. 151,925, Nov. 30.
Generator, Electric motor. E. J. Petry. 151,903, Nov. 30.
Hammer, Insulator applying and removing. H. W. Edwards. 151,876, Nov. 30.
Hat or similar article. M. Friedman. 151,882–3, Nov. 30.
Heater, Space. D. La Barre and T. Ornas. 151,906, Nov. 30.
Jar. F. Smith. 151,945, Nov. 30.
Kite. G. E. Shackelford. 151,944, Nov. 30.
Lamp standard or similar article. D. S. Erwin. 151,877, Nov. 30.
Lighter, Table. H. G. Treiss. 151,946, Nov. 30.
Link bracelet. H. Bogoff. 151,869, Nov. 30.
Lure, Fishing. G. J. Crabdree. 151,875, Nov. 30.
Necklace. H. Reinstein. 151,938–9, Nov. 30.
Necklace or similar article. A. Katz. 151,901, Nov. 30.
Necklace or similar article. A. Philippe. 151,920–3, Nov. 30.
Optical comparator. K. A. Van Dyck. 151,947, Nov. 30.
Projector for handling transparent plates. H. G. Fitz Gerald. 151,878, Nov. 30.
Ravioli. C. J. Carapellotti. 151,871, Nov. 30.
Riding stick toy. A. R. Mellor. 151,910, Nov. 30.
Slip. K. Kaplan. 151,887, Nov. 30.
Slip. L. Rose, L. Myers, and M. Richter. 151,941, Nov. 30.
Slipper. E. K. Bradley. 151,870, Nov. 30.
Suit. J. Freedman. 151,880–1, Nov. 30.
Sundial, Water compass. J. F. Carssow. 151,872, Nov. 30.
Sweater, Knitted. B. Sapin. 151,943, Nov. 30.
Switch escutcheon. J. D. McDonald. 151,907, Nov. 30.
Switching device or similar article, Electrical. H. E. Metz. 151,911, Nov. 30.
Tie clasp. C. W. Cole. 151,874, Nov. 30.
Tire. W. E. Hardeman and S. C. Parker. 151,886, Nov. 30.
Tongs or similar article, Pulpwood. M. M. McElderry. 151,908, Nov. 30.
Toy wheeled barge. L. M. J. Foulke. 151,879, Nov. 30.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 30TH DAY OF NOVEMBER, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Accumulator meter. J. E. Hagdahl. 2,455,056, Nov. 30.
Acetate, Stabilized cellulose. W. J. Simpson and D. Finlayson. 2,454,950, Nov. 30.
Acetylene and potassium hydroxide, Reacting. D. F. Herman. 2,455,058, Nov. 30.
Adhesive and joining elements therewith. G. E. Guellich. 2,455,118, Nov. 30.
Adjustable heater support. C. C. Doyle. 2,455,047, Nov. 30.
Agent for lubricants, Addition. W. A. Jones. 2,455,337, Nov. 30.
Aid to art practice and instruction. K. B. Twomey. 2,454,899, Nov. 30.
Air cleaning device for motor vehicles. S. C. Heth. 2,455,252, Nov. 30.
Air conditioning. W. M. Simpson. 2,455,196, Nov. 30.
Aircraft control. J. L. Vint, Jr. 2,454,981, Nov. 30.
Air pump lubrication, Sliding vane. W. H. and R. R. Curtis. 2,455,297, Nov. 30.
Alarm apparatus, Thermal. C. W. Ingels. 2,455,011, Nov. 30.
Aldehyde derivatives of 2-aminoalkanes. E. Rohrmann. 2,455,193, Nov. 30.
Alkenyl succinic esters with sulfur, Product and process of reacting. G. T. Collins. 2,454,862, Nov. 30.
Alkylation method. A. R. Goldsby and C. W. Watson. 2,454,869, Nov. 30.
Alkylation of paraffins in presence of hydrofluoric acid. F. E. Frey. 2,455,003, Nov. 30.
Aluminum fluoride gels, Production of. H. Heinemann. 2,454,921, Nov. 30.
Amplifier, Electromechanical. M. A. Lalande. 2,454,812, Nov. 30.
Amplifier, Wide-range audio frequency. D. G. C. Hare. 2,455,332, Nov. 30.
Amusement device, Children's. E. Nudelman. 2,455,266, Nov. 30.
Antenna. L. Buchwalter and G. G. Harvey. 2,455,224, Nov. 30.
Antenna. F. O. Chesus and F. G. Thomas. 2,454,774, Nov. 30.
Antenna, Broad band. L. N. Brillouin. 2,454,766, Nov. 30.
Antenna cap. F. D. Werner. 2,455,286, Nov. 30.
Antenna mounting. C. A. Trowbridge. 2,454,897, Nov. 30.
Antenna-reflector system, Vertical scanning. A. G. Kandoian. 2,454,805, Nov. 30.
Antenna system, Direction finding. G. S. Burroughs. 2,454,768, Nov. 30.
Antioxidant. C. I. Jarowski. 2,455,256, Nov. 30.
Antioxidant. W. I. Patterson and M. B. Williamson. 2,455,088, Nov. 30.
Antioxidant from rice bran, Preparing an. C. I. Jarowski, E. T. Stiller, and M. B. Williamson. 2,455,255, Nov. 30.
Antioxidants. C. I. Jarowski and E. T. Stiller. 2,455,254, Nov. 30.
Antioxidants for mineral oil lubricants and compositions containing the same. H. G. Smith, T. L. Cantrell, and J. G. Peters. 2,454,890, Nov. 30.
Apparatus for automatic control of heat input to stillpots. E. H. Epprecht. 2,455,243, Nov. 30.
Apparatus for building tires. W. J. Breth. 2,455,038, Nov. 30.
Apparatus for coating the threaded portion of bushings and nuts. J. H. Lepperhoff. 2,455,129, Nov. 30.
Apparatus for cooling compressed gases. M. H. Olstad and A. E. Williams. 2,454,883, Nov. 30.
Apparatus for detecting the presence and position of an invisible body by infrared radiation. W. Sackville. 2,454,841, Nov. 30.
Apparatus for disseminating weather information. J. B. Anderson. 2,455,209–10, Nov. 30.
Apparatus for exposing and processing photographic film. E. H. Land. 2,455,125–6, Nov. 30.
Apparatus for reacting finely divided solid material and a gas. C. F. Ramseyer and H. A. Brassert. 2,455,092, Nov. 30.
Apparatus for resurfacing meat blocks. G. L. Coleman. 2,454,992, Nov. 30.
Apparatus for tempering glass articles. C. D. Oughton, S. Sterling, and A. F. Turner. 2,455,058, Nov. 30.
Apparatus for treating filamentary material. W. H. Kreamer, J. C. Klingener, and E. K. Bauer. 2,454,930, Nov. 30.
Apparatus for use in applying wire to rows of plants. F. J. Grisanti. 2,454,870, Nov. 30.
Aromatic compounds, Oxynitration of. W. O. Teeters and M. B. Mueller. 2,455,322, Nov. 30.

616 O. G.—91c

Attachment for trailer boat caster units. S. R. Du Brie. 2,455,048, Nov. 30.
Automatic keyhole lock cover. E. N. Jacobi. 2,454,925, Nov. 30.
Automatic striking tool. J. A. Ravella. 2,455,270, Nov. 30.
Automobile position signal. E. Traub. 2,454,896, Nov. 30.
Automobile service table. G. I. Shelton and H. L. Dowell. 2,454,889, Nov. 30.
Auxiliary tool handle. C. H. Carlson and W. Russell. 2,454,989, Nov. 30.
Averaging mechanism. H. W. Bode. 2,455,035, Nov. 30.
Bailer. J. M. Reynolds. 2,454,945, Nov. 30.
Balloon. J. A. Hagen, L. Prendergast, and E. L. Gregor. 2,455,248, Nov. 30.
Band, Rotating. H. H. Himmer. 2,454,801, Nov. 30.
Barbeque device, Home. R. R. Zoegall. 2,455,034, Nov. 30.
Base assemblies for electric discharge tubes, Manufacture of. S. J. Powers. 2,454,834, Nov. 30.
Beam deflection system, Cathode-ray. W. J. Stolze and E. I. Anderson. 2,455,321, Nov. 30.
Bearing: *See*—
Shaft bearing.
Shock absorbing bearing.
Bearing assembly. D. Ramsey. 2,455,091, Nov. 30.
Bed spring. C. J. Elder. 2,454,964–5, Nov. 30.
Bender with reversible clamp and former, Pivoted. G. C. H. Perkins. 2,455,138, Nov. 30.
Bicycle kick stand. E. L. Schofield and W. R. Lustig. 2,454,842, Nov. 30.
Bin, Garment hanger. J. C. Burt. 2,454,858, Nov. 30.
Blanket, Cargo. F. L. Davis. 2,455,237, Nov. 30.
Blast torch. S. C. Brody. 2,455,220–22, Nov. 30.
Blast torch perforated combustion burner. S. C. Brody. 2,455,223, Nov. 30.
Board: *See*—
Lath board.
Bobbin magazine for weft replenishing looms. R. G. Turner. 2,455,149, Nov. 30.
Boiler: *See*—
Selenium boiler.
Boiler for tubular-section type. A. J. Gallaher. 2,454,866, Nov. 30.
Bomb lift, Fighter airplane. W. W. Ryan. 2,454,840, Nov. 30.
Box structure, Journal. T. R. Weber. 2,455,031, Nov. 30.
Bracket: *See*—
Clamp bracket.
Transposition bracket.
Brake and clutch mechanism for transmissions. G. A. Geddes. 2,454,917, Nov. 30.
Brake and steering mechanism, Combined. W. A. Eaton. 2,454,999, Nov. 30.
Brake beam. F. Schaefer. 2,455,316, Nov. 30.
Brake line, Constant volume expansible. T. C. Hill and W. A. Schmidt. 2,455,334, Nov. 30.
Brassière. G. A. Boylan. 2,455,036, Nov. 30.
Buffing wheel. L. M. Seelenfreund. 2,455,098–9, Nov. 30.
Burner: *See*—
Blast torch perforated combustion burner.
Liquid fuel burner.
Bus bar bender. J. W. Garrett. 2,454,867, Nov. 30.
Cable and insulation therefor, Insulated electric. S. R. Hartstein and F. Stolte. 2,454,800, Nov. 30.
Calculating machine. D. B. Bradner. 2,454,987, Nov. 30.
Camera, Self-developing. J. F. Carbone and M. N. Fairbank. 2,455,111, Nov. 30.
Cap: *See*—
Antenna cap.
Cap applying machine. C. W. Goodwin and H. W. Martin. 2,455,246, Nov. 30.
Capping machine. J. Hohl. 2,455,175, Nov. 30.
Carbureting air for fuel mixtures. A. Yang. 2,454,900, Nov. 30.
Carton, Cellular. L. Benoit. 2,455,291, Nov. 30.
Carton, Cellular. J. W. Cox. 2,455,295, Nov. 30.
Cartons, Sealing. R. Guyer. 2,455,304, Nov. 30.
Case: *See*—
Safety eyeglass case.
Case for firearms. P. M. Current. 2,455,296, Nov. 30.
Casting aluminum, Method and apparatus for. M. F. Booth. 2,454,961, Nov. 30.
Cathode controlled electronic voltage regulator circuit. E. M. Sorensen. 2,455,143, Nov. 30.
Cathode for electronic discharge devices. H. B. Allen, Jr. 2,455,287, Nov. 30.

Cellulose ethers of 3,4 epoxy 1-butene and their oxidation products. D. M. Musser. 2,455,083, Nov. 30.
Centrifugal machine. P. van Riel. 2,455,284, Nov. 30.
Centrifugally operated, expanding shoe type, automatic clutch. G. S. Papas. 2,455,086, Nov. 30.
Chair: *See*—
Spring supported rocking chair.
Chair structure, Spring pivot. E. B. Morgan and R. W. Clay. 2,455,262, Nov. 30.
Christmas tree holder. C. J. Schroeder. 2,455,025, Nov. 30.
Christmas tree stand. W. M. Lewis. 2,454,877, Nov. 30.
Circuit: *See*—
Cathode controlled electronic voltage regulator circuit.
Circuit arrangement for automatic or semiautomatic telephone systems, Identification. L. A. B. Cabes. 2,454,770, Nov. 30.
Circuit arrangement, Mixer. L. L. Libby. 2,454,817, Nov. 30.
Circuit breaker, Automatic reclosing. W. D. Kyle, Jr., and C. Schindler. 2,455,067, Nov. 30.
Circuit controller, Shockproof electromagnetic. P. G. Edwards and H. W. Herrington. 2,455,049, Nov. 30.
Circuit for alternating-current bridges, Indicating. H. B. Conant. 2,454,776, Nov. 30.
Circuit for induction heating apparatus, High frequency oscillator. V. W. Sherman and C. M. Wheeler. 2,454,845, Nov. 30.
Circuit interrupter, Electric. C. L. Stroup. 2,454,849, Nov. 30.
Clamp: *See*—
Film sprocket clamp.
Clamp bracket. E. E. Bish. 2,454,857, Nov. 30.
Clamp for bonding brake lining to brake shoes. S. G. Saunders. 2,455,341, Nov. 30.
Clasp. S. and I. Darvie, and S. Pearlman. 2,455,236, Nov. 30.
Clasp for bands such as bracelets, Extension. G. A. Gotti, A. Killian, and N. Volpicelli. 2,455,302, Nov. 30.
Cleaning device for conduits. W. H. Peaden. 2,454,884, Nov. 30.
Cleansing and fluid extracting apparatus having a flexible clothes squeezing diaphragm, Clothes. T. P. Calhoun. 2,455,043, Nov. 30.
Closures for paper containers, Forming metal. G. F. Jackson. 2,455,063, Nov. 30.
Clothesline apparatus. C. S. West. 2,455,203, Nov. 30.
Clutch: *See*—
Centrifugally operated, expanding shoe type, automatic clutch.
Coatings on magnesium powder, Producing protective. D. Hart and H. J. Eppig. 2,454,799, Nov. 30.
Coatings to molded or cast articles, Applying. W. P. Carr. 2,454,910, Nov. 30.
Collapsible container. H. A. Johnson. 2,455,124, Nov. 30.
Communication system employing complex multivibrator modulators, Multichannel pulse. M. M. Levy. 2,454,815, Nov. 30.
Communication system, Pulse multiplex. D. D. Grieg. 2,454,792, Nov. 30.
Compass follower. E. F. Britten, Jr. 2,455,219, Nov. 30.
Compositions suitable for use as g. s and power producing liquids. J. Whetstone and J. Taylor. 2,455,205, Nov. 30.
Compressor load protector. C. E. Ploeger. 2,454,976, Nov. 30.
Condensation of phthalic anhydride, Fractional. K. F. Pietzsch. 2,455,314, Nov. 30.
Conduit connection for tanks. E. H. Meyers and W. S. Gaines. 2,455,311, Nov. 30.
Connector: *See*—
Electrical connector.
Thin-wall tubing connector.
Conserving and delivering water. C. C. Crick. 2,455,234, Nov. 30.
Contactor, Multiple. J. F. Frese. 2,454,788, Nov. 30.
Container: *See*—
Collapsible container.
Container for electrical apparatus. J. V. Brown. 2,454,962, Nov. 30.
Container with dispensing outlet secured thereto, Multiply. C. L. Hagan. 2,454,919, Nov. 30.
Control apparatus. D. M. Borden. 2,455,292, Nov. 30.
Control apparatus, Automatic condensation. J. F. Stephens. 2,455,320, Nov. 30.
Control apparatus for internal-combustion engines. L. Lee, II. 2,455,308, Nov. 30.
Control circuits. A. Kennedy. 2,454,807, Nov. 30.
Control device, Polarized electromagnetic. C. R. Mason. 2,454,973, Nov. 30.
Control mechanism, Fluid pressure. S. Vorech. 2,455,030, Nov. 30.
Control mechanism, Speed. L. De Marco. 2,454,914, Nov. 30.
Control mechanism, Tuning. F. W. Frink and M. Kaplan. 2,454,789, Nov. 30.
Control of temperature in regeneration of solid hydrocarbon conversion catalysts. R. E. Vinyard, W. W. Roach, and B. Skinner. 2,454,901, Nov. 30.
Control switch assembly. A. and J. Hollins. 2,454,873, Nov. 30.
Control system, Electrical. H. H. Curry. 2,454,778, Nov. 30.
Control system, Electrical. E. J. Vogt. 2,455,029, Nov. 30.
Control system for fuel burners, Safety. C. K. Strobel. 2,454,848, Nov. 30.
Control system, Matched potential. G. Deakin. 2,454,781, Nov. 30.
Control system, Single-phase induction-motor. H. B. Fuge. 2,454,968, Nov. 30.
Conveyer gripper member for can bodies. E. Laxo. 2,455,127, Nov. 30.
Conveyer to fish canning machine. R. E. J. Nordquist. 2,454,831, Nov. 30.
Cooking unit. C. P. Crawford. 2,454,993, Nov. 30.
Copolymers of fumarodinitrile and styrenes. R. B. Seymour. 2,455,342, Nov. 30.
Countertorque mechanism for helicopters. R. R. Hays. 2,455,006, Nov. 30.
Couplers, Colored. D. B. Glass, P. W. Vittum, and A. Weissberger. 2,455,169–70, Nov. 30.
Coupling. B. H. Crippen. 2,454,994, Nov. 30.
Coupling device, Wave guide. W. E. Bradley. 2,455,158, Nov. 30.
Coupling pin for trailer hitches, Safety. P. Bible. 2,454,856, Nov. 30.
Coupling with automatic speed control, Rotary hydraulic. L. F. Haller. 2,455,249, Nov. 30.
Cover: *See*—
Automatic keyhole lock Lighting fixture cover.
cover.
Covering for preventing ice formation on aircraft. W. H. Hunter. 2,454,874, Nov. 30.
Crystals, Manufacturing piezo. W. I. Cronan. 2,454,777, Nov. 30.
Curing frame for resin impregnated stock sheets. H. C. Gray. 2,455,055, Nov. 30.
Current relay and system, Reverse. W. R. Holmes. 2,455,060, Nov. 30.
Cutter: *See*—
Surgical cast cutter.
Cutter and pitter with rotary blades, Fruit. C. Lindley, Jr. 2,455,072, Nov. 30.
Damper. M. Sobell. 2,454,980, Nov. 30.
Deep well pump. C. A. Neely. 2,455,084, Nov. 30.
Detachable sash fastener. F. Mastrangelo. 2,455,077, Nov. 30.
Detector system, Radio wave. C. L. Richards. 2,455,191, Nov. 30.
Detergent compositions, Nondusting. S. Eisenberger and S. Machlis. 2,455,050, Nov. 30.
Device for regulating the pitch of two counterrotating coaxial propellers. R. Doussain. 2,455,239, Nov. 30.
Digging apparatus, Motor-driven rotary. H. G. Traver. 2,455,148, Nov. 30.
Dimethyl silicone gums, Preparation of. M. M. Safford. 2,454,759, Nov. 30.
Direction finder, Radio. E. N. Dingley, Jr. 2,454,783, Nov. 30.
Discharge apparatus, Electron. C. H. Foulkes. 2,454,786, Nov. 30.
Discharge device, Ultra high frequency electric. J. M. Lafferty. 2,454,970, Nov. 30.
Dispenser. W. L. Baumner, Jr. 2,455,212, Nov. 30.
Dispenser for measured lengths of pressure sensitive tape. E. E. Sharpe. 2,454,844, Nov. 30.
Distillation apparatus, Vacuum unobstructed path. K. C. D. Hickman. 2,455,059, Nov. 30.
Distributing device, Liquid. A. Mennesson. 2,454,974, Nov. 30.
Domestic electric heater. F. H. McCormick. 2,455,186, Nov. 30.
Door for vehicles. C. G. Branstrator. 2,455,293, Nov. 30.
Door guard. W. F. Christison. 2,455,112, Nov. 30.
Door indicating device. R. Wirth. 2,455,208, Nov. 30.
Door lock protector. J. R. Wylie. 2,454,904, Nov. 30.
Door securing means. A. Matthews and F. A. Gerlach. 2,455,132, Nov. 30.
Drawbar and support structure, Combination. S. D. Russell. 2,455,195, Nov. 30.
Drawer for typewriters, including elevating typewriter supports, Desk. C. Balzi, P. Juravcoff, and C. H. Listenpart. 2,455,156, Nov. 30.
Drawer, Refrigerator. O. A. La Vallee. 2,455,182, Nov. 30.
Drill bit assembly. W. E. Carr. 2,454,771, Nov. 30.
Drill jig. H. W. Schneider. 2,455,024, Nov. 30.
Drive shaft unit for pulverizing mills, Removable. W. A. Gibson and C. W. Mayer. 2,454,868, Nov. 30.
Driving means for rolling doors. N. Michelman. 2,454,880, Nov. 30.
Drop bottom mine car latch. R. A. Shields. 2,455,276, Nov. 30.
Elliptic flasher lamp. H. W. McQuaid. 2,455,020, Nov. 30.
Edge for T-square and the like. J. Nash. 2,454,938, Nov. 30.
Electric instrument, Dual. R. W. Gilbert. 2,455,167, Nov. 30.
Electric servo. C. L. Paulus. 2,454,832, Nov. 30.

Electrical connector. G. M. Anderson. 2,454,760, Nov. 30.
Electrical connector. K. Neijstrom. 2,454,829, Nov. 30.
Electrical system for gauging a dimension by the width of a spark gap. H. S. Bishop. 2,454,763, Nov. 30.
Electrode holder. H. Beauregard. 2,455,108, Nov. 30.
Electrooptical system, Nonlinear. N. R. Gunderson. 2,454,871, Nov. 30.
Elevating mechanism for food containers, Shelf. J. R. Bailey. 2,455,154, Nov. 30.
Elevator for loading trucks, Portable. J. R. Clark. 2,454,860, Nov. 30.
Elevator stop, Long or short line assembly. W. J. Swatzell. 2,455,279, Nov. 30.
Emergency wheel. A. C. Howell, Jr. 2,454,923, Nov. 30.
Enameling. J. C. Eckel and H. E. Romine. 2,455,331, Nov. 30.
Ethers of 5-hydroxy, 3-methyl, penta-3-en-yne-1. N. A. Milas. 2,455,261, Nov. 30.
Ethylhexoic acid, Manufacture of. B. Duval and K. H. W. Tuerck. 2,455,241, Nov. 30.
Exit for transport aircraft, Emergency aircraft. C. A. Bigelow. 2,455,157, Nov. 30.
Extractor: *See*—
Fruit juice extractor.
Eye opening and closing mechanism for dolls. W. N. Wheeler. 2,455,104, Nov. 30.
Fan blades in opening of rotary valve in two-cycle supercharged engines. D. K. Warner. 2,454,852, Nov. 30.
Fan, Constant thrust. D. S. Hersey. 2,455,251, Nov. 30.
Fastener: *See*—
Detachable sash fastener.
Fastener. K. A. Swanstrom. 2,455,145, Nov. 30.
Fastening device. G. A. Tinnerman. 2,455,028, Nov. 30.
Feed valve. R. R. Dupler. 2,455,240, Nov. 30.
Fiber, Free fall. I. V. Hitt. 2,455,174, Nov. 30.
File, Special purpose. G. L. Johnson. 2,455,064, Nov. 30.
Film magazine, Photographic. F. H. Owens. 2,455,187, Nov. 30.
Film spool, Contractile. E. G. Bader. 2,454,984, Nov. 30.
Film sprocket clamp. H. N. Fairbanks. 2,455,051, Nov. 30.
Filter element. D. D. Wallace. 2,454,982, Nov. 30.
Filtering, Method of and apparatus for. F. B. Lomax. 2,455,130, Nov. 30.
Finding system, Radio position. J. A. Ebeling. 2,455,164, Nov. 30.
Firing mechanism. E. Garrett. 3,454,790, Nov. 30.
Fish hook remover. A. S. Klinicki. 2,455,013, Nov. 30.
Fish lure. D. B. Baima. 2,455,155, Nov. 30.
Fishing tackle. B. J. Mattingly. 2,454,879, Nov. 30.
Fitting, Conduit. H. J. Brushaber. 2,454,767, Nov. 30.
Fitting device, Saw. T. Stennitt. 2,454,953, Nov. 30.
Fitting for pipe lines. L. S. Hamer. 2,455,121, Nov. 30.
Fitting, Pipe-line. L. S. Hamer. 2,455,120, Nov. 30.
Flashlight. O. D. Thurnell and J. J. Cannistra. 2,454,895, Nov. 30.
Flow control. L. A. Kempton. 2,454,929, Nov. 30.
Fluid, Drilling. W. F. Oxford, Jr. 2,455,188, Nov. 30.
Fluid operated motor. T. F. Stacy. 2,454,893, Nov. 30.
Flush box and toilet construction, Unit-type. S. S. Lenski. 2,455,128, Nov. 30.
Folding child's vehicle. R. E. Gilmore. 2,455,168, Nov. 30.
Foot pad. P. D. Rayner. 2,454,836, Nov. 30.
Footrest and pedal extension. P. Kaufman and R. Stovall. 2,454,969, Nov. 30.
Forming eyes on wire. I. Diamond. 2,454,997, Nov. 30.
4-Alkylmorpholine sulfur trioxide compounds. M. Scalera, C. T. Lester, and E. M. Hardy. 2,454,978, Nov. 30.
4-Amino-1,8-naphthalic imide disulfonic acids. M. Scalera and W. S. Forster. 2,455,095, Nov. 30.
4-dialkylaminoalkylamino-6-methoxyquinoline. H. A. Shonle and A. M. Van Arendonk. 2,454,949, Nov. 30.
Frame: *See*—
Retouching frame.
Frame construction for soft-sided luggage. G. G. Barton. 2,454,985, Nov. 30.
Frame for core strips, Holding. M. W. Perry. 2,455,268, Nov. 30.
Frequency changer. H. J. McCreary. 2,455,078, Nov. 30.
Frequency modulation. R. V. Langmuir. 2,454,971, Nov. 30.
Frequency modulation. D. G. C. Luck. 2,454,933, Nov. 30.
Frequency modulation. G. L. Usselman. 2,454,954, Nov. 30.
Fruit juice extractor. N. C. S. Allen. 2,454,905, Nov. 30.
Fuel indicating lighter. A. Harris. 2,454,872, Nov. 30.
Fuel injection pump. G. W. Baierlein. 2,455,289, Nov. 30.
Fuel pump drive for Diesel engines. R. H. Sheppard. 2,455,275, Nov. 30.
Furnace baffle. J. S. Wallis and J. W. Throckmorton. 2,455,201, Nov. 30.
Fuse puller. A. R. Marler. 2,454,878, Nov. 30.
Game apparatus, Pocket football. E. A. Spause. 2,454,891, Nov. 30.
Garment finishing device. J. C. Shaw and H. E. Blettner. 2,454,888, Nov. 30.
Garment hanger. P. S. Kempf. 2,455,066, Nov. 30.
Garment hanger. B. Levitin. 2,455,258, Nov. 30.
Garment hanger. H. E. Reynolds. 2,454,944, Nov. 30.
Gas filled machine. De W. S. Snell and L. P. Grobel. 2,454,979, Nov. 30.
Gate operating means. I. B. McKeown. 2,455,018, Nov. 30.
Gauge: *See*—
Shock gauge. Strain gauge.
Gearing and control, Engine starter. J. E. Buxton. 2,455,328, Nov. 30.
Gearing, Engine starter. J. E. Buxton. 2,455,327, Nov. 30.
Gearing, Engine starter. D. L. Miller. 2,455,339, Nov. 30.
Gearshift, Concentric steering column. M. Jovanovich and J. J. Wharam. 2,455,179, Nov. 30.
Geological exploration system. D. H. Clewell. 2,454,911, Nov. 30.
Girdle, Panty. J. E. Robbins. 2,455,272, Nov. 30.
Glazing and caulking material. P. L. McKee. 2,454,821, Nov. 30.
Glucosides of polyoxy compounds with cyclopentane-polyhydrophenanthrene ring system as have at least one free oxy group in the sterine skeleton, Production of such. I. Bennekou. 2,455,214, Nov. 30.
Glyceride oils with activated magnesium oxide, Treating. W. W. Moyer and R. A. Marmor. 2,454,937, Nov. 30.
Gocart, Collapsible. B. R. Hall. 2,455,119, Nov. 30.
Golf club. J. Verderber. 2,455,150, Nov. 30.
Golf game, Pitch and chip. M. D. May. 2,455,185, Nov. 30.
Governor, Centrifugal. L. De Marco. 2,454,913, Nov. 30.
Governor, Centrifugally operated electric. J. T. Janette. 2,455,335, Nov. 30.
Governor, Speed. H. E. Warren. 2,454,902, Nov. 30.
Grinder, Adjustable internal expansion. S. R. Keller. 2,455,065, Nov. 30.
Grinding machine. J. I. Garside. 2,455,004, Nov. 30.
Grinding machine, Crankpin. F. W. Foudy. 2,455,002, Nov. 30.
Gripper mechanism. R. H. Lawson. 2,454,876, Nov. 30.
Guard, Crib and bed. B. Newman. 2,455,340, Nov. 30.
Gun recoil spring surge dampener. V. F. Lucht. 2,454,818, Nov. 30.
Handle: *See*—
Auxiliary tool handle.
Handle for retracting breech bolts, Detachable operating. T. R. Robinson, Jr. 2,454,885, Nov. 30.
Hanger: *See*—
Garment hanger. Wiring channel hanger.
Picture hanger.
Hanger. F. L. Buxton. 2,454,908, Nov. 30.
Harness motions. E. C. Nichols. 2,455,263, Nov. 30.
Heat exchanging airplane propeller. I. B. Osofsky. 2,455,313, Nov. 30.
Heater: *See*—
Domestic electric heater.
Heater for hydrocarbon fluids. C. S. Reed. 2,454,943, Nov. 30.
Heater with nozzle heating means, Internal-combustion. L. A. Williams, Jr. 2,455,207, Nov. 30.
Heating system. F. C. Broderick. 2,455,040, Nov. 30.
Heating system. W. W. Hallinan. 2,455,250, Nov. 30.
Heating system, Hot-water. F. C. Broderick. 2,455,039, Nov. 30.
Heating unit, Electric. S. J. Temple. 2,455,102, Nov. 30.
Heavy-duty electrode holder. M. Wells. 2,455,325, Nov. 30.
Hexachlorobutadiene, Making. E. T. McBee and L. W. Devaney. 2,454,820, Nov. 30.
Hoist attachment for tractors. E. Sadusky and H. T. Thompson. 2,455,093, Nov. 30.
Holder: *See*—
Christmas tree holder. Pencil holder.
Electrode holder. Ready-reference card index holder.
Heavy-duty electrode holder. Sash holder.
Holder for thermionic tubes. G. Wagstaff. 2,455,324, Nov. 30.
Holders and display devices, Fabricating merchandise. F. H. Bowers. 2,455,109, Nov. 30.
Hook. R. F. Tatom. 2,454,894, Nov. 30.
Humidity control, Refrigerator. J. J. Bauman. 2,454,855, Nov. 30.
Hydraulic apparatus. W. C. Denison, Jr. 2,455,330, Nov. 30.
Hydraulic apparatus. T. E. Raymond. 2,455,271, Nov. 30.
Hydraulic fluid, Noncombustible. F. J. Glavis and H. T. Neher. 2,455,117, Nov. 30.
Hydrocarbons, Treatment of liquid. C. O. Hoover. 2,455,061, Nov. 30.
Hydrogel catalysts by distilling with butanol, Drying. J. A. Pierce and C. N. Kimberlin, Jr. 2,454,941, Nov. 30.
Hydrogen peroxide, Manufacture of. L. H. Dawsey, R. R. Umhoefer, and C. R. Muehlhausser. 2,455,238, Nov. 30.
Ice tray. S. W. E. Andersson. 2,454,958, Nov. 30.
Ice tray. H. C. Berkeley. 2,454,960, Nov. 30.
Igniting propellant in rocket motors. H. W. Mace and B. H. Chamberlain. 2,455,015, Nov. 30.
Ignition control. D. B. Waring. 2,455,344, Nov. 30.
Implement seat support. C. W. Chindlund. 2,454,990, Nov. 30.

Indicating system. G. E. Valley, Jr. 2,455,283, Nov. 30.
Indicator: *See*—
Liquid level indicator.
Single contact dial indicator.
Initiator for explosive charges, Delay action. E. Jones. 2,455,336, Nov. 30.
Instrument, Musical. A. O. Williams. 2,455,032, Nov. 30.
Instrument, Pressure transmitting. A. J. Rosenberger. 2,454,946, Nov. 30.
Insulating material containing polystyrene and plasticizer and making. A. J. Warner and M. Bakst. 2,454,851, Nov. 30.
Internal pipe wrench. L. R. Hall. 2,455,005, Nov. 30.
Iron: *See*—
Soldering iron.
Jacket, Water-cooling. E. F. Zimmerman. 2,454,957, Nov. 30.
Joint. F. W. Slack and C. C. Utz. 2,455,343, Nov. 30.
Joints of hollow beams. A. Borges. 2,455,217, Nov. 30.
Kick stand. H. L. Mueller. 2,455,312, Nov. 30.
Knob construction for locks. L. J. Kalwo. 2,454,927, Nov. 30.
Knockout, Printer's. C. W. Wright. 2,455,033, Nov. 30.
Lamp: *See*—
Ecliptic flasher lamp.
Lamp base asssembly. W. F. Masterson. 2,455,131, Nov. 30.
Lamp locking device, Fluorescent. M. A. Harris. 2,455,333, Nov. 30.
Latch: *See*—
Drop bottom mine car latch.
Latching device. N. C. Coates. 2,455,163, Nov. 30.
Lath board. G. A. Buttress. 2,455,016, Nov. 30.
Lathe dog. J. C. Leone. 2,455,071, Nov. 30.
Lawn washer and sprinkler support. E. R. Bremer. 2,455,037, Nov. 30.
Leads to electrical capacitors, Securing. M. J. Obert. 2,455,136, Nov. 30.
Lighter: *See*—
Fuel indicating lighter.
Lighter shell and making same. C. D. Dosker. 2,454,998, Nov. 30.
Lighting fixture cover. G. W. Beals. 2,455,107, Nov. 30.
Linkage, Mechanical. L. Cook. 2,455,329, Nov. 30.
Lipovitellenin from egg yolk, Isolation of. H. L. Fevold and A. L. Dimick. 2,454,915, Nov. 30.
Liquid fuel burner. R. W. De Laucey. 2,455,115, Nov. 30.
Liquid level indicator. C. F. Wallace. 2,455,200, Nov. 30.
Litter stretcher-bar assembly. S. G. Thomson. 2,455,027, Nov. 30.
Load and voltage recordings of electrical distribution systems on a single recorder, Obtaining. T. Oakley. 2,454,882, Nov. 30.
Load leveler for power scoops. B. Burrow. 2,455,160, Nov. 30.
Lock: *See*—
Tube lock.
Lock construction. E. J. Heineman. 2,454,920, Nov. 30.
Lock construction. L. J. Kalwo. 2,454,928, Nov. 30.
Lock device for compartment doors. E. N. Jacobi. 2,454,926, Nov. 30.
Lubricants for textile materials. A. Moscowitz. 2,454,822, Nov. 30.
Machine for cutting handholes. A. C. Coker. 2,454,861, Nov. 30.
Machine guns in airplanes, Mounting. P. H. Kemmer, C. E. Reichert, and C. S. Butt, Jr. 2,454,806, Nov. 30.
Machine tool. R. M. Gamble. 2,454,916, Nov. 30.
Magnet device, Floor sweeping. R. H. Stearns. 2,455,319, Nov. 30.
Marble game. F. H. King. 2,455,012, Nov. 30.
Marking system. H. C. Hayslip. 2,455,007, Nov. 30.
Means to connect tractor and trailer sections and for effecting steering thereof. H. G. Traver. 2,455,147, Nov. 30.
Measurement of corrosive characteristics of the soil. R. L. Starkey and K. M. Wight. 2,454,952, Nov. 30.
Measuring device, Capacitive angular velocity. B. E. Watt. 2,455,345, Nov. 30.
Measuring the color quality of light, Method of and apparatus for. V. O. Gittus. 2,455,116, Nov. 30.
Mechanism for effecting the regulation and automatic control of the temperature of bath water. C. R. Spencer and D. G. Wilhelm. 2,455,144, Nov. 30.
Mechanism for moving movable members. H. L. Bowditch. 2,455,326, Nov. 30.
Metal surfaces, Protecting. E. G. Cobb. 2,455,114, Nov. 30.
Meter: *See*—
Accumulator meter.
Pressure meter.
Metering device and heat exchanger for refrigerators, Combination. M. T. Cahenzli, Jr. 2,455,298, Nov. 30.
Methallylbenzene and related compounds, Preparation of. D. Davidson and S. J. Kahn. 2,454,779, Nov. 30.
Microphone, Guitar magnetic. H. De Armond. 2,455,046, Nov. 30.
Milling tool. H. M. Brancher. 2,454,764, Nov. 30.
Milling tool. L. F. Catlin, Sr., R. Rourke, and L. F. Catlin, Jr. 2,455,230, Nov. 30.
Mixer: *See*—
Motor-driven food mixer.
Mixing bowl, Mechanical. R. E. Irish. 2,455,177, Nov. 30.
Mold. E. Mayer. 2,454,819, Nov. 30.
Mold, mold charging, and molding process. F. A. Slack, Jr. 2,454,847, Nov. 30.
Molded scabbards, Making. E. L. Beckwith and C. P. MacIver. 2,455,215, Nov. 30.
Motor: *See*—
Fluid operated motor.
Windshield wiper motor.
Synchronous electric motor.
Motor control apparatus, Electric. R. H. Griest. 2,455,247, Nov. 30.
Motor-driven food mixer. A. W. Seyfried. 2,455,026, Nov. 30.
Motor mount and motor drive means for phonographs. D. W. Sweighert. 2,455,280, Nov. 30.
Motor with valved flexible piston, Expansible chamber. L. Francis. 2,455,245, Nov. 30.
Mounting: *See*—
Antenna mounting.
Vehicle wheel mounting.
Saxophone key mounting.
Mounting for electric motors, Brush. E. Bylund. 2,454,909, Nov. 30.
Mounting for outboard motors. G. W. Martin. 2,454,972, Nov. 30.
N-propyl diaminodiphenylsulfone and obtaining same. A. L. Rawlins. 2,454,835, Nov. 30.
Natural gums or resins, Blanching. L. R. Van Allen. 2,455,199, Nov. 30.
Network, Time-delay. M. J. Di Toro. 2,454,865, Nov. 30.
Optical apparatus for showing rotating parts at rest. N. F. Barnes. 2,454,959, Nov. 30.
Optical method and apparatus for checking propeller blades. E. F. Flint. 2,455,053, Nov. 30.
Ordnance chambrage and cartridge case. R. W. Miller and E. B. Powell. 2,455,080, Nov. 30.
Package of individual cleansing tissue. R. G. Dexter. 2,454,864, Nov. 30.
Packages, Drying wound. G. G. Whytlaw. 2,454,854, Nov. 30.
Packing. C. Ware. 2,455,202, Nov. 30.
Pad: *See*—
Foot pad.
Pallet, Material supporting. F. S. Sullivan. 2,455,197, Nov. 30.
Paper cup and handle therefor. W. E. Amberg. 2,454,906, Nov. 30.
Parachute. H. Caplan. 2,455,044, Nov. 30.
Parachute, Ribbon. F. S. Weinig. 2,454,853, Nov. 30.
Parking device. J. H. Moffat. 2,455,133, Nov. 30.
Pencil holder. R. M. McNeill. 2,455,019, Nov. 30.
Phasing system. C. L. Townsend. 2,455,323, Nov. 30.
Phenothiazine and producing same, Water dispersible. L. M. Geiger and D. L. Marsh. 2,455,054, Nov. 30.
Photonibum leaf. H. F. Schmiege. 2,455,023, Nov. 30.
Photographic enlarger with exchangeable lenses and adjustable lamp housing, Condenser type. R. and A. Simmon. 2,455,142, Nov. 30.
Piano mechanism. A. N. Prevost. 2,455,139, Nov. 30.
Picture hanger. C. O. Larson. 2,454,813, Nov. 30.
Piezoelectric crystal support. F. A. M. Busnel. 2,454,769, Nov. 30.
Pin structure, Coupling. C. R. Wilson. 2,455,105, Nov. 30.
Pipe wrench having a pivoted and adjustable outer jaw. R. D. Bryan. 2,455,041, Nov. 30.
Pitch changing mechanism, Electrically operated. A. G. Forsyth. 2,455,000, Nov. 30.
Plant for the rapid manufacture of straw hats. O. Kohler and W. Rieder. 2,455,257, Nov. 30.
Plasticizers for polyvinyl acetal resins. H. R. Gamrath. 2,455,301, Nov. 30.
Plate, Connecting base. I. J. Israelski. 2,454,803, Nov. 30.
Plug assembly. A. G. Richardson and M. Kaplan. 2,454,838, Nov. 30.
Polyvinyl chloride compositions, Plasticizing. L. B. Morgan, P. Russell, A. A. Gibson, R. A. Kinnear, and R. G. Heyes. 2,455,042, Nov. 30.
Portable surgical table. H. E. Hipps. 2,454,802, Nov. 30.
Potash from wyomingite, Extracting. R. D. Pike. 2,455,190, Nov. 30.
Potato digger attachment for tractors. F. P. Noffsinger. 2,455,264, Nov. 30.
Potentiometer. M. M. Levy. 2,454,816, Nov. 30.
Power supply to multiple loads, High-frequency. J. S. Engel. 2,454,784, Nov. 30.
Preheating installation in boilers for quick heating and steaming. R. H. Robinson. 2,455,192, Nov. 30.
Pressure meter. F. Rieber. 2,455,021, Nov. 30.
Prevention of mist and frost on glass and similar sheet material. R. H. Sapiro. 2,454,886, Nov. 30.
Printing plate and base mount therefor. W. A. Madigan. 2,455,075, Nov. 30.
Projector and incandescent lamp therefor, Electric headlamp. R. K. Braunsdorff. 2,454,765, Nov. 30.
Projector for amusement devices, Coin and disk. R. S. Oakes. 2,454,939, Nov. 30.
Projector, Rocket. D. F. Stevens. 2,455,101, Nov. 30.
Protector: *See*—
Compressor load protector. Door lock protector.
Protogenous substances, Solubilizing. J. A. Reyniers. 2,454,837, Nov. 30.
Puller: *See*—
Fuse puller.

Pulse echo system for distance measuring. P. K. Chatterjea and L. W. Houghton. 2,454,772, Nov. 30.
Pulse radar system. D. E. Norgaard. 2,455,265, Nov. 30.
Pump: *See*—
Deep well pump.
Submersible double-acting fluid piston deep well pump.
Fuel injection pump.
Rotary flexible vane pump.
Rotary pump.
Variable stroke pump.
Raceway, Electrical. M. M. Clayton. 2,455,231, Nov. 30.
Rack: *See*—
Storage tank rack.
Towel rack.
Radio circuit selector switch. G. R. Pennington. 2,455,137, Nov. 30.
Radio-frequency network. G. H. Brown. 2,454,907, Nov. 30.
Radio receiver, Interference reducing. G. J. Lehmann. 2,454,814, Nov. 30.
Radio transmitting and receiving system. E. Labin. 2,454,810, Nov. 30.
Razor, Safety. W. J. Wolpert. 2,455,152, Nov. 30.
Ready-reference card index holder. Q. T. Turner. 2,455,103, Nov. 30.
Reagent and resolving emulsions. W. H. Kirkpatrick and D. L. Wilson. 2,454,808, Nov. 30.
Receiver, particularly for watch on broad frequency bands, Radio-electric. R. Hardy. 2,454,797, Nov. 30.
Receiving system, Signal. H. J. Fisher. 2,455,052, Nov. 30.
Recorder, Heated stylus inkless. H. T. Faus. 2,454,966, Nov. 30.
Rectifier, Metal. A. M. Searle. 2,454,843, Nov. 30.
Rectifier stack. M. F. Skinker. 2,454,846, Nov. 30.
Refractory structures, Basic. E. C. Hite. 2,454,922, Nov. 30.
Regeneration of activated carbon by inorganic liquid treatment. G. J. Meerdink. 2,455,260, Nov. 30.
Resistance device, Variable. A. O. Beckman. 2,454,986, Nov. 30.
Retouching frame. P. Schmadlewsky. 2,455,096, Nov. 30.
Retrieving apparatus. R. Ring. 2,454,839, Nov. 30.
Ricer, Potato. J. D. Pacotto. 2,455,267, Nov. 30.
Rosin, Polymerization of. B. L. Hampton. 2,454,795–6, Nov. 30.
Rotary flexible vane pump. E. C. Rumsey. 2,455,194, Nov. 30.
Rotary pump. E. L. Grate. 2,455,303, Nov. 30.
Rotor for electric motors and making the same. T. R. Wieseman. 2,454,955, Nov. 30.
Safety eyeglass case. W. H. Mercer. 2,455,079, Nov. 30.
Sash holder. A. Hakanson. 2,454,794, Nov. 30.
Saw, Adjustable radial kerfing. A. Scianna. 2,455,097, Nov. 30.
Saw, Masonry. N. C. Coates. 2,455,113, Nov. 30.
Saxophone key mounting. F. E. Comer. 2,455,232, Nov. 30.
Scraper, Chimney. V. Fortin. 2,455,001, Nov. 30.
Scum removing apparatus. A. C. Lind. 2,455,338, Nov. 30.
Seal for chutes of concrete mixers. H. C. Peters. 2,454,940, Nov. 30.
Sealer for containers, Hand. J. Coyle. 2,455,045, Nov. 30.
Sealing element for valves. A. L. Parker. 2,455,087, Nov. 30.
Sealing machine, Tube. G. G. Schneider. 2,455,317, Nov. 30.
Seam welding apparatus, Electric resistance. C. S. Seltzer. 2,454,948, Nov. 30.
Seating structure, Springy adjustable. M. M. Cunningham. 2,454,912, Nov. 30.
Selenium boiler. C. S. Smith, Jr., and S. Blumenthal. 2,455,277, Nov. 30.
Selenium rectifier element. C. E. Holmes. 2,455,176, Nov. 30.
Shading process for photographs. H. J. Tuthill. 2,454,898, Nov. 30.
Shaft bearing. D. Firth. 2,455,166, Nov. 30.
Shaped articles, Making. G. T. Vaala. 2,455,198, Nov. 30.
Sharpening device, Axe. T. Lee. 2,455,014, Nov. 30.
Shears, Surgical cast. A. J. Hood. 2,455,009, Nov. 30.
Sheet feeding method and apparatus therefor. F. R. Beliuche. 2,454,762, Nov. 30.
Shock absorbing bearing. E. Morf. 2,455,081, Nov. 30.
Shock gauge. C. H. Grogan and C. E. Crede. 2,454,793, Nov. 30.
Shoe last. G. Clausing. 2,455,294, Nov. 30.
Shoe mounting for projectors, Tension. E. J. Wienke. 2,455,206, Nov. 30.
Shoulder support for garment finishing apparatus, Adjustable. J. H. Richa and F. E. Hanson. 2,454,977, Nov. 30.
Signal: *See*—
Automobile position signal.
Signaling device, Emergency day and night. M. Dwyer. 2,455,242, Nov. 30.
Signaling system, Electric alarm. E. Cohrt. 2,454,775, Nov. 30.
Signaling system, Electric selective. L. R. Frost. 2,454,967, Nov. 30.
Signaling system, Pulse. E. Labin and D. D. Grieg. 2,454,811, Nov. 30.
Single contact dial indicator. H. G. Magealson. 2,455,076, Nov. 30.
Ski trainer and exerciser. C. A. Scriver. 2,455,274, Nov. 30.
Sled. I. Shakowitz. 2,455,318, Nov. 30.
Soldering iron. R. W. Hyde. 2,454,875, Nov. 30.
Solids according to specific gravity, Centrifugal separation of. J. Harrington. 2,454,798, Nov. 30.
Speed control, Grinder. V. W. Bunker. 2,454,988, Nov. 30.
Spherical adsorbent particles, Preparation of. J. A. Pierce and C. N. Kimberlin, Jr. 2,454,942, Nov. 30.
Spinning top. G. A. Geddes. 2,454,918, Nov. 30.
Spotlight, Automotive. R. T. Larson. 2,454,931, Nov. 30.
Spray cooling apparatus for milk cans. D. Donnelly. 2,455,162, Nov. 30.
Spring: *See*—
Bed spring.
Spring heel for footwear. H. H. Smith. 2,454,951, Nov. 30.
Spring holding device for vehicles. F. L. Dahleen. 2,454,996, Nov. 30.
Spring supported rocking chair. W. J. La Valliere. 2,454,932, Nov. 30.
Stainless steel, Production of. D. L. Loveless. 2,455,073–4, Nov. 30.
Stand: *See*—
Bicycle kick stand.
Kick stand.
Christmas tree stand.
Stand for displaying merchandise, Display. R. R. Stewart and J. W. Blewen. 2,455,278, Nov. 30.
Steaming or vaporizing means. K. Weik. 2,454,903, Nov. 30.
Steering column gearshift operating mechanism, Concentric. J. J. Wharam and M. Jovanovich. 2,455,204, Nov. 30.
Steering gear for operating the rudders of ships, Hydraulic marine. W. T. Pritchard. 2,455,090, Nov. 30.
Storage tank rack. C. E. McCormick. 2,455,017, Nov. 30.
Strain gauge. F. F. Versaw. 2,455,285, Nov. 30.
Strainer. S. P. Kinney and L. M. Hartwick. 2,455,181, Nov. 30.
Stroboscopic apparatus for calibrating time indicating devices. J. M. Weinberger. 2,454,983, Nov. 30.
Stroke eccentric mechanism, Adjustable. N. Michelman. 2,454,881, Nov. 30.
Structural member, Composite. P. W. Abeles. 2,455,153, Nov. 30.
Stud for welding. C. S. Evans. 2,455,244, Nov. 30.
Styrene resin, Making. S. G. Burroughs. 2,455,225, Nov. 30.
Submersible double-acting fluid piston deep well pump. B. F. Schmidt. 2,455,022, Nov. 30.
Sulfonates and products thereof, Preparing insolubilized. J. T. Thurston. 2,455,282, Nov. 30.
Support: *See*—
Adjustable heater support.
Piezoelectric crystal support.
Implement seat support.
Lawn washer and sprinkler support.
Support means for idler rollers. F. N. Smith. 2,455,100, Nov. 30.
Surgical cast cutter. A. J. Hood. 2,455,008, Nov. 30.
Sweep for radar oscilloscopes, Adjustable expanded. L. A. de Rosa. 2,454,782, Nov. 30.
Switch: *See*—
Radio circuit selector switch.
Time switch.
Switch control device. A. Buttner. 2,455,161, Nov. 30.
Synchronizing mechanism. D. M. Lawrence. 2,455,070, Nov. 30.
Synchronous electric motor. T. Mungall, Sr. 2,455,134, Nov. 30.
System for corrosion protection. G. L. Young. 2,454,956, Nov. 30.
System for magnetic deflection in cathode-ray tubes. J. Haantjes. 2,455,171, Nov. 30.
Table: *See*—
Automobile service table.
Portable surgical table.
Telecommunication switching system. G. Deakin. 2,454,780, Nov. 30.
Telephone system utilizing register controlled final selector switches. J. Kruithof and M. D. Hertog. 2,454,809, Nov. 30.
Tensioned roving and forming same. R. B. Newton. 2,454,830, Nov. 30.
Tetrahydrofurfuryl alcohol containing furfural and furfuryl alcohol as impurities, Purification of. J. G. M. Bremner and D. G. Jones. 2,455,159, Nov. 30.
Tetralol, Manufacture of. R. Johnson. 2,454,804, Nov. 30.
Thermohydrometer. A. Hoyer. 2,455,010, Nov. 30.
Thermostatic device for draining condensate from steam cylinders and the like. J. A. Heva. 2,455,305, Nov. 30.
Thin-wall tubing connector. F. J. Kennedy. 2,455,180, Nov. 30.
Throttle control, Automatic. S. C. Copeland. 2,455,233, Nov. 30.
Time switch. E. R. Schott. 2,454,887, Nov. 30.

Toe creasing machine. R. W. Wirtz. 2,455,106, Nov. 30.
Tonsillar instrument. V. E. Landry. 2,455,068, Nov. 30.
Tool: *See*—
Automatic striking tool. Milling tool.
Machine tool.
Tool. F. H. Lobdell. 2,455,183, Nov. 30.
Tool for handling retaining rings. R. Feiti. 2,455,165, Nov. 30.
Tooth cleaning kit, Disposable. E. M. Curran. 2,454,995, Nov. 30.
Torsion specimen and holder for same. D. M. Van Winkle and D. C. Buffum. 2,454,850, Nov. 30.
Totalizing device. A. A. Markson. 2,455,184, Nov. 30.
Towel rack. T. W. Bell. 2,455,213, Nov. 30.
Towing device, Automobile. A. J. Roth. 2,455,140, Nov. 30.
Traction device for tractors. H. N. Boyer. 2,455,110, Nov. 30.
Traction device for wheeled vehicles. B. D. Irvin. 2,455,307, Nov. 30.
Transmission, Variable-speed. G. C. Cooke. 2,454,991, Nov. 30.
Transmission, Variable speed and power. F. J. Morith. 2,455,082, Nov. 30.
Transmitter employing a cathode-ray tube time modulator, Pulse multiplex. P. K. Chatterjea and L. W. Houghton. 2,454,773, Nov. 30.
Transmitter-receiver, Velocity variation. A. L. Samuel. 2,455,094, Nov. 30.
Transportation bracket. R. Case. 2,455,228–9, Nov. 30.
Treating milk, blood, and other globular liquids, Process and apparatus for. S. B. Crespi. 2,455,235, Nov. 30.
Tricycle, Convertible. A. M. Teta. 2,455,281, Nov. 30.
Truss. W. C. Pfahl. 2,454,833, Nov. 30.
Tube: *See*—

Vibrator and circuit therefor. C. Huetten. 2,455,253, Nov. 30.
Viscosity reduction of petroleum mahogany sulfonate hydrocarbon solutions. J. Faust. 2,454,825, Nov. 30.
Viscosity reduction of petroleum mahogany sulfonate hydrocarbon solutions. J. Faust. 2,454,828, Nov. 30.
Viscosity reduction of petroleum mahogany sulfonate hydrocarbon solutions. L. Liberthson and J. Faust. 2,454,826, Nov. 30.
Viscosity reduction of petroleum mahogany sulfonate hydrocarbon solutions. A. Moscowitz. 2,454,823–4, Nov. 30.
Viscosity reduction of petroleum mahogany sulfonate hydrocarbon solutions. A. Moscowitz. 2,454,827, Nov. 30.
Washer, Barrel. G. L. Hurst. 2,454,924, Nov. 30.
Water- and weatherproofing construction of casings for binoculars. P. H. Case. 2,454,859, Nov. 30.
Water fountain for poultry. W. G. Armstrong. 2,455,211, Nov. 30.
Web tension equalizing device. G. J. Crocker. 2,454,863, Nov. 30.
Welder for wire mesh fabrics. C. C. Wickwire. 2,455,346, Nov. 30.
Welding apparatus, Electric. K. V. Hart. 2,455,057, Nov. 30.
Wheel: *See*—
Buffing wheel. Emergency wheel.
Wheel starter. J. F. Schroeder. 2,454,947, Nov. 30.
Wheel trim. E. L. Wood. 2,455,151, Nov. 30.
Windshield wiper motor. H. E. Perez. 2,455,089, Nov. 30.
Window molding. P. H. Pelley. 2,454,975, Nov. 30.
Windrow device. C. W. Hansen and F. N. G. Kranick. 2,455,122, Nov. 30.
Winglock slider for slide fasteners. L. L. Jones. 2,455,178, Nov. 30.
Wire and strip electroprocessing machine, Continuous. C. G. Miller. 2,454,935, Nov. 30.
Wire transposing device. R. Case. 2,455,227, Nov. 30.
Wiring channel hanger. R. M. Runge. 2,455,141, Nov. 30.
Wood veneer, Dry expansion of. J. R. Francek. 2,454,787, Nov. 30.
Work holder for woodworking machines. A. Pedersen. 2,455,189, Nov. 30.
Wrench: *See*—
Internal pipe wrench.
Yarn assembly. D. Tann. 2,455,146, Nov. 30.
Yarn treating apparatus. I. V. Hitt. 2,455,173, Nov. 30.
Zirconia opacifiers and making. L. C. Hurd, A. J. Vander Weyden, and J. D. Stroupe. 2,455,123, Nov. 30.

CLASSIFICATION OF PATENTS

ISSUED NOVEMBER 30, 1948

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number = class, second number = subclass, third number = patent number

2— 38: 2,455,272	60— 35.6: 2,455,015	102— 37.8: 2,455,242	170–135.27: 2,455,239	204— 209: 2,454,935	250— 27: 2,455,218

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

CARL W. OSBORNE *v.* HERBERT F. PATTERSON AND OTTO W. SCHOTZ

[169 F.2d 817; 79 USPQ 72]

No. 5476. Decided June 1, 1948. Petition for Rehearing Denied Sept. 30, 1948

1. INTERFERENCE—CONSTRUCTION OF COUNTS.
When there is no contention that the language of the counts is vague, ambiguous, or indefinite, *Held* that they must be construed as broadly as their language will reasonably permit.

2. SAME—SAME—"AUTOMATICALLY CONTROLLED MEANS."
When appellant insists that the "automatically controlled means" requires that the responsive element thereof must be a single or unitary device, *Held* that a means for performing any function includes all of the elements contributing to such performance, regardless as to the number of kind of such elements.

3. SAME—VARIABLE SPEED TRANSMISSION.
Held that since the counts are supported by the application of appellees, we find no error in the decision of the Board of Interference Examiners awarding priority of invention of the subject matter of the two counts to appellees.

APPEAL from the Patent Office. Interference No. 81,935.

AFFIRMED.

Max W. Zabel, Edward C. Gritzbaugh and *Benton Baker* for Osborne.

Sidney A. Ochs (*Charles M. Thomas* and *Harness, Lind, Pattee, and Harris* of counsel) for Patterson et al.

JACKSON, *J.*:

This is an appeal in an interference proceeding from a decision of the Board of Interference Examiners awarding priority of invention of the subject matter of two counts copied from the patent of appellant by appellees for the purpose of provoking this interference.

The interference involves appellant's Patent No. 2,328,291, dated August 31, 1943, on an application, Serial No. 403,198, filed January 19, 1941, and an application of appellees, Serial No. 360,068, filed August 7, 1940. The Borg-Warner Corporation is the assignee of appellant's patent and the Chrysler Corporation is assignee of the application of appellees.

The counts read as follows:

1. A variable speed transmission comprising in combination a countershaft type unit having low, second and direct drive ratios, and a planetary type unit having direct drive and overdrive ratios, automatically controlled means for effecting shifts between second and direct drive in the countershaft unit and between direct drive and overdrive in the planetary unit, said means being adapted to effect up shifts from second to direct to overdrive direct, and manually operated overcontrol means for effecting downshifts from overdrive direct to overdrive second to second.

2. A variable speed transmission comprising in combination a countershaft type unit having low, second and direct drive ratios, and a planetary type unit having direct drive and overdrive ratios, automatically controlled means for effecting shifts between second and direct drive in the countershaft unit and between direct drive and overdrive in the planetary unit, said means being adapted to effect upshifts from second to direct to overdrive direct, manually operated overcontrol means for effecting down-shifts from overdrive direct to overdrive second to second, and means for limiting said down-shifts above a predetermined speed of operation of one of the units from overdrive direct to direct only.

After the preliminary statements had been opened, appellant was placed under an order to show cause why judgment on the record should not be entered against him for the reason that all of the dates alleged by him were subsequent to the filing date of appellees.

Thereupon appellant moved to dissolve the interference alleging that the counts are not readable on the disclosure of the application of appellees; that the disclosure of appellees is inoperative to perform the functions stated in the counts; that appellees' disclosure is radically different from that of appellant's patent; and that the counts should be interpreted in the light of the patentee's disclosure. The motion to dissolve was opposed by appellees on the ground that the allegations contained therein are not supported in fact and in law.

The Primary Examiner denied appellant's motion and final hearing was had before the Board of Interference Examiners for a review of the Primary Examiner's decision. The Board in its decision affirmed both the conclusion and reasoning given by the Examiner.

The inventions of the parties in general concern a power transmission device for motor vehicles directed to speed change transmissions and the controls thereof. The devices comprise a countershaft transmission connected in tandem with an overdrive unit of the planetary type. Each unit is designed so as to be actuated by means of an electromagnetically controlled power device in accordance with the speed of the vehicle and the manipulation of the conventional accelerator pedal.

Vol. 616 • No. 5 Tuesday, November 30, 1948 Price $16 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $16.00 per annum, including annual index, $19.50; single numbers, 35 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 25 cents each; copies of TRADE-MARKS and DESIGNS at 10 cents each. Address orders to the Commissioner of Patents, Washington 25, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or TRADE-MARKS will be sent without cost on request to the Commissioner of Patents, Washington 25, D. C.

The structures upon which the issue of fact depends are very complicated and highly complex. It will not be necessary, however, to describe those structures in detail.

[1] It will be noted that the counts are identical except for the last clause appearing in count 2, and the parties appear to agree that such difference does not affect the questions before us. There is no contention that the language of the counts is vague, ambiguous, or indefinite, and, therefore, they must be construed as broadly as their language will reasonably permit. *Moniz* v. *Kronmiller*, 25 CCPA (Patents) ——, 168 F.2d 100, 77 USPQ 628, 614 O. G. 18. For the reasons hereinbefore set out, we will confine our discussion to count 1.

That count defines a transmission structure comprising a combination of a countershaft type transmission with two forward speeds. Those transmissions are conventional and well known in the automotive art. The novelty which is said to be here involved is in the providing of mechanism to make possible and to effectuate the bringing into operation of sequences of combinations of the transmission's speed or gear positions in the ordinary operation of the structure. The novel parts of the combination in the structure are recited in the count as "automatically controlled means" and a "manually operated overcontrol means." The automatically controlled means is made effective by being responsive to conditions obtaining in the structure, and the manually operated overcontrol means is such that it will supersede the automatically controlled means by manual operation.

[2] It is the contention of appellant that the means disclosed by appellees with respect to the automatically controlled means does not respond to the count because appellees use as a responsive element, in effecting the gear shift from second to direct, a separate speed responsive switch and also a centrifugal clutch, which is a distinct and separate element for effecting the overdrive in the planetary transmission in which the shift from direct to overdrive is accomplished. Arguing in support of that contention, appellant insists that the "automatically controlled means" requires that the responsive element thereof must be a single or unitary device. We can not agree with such contention. It has been held many times in this and other courts that a means for performing any function includes all of the elements contributing to such performance, regardless as to the number or kind of such elements. *Moniz* v. *Kronmiller*, supra.

With respect to the "manually operated overcontrol means" by which down-shifts are made from overdrive direct to overdrive second speed and from overdrive second to second speed in place of the normal reverse of sequence of upshifts, taken care of by the automatic means, reads on the disclosure of appellees in their system which is under control of an accelerator pedal operated switch. When that switch is closed by full depression of the pedal, as the machine is working in overdrive direct within a set range of speeds, it will "kick down" the transmission to overdrive second speed in conjunction with the effect of the centrifugal clutch upon the operation of the throttle, thus obtaining a reversal of torque. Such operation is accomplished without opening the pedal switch. If such switch were opened, direct drive might be restored in the countershaft transmission during speed which is below the set range to shift down from the overdrive. Therefore, in our opinion, the shift down sequence, obtained as above set out, is determined by a manual operation, and consequently fully responds to the limitation "manually operated overcontrol means" of the count.

It is contended by appellant that because the second down shift in appellees' device is made by operation of the centrifugal clutch, that such down shift is wholly automatic and without manual control. However, the centrifugal clutch is clearly only one of the elements of the manually operated means. The foot pedal must first be operated in order to bring about the second shift of the speed sequence and condition it for the second shift thereof, and it must be manipulated to allow the centrifugal clutch to be operated and at the same time prevent reshift in the countershaft transmission to direct drive, and thus prevent selection of the second shift in the overcontrol means. Consequently the clutch as well as the pedal comprise the means. Since no structure is recited in the count defining the means, the expression "manually operated overcontrol means" must be a definition of the means as a whole when functionally viewed. That limitation of the count can not properly be interpreted in a restricted fashion to some unidentified subcombination of the means, as appellant appears to contend. Therefore, in our opinion, the disclosure of appellant supports the count, as was held by both the Primary Examiner and the Board.

While the devices of the parties are different, such difference is not so great that they will not both support the same count, and we find nothing in the record which could require reading into the count limitations which fit only the disclosure of appellant.

[3] Since we are of opinion that the counts are supported by the application of appellees, we find no error in the decision of the Board of Interference Examiners.

Diminution of the record was suggested by each of the parties, and in consequence thereof certain papers from the Patent Office were certified to this court pursuant to a writ of certiorari. Since it was not necessary to our decision to consider such papers, costs will be taxed against each of the parties for the printing of the papers of each of them brought here on certiorari.

For the reasons hereinbefore set out, the decision of the Board is affirmed.

AFFIRMED.

By reason of illness, O'CONNELL, *J.*, was not present at the argument of this case and did not participate in the decision.

PATENT SUITS

[Notices under sec. 4921, R. S., as amended Feb. 18, 1922]

1,574,700, Schlesinger & Heine, Foot controlled washfountain; 2,196,301, H. E. Heine, Washfountain, D. C., S. D. Ohio (Cincinnati), Doc. 282, *Bradley Washfountain Co.* v. *Metalloid Engineering & Mfg. Co.* Cause dismissed without prejudice Oct. 5, 1948.

NOTICES

Patentability Reports

Where an application, properly assigned to one examining division, is found to contain one or more claims per se classifiable in one or more other divisions, which claims are not divisible inter se or from the claims which govern classification of the application in the first division, the application may be referred to the other division or divisions concerned for a report as to the patentability of certain designated claims. This report will be known as a Patentability Report (P. R.) and will be signed by the Primary Examiner of the reporting division. Credit for an action will be given for each such report.

The practice above authorized becomes effective December 1, 1948, and supersedes the dual prosecution procedure as outlined in the notices of October 7, 13, 14, and 20, 1941, the memorandum of June 5, 1943, and the notices of September 25, 1944, and November 24, 1947.

LAWRENCE C. KINGSLAND,
November 10, 1948. *Commissioner of Patents.*

Disclaimers

2,272,965.—*John C. Crowley*, Cleveland Heights, Ohio. VULCANIZER CLAMP. Patent dated Feb. 10, 1942. Disclaimer filed Nov. 5, 1948, by the assignee, *The Dill Manufacturing Company*.

Hereby enters this disclaimer to claims 14 and 15 of said patent.

2,297,365.—*John Ellis Ostline*, Chicago, Ill. TELEPHONE SYSTEM. Patent dated Sept. 29, 1942. Disclaimer filed Oct. 27, 1948, by the assignee, *Automatic Electric Laboratories, Inc.*; the inventor consenting.

Hereby enters this disclaimer of claims 27 and 29 of said patent.

2,408,664.—*Charles William Lloyd*, Brooklyn, N. Y. MIXING FAUCET FOR BEVERAGES. Patent dated Oct. 1, 1946. Disclaimer filed Oct. 23, 1948, by the assignee, *Dispensers Inc.*

Hereby enters this disclaimer to claims 1 and 4 in said specification.

2,434,739.—*Charles L. Flindt*, San Jose, Calif. SOLE TRIMMING MACHINE. Patent dated Jan. 20, 1948. Disclaimer filed Oct. 25, 1948, by the patentee.

Hereby enters disclaimer to the following words appearing in column 5, lines 5 and 6, claim 1 of the patent:

"means for rotating the blade past the said cooperating edge"

and substitutes in lieu thereof:

means for conveying motor power for rotating the blade past the said cooperating edge.

Interference Notice

Louis S. Richman, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of The Cudahy Packing Co., 221 North La Salle Street, Chicago, Ill., for registration of a trade-mark and registration No. 388,367, issued June 24, 1941, to Louis S. Richman, 225 Grand Street, New York, N. Y., and the notice of such declaration sent by registered mail to the said Richman at the said address of record having been returned by the post office undeliverable, notice is hereby given that unless said Richman, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order, the interference will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS F. MURPHY,
Nov. 4, 1948. *Assistant Commissioner of Patents.*

Cancellation Notice

Mary Pardo, her assigns or legal representatives, take notice:

A petition for cancellation having been filed in this Office by Elizabeth Arden Sales Corporation, 681 Fifth Ave., New York 22, N. Y., to effect the cancellation of trade-mark registration of Mary Pardo, 552 Cabrini Place, Chicago, Ill., No. 347,316, dated June 22, 1937, and the notice of such proceeding sent by registered mail to the said Mary Pardo at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Mary Pardo, her assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order, the cancellation will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS F. MURPHY,
Nov. 5, 1948. *Assistant Commissioner of Patents.*

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Groups" appearing after the patent abstracts are based on the Standard Industrial Classification Manual, Vol. I, Manufacturing Industries, Executive Office of the President, Bureau of the Budget)

General Aniline & Film Corporation has placed more than 3,000 patents on the Register of Patents as being available for licensing. The patents are grouped in five sections. Publication began November 2, 1948. The following patents (Reg. Nos. 13,400 through 13,933) are the balance of Section 3, relating to Miscellaneous Organic Compounds and Processes, including Vinyl Compounds and Iron Carbonyl, Groups 28; 33; 35, and part of Section 4, relating to Photographic—Chemical and Mechanical, Groups 28; 39—12. Inquiries concerning these patents should be addressed to the Patent Department, General Aniline & Film Corporation, 247 Park Ave., New York 17, N. Y.

SECTION 3—Continued

Pat. 2,174,287. Tanning Agents and Process of Producing Same. Sept. 26, 1939.

Pat. 2,175,096. Floor and Wall Covering Material. Oct. 3, 1939.

Pat. 2,176,843. Process of Preparing Imidazolines. Oct. 17, 1939.

Pat. 2,177,420. Water-Soluble Condensation Products. Oct. 24, 1939.

Pat. 2,177,619. Process of Producing Nitriles. Oct. 24, 1939.

Pat. 2,177,621. Process for Preparing Calcium Carbide. Oct. 24, 1939.

Pat. 2,177,622. Electric Furnace for the Production of Calcium Carbide. Oct. 24, 1939.

Pat. 2,178,454. Production of Olefin Oxides. Oct. 31, 1939.

Pat. 2,178,523. Production of High Molecular Hydroxylated Condensation Products from Crotonaldehyde. Oct. 31, 1939.

Pat. 2,179,038. Tanning Agents and Process of Producing Them. Nov. 7, 1939.

Pat. 2,179,040. Process of Polymerization in the Gaseous State. Nov. 7, 1939.

Pat. 2,179,209. Esters Derived from Isocyclic Compounds. Nov. 7, 1939.

Pat. 2,179,800. Process of Producing Condensation Products Having Tanning Action. Nov. 14, 1939.

Pat. 2,180,382. Process of Preparing Calcium Cyanamide. Nov. 21, 1939.

Pat. 2,182,306. Polymerization of Ethylene Imines. Dec. 5, 1939.

Pat. 2,182,754. Process of Preparing Cyclic Acetals of Formaldehyde. Dec. 5, 1939.

Pat. 2,184,622. Manufacture of Tanning Agents. Dec. 26, 1939.

Pat. 2,185,480. Nitrogenous Condensation Products and Process of Producing the Same. Jan. 2, 1940.

Pat. 2,187,570. Polyvinyl Acetals. Jan. 16, 1940.

Pat. 2,188,272. Shaped Article and Process of Preparing It. Jan. 23, 1940.

Pat. 2,188,778. Production of Polymerization Products of Vinyl Ethers. Jan. 30, 1940.

Pat. 2,190,179. Conversion Products of Constituents of Carob Beans. Feb. 13, 1940.

Pat. 2,190,184. Process of Producing Aldehyde Resins. Feb. 13, 1940.

Pat. 2,191,737. Production of Water-Soluble Condensation Products. Feb. 27, 1940.

Pat. 2,191,738. High Molecular Polycarboxylic Acid Amides and Their Production. Feb. 27, 1940.

Pat. 2,191,978. Quaternary Nitrogen Compounds and Process of Preparing Them. Feb. 27, 1940.

Pat. 2,191,982. Water Repellent Textile Material. Feb. 27, 1940.

Pat. 2,193,327. Artificial Resins. Mar. 12, 1940.

Pat. 2,193,944. Alkylation Products of Aromatic Compounds and a Process of Preparing Them. Mar. 19, 1940.

Pat. 2,194,419. Cyclic Amidines and Process of Producing Them. Mar. 19, 1940.

Pat. 2,194,429. Production of Condensation Products Suitable as Assistants in the Lacquer and Related Industries. Mar. 19, 1940.

Pat. 2,194,906. Nitrogenous Condensation Product and Process of Producing Same. Mar. 26, 1940.

Pat. 2,195,088. Sulphonated Ketones. Mar. 26, 1940.

Pat. 2,195,974. Process of Producing New Aminocarboxylic Acids. Apr. 2, 1940.

Pat. 2,196,135. Abradant. Apr. 2, 1940.

Pat. 2,196,156. Production of Formic Acid. Apr. 2, 1940.

Pat. 2,197,880. Aromatic Polynuclear Polycarboxylic Acids and a Process of Making Them. Apr. 23, 1940.

Pat. 2,198,042. Porous Metal Bodies. Apr. 23, 1940.

Pat. 2,198,046. Process of Producing Esters and Ethers. Apr. 23, 1940.

Pat. 2,199,780. Imidazolines Containing Sulphuric Acid Radicals and Process of Preparing Them. May 7, 1940.

Pat. 2,199,934. Process of Preparing Higher Halogenated Ketones. May 7, 1940.

Pat. 2,200,216. Production of High Molecular Unsaturated Ketones and Conversion Products Thereof. May 7, 1940.

Pat. 2,200,220. N-Substituted Aspartic Acids and Their Functional Derivatives and Process of Producing Them. May 7, 1940.

Pat. 2,200,437. Highly Viscous Polymerization Products and a Process of Preparing Them. May 14, 1940.

Pat. 2,200,485. Process of Diminishing or Preventing Foaming. May 14, 1940.

Pat. 2,202,169. Method of Protecting Goods Containing Proteins Against Insects. May 28, 1940.

Pat. 2,203,628. Production of Butane-Polycarboxylic Acids. June 4, 1940.

Pat. 2,205,021. Production of Condensation Products. June 18, 1940.

Pat. 2,206,273. Production of Alkylene Imines. July 2, 1940.

Pat. 2,207,603. Manufacture of Aliphatic Amino-Sulphonic Acids. July 9, 1940.

Pat. 2,208,919. Device for Subdividing Fused Calcium Carbide. July 23, 1940.

Pat. 2,210,563. Production of Alkyl Halides. Aug. 6, 1940.

Pat. 2,210,564. Production of Alkyl Halides. Aug. 6, 1940.

Pat. 2,210,588. Process of Preparing Imidazolines. Aug. 6, 1940.

Pat. 2,210,874. Process of Preparing Cyclic Carboxylic Acids Substituted in the Nucleus. Aug. 13, 1940.

Pat. 2,211,001. Oxalkyl Derivatives of Imidazolines. Aug. 13, 1940.

Pat. 2,211,019. Electrical Condenser. Aug. 13, 1940.

Pat. 2,211,152. Substituted Alpha-Amino-Acrylic Acid Nitriles. Aug. 13, 1940.

Pat. 2,211,436. Plastic Masses from Nitrocellulose. Aug. 13, 1940.

Pat. 2,211,709. Triazine-Aldehyde Resinous Condensation Products. Aug. 13, 1940.

Pat. 2,211,710. Diazine-Aldehyde Resinous Condensation Products. Aug. 13, 1940.

Pat. 2,213,984. Condensation Products Having the Constitution of Acid Amides and a Process of Preparing Them. Sept. 10, 1940.

Pat. 2,214,629. Products for Fixing Tanning Agents and a Method of Carrying Out This Fixing. Sept. 10, 1940.

Pat. 2,215,095. Production of Maleic Acid. Sept. 17, 1940.

Pat. 2,215,573. Production of Shaped Articles. Sept. 24, 1940.

Pat. 2,215,861. Manufacture of Imidazolines. Sept. 24, 1940.

Pat. 2,215,862. Manufacture of Imidazolines. Sept. 24, 1940.

Pat. 2,215,863. Manufacture of Imidazolines. Sept. 24, 1940.

Pat. 2,215,864. Manufacture of Imidazolines. Sept. 24, 1940.

Pat. 2,215,865. Recovery of Concentrated Alkylene Chlorhydrins. Sept. 24, 1940.

Pat. 2,217,836. Preparation of Phenol. Oct. 15, 1940.

Pat. 2,217,846. Condensation Products of Betaine-like Constitution and a Process of Preparing Them. Oct. 15, 1940.

Pat. 2,218,077. Resinous Condensation Products and Process of Making Same. Oct. 15, 1940.

Pat. 2,218,640. Production of Aliphatic Hydrocarbons of the Diolefin Series. Oct. 22, 1940.

Pat. 2,218,660. Process of Producing Products of High Wetting Power from Aliphatic Ketones. Oct. 22, 1940.

Pat. 2,218,939. Urethane-Like Compounds. Oct. 22, 1940.

Pat. 2,218,996. Tanning Material. Oct. 22, 1940.

Pat. 2,219,006. Addition Products of 3.4 Dehydrocyclotetramethylene Sulphone. Oct. 22, 1940.

Pat. 2,219,433. Splinterless Glass. Oct. 29, 1940.

Pat. 2,220,906. Drying Oil. Nov. 12, 1940.

Pat. 2,221,140. Process for Bleaching Montan Wax. Nov. 12, 1940.

Pat. 2,221,418. Thiodiglycol-Polycarboxylic Acid Condensation Products. Nov. 12, 1940.

Pat. 2,222,208. Nitrogenous Condensation Product and a Process of Producing Same. Nov. 19, 1940.

Pat. 2,222,302. Synthesis of Adipic Acid Dinitrile. Nov. 19, 1940.

Pat. 2,223,448. Process for Manufacturing Carbon Tetrachloride. Dec. 3, 1940.

Pat. 2,224,022. Maleic Acid and Fumaric Acid Derivatives. Dec. 3, 1940.

Pat. 2,224,026. Process of Producing Fatty Acid Mono-Esters of Monochlorhydrin. Dec. 3, 1940.

Pat. 2,224,964. Manufacture of Aromatic Sulphones. Dec. 17, 1940.

Pat. 2,227,163. Aqueous Emulsions of Polymerization Products and a Process of Preparing Them. Dec. 31, 1940.

Pat. 2,227,948. Production of Epichlorhydrin. Jan. 7, 1941.

Pat. 2,228,270. Interpolymerization Products of the Vinyl Methyl Ketone and Crotonic Acid. Jan. 14, 1941.

Pat. 2,228,365. Process of Producing Vinyl Esters. Jan. 14, 1941.

Pat. 2,228,929. Recovering Surface Active Compounds Containing Polyglycol Ether Radicles. Jan. 14, 1941.

Pat. 2,229,649. Sulphated Methyl Heptadecenyl Carbinol. Jan. 28, 1941.

Pat. 2,229,781. Laminated Glass. Jan. 28, 1941.

Pat. 2,230,591. Aliphatic Aldehyde Condensation Products and a Process for Making Them. Feb. 4, 1941.

Pat. 2,230,812. Process of Recovering Phenols from Resins of Phenols and Aldehydes. Feb. 4, 1941.

Pat. 2,231,502. Process for the Production of High Molecular Nitrogenous Condensation Products. Feb. 11, 1941.

Pat. 2,231,649. Artificial Resins Soluble in Drying Oils and Process of Producing the Same. Feb. 11, 1941.

Pat. 2,232,053. Foaming Composition. Feb. 18, 1941.

Pat. 2,232,867. Production of Alkinols. Feb. 25, 1941.

Pat. 2,233,296. Process of Making Mono Acyl Alkylene Diamines. Feb. 25, 1941.

Pat. 2,233,805. Triazoles. Mar. 4, 1941.

Pat. 2,233,817. Process for Producing Melamine. Mar. 4, 1941.

Pat. 2,235,507. Floor and Wall Covering Material. Mar. 18, 1941.

Pat. 2,238,471. Production of Dihydric Alcohols of the Acetylene Series. Apr. 15, 1941.

Pat. 2,239,780. Process for Improving the Properties of Thermoplastic, Film-Forming, Organic Substances. Apr. 29, 1941.

Pat. 2,240,730. Solutions of Polyvinyl Alkyl Ketones and a Process of Polymerizing Vinyl Alkyl Ketones. May 6, 1941.

Pat. 2,241,200. Process of Producing Chlorinated Ethers. May 6, 1941.

Pat. 2,241,201. Condensation Products from Butane Tetracarboxylic Acids and Process for Producing Same. May 6, 1941.

Pat. 2,241,777. Production of Aliphatic Branched-Chain Hydrocarbons of the Diolefin Series. May 13, 1941.

Pat. 2,241,792. Process of Producing Diolefins. May 13, 1941.

Pat. 2,242,019. Laminated Glass. May 13, 1941.

Pat. 2,242,485. Production of Alkylene Oxides Difficultly Soluble in Water. May 20, 1941.

Pat. 2,242,490. Nitrogenous Condensation Product from 1.2-Alkylene Imines. May 20, 1941.

Pat. 2,243,437. Sulphonic Acid Amides and a Process of Preparing Them. May 27, 1941.

Pat. 2,245,183. Production of Olefin Oxides by Catalytic Oxidation of Olefins. June 10, 1941.

Pat. 2,245,377. Production of Carbonyl Compounds. June 10, 1941.

Pat. 2,246,049. Process of Preparing Glyoxal. June 17, 1941.

Pat. 2,247,735. Condensation Products. July 1, 1941.

Pat. 2,248,729. Quaternary Allsylol Poly-Ammonium Compounds and Process for Producing Them. July 8, 1941.

Pat. 2,251,245. Production of Hydroxy Alkyl Amines. July 29, 1941.

Pat. 2,251,292. Production of Tetrahydrofuranes. Aug. 5, 1941.

Pat. 2,251,835. Production of Tetrahydrofurane from 1.4-Butylene Glycol. Aug. 5, 1941.

Pat. 2,251,895. Production of Tetrahydrofuranes. Aug. 5, 1941.

Pat. 2,253,323. Production of Drying Oils. Aug. 19, 1941.

Pat. 2,255,082. Capillary Active Compounds and Process of Preparing Them. Sept. 9, 1941.

Pat. 2,255,229. Solvent for Organic Film-Forming Materials. Sept. 9, 1941.

Pat. 2,256,186. Quaternary Nitrogen Compounds. Sept. 16, 1941.

Pat. 2,256,189. Antioxidant for Rubber. Sept. 16, 1941.

Pat. 2,257,148. Capillary Active Product. Sept. 30, 1941.

Pat. 2,257,239. Process for Improving Fibrous Materials. Sept. 30, 1941.

Pat. 2,257,980. Manufacture of Aliphatic Unsaturated Nitro Compounds. Oct. 7, 1941.

Pat. 2,263,598. Interpolymerization Product of Vinyl Acetate and Crotonic Acid. Nov. 25, 1941.

Pat. 2,265,163. A Mixture of Sulphonic Acid Chlorides. Dec. 9, 1941.

Pat. 2,265,194. Process for the Production of Capillary-Active Water-Soluble Condensation Products. Dec. 9, 1941.

Pat. 2,265,200. Process of Preparing Propylene Oxide Sulphonic Acid. Dec. 9, 1941.

Pat. 2,265,201. Process of Producing Heterocyclic Nitrogen Compounds Containing a Six-Membered Ring. Dec. 9, 1941.

Pat. 2,265,211. Process of Producing High Molecular Weight Carbonyl Compounds. Dec. 9, 1941.

Pat. 2,265,416. Polymerization Products. Dec. 9, 1941.

Pat. 2,266,771. Acyloxy-Acrylic Acid Nitriles and Process of Preparing Them. Dec. 23, 1941.

Pat. 2,267,068. Process for Producing Ethers of Thioammeline. Dec. 23, 1941.

Pat. 2,267,749. Process of Converting Dihydroxy Compounds of the Acetylene Series into Dihydroxy Compounds of the Ethylene Series. Dec. 30, 1941.

Pat. 2,267,757. Process of Producing Substituted Alpha-Pyrrolidones. Dec. 30, 1941.

Pat. 2,268,129. Process for Making Amines of the Acetylene Series. Dec. 30, 1941.

Pat. 2,270,893. Process of Imparting Hydrophobic Properties to Fibrous Materials. Jan. 27, 1942.

Pat. 2,271,708. Process of Producing High Molecular Oxygen-Containing Compounds. Feb. 3, 1942.

Pat. 2,272,466. Production of Waxlike Substances. Feb. 10, 1942.

Pat. 2,272,489. Nitrogenous Condensation Products and a Process of Producing Same. Feb. 10, 1942.

Pat. 2,273,030. Process of Preparing Phenols. Feb. 17, 1942.

Pat. 2,273,101. Iron Oxide Pigments and Process of Producing the Same. Feb. 17, 1942.

Pat. 2,273,141. Production of Amines of the Acetylene Series. Feb. 17, 1942.

Pat. 2,273,506. Reclaiming of Rubber. Feb. 17, 1942.

Pat. 2,273,515. Fire-Extinguishing Liquid. Feb. 17, 1942.

Pat. 2,273,940. Addition Products of Amides of Low Molecular Carboxylic Acids and Process of Producing the Same. Feb. 24, 1942.

Pat. 2,275,586. Tri(hydroxy Methyl) Acetaldehyde and a Process of Making It. Mar. 10, 1942.

Pat. 2,276,166. Process of Preparing Chlorinated Bromomethanes. Mar. 10, 1942.

Pat. 2,276,309. Formaldehyde-Polyalkylene Polyamine Condensation Products and Production Thereof. Mar. 17, 1942.

Pat. 2,276,666. α-Chloro-β-Alkoxy-Butyraldehydes and Process of Preparing Them. Mar. 17, 1942.

Pat. 2,277,202. Process and Auxiliary for Improving Textile Fabrics. Mar. 24, 1942.

Pat. 2,277,650. Process of Producing N-Butylene. Mar. 24, 1942.

Pat. 2,280,484. Reclaiming of Rubber. Apr. 21, 1942.

Pat. 2,282,264. Process of Producing Substances Having Tanning Action. May 5, 1942.

Pat. 2,282,928. Water-Soluble Condensation Products. May 12, 1942.

Pat. 2,283,764. Esterlike Condensation Products and a Process of Preparing Them. May 19, 1942.

Pat. 2,288,178. Process of Preparing Acylated Halogen Alkyl Amines. June 30, 1942.

Pat. 2,288,588. Solvent for Organic Film-Forming Materials. June 30, 1942.

Pat. 2,289,275. Process of Waterproofing Textiles. July 7, 1942.

Pat. 2,289,278. Resinous Sulphonated Condensation Products. July 7, 1942.

Pat. 2,289,282. Method of Delustering. July 7, 1942.

Pat. 2,291,798. Addition Products of 3.4-Dehydrocyclotetramethylene Sulfone. Aug. 4, 1942.

Pat. 2,294,666. Water Soluble Adhesives Obtained by Etherifying Wood. Sept. 1, 1942.

Pat. 2,294,878. Nitrogenous Waxy to Resinous Condensation Products and Process of Producing Same. Sept. 1, 1942.

Pat. 2,295,618. Recovery of Aliphatic Polyhydroxy Compounds. Sept. 15, 1942.

Pat. 2,296,211. Production of Nitrogenous Condensation Products. Sept. 15, 1942.

Pat. 2,296,225. Nitrogenous Condensation Products and a Process of Producing Same. Sept. 15, 1942.

Pat. 2,296,226. Nitrogenous Condensation Products and a Process of Producing Same. Sept. 15, 1942.

Pat. 2,296,331. Softener for Halogen-Containing High Molecular Weight, Organic Compounds. Sept. 22, 1942.

Pat. 2,298,078. Plastic Masses Similar to Factice and Linoxyn. Oct. 6, 1942.

Pat. 2,299,013. Catalytic Oxidation of Ketones. Oct. 13, 1942.

Pat. 2,300,566. Process of Preparing Polymerization Products. Nov. 3, 1942.

Pat. 2,300,587. Adhesive. Nov. 3, 1942.

Pat. 2,300,589. Animalizing Cellulosic Fibers. Nov. 3, 1942.

Pat. 2,300,598. Process of Producing Butene-2-Diol-1.4 and Its Substitution Products. Nov. 3, 1942.

Pat. 2,300,920. Interpolymers of Vinyl Sulphonic Acid with Another Vinyl Compound and Aqueous Emulsions Thereof. Nov. 3, 1942.

Pat. 2,300,969. Production of Alkinols. Nov. 3, 1942.

Pat. 2,301,676. Water-Repellent Textile Material and a Process of Preparing It. Nov. 10, 1942.

Pat. 2,302,345. Production of Alcohols of the Acetylene Series. Nov. 17, 1942.

Pat. 2,302,885. Hydrohalides of Substituted Isothio-Ureas and a Process of Preparing Them. Nov. 24, 1942.

Pat. 2,304,917. Polymerization of Vinyl Compounds with Acetylene Alcohols. Dec. 15, 1942.

Pat. 2,306,924. Hard Infusible Resinous Condensation Products. Dec. 29, 1942.

Pat. 2,307,118. Process of Producing Effects on Textile Material. Jan. 5, 1943.

Pat. 2,311,307. Production of Metal Carbonyls. Feb. 16, 1943.

Pat. 2,312,064. Production of Dihalogenated Saturated Hydrocarbons. Feb. 23, 1943.

Pat. 2,312,135. Method of Preparing Valuable Nitrogenous Condensation Products. Feb. 23, 1943.

Pat. 2,312,863. Polymerization Products. Mar. 2, 1943.

Pat. 2,313,573. Capillary Active Compounds and Process of Preparing Them. Mar. 9, 1943.

Pat. 2,313,695. Process of Preparing Amino-Sulphonic Acids Substituted in the Amino Group by Acyl Radicals of Fatty Acids. Mar. 9, 1943.

Pat. 2,314,454. Production of Esters of Halogen Alcohols. Mar. 23, 1943.

Pat. 2,314,968. Process of Impregnating Textile Materials and the Material Thus Obtained. Mar. 30, 1943.

Pat. 2,316,653. Condensation Products of Acetylene with Dimethylol Urea. Apr. 13, 1943.

Pat. 2,316,921. Process of Preparing Acetals of Polyvinyl Alcohol. Apr. 20, 1943.

Pat. 2,317,466. Process of Producing Effects on Textile Material. Apr. 27, 1943.

Pat. 2,318,323. Manufacture of Halogenated Hydrocarbons. May 4, 1943.

Pat. 2,319,707. Production of Aliphatic Dihydric Alcohols. May 18, 1943.

Pat. 2,321,451. Water-Soluble Condensation Product. June 8, 1943.

Pat. 2,321,493. Phenol-Furfuryl Alcohol Resinous Condensation Products. June 8, 1943.

Pat. 2,322,095. Catalytic Hydrogenation of Organic Compounds. June 15, 1943.

Pat. 2,322,096. Catalytic Hydrogenation of High Molecular Aliphatic Carboxylic Acids. June 15, 1943.

Pat. 2,322,097. Catalytic Hydrogenation of Aliphatic Carboxylic Acid Anhydrides. June 15, 1943.

Pat. 2,322,098. Catalytic Hydrogenation of Alicyclic Carboxylic Acids. June 15, 1943.

Pat. 2,322,099. Catalytic Hydrogenation of Organic Compounds. June 15, 1943.

Pat. 2,324,896. Mixed Polymerization Products. July 20, 1943.

Pat. 2,325,760. Cyclic Acetals of Formaldehyde and a Process of Preparing Them. Aug. 3, 1943.

Pat. 2,326,501. Isocyanates. Aug. 10, 1943.

Pat. 2,334,195. Process for the Production of Polymerization Products. Nov. 16, 1943.

Pat. 2,335,795. Production of Aliphatic Alcohols. Nov. 30, 1943.

Pat. 2,335,813. Production of Carboxylic Acid Esters of Monochlorhydrins. Nov. 30, 1943.

Pat. 2,336,100. Process of Producing Twists of Organic Thermoplastic Material. Dec. 7, 1943.

Pat. 2,337,887. Paper and Its Production. Dec. 28, 1943.

Pat. 2,337,924. Aromatic Sulphonic Acids Having Capillary-Active Properties and a Process of Preparing Them. Dec. 28, 1943.

Pat. 2,339,066. Process for the Manufacture of Benzoic Acid Vinyl Ester. Jan. 11, 1944.

Pat. 2,339,314. Resinous Condensation Products of Aldehydes and Compounds of the Pyrrole and Thiazole Series. Jan. 18, 1944.

Pat. 2,342,295. Interpolymerization Products of Vinyl Compounds with Cyclic Imides. Feb. 22, 1944.

Pat. 2,342,400. Production of Polymerization Products from Ethylene. Feb. 22, 1944.

Pat. 2,342,463. Process for the Manufacture of Vinyl Esters of Monocarboxylic Acids. Feb. 22, 1944.

Pat. 2,342,493. Organic Nitrogen Compounds and Process of Producing Same. Feb. 22, 1944.

Pat. 2,344,321. Condensation Products of Sulphonic Acid Amides and Sulphonic Acid Hydrazides and a Process of Preparing Them. Mar. 14, 1944.

Pat. 2,345,427. Solvent for Organic Film-Forming Materials. Mar. 28, 1944.

Pat. 2,349,912. Halogen Methyl Compounds of Sulphonamides and Sulphonhydrazides and a Process of Preparing Them. May 30, 1944.

Pat. 2,351,462. Pulverulent Metallic Substance for Electromagnetic Purposes. June 13, 1944.

Pat. 2,352,097. Production of Organic Compounds Containing Sulphur, Chlorine and Oxygen. June 20, 1944.

Pat. 2,356,079. Animalizing of Cellulosic Materials. Aug. 15, 1944.

Pat. 2,359,038. Interpolymerization Products of Diene Synthesis Products and Compounds Having an ω-Methylene Group and Process of Their Production. Sept. 26, 1944.

Pat. 2,362,858. Solvents for Organic Film-Forming Materials. Nov. 14, 1944.

Pat. 2,363,951. Process of Emulsion-Polymerization. Nov. 28, 1944.

Pat. 2,368,082. 1:2 Alkylene Imine Condensation Products. Jan. 23, 1945.

Pat. 2,382,185. Nitrogenous Condensation Products of Alkylene Imines. Aug. 14, 1945.

Pat. 2,392,952. Production of Resin Alcohols. Jan. 15, 1946.

Pat. 2,410,647. Production of Allyl Chloride. Nov. 5, 1946.

Pat. 2,421,650. Process of Producing Pyrroles and Hydrogenated Pyrroles. June 3, 1947.

Pat. 2,426,293. Quaternary Ammonium Salts and Process of Preparing Them. Aug. 26, 1947.

Pat. 2,428,733. Capillary-Active Substances. Oct. 7, 1947.

Pat. 2,442,710. Methine Dyestuffs. June 1, 1948.

SECTION 4

Photographic—Chemical and Mechanical

Pat. 1,840,307. Printing Frame. Jan. 12, 1932.

Pat. 1,843,319. Film Holding Box for Cinematograph Apparatus. Feb. 2, 1932.

Pat. 1,845,404. Backing of Photographic Materials to Prevent Halation. Feb. 16, 1932.

Pat. 1,846,486. Exposure-Meter for Photographic Purposes. Feb. 23, 1932.

Pat. 1,848,523. Photographic Shutter. Mar. 8, 1932.

Pat. 1,850,162. Fixing Bleaching-Out Pictures. Mar. 22, 1932.

Pat. 1,850,220. Photographic Bleaching-Out Layer. Mar. 22, 1932.

Pat. 1,853,455. Photographic Developer. Apr. 12, 1932.

Pat. 1,857,724. Holder for Photographic Image Carriers. May 10, 1932.

Pat. 1,858,575. Camera Body. May 17, 1932.

Pat. 1,858,576. Film and Plate Hanger. May 17, 1932.

Pat. 1,858,585. Photographic Film Cartridge. May 17, 1932.

Pat. 1,860,482. Photographic Film-Pack Casing. May 31, 1932.

Pat. 1,860,575. Photographic Objective. May 31, 1932.

Pat. 1,864,657. Combined Shutter and Film Moving Mechanism. June 28, 1932.

Pat. 1,867,109. Shutter for Photographic Objectives. July 12, 1932.

Pat. 1,870,354. Photographic Gelatine Layer. Aug. 9, 1932.

Pat. 1,871,217. Film Pack Casing. Aug. 9, 1932.

Pat. 1,871,830. Fixing Photographic Bleaching-Out Layers. Aug. 16, 1932.

Pat. 1,871,983. Attachment of Moving Picture Film to the Film Spool. Aug. 16, 1932.

Pat. 1,873,927. Folding Camera. Aug. 23, 1932.

Pat. 1,874,529. Printing Pictures of a Lenticular Film. Aug. 30, 1932.

Pat. 1,875,193. Cinematographic Projection Apparatus. Aug. 30, 1932.

Pat. 1,879,179. Mechanically Grinding Concave Lenses. Sept. 27, 1932.

Pat. 1,879,188. Film Door for Motion Picture Apparatus. Sept. 27, 1932.

Pat. 1,879,236. Printing Color Pictures. Sept. 27, 1932.

Pat. 1,879,237. Production of Lenticular Elements on Films. Sept. 27, 1932.

Pat. 1,879,443. Protective Paper Strips for Daylight Loading Film Rolls. Sept. 27, 1932.

Pat. 1,879,537. Anti-Halation Layers for Photographic Material. Sept. 27, 1932.

Pat. 1,880,572. Color Photography. Oct. 4, 1932.

Pat. 1,880,573. Light-Sensitive Material for the Bleaching Out Process. Oct. 4, 1932.

Pat. 1,883,510. Enlarging Apparatus. Oct. 18, 1932.

Pat. 1,883,511. Film Holder for Cameras. Oct. 18, 1932.

Pat. 1,883,512. Camera Front. Oct. 18, 1932.

Pat. 1,883,997. Tripod Socket for Cameras and the Like. Oct. 25, 1932.

Pat. 1,883,998. Camera Shutter. Oct. 25, 1932.

Pat. 1,885,982. Focusing Device for Cameras. Nov. 1, 1932.

Pat. 1,892,725. Production of Photosensitive Emulsions. Jan. 3, 1933.

Pat. 1,897,429. Protecting Film Roll from the Entry of Light. Feb. 14, 1933.

Pat. 1,898,512. Process of Manufacturing Photographic Silver Salt Emulsions and Light-Sensitive Material. Feb. 21, 1933.

Pat. 1,898,675. Speed Control for Motion Picture Cameras. Feb. 21, 1933.

Pat. 1,899,279. Photographic Film Reel. Feb. 28, 1933.

Pat. 1,903,434. Combined View Finder and Catch for Cameras. Apr. 11, 1933.

Pat. 1,903,783. Production and Application of Layers Sensitive to Light. Apr. 18, 1933.

Pat. 1,903,937. Photographic Roll Film Spool. Apr. 18, 1933.

Pat. 1,904,221. Protective Layer on Photographic Films. Apr. 18, 1933.

Pat. 1,904,760. Merchandising and Display Receptacle. Apr. 18, 1933.

Pat. 1,906,931. Film Gate for Motion Picture Cameras. May 2, 1933.

Pat. 1,907,444. N-Hydroxyethyl Derivatives of Nuclear Substitution Products of 4-Amino-1-Hydroxybenzene. May 9, 1933.

Pat. 1,909,759. Driving Mechanism in Cinematograph Apparatus. May 16, 1933.

Pat. 1,910,294. **High Gloss Drying Apparatus for Photographic Prints.** May 23, 1933.

Pat. 1,912,797. **Photographic Material.** June 6, 1933.

Pat. 1,914,398. **Intermittent Movement.** June 20, 1933.

Pat. 1,915,418. **Process for Printing Copies from a Lenticular Film.** June 27, 1933.

Pat. 1,916,350. **Manufacture of Color-Pictures.** July 4, 1933.

Pat. 1,916,779. **Light-Sensitive Material.** July 4, 1933.

Pat. 1,918,492. **Manufacture of Material Suitable for Receiving Writings by Electrodecomposition.** July 18, 1933.

Pat. 1,918,623. **Multicolored Pictures.** July 18, 1933.

Pat. 1,923,485. **Antihalation Layer and Halation-proof Photographic Material.** Aug. 22, 1933.

Pat. 1,924,093. **Film Reel for Cinematograph Apparatus.** Aug. 29, 1933.

Pat. 1,930,334. **Camera Body.** Oct. 10, 1933.

Pat. 1,930,335. **Film Receptacle.** Oct. 10, 1933.

Pat. 1,932,617. **Condenser for Film-Projectors.** Oct. 31, 1933.

Pat. 1,937,053. **Folding Camera.** Nov. 28, 1933.

Pat. 1,937,057. **Folding Camera.** Nov. 28, 1933.

Pat. 1,940,312. **Intermittent Movement for Motion-Picture Projectors and the Like.** Dec. 19, 1933.

Pat. 1,941,852. **Photographic Gelatin Layer.** Jan. 2, 1934.

Pat. 1,943,169. **Process of Making Film-Supports for Color Photography.** Jan. 9, 1934.

Pat. 1,945,658. **Production of Colored Photographic Pictures.** Feb. 6, 1934.

Pat. 1,949,815. **Manufacture of 3-Hydroxyseleno-Naphthene.** Mar. 6, 1934.

Pat. 1,950,533. **Focusing Means in Photographic Enlarging Apparatus.** Mar. 13, 1934.

Pat. 1,951,347. **Focal Plane Camera Shutter.** Mar. 20, 1934.

Pat. 1,953,175. **Subtractive Two-Color Picture.** Apr. 3, 1934.

Pat. 1,953,176. **Apparatus for Projecting Lenticular Screen Films.** Apr. 3, 1934.

Pat. 1,954,294. **Superimposed Colored Photographic Layers.** Apr. 10, 1934.

Pat. 1,955,170. **Photographic Copying Apparatus.** Apr. 17, 1934.

Pat. 1,955,898. **Sensitizing of Bleaching-Out Layers.** Apr. 24, 1934.

Pat. 1,956,230. **Process for Obtaining Different Gradations in Developing Silver Halide Emulsion Layers.** Apr. 24, 1934.

Pat. 1,959,268. **Apparatus for Taking Cinematographic Pictures.** May 15, 1934.

Pat. 1,959,739. **Sound Recording System.** May 22, 1934.

Pat. 1,963,197. **Color Photography and Cinematography.** June 19, 1934.

Pat. 1,966,857. **Film Guiding Roll for Cinematographic Apparatus.** July 17, 1934.

Pat. 1,966,873. **Manufacture of Sound Films.** July 17, 1934.

Pat. 1,968,145. **Process and Device for Printing Multicolor Partial Pictures on Lenticular Films.** July 31, 1934.

Pat. 1,968,938. **Motion Picture Apparatus.** Aug. 7, 1934.

Pat. 1,968,944. **Three-Color Photography.** Aug. 7, 1934.

Pat. 1,969,858. **Photographic Roll-Film.** Aug. 14, 1934.

Pat. 1,970,869. **Photographic Reversal Development.** Aug. 21, 1934.

Pat. 1,970,890. **Process and Multicolor Filter for Producing Color Pictures on Lenticular Films.** Aug. 21, 1934.

Pat. 1,971,410. **Apparatus for Projecting Multicolor Pictures on Lenticular Films.** Aug. 28, 1934.

Pat. 1,971,430. **Antihalation Layer.** Aug. 28, 1934.

Pat. 1,971,569. **Safety Shutter for Projectors.** Aug. 28, 1934.

Pat. 1,972,424. **Photographic Roll-Film Cartridge.** Sept. 4, 1934.

Pat. 1,974,524. **Photographic Material.** Sept. 25, 1934.

Pat. 1,977,184. **Stop for Motion Picture Apparatus** Oct. 16, 1934.

Pat. 1,978,638. **Film Retaining Means.** Oct. 30, 1934.

Pat. 1,981,102. **Photographic Material and Process of Making the Same.** Nov. 20, 1934.

Pat. 1,982,739. **Motion Picture Apparatus.** Dec. 4, 1934.

Pat. 1,982,987. **Sensitizing of Photographic Emulsions.** Dec. 4, 1934.

Pat. 1,983,910. **Inscription Bearing Film and Ink for Making Same.** Dec. 11, 1934.

Pat. 1,984,481. **Apparatus for Projecting Lenticular Films.** Dec. 18, 1934.

Pat. 1,984,504. **Color Photography.** Dec. 18, 1934.

Pat. 1,986,278. **Protective Paper for Photographic Material.** Jan. 1, 1935.

Pat. 1,987,247. **Protecting Film Rolls from the Entry of Light.** Jan. 8, 1935.

Pat. 1,987,254. **Roll Film Camera.** Jan. 8, 1935.

Pat. 1,988,550. **Supports Made of Cellulose Derivatives for Use in the Manufacture of Sheets of Material Soluble in Organic Solvents.** Jan. 22, 1935.

Pat. 1,988,812. **Sound Negative for Direct Production of Sounds.** Jan. 22, 1935.

Pat. 1,989,813. **Photographic and Cinematographic Film Employed Without Use of a Protective Paper Strip.** Feb. 5, 1935.

Pat. 1,990,843. **Sound Recording.** Feb. 12, 1935.

Pat. 1,991,670. **Apparatus for Projecting Lenticular Films in Natural Colors.** Feb. 19, 1935.

Pat. 1,994,170. **Compound of the Distyryl Pyridinium Salt Series and Its Production.** Mar. 12, 1935.

Pat. 1,994,627. **Filmpack for Multicolor Photography.** Mar. 19, 1935.

Pat. 1,994,875. **Photographic Film Free from Halation.** Mar. 19, 1935.

Pat. 1,994,876. **Photographic Film Free from Halation.** Mar. 19, 1935.

Pat. 1,996,868. **Manufacture of Lenticular Films.** Apr. 9, 1935.

Pat. 1,998,530. **Photographic Material.** Apr. 23, 1935.

Pat. 2,000,353. **Process of Treating Photographic Layers in a Bath Containing a Wetting Agent and New Preparations Intended for Acting on Photographic Layers.** May 7, 1935.

Pat. 2,001,250. **Process of Producing Cinematographic Three- and Multi-Color Pictures.** May 14, 1935.

Pat. 2,002,035. **Pack of Photographic Plates.** May 21, 1935.

Pat. 2,002,076. **Photographic Camera.** May 21, 1935.

Pat. 2,005,818. **Camera.** June 25, 1935.

Pat. 2,005,820. **Folding Camera.** June 25, 1935.

Pat. 2,005,837. **Manufacture of Photographic Emulsions.** June 25, 1935.

Pat. 2,005,847. **Sound Film.** June 25, 1935.

Pat. 2,006,002. **Manufacture of Photographic Silver Halide Emulsion Layers.** June 25, 1935.

Pat. 2,010,186. **Container for Film Rolls.** Aug. 6, 1935.

Pat. 2,010,188. **Process of Fastening Photographic Films on Supports and Article Produced Thereby.** Aug. 6, 1935.

Pat. 2,011,669. **Photographic Emulsions.** Aug. 20, 1935.

Pat. 2,011,895. **Photographic Camera.** Aug. 20, 1935.

Pat. 2,014,495. **Sound Recording.** Sept. 17, 1935.

Pat. 2,015,261. **Diaphragm for Cameras.** Sept. 24, 1935.

Pat. 2,016,471. **Stabilizing Silver Halide Emulsions.** Oct. 8, 1935.

Pat. 2,017,184. **Cutting Webs of Paper.** Oct. 15, 1935.

Pat. 2,018,812. **Printing Sound and Moving Picture Films.** Oct. 29, 1935.

Pat. 2,020,607. **Photographic Material.** Nov. 12, 1935.

Pat. 2,020,636. **Sensitizing of Silver Halide Emulsions.** Nov. 12, 1935.

Pat. 2,020,642. **Manufacture of Foils and Threads.** Nov. 12, 1935.

Pat. 2,020,901. **Process for Producing Pictures.** Nov. 12, 1935.

Pat. 2,021,264. **Printing Device for Sound Films.** Nov. 19, 1935.

Pat. 2,022,768. **Process of Printing Copies from a Lenticular Film.** Dec. 3, 1935.

Pat. 2,025,862. **Illuminating Device.** Dec. 31, 1935.

Pat. 2,026,677. **Folding Camera.** Jan. 7, 1936.

Pat. 2,026,899. **Process of Retouching Photographic Films or Plates.** Jan. 7, 1936.

Pat. 2,027,688. **Manufacture of Foils.** Jan. 14, 1936.

Pat. 2,029,578. **Flashlight.** Feb. 4, 1936.

Pat. 2,030,336. **Photographic Developer.** Feb. 11, 1936.

Pat. 2,030,983. **Treatment of Films and Foils of Organic Cellulose Esters.** Feb. 18, 1936.

Pat. 2,031,071. **Photographic Copying Apparatus.** Feb. 18, 1936.

Pat. 2,032,506. **Sensitizing Photographic Silver Halide Emulsions.** Mar. 3, 1936.

Pat. 2,033,225. **Projector.** Mar. 10, 1936.

Pat. 2,034,029. **Flashlight Device.** Mar. 17, 1936.

Pat. 2,034,978. **Photographic Camera.** Mar. 24, 1936.

Pat. 2,036,326. **Camera.** Apr. 7, 1936.

Pat. 2,036,546. **Filter Layer.** Apr. 7, 1936.

Pat. 2,038,037. **Photographic Camera.** Apr. 21, 1936.

Pat. 2,038,831. **Manufacture of Multicolor Filter.** Apr. 28, 1936.

Pat. 2,042,895. **Color Photography.** June 2, 1936.

Pat. 2,043,612. **Roll Film Camera.** June 9, 1936.

Pat. 2,044,333. **Marking Sound and Moving Picture Film for the Purpose of Synchronization.** June 16, 1936.

Pat. 2,045,037. **Range Finder Focusing Attachment for Folding Cameras.** June 23, 1936.

Pat. 2,045,080. **Manufacture of Molded Articles.** June 23, 1936.

Pat. 2,050,588. **Manufacture of Anti-Halation or Filter Layers.** Aug. 11, 1936.

Pat. 2,051,134. **Sensitizing Silver-Halide Emulsions.** Aug. 18, 1936.

Pat. 2,052,754. **Sensitizing Silver Halide Emulsions.** Sept. 1, 1936.

Pat. 2,053,867. **Photographic Camera.** Sept. 8, 1936.

Pat. 2,057,153. **Motion Picture Projector.** Oct. 13, 1936.

Pat. 2,057,764. **Manufacture of Stabilized Silver Halide Emulsions.** Oct. 20, 1936.

Pat. 2,058,438. **Film Reel.** Oct. 27, 1936.

Pat. 2,058,439. **Cinematographic Apparatus.** Oct. 27, 1936.

Pat. 2,058,725. **Backing of Photographic Materials to Prevent Halation.** Oct. 27, 1936.

Pat. 2,060,089. **Combination of Camera and Exposure Meter.** Nov. 10, 1936.

Pat. 2,060,382. **Trimethine-Cyanine Dyes.** Nov. 10, 1936.

Pat. 2,060,383. **Sensitized Silver Halide Emulsions.** Nov. 10, 1936.

Pat. 2,060,594. **Photographic Developer.** Nov. 10, 1936.

Pat. 2,060,595. **Photographic Developer.** Nov. 10, 1936.

Pat. 2,060,596. **Photographic Developer.** Nov. 10, 1936.

Pat. 2,060,933. **Camera.** Nov. 17, 1936.

Pat. 2,060,956. **Film Roll.** Nov. 17, 1936.

Pat. 2,061,230. **Manufacture of Gelatin Reliefs for Printing.** Nov. 17, 1936.

Pat. 2,061,688. **Manufacture of Direct Positives for Autotype.** Nov. 24, 1936.

Pat. 2,065,411. **Sensitizing of Photographic Emulsions.** Dec. 22, 1936.

Pat. 2,065,412. **Sensitizing of Photographic Emulsions.** Dec. 22, 1936.

Pat. 2,065,449. **Camera.** Dec. 22, 1936.

Pat. 2,066,099. **Photographic Emulsion.** Dec. 29, 1936.

Pat. 2,066,727. **Photographic Printing.** Jan. 5, 1937.

Pat. 2,066,966. **Manufacture of Light Sensitive Materials.** Jan. 5, 1937.

Pat. 2,066,967. Dyes of the Cyanine Series. Jan. 5, 1937.

Pat. 2,066,968. Manufacture of Light-Sensitive Materials. Jan. 5, 1937.

Pat. 2,068,047. Thio- and Seleno-Carbocyanines. Jan. 19, 1937.

Pat. 2,068,911. Photographic Shutter. Jan. 26, 1937.

Pat. 2,070,122. Roll Film Camera. Feb. 9, 1937.

Pat. 2,071,374. Sensitizing of Photographic Emulsions. Feb. 23, 1937.

Pat. 2,071,462. Film. Feb. 23, 1937.

Pat. 2,071,463. Film. Feb. 23, 1937.

Pat. 2,071,993. Trimethine Cyanine Dyes. Feb. 23, 1937.

Pat. 2,071,994. Thiazole Trimethine Cyanines. Feb. 23, 1937.

Pat. 2,072,908. Naphthoxo-Trimethine Cyanines. Mar. 9, 1937.

Pat. 2,073,759. Manufacture of Polymethine Dyes. Mar. 16, 1937.

Pat. 2,074,200. Prepared Chemicals and Method of Preparing the Same. Mar. 16, 1937.

Pat. 2,074,647. Manufacture of Foils and Artificial Products. Mar. 23, 1937.

Pat. 2,075,144. Antihalation Layers for Photographic Plates and Films. Mar. 30, 1937.

Pat. 2,075,145. Antihalation Layer. Mar. 30, 1937.

Pat. 2,075,153. Light Filter. Mar. 30, 1937.

Pat. 2,076,984. Intensifying and Fluorescent Screen. Apr. 13, 1937. Re. 21,216. Sept. 26, 1939.

Pat. 2,131,865. Process of Making Pentamethine Cyanine Dyes. Oct. 4, 1938.

Pat. 2,132,157. Roll Film Camera. Oct. 4, 1938.

Pat. 2,132,160. Manufacture of Shaped Articles. Oct. 4, 1938.

Pat. 2,132,169. Photographic Desensitizing. Oct. 4, 1938.

Pat. 2,134,546. High Speed Infrared Film. Oct. 25, 1938.

Pat. 2,135,638. Cinematographic Apparatus. Nov. 8, 1938.

Pat. 2,138,223. Polymethine Dyes. Nov. 29, 1938.

Pat. 2,139,870. Photographic Developers. Dec. 13, 1938.

Pat. 2,143,389. Dyes of the Cyanine Series. Jan. 10, 1939.

Pat. 2,146,040. Development of Silver Halide Emulsions in Color. Feb. 7, 1939.

Pat. 2,146,802. Dry Hypersensitizing of Photographic Emulsions. Feb. 14, 1939.

Pat. 2,147,112. Antihalation Layer and Filter Layer. Feb. 14, 1939.

Pat. 2,148,790. Time Controlled Electrical Switch. Feb. 28, 1939.

Pat. 2,148,979. Color Photography. Feb. 28, 1939.

Pat. 2,148,980. Photographic Material for Color Photography. Feb. 28, 1939.

Pat. 2,150,757. Film Drier. Mar. 14, 1939.

Pat. 2,150,966. Intensifying and Fluorescent Screen. Mar. 21, 1939.

Pat. 2,152,460. Manufacture of Photographic Gelatin Emulsions. Mar. 28, 1939.

Pat. 2,152,615. Pentamethine-Omega-Aldehydes of Heterocyclic Bases. Mar. 28, 1939.

Pat. 2,153,617. Manufacture of Colored Photographic Pictures. Apr. 11, 1939.

Pat. 2,153,619. Production of Photographs in Blue-Black Tones. Apr. 11, 1939.

Pat. 2,153,665. Roll Film Camera. Apr. 11, 1939.

Pat. 2,154,895. Process of Hardening Protein Substances. Apr. 18, 1939.

Pat. 2,154,918. Coupling Compounds for Color Forming Development. Apr. 18, 1939.

Pat. 2,154,958. View Finder for Cameras. Apr. 18, 1939.

Pat. 2,155,475. Sensitizing Silver Halide Emulsions. Apr. 25, 1939.

Pat. 2,155,501. Photographic Treating Bath. Apr. 25, 1939.

Pat. 2,156,821. Derivatives of α-Hydroxynaphthoic Acid. May 2, 1939.

E. I. du Pont de Nemours and Company has placed more than 4,000 of its patents on the Register of Patents as available for license on reasonable terms. The index to these patents was published in the Official Gazette, November 2, 1948. Abstracts of the patents are being published in the Official Gazette beginning November 9, 1948. The following patents (Reg. Nos. 13,934 through 14,175) are the balance of Schedule 2, Groups 28; 32.

Detailed information concerning specific abstracts should be addressed to Patent Division, E. I. du Pont de Nemours and Company, Wilmington 98, Del.

SCHEDULE 2—Continued

Patents Relating to Sodium

Pat. 1,931,144. Treatment of Metals. Oct. 17, 1933. Inert gas such as N_2 is passed thru molten Na to form a mixture of N_2 and Na vapors which are passed into molten metals such as steel.

Pat. 1,937,934. Metallurgical Process. Dec. 5, 1933. Deoxidation of molten brass by adding a sodium-zinc alloy.

Pat. 1,943,307. Purifying Light Metals. Jan. 16, 1934. Filtration of liquid sodium. Liquid sodium under nitrogen is removed through a filter by suction and the sludge is collected and removed at bottom of container. Filter is cleaned by a backward surge of the liquid metal.

Pat. 1,952,616. Process for Refining Hydrocarbon Oils. Mar. 27, 1934. Refining hydrocarbon oils, gasoline, etc. by treating with large excess of Na. Excess recovered and reused.

Pat. 1,962,698. Refining Liquid Hydrocarbons. June 12, 1934. Hydrocarbons partially refined by treatment with a mixture of Na and by-products from a previous treatment is further refined by treatment with an excess of Na, the excess Na and by-product mixture being separated and used to partially refine untreated hydrocarbons.

Pat. 1,996,471. Preparation of Acyloins. Apr. 2, 1935. Acyloins containing 24 or more carbon atoms are made by reacting fatty acid esters with sodium in a solvent.

Pat. 2,019,022. Preparation of High Molecular Weight Alcohols. Oct. 29, 1935. High molecular weight alcohols are produced by reacting an ester of the corresponding high molecular weight acid simultaneously with sodium and a hydrolytic alcohol in an inert medium.

Pat. 2,025,684. Fatty Acid Esters of Symmetrical Dialkyl Ethylene Glycols and Their Production. Dec. 24, 1935. Acyloins of higher fatty acids, e. g. caprylic, lauric, myristic and stearic acids, are reduced by Na and alcohol or by H_2 with nickel catalyst to glycols which are esterified.

Pat. 2,029,998. Metal Recovery. Feb. 4, 1936. Process for treating sodium filter residue with NaCl to convert the Ca to Na and for recovering the latter.

Pat. 2,042,557. Refining Hydrocarbons. June 2, 1936. Hydrocarbon lubricating oils are refined by simultaneous treatment with sodium and oxygen.

Pat. 2,048,169. Refining Hydrocarbons. July 21, 1936. Hydrocarbons such as petroleum and coal distillates are purified (i. e. sulfur removed and unsaturated hydrocarbons polymerized) by treating with a sodium addition compound of a polycyclic aromatic addition compound, e. g. naphthalene, anthracene, diphenyl.

Pat. 2,054,316. Separation of Metals. Sept. 15, 1936. Traces of Ca are removed from Na by treating with molten NaOH to oxidize the Ca and removing precipitated CaO by filtration or settling.

Pat. 2,056,184. Electrolysis of Fused Salts. Oct. 6, 1936. Improvements in cell design to prevent changes in electrolyte composition between the electrodes. Circulation is increased by perforating the cathode. A cell with

a smaller distance between the anode and cathode, whereby the cell can be operated at a lower temperature and improved efficiency.

Pat. 2,058,131. Process of Refining Hydrocarbon Oil. Oct. 20, 1936. Hydrocarbon oils treated with alkali metal in such quantities that no excess is left. The impurities are filtered out and the oil is then treated with an absorbent material.

Pat. 2,068,681. Apparatus for the Production of Light Metals. Jan. 26, 1937. Cooled riser pipe for Downs Cell for electrolytic production of sodium.

Pat. 2,071,124. Metal Recovery Process. Feb. 16, 1937. Filter sludge containing Na, Ca and oxides is electrolyzed in a Downs cell to give Na and $CaCl_2$.

Pat. 2,073,631. Metal Recovery. Mar. 16, 1937. Process for converting Ca in sodium filter sludge to Na by the reaction Ca plus 2NaCl equals 2Na plus $CaCl_2$.

Pat. 2,073,973. Treating Hydrocarbon Oils. Mar. 16, 1937. Reaction of hydrocarbon oils with sodium under hydrogen pressure to produce complex sodium compounds which act as hydrogenation catalysts.

Pat. 2,079,403. Reduction of Acyloins. May 4, 1937. Acyloins of higher fatty acids, e. g. caprylic, lauric, myristic and stearic acids, are reduced to the corresponding glycols by sodium and alcohol, or by H_2 under pressure in the presence of a catalyst, e. g. reduced nickel.

Pat. 2,091,179. Preparation of Salt Mixtures. Aug. 24, 1937. Salt mixtures containing NaCl, $CaCl_2$, and CaO are electrolyzed (e. g. in the Downs Na cell) to convert the CaO to $CaCl_2$.

Pat. 2,096,036. Reduction of Esters. Oct. 19, 1937. High molecular weight alcohols are produced by reducing esters of the corresponding acids (e. g. ricinoleic, sebacic, abietic) with Na and alcohol in the presence of an aliphatic ether.

Pat. 2,106,555. Manufacture of White Lead. Jan. 25, 1938. Lead containing 0.5 to 1% of sodium is used in place of pure lead in the usual white lead processes. The presence of the sodium causes more rapid reaction.

Pat. 2,111,264. Electrolysis of Fused Salts. Mar. 15, 1938. Process for production of sodium by fused salt electrolysis, utilizing perforated cathode.

Pat. 2,113,243. Production of Abietic Alcohol. Apr. 5, 1938. Higher alcohols produced by reducing esters of the corresponding acids with Na and a secondary or tertiary alcohol.

Pat. 2,124,564. Metal Purification. July 26, 1938. Sodium amalgam or Na containing small quantities of Hg is reacted with a alkali earth metal (Ca) above the melting point of Na (300° C.) to form a sludge of alkali earth amalgam which is removed leaving pure sodium.

Pat. 2,130,801. Production of Light Metals. Sept. 20, 1938. Removal of crude sodium from Downs Cell in such manner that calcium is precipitated and returned to electrolyte.

Pat. 2,148,404. Production of Alkali Metals. Feb. 21, 1939. Production of sodium ex amalgam by electrolysis in a low fusing electrolyte, e. g. NaOH–NaI.

Pat. 2,150,437. Metal Recovery. Mar. 14, 1939. A process and apparatus for carrying out the reaction Ca plus 2NaCl equals 2Na plus $CaCl_2$ and other reactions of a similar nature. Process used for converting Ca in sodium filter sludge into sodium.

Pat. 2,162,619. Metallurgical Process. June 13, 1939. Sodium ex carbonate and carbon; gas cooling of reaction products.

Pat. 2,163,100. Production of Finely Divided Sodamide. June 20, 1939. Finely divided sodamide by reacting metallic sodium with liquid ammonia in the presence of an iron compound as catalyst.

Pat. 2,177,412. Process for Reducing Metal Compounds. Oct. 24, 1939. Metal powders made by reducing metal salts with sodium naphthalene addition compound.

Pat. 2,188,930. Metal Cleaning Process. Feb. 6, 1940. Sodium-lead alloy for cleaning metal, e. g. for removing oxide coating.

Pat. 2,194,441. Refining Lead. Mar. 19, 1940. Molten lead containing bismuth is purified by addition of Mg, KOH and Na.

Pat. 2,194,443. Anode for Electrolytic Cell. Mar. 19, 1940. Slotted anode for sodium cell for electrolysis of fused salt.

Pat. 2,194,444. Fused Salt Electrolysis Cell. Mar. 19, 1940. In a fused salt electrolytic cell, a gas collecting device comprising a gas collecting dome and a slotted pipe located in the dome.

Pat. 2,211,415. Potassium-Sodium-Lead Alloy. Aug. 13, 1940. Preparation of potassium-lead alloy containing small amount of sodium (for refining lead).

Pat. 2,218,021. Electrolytic Cell Gas Outlet. Oct. 15, 1940. Dome for Na cell containing diagonal baffle of a construction designed to prevent freezing of bath in upper part of dome.

Pat. 2,224,814. Electrolytic Production of Metals. Dec. 10, 1940. Sodium amalgam produced by electrolysis of salt solutions is cooled to precipitate a concentrated amalgam from which Na is separated by distillation or by reaction with an alkali earth metal (Ca) to produce sodium and separate alkali earth metal amalgam.

Pat. 2,224,820. Electrolytic Fused Bath. Dec. 10, 1940. Solid salt in sodium cell riser pipe to remove calcium.

Pat. 2,234,967. Production of Alkali Metals. Mar. 18, 1941. In an electrolytic cell for recovery of sodium from a sodium amalgam anode, an insulated shield to prevent the cell wall from acting as anode.

Pat. 2,249,765. Electrical Contacts in Electrolytic Cells. July 22, 1941. Metallized electric contact between copper bus bars and graphite electrodes, particularly for fused salt cells.

Pat. 2,266,750. Metal Purification. Dec. 23, 1941. Method and apparatus for treating molten metals with sodium involving a bell device into which molten sodium is dropped and vaporized, the vapors passing under the edges of the bell into the molten metal.

Pat. 2,267,733. Alcoholates. Dec. 30, 1941. Sodium alcoholates prepared by reacting alcohols with sodium hydride.

Pat. 2,276,232. Metal Coating Process. Mar. 10, 1942. Process for coating base metal with sodium alloys Na-Sn or Na-Zn.

Pat. 2,277,268. Metal Treatment Process and Apparatus. Mar. 24, 1942. Method and apparatus for treating non-ferrous metals particularly copper, with Na vapors. Molten copper is flowed through an atmosphere of Na vapor into a mold and the mold is then immersed in liquid Na to generate Na vapor and freeze the copper.

Pat. 2,340,613. Salt Purification. Feb. 1, 1944. Purification of salt by froth flotation in a saturated brine solution.

Pat. 2,347,408. Location of Faults in Electrolytic Cell Systems. Apr. 25, 1944. Method and apparatus for location of ground faults in electrolytic cell systems by periodically measuring the resistance between the electrolytic cell, D. C. circuit and ground, and measuring the voltage at a selected point between the cell circuit and ground and, from the results of these periodic measurements, determining the degree and location of current leakage by a simple computation. A formula is provided for making the computation.

Pat. 2,361,027. Drying Compositions. Oct. 24, 1944. Drying oils are produced by the condensation of esters of unsaturated aliphatic acids in the presence of condensing agents of the Claisen type, e. g. NaH and NaOH. Superior drying oils are obtained from the simple esters of tung, menhaden, and sardine oils.

Pat. 2,364,799. Concentration of Slurries. Dec. 12, 1944. Centrifugal separator for the concentration of slurries, e. g. salt slurries.

Pat. 2,372,670. Production of Alkali Metal Hydride. Apr. 3, 1945. Alkali metal hydride, made by mixing molten sodium or other alkali metal with a finely divided solid material, e. g. sodium hydride, and a fatty acid salt, e. g. magnesium stearate, and reacting the mixture with hydrogen.

Pat. 2,372,671. Production of Alkali Metal Hydride. Apr. 3, 1945. Alkali metal hydride, formed by mixing molten alkali metal (sodium) with alkali metal hydride and alkali metal hydrocarbide or hydrocarbon and reacting with hydrogen above the melting point of the alkali metal.

Pat. 2,432,013. Measurement of Leakage Resistance in Electrolytic Cell Systems. Dec. 2, 1947. A device for measuring resistance to ground in a system of direct electrolytic cells comprising a voltmeter connected between said system and ground, a shunt circuit having a resistance of known value connected in parallel with said voltmeter, and a switch for opening and closing said shunt circuit.

Pat. 2,432,973. Level Control. Dec. 16, 1947. Apparatus for automatically feeding salt into a sodium cell, comprising a salt feeding orifice and a float mechanism capable of limited vertical movement to control the flow of salt from the orifice onto a horizontal plate attached to the float.

Patents Relating to Sodium Hydride

Pat. 2,158,071. Ester Condensations. May 16, 1939. Sodium hydride as a condensing agent for ester and ketone condensation reactions.

Pat. 2,211,419. Ester Condensation. Aug. 13, 1940. NaH as condensing agent for condensing esters with aromatic aldehydes, e. g. benzaldehyde, furfural.

Pat. 2,218,026. Organic Condensations. Oct. 15, 1940. Condensation of esters by means of sodium hydride.

Pat. 2,377,876. Metal Cleaning Process and Composition. June 12, 1945. Cleaning metals in a fused bath composed of alkali metal hydroxide having dissolved therein an alkali metal hydride.

Pat. 2,398,738. Process of Metal Coating Light Metals. Apr. 16, 1946. Coating aluminum or magnesium surfaces by contact with a fused salt bath comprising a halide of copper, lead, or silver, removing residual halide by immersion in alkali metal hydride dissolved in caustic, and washing in water.

Patents Relating to Sodium-Naphthalene and Derivatives

Pat. 2,019,832. Reactions of Sodium with Hydrocarbons. Nov. 5, 1935. Addition compounds of Na with naphthalene and its homologues are formed in a reaction medium comprising an aliphatic meno ether having an oxygen to carbon ratio of not less than 1:4 and having a CH_3—O— group.

Pat. 2,023,793. Reactions of Sodium with Hydrocarbons. Dec. 10, 1935. Addition compounds of Na with naphthalene and its homologues are formed in a reaction medium comprising a poly ether of a polyhydric alcohol.

Pat. 2,027,000. Process of Reacting Alkali Metals with Aromatic Hydrocarbons. Jan. 7, 1936. Addition compounds of Na with naphthalene and its homologues are formed in a reaction medium comprising an inert but effective ether.

Pat. 2,033,056. Production of Organic Acids. Mar. 3, 1936. Dicarboxylic acids of partially hydrogenated polycyclic aromatic hydrocarbons (dihydronaphthalene) are produced by reacting Na with the hydrocarbon (naphthalene) in a suitable ether solvent and simultaneously adding CO_2 at a sufficient rate to discharge color of reaction mixture.

Pat. 2,035,346. Synthetic Resin. Mar. 24, 1936. Resins produced by heating a polyhydric alcohol (e. g. glycerol) with a dihydrogenated polycyclic polycarboxylic acid (e. g. dihydronaphthalene dicarboxylic acid).

Pat. 2,040,882. Cellulose Derivative Compositions. May 19, 1936. Esters of dihydronaphthalene dicarboxylic acid are used as plasticizers in compositions of cellulose derivatives.

Pat. 2,054,100. Preparation of Polycyclic Aromatic Monocarboxylic Acids. Sept. 15, 1936. Production of monobasic aromatic acids (e. g. naphthoic acid) by the oxidation of dihydrodicarboxy derivatives of polycyclic aromatic hydrocarbons (e. g. DHN dicarboxylic acid) in an aqueous solution of a complex cyanide (e. g. ferricyanide).

Pat. 2,054,303. Reactions of Sodium with Hydrocarbons. Sept. 15, 1936. Production of sodium naphthalene by addition of Na to naphthalene in a solution of ethylene glycol methyl ethyl ether.

Pat. 2,055,708. Hydrogenated Products. Sept. 29, 1936. A process for making dihydronaphthalene, its homologues, and resinous polymers thereof, by reacting naphthalene with Na in a suitable ether solvent and hydrolyzing the reaction product.

Pat. 2,060,829. Esters of Dihydronaphthalene-Dicarboxylic Acids and Method of Making Same. Nov. 17, 1936. Dihydronaphthalene is treated with a monohydric alcohol, or the Na salt of the acid is reacted with a halide to produce the corresponding esters (e. g. dibutyl, dimethoxyethyl, dicyclohexyl, diethyl, dimethyl, dilauryl).

Pat. 2,065,756. Hydrogenated Esters. Dec. 29, 1936. Esters of dihydronaphthalene dicarboxylic acid are hydrogenated at 1000–1500 lbs./sq. in. and 100–200° C., using a nickel catalyst.

Pat. 2,108,213. Hydrogenated Products. Feb. 25, 1938. Dihydronaphthalene polymers are produced by reacting dihydronaphthalene with sodium naphthalene at 20–30° C. and hydrolyzing the reaction product.

Pat. 2,108,277. Reacting Hydrocarbons with Alkali Metals. Feb. 15, 1938. Tertiary amine ethers as solvents for alkali metal-aromatic hydrocarbon addition reactions.

Pat. 2,119,493. Reacting Hydrocarbons with Alkali Metals. May 31, 1938. Tertiary aliphatic amines as solvents for alkali metal-aromatic hydrocarbon addition reactions.

Pat. 2,125,401. Process of Reacting Alkali Metal with Aromatic Hydrocarbons. Aug. 2, 1938. Addition compounds of Na with naphthalene and homologues are formed in a reaction medium comprising aliphatic poly ethers.

Pat. 2,130,800. Hydrogenated Resins. Sept. 20, 1938. Hydrogenated dihydronaphthalene resin.

Pat. 2,168,011. Polymerization of 1,2-Dihydronaphthalene and Polymer. Aug. 1, 1939. Dimer of 1,2-dihydronaphthalene made by sulfuric acid treatment of dihydronaphthalene.

Pat. 2,171,869. Preparation of Organic Cyano Compounds. Sept. 5, 1939. Use of sodium naphthalene and homologues to form sodium addition products of nitriles.

Pat. 2,171,871. Preparation of Organic Acids. Sept. 5, 1939. Use of sodium naphthalene and homologues to form sodium addition compounds of organic acids.

Pat. 2,174,293. Purification of Ethers. Sept. 26, 1939. Ethers purified with sodium naphthalene addition compound.

Pat. 2,181,770. Method of Polymerization of 1,2-Dihydronaphthalene. Nov. 28, 1939. Polymerization of 1,2-dihydronaphthalene by means of sodium naphthalene addition compound.

Pat. 2,181,771. Method of Polymerization of Styrene. Nov. 28, 1939. Polymerization of styrene with sodium naphthalene addition compound.

Pat. 2,183,847. Process of Reacting Alkali Metals with Aromatic Hydrocarbons. Dec. 19, 1939. Formals as solvents for sodium-naphthalene reaction.

Pat. 2,194,450. Dimer of 1,4-Dihydronaphthalene. Mar. 19, 1940. Dihydronaphthalene dimer.

Pat. 2,199,026. Chlorinated Aromatic Resins. Apr. 30, 1940. Dihydronaphthalene resin chlorinated to contain from 2 to 3.75 atoms of chlorine per naphthalene nucleus.

Pat. 2,202,501. Sulphurized Dihydropolycyclic Aromatic Hydrocarbons and Process for Making Same. May 28, 1940. Sulfurized dihydronaphthalene.

Pat. 2,202,502. Sulphurized Dihydronaphthalene Dimer and Process for Making Same. May 28, 1940. Sulfurized dihydronaphthalene dimer formed by heating a dihydronaphthalene dimer with sulfur at 140–170° C.

Pat. 2,267,773. Colloidal Dispersions of 1,2-Dihydronaphthalene Polymer. Dec. 30, 1941. Colloidal dispersions of infusible 1,2-dihydronaphthalene polymer in halogenated compounds.

Patents Relating to Vinyl Products

Pat. 1,945,307. Polymerization of Esters of Ethylenedicarboxylic Acids. Jan. 30, 1934. Interpolymers of esters of fumaric, maleic, citraconic, or messaconic acids with vinyl esters or styrene.

Pat. 1,975,087. Composition of Matter. Oct. 2, 1934. Chlorine-free resins ex vinyl chloroacetate and an alkali metal salt of an alcohol, phenol, or carboxylic acid.

Pat. 1,988,529. Low-Viscosity Vinyl Polymers. Jan. 22, 1935. Low-viscosity vinyl resins ex vinyl esters or styrene in presence of ethylene oxide.

Pat. 2,053,112. Flexible Conductor. Sept. 1, 1936. Hose of polyvinyl alcohol.

Pat. 2,098,836. Insecticide. Nov. 9, 1937. Nicotine insecticidal spray containing a hydrophillic vinyl compound, e. g. polyvinyl alcohol, its partial esters, ethers and acetals.

Pat. 2,127,896. Method of Producing Elastic Objects from Polyvinyl Alcohols. Aug. 23, 1938. Elastic articles, e. g. hoses, threads, bands, packings, etc., made ex compositions of polyvinyl alcohol, a softening agent and a minimum amount of water.

Pat. 2,138,751. Process for the Production of Elastic Objects from Polyvinyl Alcohol. Nov. 29, 1938. Elastic articles, e. g tubing, sheets, packings, etc., made ex compositions of water-insoluble polyvinyl alcohol, a softening agent and water.

Pat. 2,162,618. Coating Metal. June 13, 1939. Polyvinyl alcohol coatings for protecting metals against corrosion and rust.

Pat. 2,174,629. Process for Printing and Photographing and Material Therefor. Oct. 3, 1939. Sensitized coating for photographic and printing purposes comprising polyvinyl alcohol and a catalyst (e. g. a soluble bichromate) reactive therewith in the presence of actinic rays to render same less soluble.

Pat. 2,184,288. Photographic and Printing Media. Dec. 26, 1939. Combination of polyvinyl alcohol with salts of higher fatty acids for photolithography.

Pat. 2,184,289. Photographic and Printing Media. Dec. 26, 1939. Organic sulfonyl compounds for increasing the ink-receptivity of polyvinyl alcohol printing plates.

Pat. 2,184,310. Photographic and Printing Media. Dec. 26, 1939. Combinations of polyvinyl alcohol with polybasic acids for photolithography.

Pat. 2,184,311. Photographic and Printing Media. Dec. 26, 1939. Polyvinyl alcohol and rubber latex for photolithographic plates.

Pat. 2,226,075. Soap Product. Dec. 24, 1940. Polyvinyl alcohol-soap mixture in sheet form.

Pat. 2,231,887. Chemical Process. Feb. 18, 1941. Production of N-vinyl imides by reacting acetylene with an amide in the liquid phase using a mercury salt catalyst.

Pat. 2,232,785. Preparation of Low Molecular Weight Polymers of Vinylidene Compounds. Feb. 25, 1941. Conversion of vinyl and vinylidene compounds to dimers and trimers by heating with inhibitives.

Pat. 2,250,681. Adhesives. July 29, 1941. Adhesive comprising polyvinyl alcohol and unhydrolyzed starch.

Pat. 2,251,296. Paper Products. Aug. 5, 1941. Paper is rendered grease-proof by a coating of polyvinyl alcohol.

Pat. 2,256,853. Paper Product. Sept. 23, 1941. Paper is rendered grease-proof by a coating consisting of polyvinyl alcohol and starch.

Pat. 2,257,355. Method of Attaching Coupling to Hoses. Sept. 30, 1941. Method of attaching fittings to polyvinyl alcohol tubing.

Pat. 2,322,887. Chemical Treatment of Paper. June 29, 1943. Use of aliphatic N-methylol compounds as insolubilizers for starch in paper manufacture. A small amount of polyvinyl alcohol is used with the starch.

Pat. 2,322,888. Process for Producing High Wet Strength Paper. June 29, 1943. Treatment of paper web with polyvinyl alcohol and aliphatic N-methylol compounds.

Pat. 2,327,082. Polymerization of Styrene. Aug. 17, 1943. Styrene is polymerized utilizing an alkali metal in the presence of certain ethers such as an unsaturated, aliphatic, acyclic polyether having not more than one ether oxygen attached to any one carbon atom or an ethylene glycol dialkyl ether.

Pat. 2,330,314. Manufacture of Non-Woven Fabrics. Sept. 28, 1943. Non-woven fabrics (e. g. for making paper) of high wet strength prepared by applying polyvinyl alcohol solution to the unwoven web of fibers, followed by treatment with alkaline solution.

Pat. 2,334,236. Coated Cellulosic Material. Nov. 16, 1943. Coating cellulosic materials (paper, wood, cellulose film, etc.) with co-polymers of asymmetrical dichloroethylene and a vinyl or vinylidene compound.

Pat. 2,351,301. Plastic Compositions. June 13, 1944. Soft elastic compositions suitable for making printing rolls and the like are prepared by incorporating in partially saponified P. V. A. (Sap. No. 200–500) considerable amounts (35–70%) of a polyglycol such as triethylene glycol or tetramethylene glycol as a plasticizer.

Pat. 2,358,444. Copolymers of Vinyl Ethinyl Carbinols with Alpha-Methylene Mono-Carboxylic Acid Esters. Sept. 19, 1944. Copolymers of vinyl ethinyl carbinols and methacrylic esters.

Pat. 2,378,015. Polyvinyl Ethers of Beta Guanylethanols. June 12, 1945. Polyvinyl ethers of beta-hydroxypropionamidines are produced by reacting polyvinyl beta-cyanoethyl ethers with an anhydrous alcohol and a non-oxidizing acid followed by reaction with ammonia or a monoamine.

Pat. 2,378,535. Monomeric and Polymeric Esters of Vinyl Thiols and Process for Their Manufacture. June 19, 1945. Vinyl thiol esters by heating an ester of 2-mercaptoethanol.

Pat. 2,378,536. New Vinyl Polymer and Process for Its Production. June 19, 1945. Hydrolysis of polyvinyl thiol esters to produce polyvinyl thiols.

Pat. 2,380,009. Interpolymers of Asymmetrical Dichloroethylene. July 10, 1945. Interpolymers of vinylidene chloride and unsaturated ketones.

Pat. 2,381,338. Vinyl Trimethyl Acetate and Synthetic Resins Made Therefrom. Aug. 7, 1945. A copolymer of vinyl trimethyl-acetate and trichloroethylene.

Pat. 2,389,626. Preparation of Vinyl Halides. Nov. 27, 1945. Production of vinyl halides by bringing an acetylenic compound in the vapor phase, in admixture with a hydrogen halide, into contact with a gold halide. For example, reacting acetylene with HCl by contact with gold chloride.

Pat. 2,391,465. Synthesis of Vinyl Chloride. Dec. 25, 1945. Production of vinyl chloride by reacting acetylene with hydrogen chloride in the presence of a supported mercurous chloride catalyst.

Pat. 2,395,581. Modified Vinyl Chloride-Fumaric Ester Copolymer. Feb. 26, 1946. Vinyl chloride-fumaric ester copolymers plasticized with an alkoxyalkyl ester of a carboxylic acid having at least two oxygen-bearing functional groups; e. g. dibutoxy sebacate and methoxyethyl acetyl recinoleate.

Pat. 2,397,724. Copolymers of Vinyl Chloride and Trichloroethylene. Apr. 2, 1946. Production of resins of copolymerizing vinyl chloride and trichloroethylene.

Pat. 2,399,208. Surface Useful Materials. Apr. 30, 1946. Lithographic printing plate surfaced with completely hydrolyzed ethylene/vinyl acetate or polyvinyl alcohol copolymer, grease receptive printing layers being located on the copolymer coating.

Pat. 2,399,401. Polyvinyl Alcohol Compositions. Apr. 30, 1946. Polyvinyl alcohol is plasticized with a combination of an aldehyde and an organic hydroxy compound, e. g. furfural or benzaldehyde and glycerol or ethanol formamide.

Pat. 2,399,456. Plasticized Polyvinyl Compositions. Apr. 30, 1946. Polyvinyl alcohol compositions are plasticized by means of solid polymers of formaldehyde, e. g. paraform and trioxane.

Pat. 2,403,215. Resinous Compositions and Electrical Conductors Insulated Therewith. July 2, 1946. Electrical insulating compositions comprising plasticized vinyl chloride-fumaric ester copolymers containing 1–10% of calcium hydroxide or other alkaline earth metal compound.

Pat. 2,404,780. Process for the Conjoint Polymerization of Vinyl Chloride with Fumaric Esters. July 30, 1946. Polymerization of a vinyl halide in admixture with fumaric esters in an aqueous medium in the presence of a persulfate and a dispersing agent comprising an acyclic hydrocarbon of 12–18 carbon atoms with only one N-free anionic solubilizing agent.

Pat. 2,404,781. Vinyl Polymers. July 30, 1946. Interpolymerization of a vinyl halide with an alpha, beta-unsaturated acid ester in an aqueous medium, in the presence of a persulfate and a dispersing agent, comprising an acyclic hydrocarbon 12–18 carbon atoms substituted with only one N-free anionic solubilizing group.

Pat. 2,404,791. Vinyl Polymers. July 30, 1946. Emulsion polymerization of vinyl halides admixed with at least one compound containing one ethylenic bond capable of vinyl polymerization in aqueous medium containing a perdisulfate and a dispersing agent.

Pat. 2,408,402. Trichloroethylene Copolymers. Oct. 1, 1946. Interpolymers of trichloroethylene with organic compounds having ethylenic unsaturation conjugated with a multiple bond between C and C, O, or N, e. g. acrylic and methacrylic esters, styrene, vinyl ketones, butadiene, etc.

Pat. 2,408,608. Chlorinated Resins. Oct. 1, 1946. Chlorination of vinylidene chloride-vinyl chloride copolymers.

Pat. 2,408,609. Resins of High Chlorine Content. Oct. 1, 1946. Production of chlorinated resins by reacting a vinyl chloridetrichloroethylene copolymer with chlorine.

Pat. 2,416,874. Treatment of Interpolymers of Vinyl Chloride and Esters of Ethylenedicarboxylic Acids. Mar. 4, 1947. Improved interpolymers of vinyl chloride with an ester of an ethylene dicarboxylic acid by heating with sulfur, a rubber vulcanization accelerator and a Group II metal oxide at not less than 100° C. for at least 15 minutes.

Pat. 2,432,296. Stabilized Chlorine Containing Polymers. Dec. 9, 1947. Chlorine-containing polymers stabilized with mercaptoalcohols.

Patents Relating to Miscellaneous

Pat. 1,911,722. Polymerization of Furylethylene. May 30, 1933. Polymerizing furylethylene, in presence of a polymerization catalyst, to the toluene-soluble stage; also polymerizing in presence of a drying or semi-drying oil.

Pat. 1,912,373. Method for Producing Carbon Black. June 6, 1933. Dissociation of hydrocarbon oil by submerged electric arc, while maintaining 5–15% of carbon black dispersed in the oil.

Pat. 1,914,870. Method of Hydrogenation. June 20, 1933. Organic compounds are hydrogenated under pressure using I_2 or HI as catalyst in the presence of H_2O.

Pat. 1,931,800. Apparatus for Effecting Dissociation of Other Reaction of Organic Liquids. Oct. 24, 1933. Apparatus for effecting a plurality of submerged electric arcs in oil, featuring adjustable, rotating electrodes.

Pat. 1,937,650. Metal Refining. Dec. 5, 1933. Copper calcium alloys are freed of calcium by passing N_2, NH_3 or H_2 thru molten alloy.

Pat. 1,937,728. Catalyst. Dec. 5, 1933. A copper catalyst for hydrogenation or for production of CH_3OH ex H_2 and CO is made by reducing cuprammonium hydroxide.

Pat. 1,941,009. Apparatus for Electrothermal Dissociation of Organic Liquids. Dec. 26, 1933. An arc-in-oil apparatus having stationary and moving electrodes.

Pat. 1,946,918. Hydrogenation of CO to Methyl Formate and Methanol in Liquid Phase with Alcoholate Catalysts. Feb. 13, 1934. Carbon monoxide is hydrogenated under pressure in an alcohol medium containing a mixture of alkali and alkaline earth alcoholates (Na and Ca methylates) and a soluble iodide to produce methanol and methyl formate.

Pat. 1,958,012. Process for the Manufacture of Alkali Metal Hydride. May 8, 1934. Alkali metal in an inert distributing liquid is hydrogenated at 230–400° C. at or above atmospheric pressure. NaH of 100% purity is obtained.

Pat. 1,965,925. Method of Electrothermal Dissociation of Organic Liquids. July 10, 1934. Process utilizing electric arc submerged in an organic liquid between a stationary annular electrode and a rotating electrode.

Pat. 1,975,697. Plasticizing Esters. Oct. 2, 1934. A composition comprising a cellulose derivative, a solvent and a fluorene or indene carboxylic ester as a conditioner or plasticizer.

Pat. 2,004,350. Condensation of Alcohols. June 11, 1935. Higher alcohols are produced from lower alcohols by heating under pressure at 150° C. or above in presence of a hydrogenation catalyst (Cu catalyst) and a condensation catalyst (KOH or K_2CO_3, etc.). Butanol produced ex ethanol.

Pat. 2,021,567. Catalyst and Process of Hydrogenating Organic Compounds. Nov. 19, 1935. Sodium and an aromatic hydrocarbon are heated together under pressure to form sodium hydrocarbide—a derivative of the hydrocarbon polymer. The product is used as catalyst for hydrogenating aromatic hydrocarbons.

Pat. 2,027,732. Electrode for Use in Electrothermal Processes for the Production of Carbon Black. Jan. 14, 1936. An electrode for arc-in-oil operations, composed of rubber-dispersible carbon black.

Pat. 2,035,314. Synthetic Resin. Mar. 24, 1936. Resins produced by heating a polycarboxylic acid with an alkyl disubstituted ethylene glycol, the alkyl groups of which contain at least 9 C atoms.

Pat. 2,054,084. Production of Carbon Black by the Thermal Dissociation of Organic Materials. Sept. 15, 1936. Thermal dissociation of solutions of organic materials to produce carbon black.

Pat. 2,071,417. Treatment of Calcium Magnesium Chloride. Feb. 23, 1937. Method for grinding deliquescent materials.

Pat. 2,077,073. Recovery of Metals from Their Ores. Apr. 13, 1937. Tungstic acid is recovered from tungsten ores by (1) refluxing with sulfur chlorides, (2) hydrolyzing with water, (3) extraction with ammonia, (4) calcining to convert ammonium tungstate to tungstic acid.

Pat. 2,079,557. Apparatus for Producing Carbon Black. May 4, 1937. A carbon black plant including in combination an arc-in-oil device and means for separating and drying carbon black.

Pat. 2,079,613. Hydroxycycloalkylammonium Salts. May 11, 1937. Reaction of organic acids with hydroxy hydroaromatic amines.

Pat. 2,083,870. Preparation of Sodium Hydrosulphite. June 15, 1937. Sodium hydrosulphite prepared by the reaction of SO_2 or alkyl sodium sulfite with organic sodium addition compounds.

Pat. 2,090,593. Process for the Preparation of Urea Derivatives. Aug. 17, 1937. Reactions of sodium urea with acyl halides.

Pat. 2,090,594. Acyl Urea and Process for the Preparation Thereof. Aug. 17, 1937. Reactions of sodium urea with esters.

Pat. 2,090,595. Process of Preparing Amido Derivatives. Aug. 17, 1937. Reaction of sodium derivatives of amines and amides (e. g. formamide, acetamide urea, phenyl hydrazine) with fatty oils, e. g. cocoanut, linseed, china wood, etc.

Pat. 2,090,596. Nitrogenous Compounds. Aug. 17, 1937. Reaction of sodium derivatives of amides (e. g. formamide, urea) with esters of an alpha-methylene carboxylic acid, e. g. methyl alpha-methacrylate.

Pat. 2,091,180. Process for Treating Paper Products. Aug. 24, 1937. Paper is impregnated with mixtures of dihydronaphthalene resin and paraffin.

Pat. 2,101,587. Insecticidal Product and Process. Dec. 7, 1937. Cyclohexene oxide as an insecticide.

Pat. 2,105,665. Chromium Sulphomolybdate Catalyst. Jan. 18, 1938. Chromium sulphomolybdate catalyst and process of preparing it.

Pat. 2,106,180. Process of Preparing Tertiary Ethynyl Carbinols and Product Produced Thereby. Jan. 25, 1938. A process for preparing tertiary ethynyl carbinols by reacting alkali metal acetylides with ketones in liquid ammonia.

Pat. 2,106,181. Ethynyl Carbinols and Process of Preparing the Same. Jan. 25, 1938. A process for preparing primary and secondary ethynyl carbinols by reacting alkali metal acetylides with aldehydes in liquid ammonia.

Pat. 2,106,182. Process of Reacting Alkali Metal Acetylides with Alkylene Oxides and Products Thereby Produced. Jan. 25, 1938. Ethynyl carbinols prepared by reacting alkylene oxides with sodium acetylide in liquid ammonia.

Pat. 2,119,507. Resin Composition. May 31, 1938. Resinous compositions containing dihydronaphthalene polymer and resinous rubber compositions, e. g. "Pliolite".

Pat. 2,122,719. Ethynylhydroxycarboxylic Acids, Dactones Thereof and Process of Preparing Them. July 5, 1938. Ethynyl lactones made by reacting keto acids with sodium acetylide in liquid ammonia.

Pat. 2,125,376. Waterproofing Process. Aug. 2, 1938. Acyloins of fatty acids as waterproofing agents for soluble materials, e. g. granular salts, etc.

Pat. 2,125,384. Preparation of Ethynyl Carbinols. Aug. 2, 1938. Sodium acetylide or a sodium derivative of an acetylenic hydrocarbon is reacted in liquid ammonia at below −33° C. for 5–50 hours. The sodium alcoholate in reaction mixture is reacted with an ammonium salt to liberate the ethynyl carbinol before the NH_3 is evaporated.

Pat. 2,125,386. Coating Alkaline Surfaces. Aug. 2, 1938. Abietyl alcohol is used as a coating or impregnating agent for alkaline materials such as marble and concrete.

Pat. 2,130,501. Reduction of Cyclic Ethers. Sept. 20, 1938. Preparation of tetrahydrofurfurane compounds by hydrogenation of succinyl compounds.

Pat. 2,130,805. Sterilizing Agent. Sept. 20, 1938. 1,3-Dichlor-5,5-dimethylhydantoin as a sterilizing agent for water, milk, etc.

Pat. 2,143,021. Reaction of Alpha-Halogenated Ethers with Olefines in the Presence of Titanium Halide Catalysts. Jan. 10, 1939. Process comprising reacting an olefine containing ethylenic unsaturation only with a brominated or chlorinated ether in the presence of titanium tetrachloride or tetrabromide.

Pat. 2,145,097. Condensation of Alcohols. Jan. 24, 1939. Esters are produced by heating alcohols under pressure in the presence of dehydrogenating catalysts, e. g. reduced Cu, Ni.

Pat. 2,148,355. Method for Producing Carbon Black. Feb. 21, 1939. A flash evaporation method for recovering carbon black from black-oil mixtures.

Pat. 2,148,356. Method for Producing Carbon Black. Feb. 21, 1939. A two-stage evaporation process for recovering carbon black from black-oil mixtures.

Pat. 2,150,947. Washing Apparatus. Mar. 21, 1939. A rotary, three-level washer for the washing of coal, middlings and slate, after separation by means of a gravity liquid, to recover the gravity liquid.

Pat. 2,152,532. Bleaching with Organic Bleaching Agent. Mar. 28, 1939. Tertiary butyl hypochlorite as a bleaching agent.

Pat. 2,155,728. Vapor Phase Bleaching. Apr. 25, 1939. Bleaching by means of tertiary butyl hypochlorite vapor.

Pat. 2,162,676. Preparation of Acetylene Glycols. June 13, 1939. Acetylene glycols ex sodium acetylide and carbonyl compounds.

Pat. 2,167,976. Electric Arc Apparatus for Producing Chemical Reactions. Aug. 1, 1939. Submerged arc pyrolysis of liquid hydrocarbons, with supply of constant current to arc.

Pat. 2,172,803. Polycarboxylic Acid Esters. Sept. 12, 1939. Esters of alpha-ketols prepared by reacting saturated polycarboxylic acids with alkynyl carbinols in presence of Hg salts of carboxylic acids.

Pat. 2,176,107. Separation of Materials. Oct. 17, 1939. Method and apparatus for the hydraulic separation of materials, particularly for washing and classifying coal. The hydraulic classifier is of the upward current type.

Pat. 2,176,632. Lubricating Composition and Method of Making Same. Oct. 17, 1939. Mixtures of lubricating oil and sulfurized dihydronaphthalene dimer.

Pat. 2,176,633. Lubricating Composition and Method of Making Same. Oct. 17, 1939. Mixtures of lubricating oil and sulfurized dihydronaphthalene.

Pat. 2,177,407. Alcoholysis of Glycerides Oct. 24, 1939. Fatty acid glycerides are converted to esters of monohydric alcohols by a non-catalytic alcoholysis reaction carried out with excess alcohol at 175–300° C. under pressure. Saturated esters may be produced by carrying out alcoholysis and hydrogenation of unsaturated glycerides (in presence of Ni catalyst) with excess alcohol under H_2 pressure.

Pat. 2,181,759. Apparatus for Producing Carbon Black. Nov. 28, 1939. In the submerged electric arc method for producing carbon black from liquid hydrocarbons, the arcing zone is surrounded by a baffle to confine gaseous decomposition products. The method results in an increased production of carbon black.

Pat. 2,182,242. Process for Hydrogenating Aromatic Hydrocarbons. Dec. 5, 1939. Reduction of monocyclic aromatic hydrocarbons with sodium in liquid ammonia.

Pat. 2,191,012. Electrothermal Pyrolysis of Carbon-Bearing Liquids. Feb. 20, 1940. Method and apparatus for production of carbon black by submerged arc. The rotating electrode is rotated in synchronism with the arc current so that it is out of arcing relationship with a half-ring electrode during a substantial part of each cycle.

Pat. 2,194,294. Preparation of N-Substituted Alkylol Amines. Mar. 19, 1940. N-alkanolamines, particularly dimethyl ethanolamine, are prepared by condensation of ethanolamine with CH_2O and hydrogenating the resulting product.

Pat. 2,197,258. Preparation of Acrolein. Apr. 16, 1940. Production of acrolein by the reaction of propylene with mercuric sulfate and water in the presence of less than 15% of sulfuric acid.

Pat. 2,198,172. Monocarboxylic Acid Esters. Apr. 23, 1940. Esters of alpha-ketols prepared by reacting monocarboxylic acids with alkynyl carbinols in presence of Hg salts of carboxylic acids.

Pat. 2,202,994. Chemical Process. June 4, 1940. Sodium is reacted with liquid ammonia in the presence of a catalyst comprising Na_2O and a hydrated salt of Fe, Ni or Co to form sodamide.

Pat. 2,212,146. Preparation of Alpha-Alkylenimines, e. g. ethylenimine. Aug. 20, 1940. Preparation of alpha-alkyleneimines from a beta-chloroalkylamine hydrochloride and caustic.

Pat. 2,230,199. Glass Manufacture. Jan. 28, 1941. Sodium monoxide as glass ingredient for making ruby and opal glasses.

Pat. 2,270,386. Aliphatic Hydrocarbon Ammonium Chromate. Jan. 20, 1942. Long-chain alkyl-ammonium acid chromates.

Pat. 2,274,058. Long-Chain Alkyl Ammonium Metallonitriles and Process for Their Manufacture. Feb. 24, 1942. Long-chain alkyl-ammonium metallonitriles.

Pat. 2,284,241. Corrosion Inhibition. May 26, 1942. A ferrous metal having its surface coated with a thin film consisting of an aliphatic acid ester polycarboxylic acid in which the aliphatic radical is a member of the group consisting of an acyclic aliphatic cyclohexylnaphthenyl radical and contains at least 6 carbon atoms, said ester consisting of the elements: carbon, hydrogen and oxygen.

Pat. 2,293,580. Process for the Treatment of Iron-Containing Surfaces and Product Thereof. Aug. 18, 1942. Protection of iron-containing surfaces against corrosion by coating with a mixture of cocoanut oil acids.

Pat. 2,294,077. Manufacture of Optical Glass. Aug. 25, 1942. Use of sodium monoxide in making striae-free optical glass.

Pat. 2,295,760. Process for Separating Aldehydes and Ketones. Sept. 15, 1942. Separation and isolation of aldehydes and ketones by reaction with an acyclic alkyl thiol in the presence of a substance, which in a polar solution gives an acidic reaction, so as to obtain the corresponding mercaptals and mercaptols and separating the desired mercaptals from the mercaptols.

Pat. 2,297,929. Increasing the Ink Receptivity of Metallic Surfaces. Oct. 6, 1942. A process for increasing the oleaginous ink receptivity of selected areas of a lithographic print which receive and retain the lithographic ink for comprising treating said areas with a composition of which the non-volatile portion is essentially completely a long chain aliphatic salt forming compound.

Pat. 2,307,643. Process for the Production of a Cyano-Imino Compound. Jan. 5, 1943. Production of cyano-imino compounds by reacting an alkali metal addition compound of a polycyclic aromatic hydrocarbon with an organic nitrile having at least one hydrogen atom on a carbon atom alpha to the nitrile group.

Pat. 2,323,226. Preparation of 2-Chlorobutene-2. June 29, 1943. Vapor phase preparation of 2-chlorobutene-2 ex 2,3-dichlorobutane in presence of $BaCl_2$.

Pat. 2,323,227. Preparation of 2,2,3-Trichlorobutane. June 29, 1943. Preparation of 2,2,3-trichlorobutane by chlorination of 2-chlorobutene-2.

Pat. 2,327,080. Polymerization of Conjugated Dienes. Aug. 17, 1943. Polymerization of diolefines, e. g. butadiene and styrene, in the presence of sodium in a special ether solvent which promotes the reaction. Ethers such as dimethyl ether and ethylene glycol dimethyl ether are suitable, the latter being preferred. Butadiene gives drying oils.

Pat. 2,333,206. Protection of Ferrous Metals Against Corrosion. Nov. 2, 1943. Protection from atmospheric corrosion of metallic surfaces by treatment with an acyclic aliphatic monoamine having an aliphatic group of a chain length of at least 8 carbon atoms.

Pat. 2,334,192. Preparation of Alpha-Cyanobutadiene. Nov. 16, 1943. Production of alpha-cyanobutadiene by dehydration of tetrahydrofuramide or its equivalent.

Pat. 2,334,683. Separation of Materials. Nov. 16, 1943. Apparatus and method for separating minerals (e. g. coal) utilizing both ordinary hydraulic classification and hindered settling. In general, this invention utilizes the features of U. S. P. 2,176,107 with certain improvements.

Pat. 2,342,102. Metal Refining Process. Feb. 22, 1944. Phosphorus is removed from iron or other metal by treatment of the molten metal within an oxide of an alkali metal, preferably sodium monoxide.

Pat. 2,343,107. Preparation of Butadiene. Feb. 29, 1944. Vapor phase preparation of butadiene ex dichlorobutanes in absence of catalysts.

Pat. 2,343,108. Production of Butadiene. Feb. 29, 1944. Production of butadiene by reacting butylene with Br_2 to produce dibrombutane, pyrolyzing the latter to butadiene and HBr, converting the HBr to Br_2 (Deacon's process) and using the Br_2 formed to produce more dibrombutane.

Pat. 2,347,410. Pyridine Carboxylic Acids. Apr. 25, 1944. Nicotine acid is produced from copper quinolinate utilizing ammonia as solvent for the latter before precipitation of copper oxide. In the final stage the crude quinolinic acid is dicarboxylated by treatment with hot acetic acid to produce nicotinic acid. Other heavy metal salts may be similarly treated.

Pat. 2,347,446. Preparation of Reducing Agents. Apr. 25, 1944. Formamidine sulfinic acid by reacting H_2O_2 with a mixture of NH_4CNS and thiourea under controlled temperature.

Pat. 2,353,026. Metal-Cleaning Process and Composition. July 4, 1944. Metal articles, particularly cast iron and other ferrous metals are cleaned by contact with a fused caustic bath containing sodamide. The bath may also contain sodium hydride.

Pat. 2,355,970. Process of Acylation. Aug. 15, 1944. Acylation of methyl lactate with vinyl esters using a tertiary amine catalyst.

Pat. 2,355,971. Process for Acylation. Aug. 15, 1944. Acylation of methyl lactate with a vinyl ester using alkali metal cyanides, silicates, carbonates, or tetraborates, as catalysts.

Pat. 2,356,542. Process of Rendering Massive Inorganic Bodies Hydrophobic. Aug. 22, 1944. Siliceous construction materials are rendered water-resistant by treatment with an aliphatic amine containing at least 8 carbon atoms in an alkyl group, and salts thereof.

Pat. 2,360,950. Welding Plastic Material and Device Therefor. Oct. 24, 1944. A heat-conductive tool for welding thermoplastic organic materials such as "Saran".

Pat. 2,370,394. Chlorinated Phenylene Diacetic Acids. Feb. 27, 1945. Nuclear chlorinated p-phenylene diacetic acids containing up to three chlorine atoms by reacting nuclear chlorinated p-xylylene dichlorides with alkali metal cyanide and hydrolyzing the dicyanide.

Pat. 2,372,709. Preparation of Benzoin. Apr. 3, 1945. A continuous process for producing benzoin ex benzaldehyde utilizing a methanol-water mixture as solvent and sodium cyanide as the condensing agent.

Pat. 2,373,870. Organic Nitrogen-Containing Compounds and Processes for Their Production. Apr. 17, 1945. Di-sodium N-(beta-hydroxyethyl)-imino-bis-(methane sulfonate).

Pat. 2,377,749. Preparation of Benzil. June 5, 1945. In the oxidation of benzoin to benzil using as aqueous copper sulfate-pyridine solution, air is passed through the reaction mixture to maintain the activity of the catalyst.

Pat. 2,387,495. Products and Process Therefor. Oct. 23, 1945. Production of acetals by reacting acetylene with a monohydric alcohol ester of hydroxy acetic acid under anhydrous conditions using a mercury catalyst.

Pat. 2,392,505. Monochlorohydantoins and Salts Thereof. Jan. 8, 1946. Production of metal salts of N-monochloro-5,5-disubstituted hydantoins by reacting a soluble metal compound with a solution of an N-monochlorohydantoin or solution of an alkali metal salt of an N-monochloro-5,5-dialkyl hydantoin; production of N-monochlorohydantoins by chlorination of 5,5-disubstituted hydantoins.

Pat. 2,394,776. Modified Polymeric Polyhydric Alcohols. Feb. 12, 1946. Ethers of polymeric polyhydric alcohols and 3-hydroxy-thiolane-1,1-dioxide.

Pat. 2,398,598. 1,3-Dichloro-5-Methyl-5-Isobutyl Hydantoin and Method of Preparation. Apr. 16, 1946. 1,3-dichloro-5-methyl-5-isobutyl hydantoin and production by reacting chlorine with 5-methyl-5-isobutyl hydantoin.

Pat. 2,398,599. Chlorinated Hydantoins. Apr. 16, 1946. Production of 3,3-dichloro-1,1′-methylene-bis-(5-methyl-5-ethyl hydantoin) and 3,3-dichloro-1,1′-methylene-bis-(5-methyl-5-isobutyl hydantoin) by chlorinating the corresponding hydantoin in aqueous alkaline medium.

Pat. 2,401,099. Reaction of 1,3-Dienes with Polyhalogenated Alkanes and Products Thereof. May 28, 1946. Low molecular weight reaction products of 1,3-dienes or 2,5-dihydrothiophene-1-dioxides with polyhalogenated alkanes by reaction in the presence of a polyhydroxy benzene, a peroxygen compound, and iron; e. g. 2,5-dihydrothiophene-1-dioxide with carbon tetrachloride in the presence of pyrogallol, benzoyl peroxide, and iron.

Pat. 2,408,623. Coating Ferrous Metals with Molten Aluminum. Oct. 1, 1946. Iron or steel is coated with aluminum by dipping the clean metal wet with water into molten aluminum.

Pat. 2,411,396. Reaction Products of Formaldehyde and Sodium Cyanamide. Nov. 19, 1946. Reaction product of sodium cyanamide and formaldehyde and process for its production.

Pat. 2,411,397. Production of Sodium Cyanamide-Formaldehyde Condensation Product. Nov. 19, 1946. Production of a sodium cyanamide-formaldehyde condensation product by reacting at pH of 10.5 and temperature below 45° C. approximately equimolecular amounts of monosodium cyanamide and formaldehyde and precipitating the product by addition of strong acid.

Pat. 2,416,624. Stabilization of Cyanhydrins. Feb. 25, 1947. Cyanhydrins are stabilized against decomposition during distillation by the addition of iodine.

Pat. 2,422,528. Rinse Compositions. June 17, 1947. Tetrachlorosuccinonitrile, a new compound, and its production by reacting succinonitrile with chlorine in the vapor phase at 200–550° C. or reacting the above in the liquid phase to produce chloromaleo- or chlorofumaronitrile and chlorinating these in vapor phase.

Pat. 2,424,664. N-Beta-Cyanoethylalkane-Sulfonamides. July 29, 1947. N-beta-cyanoethylalkanemonosulfonamides and preparation from acrylonitrile and appropriate sulfonamides.

Pat. 2,425,677. Fungicidal Compositions. Aug. 12, 1947. Fungicidal mixture containing 50–85% by weight of paraformaldehyde and symmetrical trichloroaniline.

Pat. 2,425,678. Fungicidal Compositions. Aug. 12, 1947. Fungicide comprising 50–85% paraformaldehyde and the remainder 1,2- or 1,4-dihydronaphthalene.

Pat. 2,429,391. Bis(Carboxy Methyl Propyl) Sulfide. Oct. 21, 1947. Bis(carboxy methyl propyl) sulfide.

Pat. 2,429,392. Bis(Amino Methyl Propyl) Sulfide. Oct. 21, 1947. Bis(amino methyl propyl) sulfide.

Pat. 2,429,452. Bis(Cyano Methyl Propyl) Sulfide. Oct. 21, 1947. Bis(methyl propyl) sulfide compound.

Pat. 2,429,859. Sulfur-Formaldehyde Resins. Oct. 28, 1947. Sodium polysulfide is reacted with formaldehyde or alpha polyoxymethylene to form pliable resins of rubber-like resiliency.

Pat. 2,430,233. Halogen Yielding Compositions. Nov. 4, 1947. Production of N-monohalohydantoins by reacting unhalogenated hydantoins with N,N′-dihalohydantoins.

BULLETIN OF DECISIONS OF PATENT OFFICE ON TRADE-MARKS

RENDERED DURING OCTOBER, 1948

EX PARTE JOHN F. JELKE COMPANY, Serial No. 486,782.

In a decision rendered October 1, 1948 (171 Ms. Dec. 17, 79 USPQ 85), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Trade-Marks refusing to register to John F. Jelke Company, of Chicago, Ill., the word "SPOTLESS" as a trade-mark for oleomargarine under the act of 1905.

After noting that registration was refused in view of prior registration No. 97,046 (renewed), which discloses the word "SPOTLESS" together with certain design features as a trade-mark for wheat flour, in response to applicant's argument that oleomargarine and wheat flour are clearly distinct products, it was held that it is not open to argument that they possess the same descriptive properties.

After noting that applicant's mark was heretofore registered and that such registration was inadvertently permitted to expire, it was held that the fact of such prior registration is entitled to consideration, but where, as here, the marks in their essential nature are the same and the goods are clearly of the same descriptive properties, it cannot entitle applicant to registration in view of the specific provisions of section 5 of the Trade-Mark Act of 1905.

After noting that the mark has also been refused on the ground that it is descriptive, it was held that in view of the foregoing, this need not be considered.

EX PARTE JOHN F. JELKE COMPANY, Serial No. 486,783.

In a decision rendered October 1, 1948 (171 Ms. Dec. 19, 79 USPQ 85), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Trade-Marks refusing to register to John F. Jelke Company, of Chicago, Ill., the word "TRYME" as a trade-mark for oleomargarine under the act of 1905.

After noting that the refusal is based upon the existence of three prior registrations: No. 105,963, disclosing the mark "Try Me" for self rising wheat flour; No. 101,969, disclosing the mark "TRY ME" for catsup, jells, jams, apple butter, syrup for table use, mustard, pickles, pickle relish, and olives; and No. 217,117 (renewed), disclosing the mark "TRY-ME" for food flavoring extracts; it was held that the comments in the decision with respect to application Serial No. 486,782, supra, apply to this case and need not be repeated.

EX PARTE JOHN F. JELKE COMPANY, Serial No. 486,790.

In a decision rendered October 1, 1948 (171 Ms. Dec. 18, 79 USPQ 84), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Trade-Marks refusing to register to John F. Jelke Company, of Chicago, Ill., the word "BAKO" as a trade-mark for oleomargarine under the act of 1905.

After noting that registration has been refused in view of certain prior registrations, of which only registration No. 51,010 (renewed), disclosing the trade-mark "BA-KO" for shortening for pastry, need now be considered, it was held that the marks being identical, the only question for consideration is whether or not the goods are similar within the meaning of section 5 of the Trade-Mark Act of 1905.

It was held that it cannot be questioned but that the goods have the same descriptive properties.

THE BORDEN COMPANY V. VITAMINS & PHARMACEUTICALS, INC. (PHARMACEUTICAL ORGANICS, INC., ASSIGNEE, SUBSTITUTED), Opposition No. 25,401.

In a decision rendered October 1, 1948 (171 Ms. Dec. 15, 79 USPQ 86), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Trade-Mark Interferences dismissing the notice of opposition of The Borden Company, of New York, N. Y., to the application of Vitamins & Pharmaceuticals, Inc. (Pharmaceutical Organics, Inc., assignee, substituted), of Dover, Del., to register, under the Trade-Mark Act of 1905, the word "GERIATRONE" as a trade-mark for a preparation containing various vitamins, minerals and amino acids, as a dietary supplement and for the correction of nutritional deficiencies. Opposer relied upon ownership and prior use of the trade-mark "GERILAC" as a trade-mark for certain food products for special dietary uses, and ownership of registration No. 417,947 of that mark for powdered modified milk for special dietary uses, containing certain named spray-dried substances.

It was held that the fact that opposer's product is classified in the Patent Office for registration purposes in Class 46, Foods and ingredients of foods, while applicant's product is classified for registration purposes in Class 6, Chemicals, medicines, and pharmaceutical preparations, is not controlling on the question of likelihood of confusion.

It was held that while it is true that there are specific differences between these products, and that applicant's product may be used as food or in con-

nection with cooking and baking, nevertheless, both are essentially dietary supplements intended for use in connection with nutritional deficiency, and must therefore be regarded as having broadly the same descriptive properties.

It was held that considering the marks in their entireties, they differ in sound and appearance to such an extent that it is doubtful that there is reasonable likelihood of any confusion between them, so that the Examiner of Interferences was right in ruling that the marks when viewed as a whole must be considered sufficiently different in sound, appearance, and significance, that, at least when taken in connection with the specific differences between the products to which they are applied, there is little likelihood of confusion in trade or deception of purchasers.

BOTANY WORSTED MILLS (BY CHANGE OF NAME, BOTANY MILLS, INC.) *v.* VERNEY FABRICS CORPORATION, Opposition No. 25,736.

In a decision rendered October 5, 1948 (171 Ms. Dec. 21, 79 USPQ 87), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Interferences dismissing the opposition of Botany Worsted Mills (by change of name, Botany Mills, Inc.), of Passaic, N. J., to the application of Verney Fabrics Corporation, of New York, N. Y., to register, under the act of February 20, 1905, the notation "CH'INTANG" as a trade-mark for piece goods of synthetic and natural fibres, namely, rayon, cotton, wool, silk and mixtures thereof. Opposer relied upon likelihood of confusion between that mark and opposer's trade-mark "Chinka," registered, No. 348,695, for woolen piece goods.

It was held that the Examiner of Interferences was right in ruling that although the two marks contain a certain succession of letters in common, they differ substantially when viewed as a whole, so that there is practically no similarity between them in general appearance, and when pronounced in any normal manner to which they seem to be susceptible, they appear to be readily distinguishable in sound.

EX PARTE JOSEPH BANCROFT & SONS CO., Serial No. 475,599.

In a decision rendered October 7, 1948 (171 Ms. Dec. 24, 79 USPQ 88), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Trade-Marks refusing to register to Joseph Bancroft & Sons Co., of Wilmington, Del., under the Trade-Mark Act of 1905, the notation "BAN-RINKLE" as a trade-mark for piece goods of cotton, of rayon, and of wool, and of various mixtures thereof.

After noting that "Rinkle" is a phonetic misspelling of "wrinkle," it was held that the words here sought to be registered when applied to the goods of the applicant are aptly descriptive thereof, and as applied to such goods would have no other meaning to the public, so that they are merely descriptive and therefore not entitled to registration.

EX PARTE JOSEPH BANCROFT & SONS CO., Serial No. 475,600.

In a decision rendered October 7, 1948 (171 Ms. Dec. 23, 79 USPQ 89), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Trade-Marks refusing to register to Joseph Bancroft & Sons Co., of Wilmington, Del., under the Trade-Mark Act of 1905, the notation "BAN-CREASE" as a trade-mark for piece goods of cotton, of rayon, and of wool, and of various mixtures thereof.

After noting that the Examiner's statement and the brief filed by applicant are identical with those filed in the appeal from the refusal to register the word "BAN-RINKLE," application Serial No. 475,599, supra, it was held that the issues presented are identical and are controlled by that decision.

K & S CORSET MANUFACTURING CO., INC., *v.* ROSE HANSKAT, Cancellation No. 5112.

In a decision rendered October 8, 1948 (171 Ms. Dec. 25, 79 USPQ 89), *Assistant Commissioner Daniels* denied a petition, pursuant to rule 27 of the Rules of Practice in Trade-Mark Cases, by respondent, Rose Hanskat, of Pass-a-Grille Beach, Fla., in the cancellation proceeding instituted on the petition of K & S Corset Manufacturing Co., Inc., of New York, N. Y., requesting that supervisory authority be exercised by directing the Examiner of Trade-Mark Interferences to consider the merits of a motion to dismiss the cancellation proceeding, the motion before the Examiner having been made pursuant to Rule 41(b) of the Federal Rules of Civil Procedure after the petitioner for cancellation had completed the taking of its prima facie testimony.

It was held that, in view of rules 23.1 and 23.6 of the Rules of Practice in Trade-Mark Cases, the Examiner of Interferences was right in ruling that section 41(b) of the Federal Rules of Civil Procedure cannot be followed in this proceeding, because: (1) it is not applicable and appropriate; and (2) that it is "otherwise provided" by Patent Office rules.

It was held that if any doubt existed as to the correctness of the Examiner's ruling in this case, it would be disposed of by the amendment to Rule 41(b) adopted by the Supreme Court on December 27, 1946, and transmitted to the Attorney General on January 2, 1947, which amendment clearly indicates that there was no abuse of discretion by the Examiner in refusing to pass upon the merits of petitioner's motion at this time, and declining to render any judgment until the close of all the evidence.

EX PARTE JOSEPH BANCROFT & SONS CO., Serial No. 475,598.

In a decision rendered October 12, 1948 (171 Ms. Dec. 28, 79 USPQ 151), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Trade-Marks refusing to register to Joseph Bancroft & Sons Co., of Wilmington, Del., under the Trade-Mark Act of 1905, the notation "STAZE-SET" as a trade-mark for piece goods of cotton, of rayon, and of wool, and of various mixtures thereof.

After noting that registration was refused on the ground that "STAZE-SET" is a misspelling of the words "stays set" and clearly indicates a result obtained from the treatment of the material either before or during its fabrication, it was held that, as it is clear from the record presented that "set" is commonly used as describing the making and treating of textiles, that "STAZE-SET" is descriptive can hardly be argued, and that since the only meanings which the word may have are descriptive, they must therefore be regarded as "merely descriptive."

After noting that applicant places much emphasis on the fact that it is the owner of certain trade-marks which it regards as similar for similar goods, and that an opposition brought by it to prevent a similar registration on similar goods was sustained, it was held that a mark may be "merely descriptive" as applied to certain goods and arbitrary as to others, but whether or not such registrations were proper was not before the Assistant Commissioner for consideration, and even if they were wrongly registered, which he was not prepared to find, this would not permit or require registration of this mark.

ATLAS LEATHER CASE CO. (PLATT LUGGAGE, INC., ASSIGNEE, SUBSTITUTED) *v.* GLADSTONE CASE MFG. CO., INC., Interference No. 3669.

In a decision rendered October 19, 1948 (171 Ms. Dec. 30, 79 USPQ 184), *Assistant Commissioner Daniels* reversed the action of the Examiner of Trade-Mark Interferences, who, in an interference proceeding between Atlas Leather Case Co. (Platt Luggage, Inc., assignee, substituted), of Chicago, Ill., the junior party, and Gladstone Case Mfg. Co., Inc., of Chicago, Ill., the senior party, involving two applications for registration of the word "Pilot" as a trade-mark for luggage under the Trade-Mark Act of 1905, had awarded priority to the junior party, and adjudged that it is entitled to the registration for which it has made application, and further adjudged that the senior party is not entitled to the registration which it seeks.

It was held that since Atlas was not the first to "affix" the mark to its goods, it is not entitled to the registration for which it has made application.

In response to the contention of Atlas that even though it be held to be not entitled to registration, registration by Gladstone should also be refused, it was held that while the evidence as to the specific uses by Atlas is adequate, it cannot be accepted as sufficient to establish such extensive use or public recognition, prior to Gladstone's use of the mark, as to deprive Gladstone of a right to registration based upon its actual trade-mark use, so that Gladstone was the first to affix the mark here involved to the goods and to use it as a trade-mark for luggage and on the record here presented Gladstone's use was a technical trade-mark use which would entitle it to its registration, which is not negatived by prior non-trade-mark use by Atlas.

BROOKS BROTHERS *v.* B. BENNETT COMPANY, INC., ET AL., Trade-Mark Interference No. 3593.

In a decision rendered October 20, 1948 (171 Ms. Dec. 37, 79 USPQ 188), *Assistant Commissioner Daniels* reversed the action of the Examiner of Interferences in an interference between an application of Brooks Brothers, of New York, N. Y., and registration No. 364,217 of B. Bennett Company, Inc., of New Orleans, La., and others, thereby reversing the holding that Brooks Brothers, the junior party, is the prior user and is entitled to the registration for which it has made application under the Trade-Mark Act of 1905.

After noting that because of the insertion of pamphlets or booklets in the packages of Brooks Brothers, the Examiner has found that the mark was "affixed" to the goods within the meaning of section 29 of the Trade-Mark Act of 1905, it was held that while it cannot be questioned under said section that the inclusion of the trade-mark in the package may constitute a trade-mark use, nevertheless, the use must be such that it is obviously intended to associate the trade-mark directly with the goods and identify it as a trade-mark use, which is not the case in any of the exhibits here considered.

It was held that on the record presented Brooks Brothers has failed to sustain the burden of proof as to the use of the pamphlets referred to prior to January 12, 1923, and that even if so used during the period involved the mark was not used as a trade-mark or in such a manner that it can be considered to have been affixed to the goods within the meaning of the Trade-Mark Act of 1905.

FRANCES DENNEY *v.* ELIZABETH ARDEN SALES CORPORATION, Opposition No. 25,127.

In a decision rendered October 28, 1948 (171 Ms. Dec. 46, 79 USPQ —), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Trade-Mark Interferences sustaining the opposition of Frances Denney, of Philadelphia, Pa., to the application of Elizabeth Arden Sales Corporation, of New York, N. Y., to register, under the Trade-Mark Act of 1905, the notation "ARDENA PORINE CREAM" as a trade-mark for face and body creams, the word "CREAM" being disclaimed. Opposer relied upon the prior use of the word "PORETTE" as a trade-mark for face creams.

It was held that the fact that the notice of opposition alleges use since a date later than that actually proved does not weaken the clear and uncontradicted oral and documentary evidence, and is considered immaterial since both the date alleged and the earlier date proven antedate applicant's use by several years.

After noting that a sample of the actual product was submitted in evidence, as were labels and other material, it was held that it is clearly sold as a face cream, and accordingly is identical with the product for which applicant seeks registration.

After noting that prior use having been shown, it was not necessary that opposer establish any exclusive rights to the mark on which it relies, it was held that it requires no discussion that "PORINE" and "PORETTE" are confusingly similar as applied to identical goods within the meaning of the confusion-in-trade clause of the Trade-Mark Act of 1905.

In response to applicant's contention that the use of the word "ARDENA" with the word "PORINE" removes any possibility of confusion, since "ARDENA" in itself is a well recognized trademark, it was held that the addition of this term to the word "PORINE" is not, however, sufficient to distinguish between them.

COLGATE-PALMOLIVE-PEET COMPANY *v.* M. LEO HEIM, Opposition No. 25,887.

In a decision rendered October 28, 1948 (171 Ms. Dec. 43, 79 USPQ —), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Trade-Mark Interferences sustaining the opposition of Colgate-Palmolive-Peet Company, of Jersey City, N. J., to the application of M. Leo Heim, of Brooklyn, N. Y., for registration, under the Trade-Mark Act of 1905, of the word "HELOZ" as a trade-mark for soaps, soap powder, soap cakes, shaving cream, cleaning compositions for glass, porcelain, marble, walls, painted surfaces, linoleum, carpets, leather, and cloth, such as cotton, wool, silk, rayon, and compositions for polishing and waxing metals and leather. Opposer relied upon ownership and prior use of the trade-mark "HALO" for various soap products. Opposer's ownership and prior use of the mark, for the products mentioned, and its ownership of three registrations, each covering certain of those products, were established by a stipulation of facts.

It was held that the goods of the parties possess the same descriptive properties.

It was held that the Examiner was correct in finding that applicant has done little more than make a substantial appropriation of opposer's entire mark and added thereto the letter "z".

It was held that applicant's contention that it derived its mark from a combination of certain words would be accepted as indicating good faith on applicant's part if that were in issue, but is not a matter which would be apparent to the purchasing public or influence their judgment.

It was held that the Examiner of Interferences was right in concluding that the marks of the parties bear such near resemblance in appearance and sound that their concurrent use would be likely to cause confusion or mistake in the minds of the public or to deceive purchasers as to their origin.

TRADE-MARKS

OFFICIAL GAZETTE, NOVEMBER 30, 1948

[VOL. 616. No. 5]

ACT OF 1905

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication. As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Marks published for opposition under the act of 1946 follow the 1905 publications.

CLASS 1

RAW OR PARTLY PREPARED MATERIALS

Ser. No. 515,087. CULLIGAN ZEOLITE COMPANY, Northbrook, Ill. Filed Dec. 31, 1946.

CULLSAN

FOR UNPROCESSED AND GRADED SILICA SAND FOR USE IN WATER FILTERING EQUIPMENT.
Claims use since Aug. 5, 1946.

CLASS 3

BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS

Ser. No. 512,798. RICO LEATHER SPECIALTY INC., Chicago, Ill. Filed Nov. 18, 1946.

Rico

FOR WALLETS, POCKET SECRETARIES, KEY CASES, OVERNIGHT CASES AND BAGS, BRIEF CASES, PORTFOLIOS, AND BRIEF BAGS.
Claims use since March 1946.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 522,019. JESSIE BERYL POOLE, doing business as Package Products, Toronto, Ontario, Canada. Filed May 7, 1947.

JETSPEED

FOR GENERAL PURPOSE CLEANSER FOR HOUSEHOLD AND INDUSTRIAL USE.
Claims use since Jan. 15, 1947.

Ser. No. 522,057. JESSIE BERYL POOLE, doing business as Package Products, Toronto, Ontario, Canada. Filed May 7, 1947.

JETSPEED

FOR GENERAL PURPOSE CLEANER FOR HOUSEHOLD AND INDUSTRIAL USE.
Claims use since Jan. 15, 1947.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 443,582. SOCIETY OF CHEMICAL INDUSTRY IN BASLE, Basel, Switzerland, now by change of name Ciba Limited. Filed May 14, 1941.

CIBANTINE

FOR COAL TAR COLORS.
Claims use since Mar. 15, 1941.

Ser. No. 489,164. CONSTANCE BANNISTER, New York, N. Y. Filed Sept. 29, 1945. Under the act of February 20, 1905, as amended June 10, 1938.

Bannister

The name "Bannister" is a facsimile of applicant's signature.
FOR FACE AND BODY POWDER.
Claims use since Aug. 30, 1945.

Ser. No. 504,917. MEDICONE COMPANY, New York, N. Y. Filed July 1, 1946.

Theo Tabs
MEDICONE

Applicant claims no registration rights in the word "Tabs" apart from the mark.
FOR MEDICINAL PRODUCT FOR SYMPTOMATIC TREATMENT OF CARDIO-VASCULAR DISEASES AND HYPERTENSION.
Claims use since June 25, 1946.

Ser. No. 507,356. M. CALTHORPE & COMPANY LIMITED, Ossett, England. Filed June 7, 1946.

VIROTABS

FOR MEDICINAL TONIC IN TABLET FORM FOR USE AS A BLOOD ENRICHER, DIGESTIVE, AND AID TO HEALTHY CIRCULATION.
Claims use since Oct. 12, 1943.

Ser. No. 523,314. HALITOSINE COMPANY, St. Louis, Mo. Filed May 31, 1947.

HALITONE

FOR MOUTH WASH.
Claims use since Apr. 16, 1925.

Ser. No. 524,422. MURRAY ROCK, doing business as Murray Rock and Company, Dayton, Ohio. Filed June 18, 1947.

Color-Lur. by Joroc

The word "Color" is disclaimed apart from the entire mark as shown.
FOR HAIR COLORING SOLUTION.
Claims use since Mar. 13, 1947.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 519,898. ALBERT RIES, doing business as Royal Fastener Company, New York, N. Y. Filed Mar. 31, 1947.

ROYAL

FOR SLIDE FASTENERS, TO BE USED ON CLOTHING, LEATHERGOODS, HANDBAGS, AND LUGGAGE.
Claims use since Dec. 1, 1946.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Ser. No. 523,559. ALLEGHENY LUDLUM STEEL CORPORATION, Pittsburgh, Pa. Filed June 5, 1947.

DUNKIRK EZ

The word "Dunkirk" is disclaimed apart from the mark.
FOR GRAPHITE STEEL IN THE FORM OF INGOTS, BILLETS, BARS, ROD, WIRE, PLATES, SHEETS, AND STRIP.
Claims use since November 1945.

CLASS 15

OILS AND GREASES

Ser. No. 512,783. CHARLES J. ODDYKE, doing business as Ko-Lube Co., Lansing, Mich. Filed Nov. 18, 1946.

KO-LUBE

The word "Lube" is disclaimed apart from the mark.
FOR LUBRICATING OIL.
Claims use since Nov. 15, 1945.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 493,710. AFFILIATED RETAILERS, INC., New York, N. Y. Filed Dec. 22, 1945.

ARTRON

FOR RADIO AND TELEVISION TUBES.
Claims use since Nov. 23, 1945.

Ser. No. 506,704. THE TELEOPTIC COMPANY, Racine, Wis. Filed Aug. 1, 1946.

KLEER KING

No registration rights to "Kleer," except in the association shown, are claimed.
FOR ELECTRIC CLEARANCE AND MARKER LIGHTS FOR MOTOR VEHICLES.
Claims use since July 9, 1946.

Ser. No. 508,889. GEORGE D. CHICHESTER, Pittsburgh, Pa. Filed Sept. 12, 1946.

SILENT—and SOUND

The word "Sound" is disclaimed apart from the mark.
FOR ELECTRICAL SOUND REPRODUCING LOUDSPEAKERS, MICROPHONES, AND EARPHONES.
Claims use since Apr. 23, 1946.

Ser. No. 517,946. AIRBORNE INSTRUMENTS LABORATORY, INC., Mineola, N. Y. Filed Feb. 24, 1947.

AIRBORNE INSTRUMENTS LABORATORY Inc. AIL

Applicant hereby disclaims the words "Airborne Instruments Laboratory, Inc." for purposes of this registration.
FOR RADIO RECEIVERS AND PARTS THEREFOR.
Claims use since Oct. 23, 1946.

Ser. No. 521,683. PEERLESS ELECTRICAL PRODUCTS COMPANY, Los Angeles, Calif. Filed May 1, 1947.

PEPCO

FOR RADIO RECEIVER COMPONENTS—NAMELY, TRANSFORMERS AND CHOKE COILS; AND BALLAST COMPONENTS—NAMELY, BALLAST COILS FOR GASEOUS ILLUMINATING TUBES.
Claims use since Apr. 1, 1936.

Ser. No. 522,002. THE CONTROL CORPORATION, Minneapolis, Minn. Filed May 7, 1947.

PEAK-TROL

The notation "Peak" is disclaimed apart from the mark as shown.
FOR LOAD CONTROLS FOR POWER LINES COMPRISING ELECTRONIC TRANSMITTERS FOR IMPRESSING SIGNALS ON THE LINES AND ELECTRONIC RECEIVERS RESPONSIVE TO SUCH SIGNALS AND SERVING TO CONTROL CERTAIN LOADS ON THE LINES.
Claims use since Feb. 10, 1947.

Ser. No. 523,699. PAUL E. ALLEN, Chicago, Ill. Filed June 6, 1947.

Cradle pal

FOR ELECTRICALLY HEATED BOTTLE WARMERS AND ELECTRIC NURSERY LAMPS.
Claims use since Apr. 30, 1947.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Ser. No. 525,122. A. G. SPALDING & BROS. INC., Chicopee, Mass. Filed June 28, 1947. Under section 5b of the act of 1905 as amended in 1920.

A. G. Spalding & Bros.

FOR FOOTBALLS, BASEBALL BATS, BASEBALL MASKS, BASEBALL MITTS AND GLOVES, BOXING GLOVES, STRIKING BAGS, BASKETBALLS, HANDBALLS, GOLF BALLS, GOLF CLUBS, BADMINTON AND TENNIS NETS, INDOOR BASEBALLS, SOCCER BALLS, GOLF BAGS, SQUASH RACKETS, TENNIS BALLS, TENNIS RACKETS, TENNIS COURT MARKERS AND POSTS, TENNIS RACKET PRESSES, TENNIS RACKET COVERS, MEDICINE BALLS, VOLLEY BALLS, SHUTTLECOCKS, AND BADMINTON RACKETS.
Claims use on footballs since 1898; on baseball bats, baseball masks, baseball mitts and gloves, boxing gloves, striking bags, basketballs, handballs, golf balls, golf clubs, athletic supporters, athletic wrist and angle supporters, nets, indoor baseballs, soccer balls, golf bags, squash rackets, uniforms, athletic shoes, and score books since 1901; on tennis balls, tennis rackets, tennis court markers and posts, tennis racket presses and tennis racket covers since 1902; and on medicine balls, volley balls, shuttlecocks, and badminton rackets since 1903.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Ser. No. 518,493. TRANSERVICE, INC., New York, N. Y. Filed Mar. 4, 1947.

EL MACHO

FOR MACHETES.
Claims use since Feb. 17, 1947.

Ser. No. 518,494. TRANSERVICE, INC., New York, N. Y. Filed Mar. 4, 1947.

EL MACHO

FOR MACHETES.
Claims use since Feb. 17, 1947.

Ser. No. 523,968. GERALD L. KUHL, doing business as Champall Mfg. Co., Chester, Minn. Filed June 11, 1947.

CHAMPALL

FOR LOADERS FOR LOADING MATERIAL INTO WAGONS OR TRUCKS, HITCHES, AND SNOW PLOWS.
Claims use since Apr. 1, 1947.

CLASS 24

LAUNDRY APPLIANCES AND MACHINES

Ser. No. 518,743. APPLIANCE CORPORATION OF AMERICA, Milwaukee, Wis. Filed Mar. 10, 1947.

akka

FOR AUTOMATIC HOUSEHOLD LAUNDRY WASHING MACHINES.
Claims use since Oct. 15, 1946.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Ser. No. 501,908. HELLIGE, INC., Long Island City, N. Y. Filed May 11, 1946.

'Bio-PhotoCol'

"Bio-Photo" is disclaimed apart from the mark.
FOR PHOTOELECTRIC COLORIMETERS.
Claims use since Mar. 10, 1946.

Ser. No. 515,777. OPTRON LABORATORY, Dayton, Ohio. Filed Jan. 15, 1947.

OPTRON

FOR OPTICAL MEASURING INSTRUMENTS—NAMELY, INTERFERENCE VIEWERS.
Claims use since Apr. 30, 1943.

Ser. No. 524,164. TECHNICOLOR MOTION PICTURE CORPORATION, Hollywood, Calif. Filed June 13, 1947.

TEXNIKOΛOP

The mark is the Greek translation, in Greek characters, of applicant's trade-mark "Technicolor."
FOR DEVELOPED MOTION PICTURE FILM.
Claims use since Aug. 8, 1946.

CLASS 27

HOROLOGICAL INSTRUMENTS

Ser. No. 514,836. NIVIA WATCH MFG. CO., LTD., Bienne, Switzerland. Filed Dec. 26, 1946.

NIVIA

The word "Precision" is hereby disclaimed apart from the mark as shown.
FOR WATCHES AND WATCH MOVEMENTS.
Claims use since 1933.

Ser. No. 521,026. NORMAN M. MORRIS, INCORPORATED, New York, N. Y. Filed Apr. 19, 1947.

CALAMATIC

FOR WATCHES.
Claims use since Feb. 1, 1947.

CLASS 31

FILTERS AND REFRIGERATORS

Ser. No. 491,543. H. S. CHAFFEE COMPANY, Buffalo, N. Y. Filed Nov. 14, 1945.

GLASFREZE

FOR COOLING AND FREEZING COMPARTMENTS OR ROOMS AND PARTS THEREOF IN PREFABRICATED FORM FOR PERMANENT INSTALLATION AND DOORS FOR THE SAME.

Applicant claims ownership of registrations Nos. 24,051 and 152,115.

FOR EMULSION OF REFINED PETROLEUM USED AS A MILD LAXATIVE AND AS AN INTERNAL AND EXTERNAL MEDICANT IN THE TREATMENT OF INFECTIONS OF THE THROAT, LUNGS, AND OTHER ACCESSIBLE MUCUS MEMBRANES.

Claims use since Dec. 31, 1937.

Ser. No. 531,801. GRIFFIN CHEMICAL COMPANY, San Francisco, Calif. Filed Aug. 19, 1947.

FOR ACETAL; ACETALDEHYDE; ACETAMIDE; ACETIC ACID; ACETONE; ACETRONITRILE; ALLYL ALCOHOL; ALUMINA HYDRATE; ALUMINUM ACETATE; ALUMINUM CHLORIDE; ALUMINUM SULPHATE; ALUMINUM STEARATE; ALUMINUM PALMITATE; AMMONIA ALUM; AMMONIUM CHLORIDE; AMMONIUM NITRATE; AMMONIUM SULPHATE; AMMONIUM THIOCYANATE; AMYL ALCOHOL; AMYL ACETATE; ANHYDROUS AMMONIA; ANTIMONY SULPHIDE; AQUA AMMONIA; BARIUM CHLORIDE; BARIUM HYDROXIDE; BEESWAX; BENZOIC ACID; BENZOL; BORAX; BORIC ACID; BUTYL ACETATE; BUTYL ALCOHOL; CALCIUM CARBONATE; CALCIUM CHLORIDE; CALCIUM CYANIDE; CALCIUM GLUCONATE; CALCIUM HYDROXIDE; CALCIUM STEARATE; CALCIUM SULPHATE; CAPRYLIC ACID; CARBOLIC ACID; CARBON BISULPHIDE; CARBON TETRACHLORIDE; CASEIN; CASTOR OIL; CAUSTIC POTASH; CAUSTIC SODA; CHLORINE; CHLOROFORM; CHROME ALUM; CHROMIC ACID; COLLODION; COPPER ACETATE; COPPER CARBONATE; COPPER SULPHATE, BASIC; COPPER SULPHATE, NORMAL; CREAM OF TARTAR; CROTONALDEHYDE; CYCLOHEXANE; CYCLOHEXANOL; DIACETONE; DIBUTYLPHTHALATE; DICHLOROETHYLENE ETHER; DIETHYLENE GLYCOL; DIETHYLENE GLYCOL ETHER; DIOCTYL PHTHALATE; DIETHYLENE DIOXIDE; DISODIUM PHOSPHATE; EPSOM SALTS; ETHYL ACETATE; ETHYL ETHER; ETHYLHEXYL ALCOHOL; ETHYLENE DICHLORIDE; ETHYLENE DICHLORIDE CARBON TETRACHLORIDE FUMIGANT; ETHYLENE GLYCOL; ETHYLENE GLYCOL ETHERS; FORMALDEHYDE; FORMIC ACID; GLAUBERS SALT; GLUTAMIC ACID; GLYCERINE; GUM ARABIC; GUM SANDARAC; GUM TRAGACANTH; HEPTANE; HEXAMETHYLENE TETRA AMINE; HEXYLENE GLYCOL; HYDROCHLORIC ACID; HYDROGEN PEROXIDE; INSECTICIDES—NAMELY, DICHLORO-DIPHENYL-TRICHLOROETHANE SOLUTIONS AND DUST MIXTURES, PYRETHRUM, SULPHUR; IODINE; IRON SULPHATE; ISOBUTYL ALCOHOL; ISOPROPYL ACETATE; ISOPROPYL ALCOHOL; ISOPROPYL ETHER; ISOPROPYL OLEATE; LANOLIN; LITHIUM CHLORIDE; MAGNESIUM CARBONATE; MAGNESIUM CHLORIDE; MAGNESIUM OXIDE; MAGNESIUM STEARATE; MALEIC ACID; MANGANESE SULPHATE; METHANOL; METHYL ACETATE; METHYL ACETONE; METHYL ALCOHOL; METHYL ETHYL KETONE; METHYL ISOBUTYL KETONE; MONOETHANOLAMINE; MONOSODIUM CARBONATE; MONOSODIUM GLUTAMATE; MORPHOLINE; NAPHTHALENE; N-BUTYL ALCOHOL; N-PROPYL ALCOHOL; NITROBENZENE; NITRIC ACID; OCTYL ACETATE; OCTYL ALCOHOL; OLEIC ACID; ORTHODICHLOROBENZENE; OXALIC ACID; PAPAYOTIN; PARADICHLOROBENZENE; PARALDEHYDE; PARIS GREEN; PENTACETATE; PENTA BRYTHRITOL; PERCHLORETHYLENE; PERCHLORIC ACID; PETROLEUM ETHER; PETROLEUM SULPHONATE; PETROLEUM ALKYL SULPHONATES PLUS POLYHYDRIC ALCOHOLS; PHENOL; PHOSPHORIC ACID; PHOSPHORUS OXYCHLORIDE; PHOSPHORUS TRICHLORIDE; PINE OIL; PLASTICIZERS: BIS (DIETHYLENE GLYCOL MONOETHYLENE ETHER) PHTHALATE, BUTOXY ETHYL STEARATE, BUTYL BENZYL STEARATE, DIALLYL PHTHALATE, DIBENZYL SEBACATE, DIBUTYL ETHYL PHTHALATE, DIBUTYL SEBACATE, DICAPRYL PHTHALATE, DICYCLOHEXYL PHTHALATE, DIETHOXY ETHYL PHTHALATE, DIHEXYL PHTHALATE, DIHEXYL SEBACATE, DIMETHOXY ETHYL PHTHALATE, DIMETHYL SEBACATE, DIOCTYL PHTHALATE, DIOCTYL SEBACATE, FATTY PHTHALIC ACID ESTERS, METHOXY ETHYL ACETYL RICINOLEATE, METHOXY ETHYL OLEATE, TRIBUTOXY ETHYL PHOSPHATE, TRICRESYL PHOSPHATE; POLYETHYLENE GLYCOL; POLYHYDRIC ALCOHOL ESTERS PLUS ALDEHYDES; POLYHYDRIC ALCOHOL FATTY ACID ESTERS; POLYVINYL ACETATE SOLVENT MIXTURES; POTASSIUM ACETATE; POTASSIUM ALUM; POTASSIUM IODIDE; POTASSIUM NITRATE; POTASSIUM AND SODIUM TARTRATE; PROPYL ALCOHOL; PROPYLENE DICHLORIDE; PROPYLENE GLYCOL; ROCHELLE SALTS; SAL SODA; SALICYLIC ACID; SALT CAKE; SEBACIC ACID; SILVER NITRATE; SODA ASH; SODIUM ACETATE; SODIUM ALUMINATE; SODIUM BENZOATE; SODIUM BICARBONATE; SODIUM BICHROMATE; SODIUM CHLORIDE; SODIUM FLUORIDE; SODIUM HYPOSULPHITE; SODIUM METABORATE; SODIUM METASILICATE; SODIUM NITRATE; SODIUM PERBORATE; SODIUM PHOSPHATES; DISODIUM PHOSPHATE ANHYDROUS, DISODIUM PHOSPHATE CRYSTALLINE, MIXED SODIUM PHOSPHATES, MONOSODIUM PHOSPHATE ANHYDROUS, MONOSODIUM PHOSPHATE MONOHYDRATE, SODIUM ACID PYROPHOSPHATE, SODIUM HEXAMETAPHOSPHATE, SODIUM SILICO FLUORIDE, SODIUM TETRAPHOSPHATE, SODIUM TRIPOLYPHOSPHATE, TETRASODIUM PYROPHOSPHATE, TRISODIUM PHOSPHATE CRYSTALLINE, TRISODIUM PHOSPHATE MONOHYDRATE; SODIUM SALICYLATE; SODIUM SESQUICARBONATE; SODIUM SILICATE; SODIUM SILICOFLUORIDE; SODIUM SULPHATE; SODIUM SULPHITE; SODIUM SULPHOCYANIDE; SOYA FATTY ACID; STEARIC ACID; SUCCINIMIDE; SUCROSE OCTA ACETATE; SULPHUR DIOXIDE; SULPHUR MONOCHLORIDE; SULPHURIC ACID; TANNIC ACID; TANNIN QUEBRACHOS; TARTARIC ACID; TOLUOL; TRICALCIUM PHOSPHATE; TRICHLORETHYLENE; TRICRESYLPHOSPHATE; TRIETHANOLAMINE; UREA; WHITE OIL; XYLOL; XYLENE; ZINC ACETATE; ZINC CHLORIDE; ZINC HYDROSULPHITE; ZINC OXIDE; ZINC PALMITATE; ZINC STEARATE; AND ZINC SULPHATE.

Claims use since Mar. 5, 1935.

Ser. No. 537,480. STANDARD BRANDS INCORPORATED, New York, N. Y. Filed Oct. 10, 1947.

ZYMEZATE

FOR AUTOLYSATE OF PRIMARY GROWN YEAST SUITABLE FOR USE AS AN INGREDIENT IN MAKING PHARMACEUTICAL PREPARATIONS, SOLD IN BULK TO THE PHARMACEUTICAL MANUFACTURING INDUSTRY.

Claims use since Sept. 2, 1947.

Ser. No. 538,335. A. REED WILSON CO., Kansas City, Mo. Filed Oct. 18, 1947.

Applicant claims ownership of registration No. 304,696.

FOR INSECTICIDES, GERMICIDES, ANTISEPTICS, DISINFECTANTS, DEODORANTS, AND FUNGICIDES.

Claims use since Nov. 10, 1932.

Ser. No. 539,464. A & B SALES CORPORATION, Hillside, N. J. Filed Oct. 30, 1947.

"MITY MITE"

FOR CHEMICAL PREPARATION FOR PREVENTING SLUDGE AND GUM FORMATIONS, AND TO NEUTRALIZE ACIDS AND PREVENT CORROSION IN INTERNAL COMBUSTION ENGINES.

Claims use since November 1945.

Ser. No. 542,048. NATURO MFG. CO., Los Angeles, Calif. Filed Nov. 22, 1947.

Naturo

Applicant claims ownership of registration No. 249,760.

FOR PRODUCTS USED IN PREPARATION AND PRESERVATION OF THE HUMAN DEAD: EMBALMING FLUIDS, VIZ., ARTERIAL FLUID, CAVITY FLUID; FLUID MODIFIER; DROPSICAL FLUID; BLEACHING SOLUTION; AND DISINFECTANT AND DEODORANT CHEMICALS; AND COSMETICS, VIZ., RESTORATIVE WAX; ADHESIVE CLOSURE FOR EYES AND MOUTH; TINT FOR SKIN, LIPS, NAILS, AND FACE; ANTI-MOLD CREAM; PERFUME; COVERING CREAMS; INCISION SEALER AND SOLVENTS THEREFOR; FACE POWDER; ROUGE; AND MASSAGE CREAM.

Claims use on arterial fluid since March 1947; on cavity fluid since June 1946; on fluid modifier since 1927; on dropsical fluid since 1927; on bleaching solution since 1936; on disinfectant and deodorant chemicals since 1927; on restorative wax since 1927; on adhesive closure for eyes and mouth since 1947; on tint for skin, lips, nails, and face since 1928; on anti-mold cream since 1927; on perfume since 1927; on covering creams since 1934; on incision sealer and solvents therefor since 1940; on face powder since 1927; on rouge since 1927; and on massage cream since 1930.

Ser. No. 542,284. CLOROX CHEMICAL CO., Oakland, Calif. Filed Nov. 25, 1947.

The central portion of the drawing is lined for shading purposes only. Applicant claims ownership of registrations Nos. 102,650, 251,292, 279,405, 287,293, and 290,449.

FOR BLEACHING, CLEANSING, ANTISEPTIC AND GERMICIDAL COMPOUND.

Claims use since 1934.

Ser. No. 543,175. GEIGY COMPANY, INC., New York, N. Y. Filed Dec. 3, 1947.

"GY-BEN"

Applicant claims ownership of registrations Nos. 149,067, 342,763, 384,780, 432.258, 436,142, and 435,070.

FOR INSECTICIDES.

Claims use since Oct. 27 1947.

Ser. No. 543,373. THE PHARMA-CRAFT CORPORATION, New York, N. Y. Filed Dec. 11, 1947. Under section 2f of the act of 1946.

FRESH

Applicant claims ownership of registrations Nos. 304,674, 371,350, 382.346, and 411,636.

FOR DEODORANT AND NONPERSPIRANT.

Claims use since Oct. 10, 1930.

Ser. No. 543,663. SOCIETE DE GRANDS TRAVAUX SCIENTIFIQUES (SOCIETE ANONYME), Paris, France. Filed Dec. 6, 1947.

HEMOBIOS

Applicant claims ownership of French registration No. 274,618, dated May 27, 1937.
FOR DAY CREAM, NIGHT CREAM, MAKE-UP EMULSION, MAKE-UP TONIC.

Ser. No. 544,595. WALTER NEUMANN, New York, N. Y. Filed Dec. 17, 1947.

ANTHAPHYLLINE

Applicant claims ownership of registration No. 353,581.
FOR MEDICINAL PREPARATIONS FOR TREATMENT OF NASAL AND SKIN HYPERSENSITIVITY.
Claims use since July 2, 1947.

Ser. No. 545,364. THE GLIDDEN COMPANY, Cleveland, Ohio. Filed Dec. 24, 1947.

Glid-N

Applicant claims ownership of registration No. 140,130.
FOR HERBICIDES AND INSECTICIDES.
Claims use since Feb. 6, 1947.

Ser. No. 548,303. WALLACE LABORATORIES, INC., Princeton, N. J., and New York, N. Y. Filed Jan. 29, 1948.

PENICLE

FOR LIQUID PREPARATION TO BE USED AS A VEHICLE FOR THE USE OF PENICILLIN, PARTICULARLY IN THE TREATMENT OF BOVINE MASTITIS.
Claims use since Nov. 6, 1947.

Reg. No. 548,969. LEWIS BROS., INC., New York, N. Y. Filed Feb. 6, 1948.

PHG

FOR HAIR DRESSING PREPARATIONS.
Claims use since Oct. 1, 1947.

Ser. No. 549,257. DOROTHY DAVES HOWARD, doing business as Wright Drug Company, Greenville, S. C. Filed Feb. 10, 1948.

CORTELLE

FOR MEDICINE FOR THE RELIEF OF POISON OAK AND POISON IVY.
Claims use since Feb. 1, 1946.

Ser. No. 550,622. SHARP & DOHME, INCORPORATED, Philadelphia, Pa. Filed Feb. 26, 1948.

TRESULIDE

Applicant claims ownership of registrations Nos. 398,547, 431,963, 433,503, 433,504, and 500,418.
FOR ANTIBACTERIAL PREPARATION.
Claims use since Feb. 4 1948.

Ser. No. 550,990. BUFFALO FIRE APPLIANCE CORPORATION, Dayton, Ohio. Filed Mar. 2, 1948.

BUFFALO

FOR CHEMICAL KITS FOR RECHARGING ANTI-FREEZE FIRE EXTINGUISHERS—NAMELY, CALCIUM CHLORIDE CRYSTALS FOR PUMP TANK TYPE EXTINGUISHERS, AND CALCIUM CHLORIDE CRYSTALS AND CARTRIDGE CONTAINING CARBON DIOXIDE UNDER PRESSURE FOR AUTOMATIC CARTRIDGE TYPE EXTINGUISHERS.
Claims use since 1922.

Ser. No. 551,357. BENARD & HONNORAT, doing business as Molinard, Grasse, France.

CONCRETA

Applicant claims ownership of French registration No. 937, dated Dec. 30, 1925, renewed Jan. 28, 1941, No. 1371.
FOR PERFUMES, TOILET WATER, COLOGNE, FACE POWDER, LIPSTICK, ROUGE, MASCARA, EYE SHADOW, CREAM FOR FACE AND SKIN, AND TALCUM POWDER.

Ser. No. 551,440. CORN PRODUCTS REFINING COMPANY, New York, N. Y. Filed Mar. 8, 1948.

Buffalo

Applicant claims ownership of registrations Nos. 67,613 and 154,522.
FOR CORN STARCH FOR MANUFACTURING PURPOSES.
Claims use since Mar. 1, 1906.

Ser. No. 551,456. HY-PURE LABORATORIES, INC., Cincinnati, Ohio. Filed Mar. 8, 1948.

ACIDAR

FOR PREPARATION FOR RELIEVING HEARTBURN, FLATULENCE, SOUR STOMACH DUE TO HYPERACIDITY, AND STOMACH DISCOMFORTS DUE TO HYPERACIDITY AND OVERINDULGENCE.
Claims use since Jan. 1, 1929.

Ser. No. 551,457. HY-PURE LABORATORIES, INC., Cincinnati, Ohio. Filed Mar. 8, 1948.

CLOTAR

FOR PREPARATION FOR USE AS AN EXPECTORANT AND FOR RELIEVING COUGHS, COLDS, AND BRONCHIAL IRRITATIONS.
Claims use since Jan. 1, 1929.

Ser. No. 551,521. THE CARTER'S INK COMPANY, Cambridge, Mass. Filed Mar. 9, 1948. Under section 2f of the act of 1946.

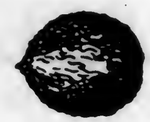
CARTER'S

Applicant claims ownership of registrations Nos. 48,946, 50,451, and 104,815.
FOR INK ERADICATOR.
Claims use since August 1901.

Ser. No. 552,192. WALLACE & TIERNAN PRODUCTS, INC., Belleville, N. J. Filed Mar. 17, 1948.

FLURIUM

FOR MEDICINAL CHEWING GUM TO BE USED AS A PREVENTATIVE OF DENTAL CARIES.
Claims use since Mar. 2, 1948.



Ser. No. 552,273. LEO A. SAUER, doing business as V-O Manufacturing Company, North Hollywood, Calif. Filed Mar. 18, 1948.

CHEM-TUNE

FOR CHEMICAL COMPOSITION FOR USE IN REMOVING CARBON DEPOSITS, DIRT AND SLUDGE FROM AND TO OTHERWISE CLEAN INTERNAL COMBUSTION ENGINES.
Claims use since Mar. 15, 1946.

Ser. No. 552,680. JOHN F. MCLEOD, doing business as McLeod Rubber Co., Hendersonville, N. C. Filed Mar. 22, 1948.

Old Walnut

Applicant claims ownership of registration No. 211,371.
FOR HYDRAULIC BRAKE FLUID.
Claims use since Feb. 15, 1944.

Ser. No. 552,832. GEORGE R. BENT, doing business as G. R. Bent & Co., Chicago, Ill. Filed Mar. 24, 1948.

LIP-STYLE

Applicant disclaims the word "Lip" except in combination with the rest of the mark.
FOR LIP STICKS.
Claims use since Feb. 26, 1948.

Ser. No. 552,833. GEORGE R. BENT, doing business as G. R. Bent & Co., Chicago, Ill. Filed Mar. 24, 1948.

NAIL-STYLE

The word "Nail" is disclaimed apart from the mark as shown.
FOR NAIL LACQUERS.
Claims use since Feb. 26, 1948.

Ser. No. 560,106. HAAS-MILLER CORPORATION, Philadelphia, Pa. Filed June 24, 1948.

HAMILUBRIC

FOR SELF-EMULSIFIABLE OIL USED IN WATER DILUTION AS A HYDRAULIC LUBRICANT AND RUST PREVENTIVE, ALSO AS A WOOL STOCK LUBRICAN.T
Claims use since Dec. 18, 1936.

Ser. No. 560,192. ANDREW W. EASLEY, doing business as The Easley Company, Bluefield, W. Va. Filed June 25, 1948.

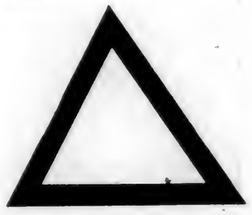
SAP FOR PAP

FOR PREPARATION FOR THE TREATMENT OF THE HAIR AND SCALP.
Claims use since May 23, 1948.

CLASS 8

SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS

Ser. No. 502,718. ROGERS IMPORTS INC., New York, N. Y. Filed Dec. 29, 1947.



HUMIDO

FOR HUMIDIFIERS FOR TOBACCO PRODUCTS.
Claims use since June 5, 1929.

CLASS 10

FERTILIZERS

Ser. No. 528,558. DARLING AND COMPANY, Chicago, Ill. Filed July 14, 1947.

FOR FERTILIZERS.
Claims use since 1913.

Ser. No. 558,814. SARATOGA LABORATORIES INC., New York and Saratoga Springs, N. Y. Filed June 9, 1948.

Tracel

FOR MINERAL FERTILIZER.
Claims use since June 2, 1948.

CLASS 11

INKS AND INKING MATERIALS

Ser. No. 542,221. MARSH STENCIL MACHINE COMPANY, Belleville, Ill. Filed Aug. 14, 1947. Under section 2f of the act of 1946.

MARSH

Applicant claims ownership of registrations Nos. 422,854, 423,117, and 427,596.
FOR STENCIL MARKING INKS.
Claims use since Mar. 17, 1921.

CLASS 12

CONSTRUCTION MATERIALS

Ser. No. 511,348. J. W. MORTELL COMPANY, Kankakee, Ill. Filed Sept. 25, 1947.

MORTEX

Applicant claims ownership of registration No. 245,544.
FOR LIQUID ASPHALTIC MATERIAL FOR SOUNDPROOFING, DAMPPROOFING, AND RUSTPROOFING METAL SURFACES, AND LIQUID ASPHALTIC MATERIAL FOR SECURING INSULATING MATERIALS TO WALLS, CEILINGS AND THE LIKE, AND FOR THE REPAIR OF ROOFS AND THE LIKE.
Claims use since Sept. 1, 1927.

Ser. No. 541,185. RUTLAND FIRE CLAY COMPANY, Rutland, Vt. Filed Nov. 14, 1947. Under section 2f of the act of 1946.

The figure in the drawing is fanciful. No claim is made to the words "Stove" and "Lining" apart from the mark as shown. Applicant claims ownership of registrations Nos. 152,978, 161,832, 324,155, and 324,156.
FOR COMPOUND INCLUDING ASBESTOS TO BE MIXED WITH WATER TO MAKE A PLASTIC STOVE LINING.
Claims use since Jan. 1, 1928.

Ser. No. 541,189. RUTLAND FIRE CLAY COMPANY, Rutland, Vt. Filed Nov. 14, 1947. Under section 2f of the act of 1946.

RUTLAND

Applicant claims ownership of registrations Nos. 163,759, 324,155, 324,156, 152,978, and 161,832.
FOR SPACKLING COMPOUND TO BE MIXED WITH WATER TO FORM A MORTAR AND APPLIED WITH A CASE KNIFE OR TROWEL TO FILL SMALL CRACKS AND TO LEVEL THE SURFACE OF PLASTER, WOOD OR METAL, A CONCRETE PATCHING PLASTER TO BE MIXED WITH WATER FOR CLOSING CRACKS, BREAKS AND HOLES IN CONCRETE WALLS, WALKS, ROOFS, ETC., A PATCHING PLASTER TO BE MIXED WITH WATER FOR POINTING BRICKS AND PATCHING STUCCO, AN ASBESTOS STOVE LINING TO BE MIXED WITH WATER TO FORM A PLASTIC OR STIFF PUTTY, BLACK ROOFING CEMENT FOR BEDDING SLATE AND TILE, REPAIRING METAL ROOFS, STOPPING LEAKS, ETC., IRON CEMENT FOR MENDING BREAKS IN CASTINGS, AND LEAKS IN STEAM, GAS, AND WATER PIPES, ASBESTOS FURNACE CEMENT, RETORT CEMENT, AND BOILER COVERING.
Claims use since Apr. 1, 1883.

Ser. No. 550,394. THE DENVER FIRE CLAY COMPANY, Denver, Colo. Filed Feb. 24, 1948.

CALIBEX

Applicant claims ownership of registration No. 243,722.
FOR CALCINED DIASPORE, WHICH IS A HIGH TEMPERATURE OR REFRACTORY AGGREGATE.
Claims use since Oct. 15, 1927.

Serial No. 551,366. THE CUSSINS AND FEARN COMPANY, Columbus, Ohio. Filed Mar. 6, 1948.

LIBERTY

FOR ROLLED ROOFING.
Claims use since Apr. 1, 1918.

Ser. No. 551,896. IRVING SUBWAY GRATING CO. INC., Long Island City, N. Y. Filed Mar. 13, 1948.

IRVICO

FOR METAL GRATINGS FOR FLOORS AND STAIRCASES.
Claims use since Oct. 2, 1926.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 515,124. MUELLER BRASS CO., Port Huron, Mich. Filed Aug. 20, 1947.

STREAMLINE

Applicant claims ownership of registrations Nos. 214,272, 283,119, 283,781, 287,255, 289,612, 309,442, and 323,066.
FOR LAWN SPRINKLERS.
Claims use since Nov. 1, 1946.

Ser. No. 534,009. THE FERRY CAP & SET SCREW COMPANY, Cleveland, Ohio. Filed Sept. 10, 1947.

Lo-Carb

FOR HEXAGON HEAD SCREWS.
Claims use since Jan. 15, 1947.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Ser. No. 485,926. LAWRENCE B. SCOTT, Long Island City, N. Y. Filed Mar. 11, 1948. Under section 2f of the act of 1946.

TAPER LOCK

FOR METALLIC RODS AND ELEMENTS FOR REPAIRING CRACKED AND BROKEN CASTINGS OF STEEL, IRON, OR OTHER METALS.
Claims use since Jan. 1, 1943.

CLASS 15

OILS AND GREASES

Ser. No. 521,163. RUSSELL WILES, JR., doing business as Rig Products Company, Oregon, Ill. Filed July 30, 1947.

RIG

FOR RUST INHIBITING GREASE.
Claims use since March 1936.

Ser. No. 533,284. DEMERT & DOUGHERTY, INC., Chicago, Ill. Filed Sept. 4, 1947.

D and D

FOR LUBRICATING OILS HAVING ANTI-CORROSIVE PROPERTIES.
Claims use since Dec. 31, 1923.

CLASS 19

VEHICLES

Ser. No. 528,262. CLARK EQUIPMENT COMPANY, Buchanan, Mich. Filed July 10, 1947. Under section 2f of the act of 1946.

CLARK

Applicant claims ownership of registrations Nos. 165,644, 166,313, 169,144, 169,868, 240,492, 261,106, and 394,500.
FOR POWER OPERATED INDUSTRIAL MATERIAL HANDLING TRUCKS USED MERELY TO TRANSPORT GOODS.
Claims use since March 1918.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 526,656. P. R. MALLORY & CO., INC., Indianapolis, Ind. Filed July 5, 1947.

RECTOTRUCK

FOR ELECTRIC CURRENT RECTIFIERS, ELECTRIC BATTERY CHARGERS, AND RECTIFIER BATTERY CHARGERS, PARTICULARLY FOR TRUCK BATTERIES.
Claims use since May 29, 1947.

Ser. No. 528,915. ELECTRO MANUFACTURING CORPORATION, Chicago, Ill. Filed July 19, 1947. Under section 2f of the act of 1946.

ELECTRO-AIR

Applicant claims ownership of registration No. 412,349.
FOR GERMICIDAL LAMPS USED TO DESTROY AIR-BORNE BACTERIA.
Claims use since July 10, 1939.

Ser. No. 531,113. HARLEY-DAVIDSON MOTOR COMPANY, Milwaukee, Wis. Filed Aug. 12, 1947. Under section 2f of the act of 1946.

HARLEY-DAVIDSON

FOR MOTORCYCLE GENERATORS AND SPARE PARTS FOR SAME, WIRING AND WIRING HARNESSES FOR MOTORCYCLES, SWITCHES, SWITCH PANELS AND SPARE PARTS FOR SAME, ELECTRIC LAMPS AND SPARE PARTS FOR SAME, ELECTRIC LAMP MOUNTINGS AND SPARE PARTS FOR SAME, STORAGE BATTERIES AND SPARE PARTS FOR SAME, SPARK PLUGS, ELECTRIC SIGNS.
Claims use since Dec. 1, 1919.

Ser. No. 531,219. LE-LITE, INC., Chicago, Ill., assignor to Emarco Corporation, Chicago, Ill., a corporation of Illinois. Filed Aug. 13, 1947.

THORO FLARE

Applicant disclaims the word "Flare" and the design of the globe apart from the mark as shown.
FOR ELECTRICALLY OPERATED SIGNAL LIGHTS FOR EMERGENCY USE BY HIGHWAY VEHICLES AND FOR OTHER PURPOSES.
Claims use since July 7, 1947.

Ser. No. 531,655. E. A. LABORATORIES, INC., Brooklyn, N. Y. Filed Aug. 18, 1947.

EA PRODUCTS

Applicant disclaims the word "Products." Applicant claims ownership of registration No. 354,568.
FOR ELECTRIC FANS, BOTH WITH AND WITHOUT SUPPLEMENTAL AIR HEATING MEANS.
Claims use since Apr. 5, 1920.

Ser. No. 532,280. DETROIT-MICHIGAN STOVE COMPANY, Detroit, Mich. Filed Aug. 25, 1947. Under section 2f of the act of 1946.

DETROIT JEWEL

FOR ELECTRIC RANGES.
Claims use since Jan. 1, 1936.

Ser. No. 535,065. MILLS INDUSTRIES, INCORPORATED, Chicago, Ill. Filed Sept. 19, 1947.

FOR AUTOMATIC SELECTIVE PHONOGRAPH MACHINES.
Claims use since Feb. 20, 1947.

Ser. No. 537,170. THE GATES RUBBER COMPANY, Denver, Colo. Filed Oct. 8, 1947. Under section 2f of the act of 1946.

GATES

Applicant claims ownership of registration No. 353,065.
FOR ELECTRIC STORAGE BATTERIES AND STORAGE BATTERY CASINGS.
Claims use since Oct. 11, 1936.

Ser. No. 544,697. BUEHNER & WANNER, INC., New York, N. Y. Filed Dec. 18, 1947.

BUENILUM

FOR ELECTRIC LAMPS MADE FROM ALUMINUM, COPPER, BRASS, AND PEWTER.
Claims use since June 1933.

Ser. No. 547,027. PICO COMPANY, INC., Detroit, Mich. Filed Jan. 14, 1948.

NEWAL

FOR DOMESTIC LIGHTING APPLIANCES—NAMELY, ELECTRIC HOUSEHOLD LAMP FIXTURES AND WALL LAMP FIXTURES.
Claims use since Sept. 27, 1947.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Ser. No. 470,298. THE COLSON CORPORATION, Elyria, Ohio. Filed Aug. 1, 1947. Under section 2f of the act of 1946.

Colson

FOR CHILDREN'S VEHICLES—NAMELY, TRICYCLES, VELOCIPEDES AND SIDEWALK BICYCLES.
Claims use since Mar. 1, 1938.

Ser. No. 529,249. EXHIBIT SUPPLY COMPANY, Chicago, Ill. Filed July 23, 1947.

CROSS FIRE

Applicant claims ownership of registration No. 323,900.
FOR COIN-CONTROLLED BALL ROLLING GAME.
Claims use since May 26, 1947.

Ser. No. 542,023. THE HORTON MANUFACTURING COMPANY, Bristol, Conn. Filed Nov. 22, 1947.

ELECTROMATIC

FOR FISHING REELS.
Claims use since Sept. 2, 1947.

Ser. No. 542,551. EXHIBIT SUPPLY COMPANY, Chicago, Ill. Filed Nov. 28, 1947.

CRYSTAL GAZER

FOR COIN-CONTROLLED AMUSEMENT APPARATUS.
Claims use since Sept. 30, 1947.

Ser. No. 542,552. EXHIBIT SUPPLY COMPANY, Chicago, Ill. Filed Nov. 28, 1947.

EGYPTIAN SEERESS

FOR COIN-CONTROLLED AMUSEMENT APPARATUS.
Claims use since Oct. 15, 1947.

Ser. No. 543,426. THE ENTERPRISE MANUFACTURING CO., Akron, Ohio. Filed Dec. 5, 1947.

DURITE

FOR FISHING LEADERS.
Claims use since Nov. 20, 1947.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Ser. No. 467,483. AMPCO METAL, INC., Milwaukee, Wis. Filed July 5, 1947.

AMPCOLOY

FOR WEAR RESISTANT AND CORROSION RESISTANT FINISHED MACHINE PARTS OF COPPER BASE ALLOY, AND GENERALLY MANUALLY OPERATED NON-SPARKING TOOLS OF COPPER BASE ALLOY—NAMELY, ADZES, AIR HAMMER BLANKS, AXES, BARS, CAULKING TOOLS, CHISELS, DRIFT PINS, STAR DRILLS, WEDGES, FORKS, HAMMERS, HATCHETS, HOES, ICE SHAVERS AND TONGS, KNIVES, NAIL PULLERS AND SETS, PACKING TOOLS, CHIPPERS, PICKS, PLIERS, PUNCHES, RAKES, SAWS, SCRAPERS, SCREW DRIVERS, SHEARS, SHOVELS, SPATULAS, SPRAY BOOTH KITS, SCOOPS, TROWELS, VISES AND WRENCHES.
Claims use since May 1938.

Ser. No. 505,020. WALWORTH COMPANY, Boston, Mass. Filed Aug. 15, 1947. Under section 2f of the act of 1946.

STILLSON

Applicant claims ownership of registration No. 50,842.
FOR PIPE WRENCHES.
Claims use since Jan. 31, 1906.

Ser. No. 528,356. MINNEAPOLIS-MOLINE POWER IMPLEMENT COMPANY, Minneapolis, Minn. Filed July 11, 1947. Under section 2f of the act of 1946.

MOLINE

The lining in the drawing indicates the color yellow. Applicant claims ownership of registrations Nos. 139,462 and 220,220.
FOR AGRICULTURAL MACHINERY—NAMELY, TRACTOR AND HORSE DRAWN MOLDBOARD AND DISK PLOWS, CULTIVATORS, PLANTERS, PLANTING ATTACHMENTS FOR TRACTOR MOUNTED PLOWS, HARROWS, WEEDERS, HAY RAKES AND LOADERS, LISTERS, ROTARY HOES AND MANURE SPREADERS.
Claims use since 1907.

Ser. No. 531,635. VAUGHAN NOVELTY MFG. CO., Chicago, Ill. Filed Aug. 16, 1947.

VALACO

FOR CAN OPENERS.
Claims use since Aug. 8, 1947.

Ser. No. 535,814. CONTRACTORS MACHINERY COMPANY, INC., Batavia, N. Y. Filed Sept. 26, 1947.

TROJAN

FOR ROAD CONSTRUCTION AND MAINTENANCE MACHINERY AND EARTH MOVING MACHINERY—NAMELY, GRADERS, BULLDOZERS, ANGLEDOZERS, AND SNOW PLOWS.
Claims use since 1930.

Ser. No. 535,815. CONTRACTORS MACHINERY COMPANY, INC., Batavia, N. Y. Filed Sept. 26, 1947.

FOR ROAD CONSTRUCTION AND MAINTENANCE MACHINERY AND EARTH MOVING MACHINERY—NAMELY, GRADERS, BULLDOZERS, ANGLEDOZERS, AND SNOW PLOWS.
Claims use since 1930.

Ser. No. 541,724. POTTER AND JOHNSTON MACHINE COMPANY, Pawtucket, R. I., assignor to Niles-Bement-Pond Company, West Hartford, Conn., a corporation of New Jersey. Filed Aug. 8, 1947.

POTTER & JOHNSTON

Applicant claims ownership of registration No. 388,498.
FOR MACHINE TOOLS, PARTICULARLY AUTOMATIC CHUCKING AND TURNING MACHINES AND PARTS THEREOF INCLUDING TOOLS AND TOOL HOLDERS THEREFOR.
Claims use since Dec. 15, 1898.

CLASS 25

LOCKS AND SAFES

Ser. No. 536,289. REESE PADLOCK COMPANY, Lancaster, Pa. Filed Sept. 30, 1947. Under section 2f of the act of 1946.

REESE

Applicant claims ownership of registration No. 224,771.
FOR PADLOCKS.
Claims use since Apr. 1, 1924.

Ser. No. 538,217. THE YALE & TOWNE MANUFACTURING CO., New York, N. Y. Filed Oct. 17, 1947. Under section 2f of the act of 1946.

BARROWS

FOR LOCKS AND KEYS.
Claims use since 1880.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Ser. No. 529,536. THE AETNA CASUALTY AND SURETY COMPANY, Hartford, Conn. Filed July 26, 1947.

DRIVORAMA

FOR APPARATUS TO TEST THE COMPETENCE OF AN AUTOMOBILE DRIVER THROUGH HIS OPERATION, BY USING A FULL-SIZE AUTOMOBILE STEERING WHEEL, FOOT-BRAKE AND ACCELERATOR, OF A MINIATURE MODEL AUTOMOBILE UPON A PANORAMA DEPICTING TYPICAL HIGHWAY TRAFFIC AND ON WHICH MINIATURE MODELS OF PERSONS AND VEHICLES ARE IN MOTION.
Claims use since January 1941.

Ser. No. 529,537. THE AETNA CASUALTY AND SURETY COMPANY, Hartford, Conn. Filed July 26, 1947.

DRIVEROMETER

FOR APPARATUS TO MEASURE THE TIME TAKEN BY AN AUTOMOBILE DRIVER TO RESPOND (1) MENTALLY AND (2) PHYSICALLY TO EVIDENCE OF IMMINENT PERSONAL PERIL, DENOTED VISUALLY BY THE PROJECTION ON A SCREEN OF MOTION PICTURES OF HIGHWAY TRAFFIC CONDITIONS AS THEY WOULD APPEAR TO AN AUTOMOBILE DRIVER.
Claims use since March 1947.

Ser. No. 529,538. THE AETNA CASUALTY AND SURETY COMPANY, Hartford, Conn. Filed July 26, 1947.

PERIOMETER

FOR APPARATUS TO MEASURE THE PERIPHERAL VISION OF AN AUTOMOBILE DRIVER BY RECORDING HIS ABILITY TO RECOGNIZE MOVING FIGURES STATIONED AT VARYING DEGREES TO EACH SIDE OF THE DIRECTION IN WHICH HE IS FACING.
Claims use since December 1938.

Ser. No. 529,539. THE AETNA CASUALTY AND SURETY COMPANY, Hartford, Conn. Filed July 26, 1947.

GLAROMETER

FOR APPARATUS TO MEASURE AN AUTOMOBILE DRIVER'S RESISTANCE TO AUTOMOBILE HEADLIGHT GLARE BY RECORDING HIS ABILITY TO STEER A SIMULATED AUTOMOBILE ALONG A SIMULATED CURVED HIGHWAY IN THE FACE OF VARYING INTENSITIES OF LIGHT.
Claims use since January 1936.

Ser. No. 529,578. BELL & HOWELL COMPANY, Chicago, Ill. Filed July 26, 1947. Under section 2f of the act of 1946.

AUTO LOAD

FOR PHOTOGRAPHIC CAMERAS.
Claims use since July 27, 1940.

Reg. No. 221,212. Registered Nov. 23, 1926. BLACK STAR COAL COMPANY, Louisville, Ky. Republished by Black Star Coal Corporation, Louisville, Ky., a corporation of Kentucky.

BLACK STAR

FOR COAL.
Claims use since 1921.

Reg. No. 277,501. Registered Nov. 11, 1930. GEO. LAUB'S SONS, Buffalo, N. Y., a firm. Republished by registrant.

LAUB

FOR LEATHER.
Claims use since 1846.

Reg. No. 289,728. Registered Dec. 1, 1931. BLACK STAR COAL COMPANY, Louisville, Ky. Republished by Black Star Coal Corporation, Louisville, Ky., a corporation of Kentucky.

The word "Coal" is disclaimed apart from the mark as shown.
FOR COAL.
Claims use since June 10, 1931.

Reg. No. 301,085. Registered Feb. 14, 1933. BECK, KOLLER & COMPANY, INC., Detroit, Mich. Republished by Reichhold Chemicals, Inc., Detroit, Mich., a corporation of Delaware.

The words "Plastic Resins" are disclaimed apart from the mark as shown.
FOR PLASTIC SYNTHETIC RESINS.
Claims use since Sept. 16, 1931.

Reg. No. 301,493. Registered Mar. 7, 1933. BECK, KOLLER & COMPANY, INC., Detroit, Mich. Republished by Reichhold Chemicals, Inc., Detroit, Mich., a corporation of Delaware.

KOPOL
SYNTHETIC RESIN

The words "Synthetic Resin" are disclaimed apart from the mark as shown.
FOR SYNTHETIC RESINS.
Claims use since Feb. 19, 1929.

Reg. No. 397,817. Registered Sept. 22, 1942. EASTERN COAL SALES COMPANY, Bluefield, W. Va., a corporation of West Virginia. Republished by registrant.

FOR BITUMINOUS COAL.
Claims use since Sept. 14, 1937.

Reg. No. 402,082. Registered June 29, 1943. EASTERN COAL SALES COMPANY, Bluefield, W. Va., a corporation of West Virginia. Republished by registrant.

The word "Freeburn" is disclaimed apart from the mark as shown.
FOR BITUMINOUS COAL.
Claims use since Dec. 1, 1942.

Reg. No. 402,083. Registered June 29, 1943. EASTERN COAL SALES COMPANY, Bluefield, W. Va., a corporation of West Virginia. Republished by registrant.

The words "Heavy Duty Stoker Coal" are disclaimed apart from the mark as shown.
FOR BITUMINOUS COAL.
Claims use since Oct. 2, 1942.

Reg. No. 402,084. Registered June 29, 1943. EASTERN COAL SALES COMPANY, Bluefield, W. Va., a corporation of West Virginia. Republished by registrant.

The word "Pocahontas" is disclaimed apart from the mark as shown.
FOR BITUMINOUS COAL.
Claims use since Dec. 1, 1942.

Reg. No. 410,091. Registered Nov. 7, 1944. REICHHOLD CHEMICALS, INC., Detroit, Mich., a corporation of Delaware. Republished by registrant.

PLYAMINE

FOR SYNTHETIC PLASTIC RESINS.
Claims use since May 13, 1944.

Reg. No. 414,133. Registered May 29, 1945. REICHHOLD CHEMICALS, INC., Detroit, Mich., a corporation of Delaware. Republished by registrant.

RESYNTHETICS

FOR PROCESSED OILS, SYNTHETIC OILS, RESINS, SYNTHETIC RESINS, AND PROCESSED NATURAL RESINS FOR USE IN OIL CLOTH, SHADE CLOTH, AND LINOLEUM, AND SYNTHETIC RESINS AND PROCESSED NATURAL RESINS FOR USE IN TEXTILE AND PAPER PRODUCTS GENERALLY.
Claims use since June 30, 1943.

CLASS 2

RECEPTACLES

Reg. No. 208,209. Registered Jan. 19, 1926. FRANK G. SHATTUCK COMPANY, Boston, Mass., and New York, N. Y., a corporation of Massachusetts. Republished by registrant.

DRI-PAC

FOR ICE-CREAM CONTAINERS OF PAPER.
Claims use since Aug. 1, 1925.

Reg. No. 214,257. Registered June 15, 1926. GEUDER, PAESCHKE & FREY CO., Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

The word "Container" is disclaimed apart from the mark as shown.
FOR METAL CONTAINERS IN THE FORM OF CANS AND DRUMS OF VARIOUS SIZES USED FOR THE PACKAGING AND SHIPPING OF PAINTS, TAR PRODUCTS, WAX, AND THE LIKE.
Claims use since Nov. 17, 1925.

Reg. No. 320,512. Registered Jan. 1, 1935. RALPH W. WILSON COMPANY, INC., New York, N. Y. Republished by Ralph W. Wilson, New York, N. Y.

"Tip-Top"

FOR NON-NOBLE METAL CONTAINERS FOR FACE POWDER AND THE LIKE.
Claims use since July 11, 1934.

CLASS 3

BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS

Reg. No. 366,634. Registered Apr. 25, 1939. STIX, BAER AND FULLER COMPANY, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

FOR TRUNKS, BILL FOLDS, BRIEF CASES, SUIT CASES, DRESSING CASES, TRAVELING BAGS, SCHOOL BAGS, POCKETBOOKS, PORTFOLIOS, PURSES, LADIES' HANDBAGS, VALISES, GRIPS, WALLETS, AND SATCHELS.
Claims use since Jan. 1, 1938.

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Reg. No. 83,462. Registered Sept. 12, 1911. J. A. WRIGHT & Co., Keene, N. H., a corporation of New Hampshire. Republished by registrant.

WRIGHT'S

FOR SILVER AND METAL POLISH.
Claims use since Jan. 1, 1873.

Reg. No. 135,022. Registered Sept. 21, 1920. THE NAPCO CORPORATION, Indianapolis, Ind. Republished by The Barbasol Company, Indianapolis, Ind., a corporation of Delaware.

Barbasol

FOR PASTE-LIKE PREPARATION FOR SHAVING AND SKIN-HEALING PURPOSES.
Claims use since September 1919.

Reg. No. 245,858. Registered Aug. 21, 1928. THE BARBASOL COMPANY, Indianapolis, Ind., a corporation of Delaware. Republished by registrant.

The drawing is lined for red and blue color. The representation of the cartoon and the geographical term "Indianapolis, U. S. A.," are disclaimed apart from the mark as shown.
FOR A PASTE-LIKE PREPARATION FOR SHAVING WITH INCIDENTAL SKIN-HEALING PROPERTIES.
Claims use since Sept. 19, 1919.

Reg. No. 278,186. Registered Dec. 9, 1930. THE WHISKO COMPANY, INC., Indianapolis, Ind. Republished by The Barbasol Company, Indianapolis, Ind., a corporation of Delaware.

Whisko

FOR SHAVING CREAM.
Claims use since July 12, 1930.

Reg. No. 316,967. Registered Sept. 11, 1934. OMAR CHEMICAL COMPANY, Columbus, Ohio. Republished by George T. Gusler, Columbus, Ohio.

The word "Clean" is disclaimed apart from the mark as shown.
FOR PREPARATION FOR CLEANING WALLPAPER.
Claims use since Feb. 1, 1932.

Reg. No. 409,161. Registered Feb. 19, 1944. COSMET COMPANY, Minneapolis, Minn., a firm. Republished by registrant.

CosmaKleen

The word "Kleen" is disclaimed apart from the mark as shown.
FOR LENS CLEANING PREPARATION.
Claims use since Mar. 16, 1944.

CLASS 5

ADHESIVES

Reg. No. 318,609. Registered Oct. 30, 1934. VAN CAMP HARDWARE & IRON COMPANY, Indianapolis, Ind., a corporation of Indiana. Republished by registrant.

BEN HUR

FOR FRICTION TAPE.
Claims use since on or about June 1, 1915.

Reg. No. 409,382. Registered Oct. 3, 1944. REICHHOLD CHEMICALS, INC., Detroit, Mich., a corporation of Delaware. Republished by registrant.

PLYOPHEN

FOR SYNTHETIC PLASTIC RESINS AND SOLUTIONS CONTAINING THE SAME FOR BONDING, LAMINATING, ADHESIVE PURPOSES.
Claims use since Dec. 12, 1942.

Reg. No. 411,720. Registered Jan. 30, 1945. REICHHOLD CHEMICALS, INC., Detroit, Mich., a corporation of Delaware. Republished by registrant.

PLYAMINE

FOR SYNTHETIC PLASTIC RESINS AND SOLUTIONS CONTAINING THE SAME FOR BONDING, LAMINATING, AND ADHESIVE PURPOSES.
Claims use since May 13, 1944.

Reg. No. 415,920. Registered Aug. 21, 1945. REICHHOLD CHEMICALS, INC., Detroit, Mich., a corporation of Delaware. Republished by registrant.

LAMINITE

FOR SYNTHETIC RESINS AND SOLUTIONS CONTAINING THE SAME FOR BONDING, LAMINATING, AND ADHESIVE PURPOSES.
Claims use since Dec. 28, 1944.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Reg. No. 36,799. Registered July 23, 1901. THE EMBALMERS SUPPLY CO., Westport, Conn. Republished by The C. B. Dolge Company, Westport, Conn., a corporation of Connecticut.

FRACRINE

FOR LIQUID DISINFECTANTS.
Claims use since Mar. 1, 1901.

Reg. No. 89,786. Registered Jan. 7, 1913. WILBUR F. YOUNG, Springfield, Mass. Republished by W. F. Young, Inc., Springfield, Mass., a corporation of Massachusetts.

Absorbine Jr.

FOR LINIMENT.
Claims use since on or about 1896.

Reg. No. 101,958. Registered Jan. 19, 1915. WILLIAM W. LEE & CO., Watervliet and Troy, N. Y. Republished by William W. Lee & Co. (1945), Watervliet, N. Y., a partnership.

Save the Baby

FOR CROUP REMEDY.
Claims use since Jan. 1, 1875.

Reg. No. 166,265. Registered Mar. 27, 1923. MEYER, FOOTE & DAYTON CO., Rochester, N. Y., a corporation of New York. Republished by registrant.

IDEAL

FOR BLUING.
Claims use since 1907.

Reg. No. 219,670. Registered Oct. 19, 1926. VAN CAMP HARDWARE & IRON COMPANY, Indianapolis, Ind., a corporation of Indiana. Republished by registrant.

Ra-O-Mist

FOR LIQUID SPRAY USED AS AN INSECTICIDE AND GERMICIDE FOR KILLING FLIES, MOTHS, FLEAS, MOSQUITOES, ANTS, ROACHES, BEDBUGS, AND OTHER HOUSEHOLD INSECTS AND THE LARVAE AND EGGS OF SOME INSECTS.
Claims use since Apr. 1, 1926.

Reg. No. 243,733. Registered June 26, 1928. BRADLEY'S LABORATORY, Matoaka, W. Va. Republished by Hy-Phen Corporation, Matoaka, W. Va., a corporation of West Virginia.

HY-PHEN

FOR ANALGESIC AND SEDATIVE PREPARATIONS FOR RELIEF OF DISCOMFORTS OF HEADACHE, COLDS, NEURALGIA, RHEUMATISM, LUMBAGO, SCIATICA, PERIODIC AND OTHER COMMON PAINS.
Claims use since April 1927.

Reg. No. 245,446. Registered Aug. 14, 1928. ARNOLD LOUIS VAN AMERINGEN, New York, N. Y. Republished by van Ameringen-Haebler, Inc., New York, N. Y., a corporation of New York.

FLOMINE

FOR ESSENCES OF PERFUMES, ESSENCES FOR PERFUMERY MATERIALS, AROMATIC MATERIALS, SYNTHETIC PERFUME MATERIALS, ODORIFEROUS MATERIALS, AND ETHERAL OILS.
Claims use since Oct. 15, 1927.

Reg. No. 251,039. Registered Dec. 25, 1928. THE DRACKETT CHEMICAL COMPANY, Cincinnati, Ohio. Republished by The Drackett Company, Cincinnati, Ohio, a corporation of Ohio.

D

FOR EPSOM SALT.
Claims use since Aug. 3, 1928.

Reg. No. 286,228. Registered Aug. 25, 1931. THE URBANA LABORATORIES, Urbana, Ill., a firm. Republished by registrant.

RICH-OR-POOR

FOR SOLUTION FOR TESTING SOILS FOR ACIDITY.
Claims use since February 1922.

Reg. No. 297,808. Registered Oct. 4, 1932. THE C. B. DOLGE COMPANY, Westport, Conn., a corporation of Connecticut. Republished by registrant.

DOLCO

FOR INSECTICIDES, RODENTICIDES, GERMICIDES, SOLVENTS FOR CLEANING GREASY WALLS AND WOODWORK AND REMOVAL OF CHEWING GUM, DISINFECTANTS, AND DEODORIZERS, NONE OF THE FOREGOING MADE OF OR CONTAINING PARADICHLORBENZENE AS AN INGREDIENT OR USED IN CONNECTION WITH THE PRODUCTION OF, OR FOR THE PROTECTION OF AGRICULTURAL, FLORICULTURAL, OR HORTICULTURAL PRODUCTS.
Claims use since 1926.

Reg. No. 301,102. Registered Feb. 14, 1933. BECK, KOLLER & COMPANY, INC., Detroit, Mich. Republished by Reichhold Chemicals, Inc., Detroit, Mich., a corporation of Delaware.

ESTER SYNTHE-COPAL GUM

The words "Ester Gum" and "Copal" are disclaimed apart from the mark as shown.

FOR ESTER GUMS.

Claims use since Mar. 16, 1914.

Reg. No. 301,663. Registered Mar. 7, 1933. THE URBANA LABORATORIES, Urbana, Ill., a firm. Republished by registrant.

Lac-hi-potash

The word "Potash" is disclaimed apart from the mark as shown.

FOR CHEMICAL REAGENTS FOR USE IN TESTING THE AVAILABLE AND WATER SOLUBLE POTASSIUM IN SOILS.

Claims use since Mar. 1, 1932.

Reg. No. 403,035. Registered Aug. 31, 1943. BONCILLA LABORATORIES, INC., Indianapolis, Ind., a corporation of Indiana. Republished by registrant.

Boncilla

FOR FACE PACK COSMETIC, WHITE FACE PACK COSMETIC, COLD CREAM, VANISHING CREAM, FACE POWDER, CLEANSING CREAM, LEMON CREAM, DENTAL CREAM, SKIN SOFTENER, HEALING CREAM, SKIN LOTION (ASTRINGENT), LIP STICK, ROUGE, DEPILATORY, ZINC STEARATE POWDER, BATH POWDER, BATH CRYSTALS, PERFUME, TOILET WATER, TALCUM POWDER, AND SHAMPOO.

Claims use since June 1916.

Reg. No. 414,133. Registered May 29, 1945. REICHHOLD CHEMICALS, INC., Detroit, Mich., a corporation of Delaware. Republished by registrant.

RESYNTHETICS

FOR PROCESSED OILS, SYNTHETIC OILS, RESINS, SYNTHETIC RESINS, AND PROCESSED NATURAL RESINS FOR USE IN OIL CLOTH, SHADE CLOTH, AND LINOLEUM, AND SYNTHETIC RESINS AND PROCESSED NATURAL RESINS FOR USE IN TEXTILE AND PAPER PRODUCTS GENERALLY.

Claims use since June 30, 1943.

Reg. No. 425,673. Registered Nov. 26, 1946. VAN PATTEN PHARMACEUTICAL CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

Thyrobrom

FOR BROMINATED THYROID PRODUCTS.

Claims use since on or about Mar. 27, 1946.

CLASS 9

EXPLOSIVES, FIREARMS, EQUIPMENTS, AND PROJECTILES

Reg. No. 106,662. Registered Oct. 26, 1915. THE OHIO MATCH COMPANY, Wadsworth, Ohio. Republished by The Ohio Match Company, Wadsworth, Ohio, a corporation of Delaware.

ROSEBUD

FOR MATCHES.

Claims use since May 6, 1914.

Reg. No. 186,690. Registered July 22, 1924. THE OHIO MATCH COMPANY, Wadsworth, Ohio. Republished by The Ohio Match Company, Wadsworth, Ohio, a corporation of Delaware.

BLUE TIP

The words "Blue Tip" are disclaimed apart from the mark as shown. The lining indicates different shades of blue.

FOR MATCHES.

Reg. No. 211,533. Registered Apr. 13, 1926. THE OHIO MATCH COMPANY, Wadsworth, Ohio. Republished by The Ohio Match Company, Wadsworth, Ohio, a corporation of Delaware.

OHIO RED LABEL MATCHES

The words "Ohio," "Red Label," and "Matches" are disclaimed apart from the mark as shown. The drawing is lined to indicate the colors red and blue.

FOR MATCHES.

Claims use since Oct. 12, 1923.

Reg. No. 211,534. Registered Apr. 13, 1926. THE OHIO MATCH COMPANY, Wadsworth, Ohio. Republished by The Ohio Match Company, Wadsworth, Ohio, a corporation of Delaware.

PLA-SAFE

The word "Safe" is disclaimed apart from the mark as shown.

FOR MATCHES.

Claims use since Apr. 30, 1915.

Reg. No. 247,789. Registered Oct. 2, 1928. AMERICAN HAIR FELT COMPANY, Chicago, Ill. Republished by American Hair & Felt Company, Chicago, Ill., a corporation of Delaware.

OZITE

FOR GUN WADDING.

Claims use since June 12, 1928.

CLASS 11

INKS AND INKING MATERIALS

Reg. No. 338,047. Registered Aug. 25, 1936. CHEMCO PHOTOPRODUCTS COMPANY, Glen Cove, N. Y. Republished by Chemco Photoproducts Company, Inc., Glen Cove, N. Y., a corporation of New York.

POWERS Glascote ENAMEL

The word "Enamel" is disclaimed apart from the mark as shown.

FOR ETCHING ENAMEL FOR ENGRAVERS' PLATES.

Claims use since Jan. 1, 1934.

Reg. No. 413,965. Registered May 22, 1945. REICHHOLD CHEMICALS, INC., Detroit, Mich., a corporation of Delaware. Republished by registrant.

RESYNTHETICS

FOR PROCESSED OILS, SYNTHETIC OILS, RESINS, SYNTHETIC RESINS AND PROCESSED NATURAL RESINS, ALL FOR USE IN PRINTERS' INKS, AND IN INKING MATERIALS TO BE APPLIED TO PAPER, TEXTILES, OIL CLOTH, LINOLEUM, WALL PAPER, AND FOR USE IN PRINTING ON RUBBER, LEATHER AND THE LIKE.

Claims use since June 30, 1943.

CLASS 12

CONSTRUCTION MATERIALS

Reg. No. 46,333. Registered Sept. 12, 1905. KEYSTONE HAIR INSULATOR COMPANY, Allegheny, Pa. Republished by American Hair & Felt Company, Chicago, Ill., a corporation of Delaware.

ACME

FOR LININGS OF INSULATING MATERIAL.

Claims use since 1895.

Reg. No. 46,334. Registered Sept. 12, 1905. KEYSTONE HAIR INSULATOR COMPANY, Allegheny, Pa. Republished by American Hair & Felt Company, Chicago, Ill., a corporation of Delaware.

PHOENIX

FOR LININGS OF INSULATING MATERIAL.

Claims use since 1901.

Reg. No. 46,335. Registered Sept. 12, 1905. KEYSTONE HAIR INSULATOR COMPANY, Allegheny, Pa. Republished by American Hair & Felt Company, Chicago, Ill., a corporation of Delaware.

ARCTIC

FOR LININGS OF INSULATING MATERIALS.

Claims use since February 1904.

Reg. No. 46,336. Registered Sept. 12, 1905. KEYSTONE HAIR INSULATOR COMPANY, Allegheny, Pa. Republished by American Hair & Felt Company, Chicago, Ill., a corporation of Delaware.

KEYSTONE

FOR LININGS OF INSULATING MATERIAL.

Claims use since March 1895.

Reg. No. 46,337. Registered Sept. 12, 1905. KEYSTONE HAIR INSULATOR COMPANY, Allegheny, Pa. Republished by American Hair & Felt Company, Chicago, Ill., a corporation of Delaware.

NEPTUNE

FOR LININGS OF INSULATING MATERIAL.

Claims use since 1895.

Reg. No. 47,364. Registered Oct. 31, 1905. KEYSTONE HAIR INSULATOR COMPANY, Allegheny, Pa. Republished by American Hair & Felt Company, Chicago, Ill., a corporation of Delaware.

FOR LININGS OF INSULATING MATERIAL.

Claims use since March 1895.

Reg. No. 48,212. Registered Dec. 19, 1905. KEYSTONE HAIR INSULATOR COMPANY, Allegheny, Pa. Republished by American Hair & Felt Company, Chicago, Ill., a corporation of Delaware.

SALAMANDER

FOR LININGS OF INSULATING MATERIAL.
Claims use since 1901.

Reg. No. 88,090. Registered Aug. 27, 1912. KEYSTONE HAIR INSULATOR CO., Pittsburgh, Pa. Republished by American Hair & Felt Company, Chicago, Ill., a corporation of Delaware.

HOUSELIN

FOR INSULATING MATERIAL, CONSISTING OF SHEETS OF PAPER OR CLOTH WITH FELTING-HAIR BETWEEN THEM.
Claims use since May 3, 1911.

Reg. No. 144,592. Registered July 12, 1921. KEYSTONE HAIR INSULATOR COMPANY, Pittsburgh, Pa. Republished by American Hair & Felt Company, Chicago, Ill., a corporation of Delaware.

CARINSUL

FOR INSULATING-SHEETING ADAPTED FOR USE IN THE CONSTRUCTION OF BUILDINGS, CARS, REFRIGERATORS, AND OTHER STRUCTURES.
Claims use since Jan. 3, 1921.

Reg. No. 169,332. Registered June 12, 1923. AMERICAN HAIR FELT COMPANY, Chicago, Ill. Republished by American Hair & Felt Company, Chicago, Ill., a corporation of Delaware.

HAIRINSUL

FOR FELT INSULATING MATERIAL.
Claims use since Dec. 12, 1922.

Reg. No. 175,295. Registered Nov. 6, 1923. GEORGE M. BUDEKE, Baltimore, Md. Republished by Budeke's, Inc., Baltimore, Md., a corporation of Maryland.

PER-MA-LITE

FOR OIL PAINT, READY-MIXED AND PASTE; LINSEED OILS, FLOOR WAX, FLOOR AND FURNITURE POLISH, PUTTY, WHITE LEAD, AND RED LEAD.
Claims use since July 1919.

Reg. No. 210,404. Registered Mar. 16, 1926. KEYSTONE HAIR INSULATOR COMPANY, Pittsburgh, Pa., and New York, N. Y. Republished by American Hair & Felt Company, Chicago, Ill., a corporation of Delaware.

THERMO FELT

The word "Felt" is disclaimed apart from the mark as shown.
FOR SHEETS OF INSULATING MATERIAL USED FOR INSULATING BUILDINGS, CARS, REFRIGERATORS, AND THE LIKE.
Claims use since June 13, 1923.

Reg. No. 233,906. Registered Oct. 11, 1927. THE FLINTKOTE COMPANY, Boston, Mass., a corporation of Massachusetts. Republished by registrant, present address New York, N. Y.

REX FLINTKOTE

FOR PREPARED ROOFING.
Claims use since Apr. 26, 1926.

Reg. No. 265,552. Registered Dec. 31, 1929. THE CON-FERRO PAINT AND VARNISH CO., St. Louis, Mo. Republished by Con-Ferro Paint & Varnish Company, St. Louis, Mo., and New York, N. Y., a corporation of Delaware.

BESTEX

FOR STIPPLE WALL FINISH OF A PLASTIC MATERIAL.
Claims use since Oct. 1, 1928.

Reg. No. 282,609. Registered Apr. 28, 1931. FRANTZ MANUFACTURING COMPANY, Sterling, Ill., a corporation of Illinois. Republished by registrant.

'Over-the-Top'

FOR DOORS THAT OPEN INTO AN OVERHEAD POSITION.
Claims use since Aug. 15, 1930.

Reg. No. 356,814. Registered May 10, 1938. THE PRESS-TITE ENGINEERING COMPANY, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

PERMAGUM

FOR SEALING MATERIAL FOR MECHANICAL JOINTS AND THE LIKE.
Claims use since Dec. 1, 1937.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Reg. No. 58,976. Registered Dec. 25, 1906. GEUDER & PAESCHKE MANUFACTURING COMPANY, Milwaukee, Wis. Republished by Geuder, Paeschke & Frey Co., Milwaukee, Wis., a corporation of Wisconsin.

FOR PIECED TINWARE, STAMPED SHEET-METAL WARE, JAPANNED SHEET-METAL WARE, GALVANIZED SHEET-METAL WARE, ENAMELED SHEET-METAL WARE, AND ANTIRUST TINWARE.
Claims use since about July 1901.

Reg. No. 81,836. Registered May 9, 1911. VAN CAMP HARDWARE & IRON COMPANY, Indianapolis, Ind., a corporation of Indiana. Republished by registrant.

Van Camp

FOR HINGES, BUTTS, SASH LIFTS, DOOR HINGES, SCREWS, NAILS; STEAM, WATER, AND GAS VALVES, BATH AND LAUNDRY TUBS, URINALS, WASH-STANDS, CHAFING DISHES AND KETTLES OF BASE METAL, TEA AND COFFEE POTS OF BASE METAL, PANS AND DIPPERS OF BASE METAL; COFFEE, TEA, AND MILK URNS OF BASE METAL; AND SIEVES, STRAINERS, AND FUNNELS OF BASE METAL.
Claims use since Apr. 21, 1909.

The words "Ware" and "Milwaukee" are disclaimed apart from the mark as shown. The drawing is lined for the colors green, gold or yellow, and red.
FOR PIECED TINWARE, STAMPED, SHEET-METAL WARE, JAPANNED SHEET-METAL WARE, GALVANIZED SHEET-METAL WARE, ENAMELED SHEET-METAL WARE, AND ANTIRUST TINWARE.
Claims use since about August 1911.

Reg. No. 250,480. Registered Dec. 11, 1928. THE GARLOCK PACKING COMPANY, Palmyra, N. Y., a corporation of New York. Republished by registrant.

GARLOCK

FOR CORD PLUGS FOR CLEANING CONDENSER TUBES.
Claims use since March 1925.

Reg. No. 310,894. Registered Mar. 13, 1934. GEORGE KOCH SONS, INC., Evansville, Ind., a corporation of Indiana. Republished by registrant.

GKS

FOR BASE METAL FLOWER VASES, TRAYS, AND HOLDERS.
Claims use since 1929.

Reg. No. 414,056. Registered May 22, 1945. VAN CAMP HARDWARE & IRON COMPANY, Indianapolis, Ind., a corporation of Indiana. Republished by registrant.

Vanco

FOR HINGES, SASH LIFTS, DOOR HANGERS, TURNPLATES, SCREWS, NAILS, STEAM, WATER, AND GAS VALVES; BATH AND LAUNDRY TUBS, URINALS, WASH STANDS, CHAFING DISHES, KETTLES, TEA AND COFFEE POTS, PANS, DIPPERS; COFFEE, TEA, AND MILK URNS; SIEVES, STRAINERS, AND FUNNELS.
Claims use since Jan. 1, 1914.

Reg. No. 422,215. Registered July 9, 1946. ALUMINUM GOODS MFG. CO., Manitowoc, Wis., a corporation of New Jersey. Republished by registrant.

MIRRO-MATIC

FOR ALUMINUM COOKING UTENSILS—NAMELY, PRESSURE PANS, PRESSURE COOKERS, AND PRESSURE CANNERS.
Claims use since Aug. 1, 1945.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Reg. No. 166,414. Registered Apr. 3, 1923. A. FINKL & SONS COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

MO-LYB-DIE

FOR FORGINGS OF STEEL ALLOY.
Claims use since Dec. 16, 1921.

Reg. No. 175,029. Registered Oct. 30, 1923. A. FINKL & SONS COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

FOR STEEL FORGINGS.
Claims use since May 2, 1919.

Reg. No. 175,060. Registered Oct. 30, 1923. A. FINKL & SONS COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

FI-CARBO

Claims use since Mar. 21, 1923.
FOR STEEL FORGINGS.

Reg. No. 401,694. Registered June 1, 1943. A. FINKL & SONS COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

DURODI

FOR STEEL USED FOR DIE BLOCKS AND INSERTS IN DROP HAMMERS AND FORGING PRESSES; STEEL USED FOR FORGING MACHINE AND UPSETTING MACHINE DIES, PUNCHES, HEADERS AND GRIPPERS; STEEL USED FOR DIES USED IN HOT OR COLD STAMPING AND COINING; AND STEEL USED FOR HOT AND COLD FORMING ROLLS, BACKUP ROLLS, AND STRAIGHTENING ROLLS.
Claims use since Apr. 5, 1921.

Reg. No. 425,292. Registered Nov. 12, 1946. A. FINKL & SONS COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

FOR STEEL USED FOR DIE BLOCKS, SOW BLOCKS, AND FORGED PARTS FOR DROP HAMMERS AND OTHER FORGING MACHINES.
Claims use since Aug. 21, 1922.

Reg. No. 425,293. Registered Nov. 12, 1946. A. FINKL & SONS COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

FOR STEEL USED FOR HARDENED AND TEMPERED DIE BLOCKS, SOW BLOCKS, AND FORGED PARTS FOR DROP HAMMERS AND OTHER FORGING MACHINES.
Claims use since Aug. 21, 1922.

Reg. No. 425,294. Registered Nov. 12, 1946. A. FINKL & SONS COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

CNM

FOR STEEL USED FOR PISTON RODS, CRANKSHAFTS, RAMS AND FORGED PARTS FOR DROP HAMMERS AND OTHER FORGING MACHINES.
Claims use since Jan. 1, 1937.

Reg. No. 429,012. Registered Apr. 15, 1947. A. FINKL & SONS COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

FOR STEEL USED FOR DIE BLOCKS, SOW BLOCKS, AND FORGED PARTS FOR DROP HAMMERS AND OTHER FORGING MACHINES.
Claims use since 1925.

CLASS 15

OILS AND GREASES

Reg. No. 243,139. Registered June 12, 1928. MARQUETTE PETROLEUM PRODUCTS, INC., Chicago, Ill., a corporation of Illinois. Republished by registrant.

Marfoyl

The drawing is lined to indicate the color green.
FOR LUBRICATING OILS.
Claims use since Dec. 13, 1927.

Reg. No. 277,126. Registered Nov. 4, 1930. TRUE'S OIL COMPANY, Spokane, Wash., a corporation of Washington. Republished by registrant.

The lining on the drawing indicates the colors as red, yellow, and green.
FOR GASOLINE, KEROSENE, BENZINE, NAPTHA, LUBRICATING OILS, AND GREASES AND FUEL OILS.
Claims use since Jan. 1, 1917.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Reg. No. 173,708. Registered Oct. 2, 1923. THE AMERICAN VARNISH COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

ARTSPAR

FOR PAINT ENAMELS.
Claims use since Mar. 7, 1923.

Reg. No. 175,295. Registered Nov. 6, 1923. GEORGE M. BUDEKE, Baltimore, Md. Republished by Budeke's, Inc., Baltimore, Md., a corporation of Maryland.

PER-MA-LITE

FOR OIL PAINT, READY-MIXED AND PASTE; LINSEED OILS, FLOOR WAX, FLOOR AND FURNITURE POLISH, PUTTY, WHITE LEAD, AND RED LEAD.
Claims use since July 1919.

Reg. No. 226,942. Registered Apr. 26, 1927. CON FERRO PAINT & VARNISH CO., doing business as Delta Lacquer & Products Company, St. Louis, Mo. Republished by Con Ferro Paint & Varnish Company, New York, N. Y., and St. Louis, Mo., a corporation of Delaware.

DELTA

FOR READY-MIXED PAINTS, PAINT ENAMELS, VARNISH, WOOD AND IRON FILLER UNDERCOATING, VARNISH STAINS, BRUSHING LACQUER, BRONZING LIQUID, LACQUER THINNERS, BRONZES, FURNITURE AND AUTOMOBILE POLISHES, AND FINISHING WAX.
Claims use since Oct. 14, 1926.

Reg. No. 241,765. Registered May 8, 1928. BOSTON VARNISH COMPANY, Everett, Mass., a corporation of Massachusetts. Republished by registrant.

LUSTAQUIK

FOR READY-MIXED PAINT, PAINT ENAMEL, AND VARNISHES.
Claims use since Dec. 8, 1927.

Reg. No. 301,765. Registered Mar. 14, 1933. BECK, KOLLER & COMPANY, INC., Detroit, Mich. Republished by Reichhold Chemicals, Inc., Detroit, Mich., a corporation of Delaware.

BECKOSOL

FOR DRY, PASTE, AND READY-MIXED PAINTS, VARNISHES, LACQUERS, OIL SOLUBLE PLASTIC RESINS, AND SOLUTIONS THEREOF IN OILS AND MINERAL SPIRITS USED AS PAINTERS' MATERIALS.
Claims use since Sept. 16, 1931.

Reg. No. 301,770. Registered Mar. 14, 1933. BECK, KOLLER & COMPANY, INC., Detroit, Mich. Republished by Reichhold Chemicals, Inc., Detroit, Mich., a corporation of Delaware.

SYNTHE-COPAL

The word "Copal" is disclaimed apart from the mark as shown.
FOR SOLUBLE ESTER GUMS AND SOLUBLE PLASTIC RESINS, EMPLOYED AS PAINTERS' MATERIALS.
Claims use since Mar. 16, 1914.

Reg. No. 301,771. Registered Mar. 14, 1933. BECK, KOLLER & COMPANY, INC., Detroit, Mich. Republished by Reichhold Chemicals, Inc., Detroit, Mich., a corporation of Delaware.

KOPOL

FOR SOLUBLE PLASTIC RESINS USED AS PAINTERS' MATERIALS.
Claims use since Feb. 19, 1929.

Reg. No. 396,119. Registered June 30, 1942. OLD COLONY PAINT & CHEMICAL CO., Los Angeles, Calif., a corporation of Nevada. Republished by registrant.

GUARDIAN

FOR WOOD OR CEMENT FLOOR PAINT, HOUSE PAINT.
Claims use since Nov. 7, 1927.

Reg. No. 400,440. Registered Mar. 9, 1943. GEORGE M. BUDEKE, doing business as George M. Budeke Co. and Budeke's, Baltimore, Md. Republished by Budeke's, Inc., Baltimore, Md., a corporation of Maryland.

150

FOR PAINTERS' MATERIALS—NAMELY, FLAT PAINT, PAINT ENAMEL, PRIMER AND SEALER, SEMI-GLOSS PAINT, AND ENAMEL UNDERCOATER.
Claims use since Apr. 6, 1939.

Reg. No. 400,441. Registered Mar. 9, 1943. GEORGE M. BUDEKE, doing business as George M. Budeke Co. and Budeke's, Baltimore, Md. Republished by Budeke's, Inc., Baltimore, Md., a corporation of Maryland.

PERMAWALL

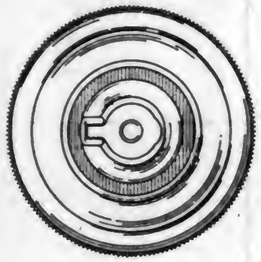
FOR PASTE PAINT.
Claims use since Sept. 11, 1937.

Reg. No. 410,574. Registered Dec. 5, 1944. REICHHOLD CHEMICALS, INC., Detroit, Mich., a corporation of Delaware. Republished by registrant.

RESYNTHETICS

FOR OILS, PROCESSED OILS, SYNTHETIC OILS, RESINS, SYNTHETIC RESINS, PROCESSED NATURAL RESINS, AND RESIN SOLUTIONS FOR USE IN PAINTS, VARNISHES, LACQUERS AND COATINGS GENERALLY.
Claims use since June 30, 1943.

Reg. No. 421,703. Registered June 11, 1946. MAAS & WALDSTEIN CO., Newark, N. J., a corporation of New Jersey. Republished by registrant.



M&W INDUSTRIAL FINISHES

The words "Industrial Finisher" are disclaimed apart from the mark as shown. The drawing is lined for the color orange.
FOR PAINTS IN READY-MIXED FORM, LACQUERS, AND PAINT ENAMELS.
Claims use since 1930.

CLASS 19

VEHICLES

Reg. No. 299,973. Registered Jan. 3, 1933. STANT MANUFACTURING COMPANY, Connersville, Ind., a corporation of Indiana. Republished by registrant.

The trade-mark consists of a red circle. All other subject matter in the drawing is disclaimed apart from the mark as shown.
FOR VEHICLE RADIATOR AND GASOLINE FILLER CAPS.
Claims use since Apr. 21, 1932.

Reg. No. 378,589. Registered June 11, 1940. ARKWRIGHT, INCORPORATED, New York, N. Y., a corporation of New York. Republished by registrant.

PACE MAKER

FOR BICYCLES, TRICYCLES, ICE VELOCIPEDES, AND RAILWAY VELOCIPEDES, AND STRUCTURAL PARTS THEREFOR.
Claims use since June 1935.

Reg. No. 414,216. Registered May 29, 1945. VAN CAMP HARDWARE & IRON COMPANY, Indianapolis, Ind., a corporation of Indiana. Republished by registrant.

BEN-HUR

FOR BICYCLES.
Claims use since Sept. 10, 1890.

Reg. No. 430,222. Registered June 10, 1947. PIPER AIRCRAFT CORPORATION, Lock Haven, Pa., a corporation of Pennsylvania. Republished by registrant.

PIPER CUB

The word "Piper" is disclaimed apart from the mark as shown.
FOR AIRPLANES AND STRUCTURAL PARTS THEREOF.
Claims use since May 1937.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Reg. No. 254,781. Registered Apr. 2, 1929. W. WESLEY HICKS, doing business as Wesix Heater Factory, San Francisco, Calif. Republished by registrant.

PACIFIX

FOR ELECTRIC WATER HEATERS COMPRISING CIRCULATION, IMMERSION, AND SPECIAL TYPES; ELECTRIC AIR HEATERS COMPRISING RADIANT, RADIANT CONVECTION, FLOOR, AND WALL TYPE HEATERS; ELECTRIC HEATING UNITS FOR GRILLS, ELECTRIC HOT PLATES, ELECTRIC STEAM BOILERS.
Claims use since Oct. 20, 1927.

Reg. No. 255,436. Registered Apr. 23, 1929. VAN CAMP HARDWARE & IRON COMPANY, Indianapolis, Ind., a corporation of Indiana. Republished by registrant.

RAOLA

FOR STORAGE BATTERIES.
Claims use since on or about Oct. 1, 1924.

Reg. No. 273,645. Registered Aug. 5, 1930. W. WESLEY HICKS, Los Angeles, Calif. Republished by Wesix Electric Heater Co., San Francisco, Calif., a corporation of California.

SOUTHWESIX

FOR ELECTRIC AIR HEATERS—NAMELY, INDIVIDUAL ROOM HEATERS.
Claims use since about January 1928.

Reg. No. 274,338. Registered Aug. 26, 1930. AMERICAN BRAIDING COMPANY, Holyoke, Mass. Republished by American Electric Cable Co., Holyoke, Mass., a corporation of Massachusetts.

BLUE STREAK

FOR INSULATED RADIO ANTENNAE.
Claims use since Feb. 1, 1929.

Reg. No. 324,268. Registered May 14, 1935. WELDING SERVICE, INC., San Francisco, Calif. Republished by Welding Service Sales, Inc., San Francisco, Calif., a corporation of Nevada.

WELDCO

FOR ELECTRICAL WELDING MACHINES AND ACCESSORIES, INCLUDING WELDING HOSE AND WELDING CABLE.
Claims use since 1923.

Reg. No. 326,684. Registered July 30, 1935. VAN CAMP HARDWARE & IRON COMPANY, Indianapolis, Ind., a corporation of Indiana. Republished by registrant.

BEN HUR

FOR ELECTRIC SMOOTHING AND PRESSING IRONS.
Claims use since on or about Jan. 1, 1932.

Reg. No. 371,926. Registered Oct. 17, 1939. STIX, BAER AND FULLER COMPANY, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

CONTEMPORA

FOR ELECTRIC FLOOR AND TABLE LAMPS.
Claims use since Jan. 1, 1938.

Reg. No. 431,667. Registered July 29, 1947. AUTOMATIC TEMPERATURE CONTROL CO., INC., Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

atc

FOR ELECTRIC MOTORIZED OPERATORS FOR VALVES: ELECTRIC MOTORIZED CONTROLS FOR THE OPERATION OF BURNERS; ELECTRIC MOTORIZED DRIVES FOR DAMPERS AND THE LIKE; ELECTRIC TIME CONTROL SWITCHES FOR THE CONTROL OF OPERATIONS IN SYNCHRONY; ELECTRIC CURRENT INPUT CONTROLLERS; ELECTRICAL CONTROL RELAYS; ELECTRICAL REMOTE POSITION SWITCH CONTROLS.
Claims use since approximately Dec. 15, 1929.

Reg. No. 431,668. Registered July 29, 1947. AUTOMATIC TEMPERATURE CONTROL CO., INC., Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

FOR ELECTRIC MOTORIZED OPERATORS FOR VALVES: ELECTRIC MOTORIZED CONTROLS FOR THE OPERATION OF BURNERS; ELECTRIC MOTORIZED DRIVES FOR DAMPERS AND THE LIKE; ELECTRIC TIME CONTROL SWITCHES FOR THE CONTROL OF OPERATIONS IN SYNCHRONY; ELECTRIC CURRENT INPUT CONTROLLERS; ELECTRICAL CONTROL RELAYS; ELECTRICAL REMOTE POSITION SWITCH CONTROLS.
Claims use since approximately Dec. 15, 1929.

Reg. No. 432,118. Registered Aug. 19, 1947. GENERAL DRY BATTERIES, INC., Lakewood, Ohio, a corporation of Ohio. Republished by registrant.

DURO-MITE

FOR DRY CELL BATTERIES PARTICULARLY FOR HEARING AIDS.
Claims use since Oct. 29, 1946.

Reg. No. 433,517. Registered Oct. 14, 1947. WEBSTER ELECTRIC COMPANY, Racine, Wis., a corporation of Delaware. Republished by registrant.

W

FOR AUDIO-FREQUENCY AMPLIFIERS COMPRISING ASSEMBLED UNITS FOR AMPLIFYING ELECTRIC SIGNALS, AUDIO-FREQUENCY TRANSFORMERS, CHOKE COILS, ELECTRIC PICK-UP TONE ARMS, ELECTRIC PICK-UP VOLTAGE CONTROLS, ELECTRICAL SOCKETS AND PLUGS, ELECTRICAL PHONOGRAPH PICK-UPS, POWER TRANSFORMERS, HIGH VOLTAGE IGNITION TRANSFORMERS, ENERGIZING TRANSFORMERS FOR ELECTRIC SIGNS, VOLTAGE AND CURRENT REGULATING DEVICES OF THE MOVING COIL TYPE, INTERCOMMUNICATING SOUND AMPLIFYING AND TRANSMITTING SYSTEMS AND PARTS THEREOF, COMPRISING SPEAKERS, AMPLIFIERS, MICROPHONES, INTERCONNECTING CIRCUITS, AND ENERGIZING DEVICES WHEREBY CONVERSATION AT EITHER POINT MAY BE HEARD AT THE OTHER POINT OF COMMUNICATION.
Claims use since July 1, 1932.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Reg. No. 272,070. Registered June 24, 1930. BERT B. BARRY AND ASSOCIATES, Chicago, Ill. Republished by Walt Disney Productions, Burbank, Calif., a corporation of California.

PINOCCHIO

FOR DOLLS.
Claims use since Apr. 23, 1929.

Reg. No. 317,772. Registered Oct. 2, 1934. VAN CAMP HARDWARE & IRON COMPANY, Indianapolis, Ind., a corporation of Indiana. Republished by registrant.

BEN HUR

FOR FISHING TACKLE, CONSISTING OF RODS, REELS, LINES, HOOKS, LEADERS, ARTIFICIAL BAITS, FLIES, FLOATS, TACKLE BOXES, MINNOW BUCKETS, AND MINNOW SEINES; BASE BALLS, BATS, MITTS, AND GLOVES; TENNIS RACQUETS, TENNIS BALLS, GOLF CLUBS, GOLF BALLS, GOLF BAGS, CROQUET SETS, PITCHING HORSE SHOES, FOOT BALLS, BASKET BALLS, RUBBER BLADDERS, STRIKING BAGS, BOXING GLOVES, ROLLER SKATES, WATER PISTOLS, BOYS' WAGONS AND SLEDS.
Claims use since on or about Sept. 1, 1929.

Reg. No. 356,624. Registered May 3, 1938. KENNETH SMITH, Lenexa, Kans. Republished by registrant.

DARTWIN

FOR GOLF CLUBS AND PARTS THEREOF.
Claims use since Nov. 27, 1937.

Reg. No. 357,861. Registered June 14, 1938. KENNETH SMITH, Lenexa, Kans. Republished by registrant.

Solidized

FOR GOLF CLUBS AND PARTS THEREOF.
Claims use since Feb. 11, 1938.

Reg. No. 361,583. Registered Oct. 25, 1938. KENNETH SMITH, Lenexa, Kans. Republished by registrant.

ARMORING

FOR GOLF CLUBS AND PARTS THEREOF.
Claims use since Nov. 22, 1937.

Reg. No. 378,192. Registered May 28, 1940. KENNETH SMITH, Lenexa, Kans. Republished by registrant.

ROLL-IN

FOR GOLF CLUBS.
Claims use since March 1938.

Reg. No. 378,193. Registered May 28, 1940. KENNETH SMITH, Lenexa, Kans. Republished by registrant.

WINALL

FOR GOLF CLUBS.
Claims use since March 1938.

Reg. No. 378,589. Registered June 11, 1940. ARKWRIGHT, INCORPORATED, New York, N. Y., a corporation of New York. Republished by registrant.

PACE MAKER

FOR BICYCLES, TRICYCLES, ICE VELOCIPEDES, AND RAILWAY VELOCIPEDES, AND STRUCTURAL PARTS THEREFOR.
Claims use since June 1935.

Reg. No. 419,237. Registered Feb. 5, 1946. ALUMINUM GOODS MFG. CO., Manitowac, Wis., a corporation of New Jersey. Republished by registrant.

MIRRO

FOR TOY COOKING AND BAKING UTENSILS, TOY TEA SETS AND TOY SAND SETS.
Claims use since Sept. 1, 1917.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Reg. No. 49,706. Registered Feb. 13, 1906. CARVER FILE COMPANY, Philadelphia, Pa. Republished by Delta File Works, Inc., Philadelphia, Pa., a corporation of Pennsylvania.

FOR FILES.
Claims use since Nov. 1, 1905.

Reg. No. 50,538. Registered Mar. 20, 1906. CARVER FILE COMPANY, Philadelphia, Pa. Republished by Delta File Works, Inc., Philadelphia, Pa., a corporation of Pennsylvania.

FOR FILES AND RASPS.
Claims use since May 10, 1905.

Reg. No. 54,129. Registered June 19, 1906. CARVER FILE COMPANY, Philadelphia, Pa. Republished by Delta File Works, Inc., Philadelphia, Pa., a corporation of Pennsylvania.

DELTA

FOR FILES AND RASPS.
Claims use since May 10, 1905.

Reg. No. 81,560. Registered Apr. 18, 1911. VAN CAMP HARDWARE & IRON COMPANY, Indianapolis, Ind., a corporation of Indiana. Republished by registrant.

FOR GARDEN HOSE AND RAKES; MANURE, HAY AND COAL FORKS; SHOVELS, SPADES, GARDEN FORKS, DRAIN CLEANERS, HAND PUMPS, FEED CHOPPERS, LARD PRESSES; CUTLERY, COMPRISING BUTCHERS' KNIVES, POCKET KNIVES, TABLE

KNIVES, AND FORKS OF BASE METAL, RAZORS, SHEARS AND SCISSORS, PRUNERS, HORSE CLIPPERS, HORSE AND SHEEP-SHEARING MACHINES, LAWN MOWERS, SEWING MACHINES, DRILLING MACHINES, MACHINE BLOWERS, CREAM SEPARATORS, EMERY AND SANDSTONE GRINDING MACHINERY; MECHANICS' TOOLS, COMPRISING HATCHETS, HAMMERS, CHISELS, TONGS, AUGER BITS, BRACES, PLIERS, PLANES, SCREW DRIVERS, FILES, WEDGES, SAWS, RIVET, NAIL AND SAW SETS, SAW FRAMES, CLAMPS, AND IMPLEMENTS FOR THE LAYING AND FINISHING OF GRANITOID CEMENT AND MORTAR, BIT BRACES; BRACE JAWS, WRECKING BARS, PUTTY KNIVES, ICE PICKS, POST HOLE DIGGERS, HEADER FORKS, POTATO HOOKS, PICKS, PICK EYES, CARPENTERS' AND BLACKSMITHS' PINCERS, SLEDGES, SAW FRAMES, GARDEN TROWELS, AWLS, COAL WEDGES, WOOD. CHOPPERS' WEDGES, NAIL PULLERS, AND MAULS.
Claims use since Apr. 21, 1909.

Ser. No. 188,204. Registered Aug. 19, 1924. CARVER FILE CO., also doing business as Delta File Works, Philadelphia Pa. Republished by Delta File Works, Inc., Philadelphia, Pa., a corporation of Pennsylvania.

VELVO

FOR METAL SURFACER, BEING A TOOL FOR GIVING A SMOOTH FINISH TO METAL.
Claims use since Dec. 5, 1923.

Reg. No. 192,911. Registered Dec. 16, 1924. THE NYE TOOL & MACHINE WORKS, Chicago, Ill. Republished by Nye Tool Company, Chicago, Ill., a corporation of Illinois.

"The Tools you swear BY and never AT"

FOR PIPE CUTTERS, PIPE CUTTER WHEELS, PIPE VISES, VISE STANDS, PIPE DIES, AND PIPE DIESTOCKS.
Claims use since Aug. 1, 1918.

Reg. No. 200,098. Registered June 23, 1925. DELTA FILE WORKS, INC., Philadelphia, Pa., a corporation of Pennsylvania.

"FILEAGE"

FOR FILES.
Claims use since Dec. 4, 1924.

Reg. No. 224,193. Registered Feb. 22, 1927. GREENLEE Bros. & Co., Rockford, Ill., a corporation of Illinois. Republished by registrant.

GREENLEE

FOR AUGERS, AUGER BITS, CAR BITS, CHISELS, GOUGES, DRAWKNIVES, WOOD-BORING DRILLS, COUNTERSINKS, REAMERS, SCREW-DRIVER BITS, PARTING TOOLS, MACHINE BITS, HOLLOW CHISELS, HOLLOW CHISEL BITS, MORTISERS, GAINING MACHINES, SAW BENCHES AND TABLES, RIPSAWS, CUT-OFF SAWS, HAND-FEED RIPSAWS, SELF-FEED RIPSAWS, VARIETY SAW BENCHES, UNIVERSAL SAW BENCHES, DADO MACHINES, TENONING MACHINES, JOINTERS, WOODWORKING MACHINES, WOOD-BORING MACHINES, SASH AND DOOR MACHINES, SASH AND DOOR CLAMPS, DOVETAILING MACHINES, DOOR RELISHERS, WEDGE CUTTERS, FRANKING MACHINES, WOOD-MOLDER-CUTTING MACHINES, WOOD-CUTTER HEADS, CUTTING TOOLS, BORING MACHINES, SPIKE-DRIVING MACHINES, SPIKE WRENCHES, MINE-TIMBER FRAMERS, TIE-ADZING MACHINES, TIE-SAWING MACHINES, TIE-BORING MACHINES, TIE-BRANDING MACHINES, PERFORATING MACHINES, SINGLE END TENONERS, DOUBLE END TENONERS, SASH RELISHERS, SASH DOVETAILERS, TURRET LATHES, AUTOMATIC SCREW MACHINES, TIE ADZING AND BORING MACHINES, MULTIPLE-SPINDLE-DRILLING MACHINES, MULTIPLE-SPINDLE-TAPPING MACHINES.
Claims use since Mar. 10, 1910.

Reg. No. 229,925. Registered July 12, 1927. AMES SHOVEL AND TOOL COMPANY, Boston, Mass. Republished by Ames Baldwin Wyoming Co., Parkersburg, W. Va., a corporation of Delaware.

GOLD RIBBON

FOR SHOVELS, SPADES, AND SCOOPS.
Claims use since October 1925.

Reg. No. 231,181. Registered Aug. 16, 1927. WHITMAN BARNES-DETROIT CORPORATION, Detroit, Mich. Republished by United Drill & Tool Corporation, Chicago, Ill., a corporation of Michigan.

HERCULES

FOR TWIST DRILLS, REAMERS, CUTTERS, COUNTERSINKS, AND INSERTED-POINT CENTERS.
Claims use since Oct. 11, 1926.

Reg. No. 233,202. Registered Sept. 27, 1927. CARVER FILE COMPANY, doing business as Delta File Works, Philadelphia, Pa. Republished by Delta File Works, Inc., Philadelphia, Pa., a corporation of Pennsylvania.

MECHANIC-FAVORITE

FOR FILES.
Claims use since July 1, 1909.

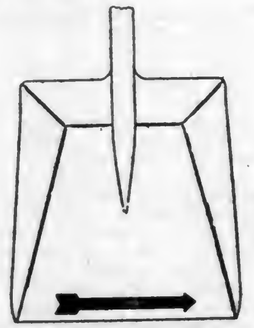
Reg. No. 233,510. Registered Oct. 4, 1927. CARVER FILE COMPANY, doing business as Delta File Works, Philadelphia, Pa. Republished by Delta File Works, Inc., Philadelphia, Pa., a corporation of Pennsylvania.

EXPERT'S-CHOICE

FOR FILES.
Claims use since July 1, 1909.

Reg. No. 250,675. Registered Dec. 11, 1928. THE BENNETT PUMPS CORPORATION, Muskegon, Mich. Republished by John Wood Manufacturing Company, Inc., Muskegon Heights, Mich., a corporation of Delaware.

LUBRI-KIT



The word "Kit" is disclaimed apart from the mark as shown.
FOR COMBINED LUBRICANT TANK AND NON-MEASURING PUMP.
Claims use since May 1, 1927.

Reg. No. 258,346. Registered July 2, 1929. AMES SHOVEL AND TOOL COMPANY, North Easton, Mass. Republished by Ames Baldwin Wyoming Co., Parkersburg, W. Va., a corporation of Delaware.

The lining on the drawing indicates a color shading, without representing any particular colors, and is applied for the purpose of showing the effect secured by using two distinct shades of color. No claim is made to "No. Easton, Mass: St. Louis, Mo: U. S. A." as a part of the registration.
FOR TOOLS AND PARTS THEREOF—NAMELY, SHOVELS, SPADES, SCOOPS, ICE CHOPPERS, AND SNOW PUSHERS.
Claims use since October 1928.

Reg. No. 264,435. Registered Nov. 26, 1929. THE PITTSBURGH SHOVEL COMPANY, Pittsburgh, Pa. Republished by Ames Baldwin Wyoming Co., Parkersburg, W. Va., a corporation of Delaware.

The representation of the tool is disclaimed apart from the mark as shown. The drawing is lined for the color red.
FOR SHOVELS, SPADES, AND SCOOPS.
Claims use since about Apr. 29, 1929.

Reg. No. 272,929. Registered July 15, 1939. WHITMAN & BARNES, INC., Detroit, Mich. Republished by United Drill & Tool Corporation, Chicago, Ill., a corporation of Michigan.

HERCULES
MAJOR

FOR TWIST DRILLS.
Claims use since Feb. 10, 1930.

Reg. No. 275,908. Registered Oct. 7, 1930. WHITMAN & BARNES, INC., Detroit, Mich. Republished by United Drill & Tool Corporation, Detroit, Mich., a corporation of Michigan.

HERCULES
W&B

FOR PUNCHES, PUNCH RETAINERS, AND TWIST DRILLS.
Claims use since May 29, 1930.

Reg. No. 278,039. Registered Dec. 2, 1930. WHITMAN & BARNES, INC., Detroit, Mich. Republished by United Drill & Tool Corporation, Chicago, Ill., a corporation of Michigan

BLUE DIAMOND

FOR DRILLS OF THE KIND USED FOR METAL AND WOODWORKING.
Claims use since Mar. 1, 1929.

Reg. No. 304,988. Registered July 25, 1933. THE BARBASOL COMPANY, Indianapolis, Ind., a corporation of Delaware. Republished by registrant.

Barbasol

FOR SAFETY RAZORS AND BLADES.
Claims use since Dec. 1, 1932.

Reg. No. 327,884. Registered Sept. 10, 1935. WHITMAN & BARNES, INC., Detroit, Mich. Republished by United Drill & Tool Corporation, Chicago, Ill., a corporation of Michigan.

HERCULES JUNIOR

FOR TWIST DRILLS.
Claims use since about Mar. 1, 1935.

Reg. No. 369,486. Registered July 25, 1939. A. FINKL & SONS COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

CU-PRO-DIE

The word "Die" is disclaimed apart from the mark as shown.

FOR STEEL DIES USED IN DROP FORGING AND ANALOGOUS MACHINES FOR FORGING OR STAMPING METAL PRODUCTS.

Claims use since Feb. 8, 1939.

Reg. No. 373,056. Registered Nov. 21, 1939. SCREW CONVEYOR CORPORATION, Hammond, Ind., a corporation of Illinois. Republished by registrant.

"TEM-U-LAC"

FOR ELEVATING AND CONVEYING APPARATUS COMPRISING SPIRAL AND SCREW CONVEYERS AND ENDLESS BELT AND CARRIER ELEVATING AND CONVEYING SYSTEMS, AND PARTS THEREOF.

Claims use since May 3, 1939.

Reg. No. 400,088. Registered Feb. 16, 1943. A. FINKL & SONS COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

DURODI

FOR STEEL DIES USED IN DROP FORGING AND ANALOGOUS MACHINES FOR FORGING OR STAMPING METAL PRODUCTS.

Claims use since Apr. 5, 1921.

Reg. No. 403,790. Registered Oct. 19, 1943. A. FINKL & SONS COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

MO-LYB-DIE

The word "Die" is disclaimed apart from the mark as shown.

FOR FINISHED DIE BLOCKS AND SOW BLOCKS MADE OF STEEL ALLOY.

Claims use since Dec. 16, 1921.

Reg. No. 403,791. Registered Oct. 19, 1943. A. FINKL & SONS COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

FOR FINISHED DIE BLOCKS, RAMS FOR FORGING MACHINES, AND SOW BLOCKS MADE OF STEEL ALLOY.

Claims use since May 2, 1919.

Reg. No. 408,006. Registered July 11, 1944. WESSON COMPANY, Ferndale, Mich., a corporation of Illinois. Republished by registrant.

WCO

FOR SPOTFACERS, COUNTERBORES, COUNTERSINKS, HOLDERS, MILLING CUTTERS, PILOTS, BORING BARS, CENTERS, CORE DRILLS, GRINDING MACHINES, END MILLS, REAMERS, TURNING AND BORING TOOLS, AND VISES.

Claims use since 1936.

Reg. No. 414,781. Registered June 26, 1945. VAN CAMP HARDWARE & IRON COMPANY, Indianapolis, Ind., a corporation of Indiana. Republished by registrant.

Vanco

FOR SCYTHES, HOES AND RAKES, HAY AND COAL FORKS, SHOVELS, SPADES AND GARDEN FORKS, DRAIN CLEANERS, HAND PUMPS, FEED CHOPPERS, LARD PRESSES; CUTLERY—NAMELY, BUTCHER KNIVES, CORN KNIVES, POCKET KNIVES, TABLE KNIVES AND FORKS OF BASE METAL, RAZORS, SHEARS, AND SCISSORS, PRUNERS, HORSE CLIPPERS, HORSE AND SHEEP SHEARING MACHINES, GRASS HOOKS, LAWN MOWERS, SEWING MACHINES, CARPET SWEEPERS, DRILLING MACHINES, MACHINE BLOWERS, CREAM SEPARATORS, EMERY AND SANDSTONE GRINDING MACHINERY; MECHANICS' TOOLS—NAMELY, HATCHETS, HAMMERS, CHISELS, TONGS, AUGER BITS, BRACES, PLIERS, PLANES, SCREW DRIVERS, FILES, WEDGES, SAWS, RIVET, NAIL AND SAW SETS, CLAMPS, IMPLEMENTS FOR LAYING GRANITOID, CEMENT, AND MORTAR, TROWELS, BRACE JAWS, CARPENTERS' WRECKING BARS, PUTTY KNIVES, ICE PICKS, POST HOLE DIGGERS, SAW FRAMES, GARDEN TROWELS, AWLS, COAL WEDGES, WOOD CHOPPING WEDGES, NAIL PULLERS, AND MAULS.

Claims use since Jan. 1, 1914.

Reg. No. 424,200. Registered Sept. 24, 1946. A. FINKL & SONS COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

FOR STEEL DIES AND MACHINE PARTS USED IN DROP FORGING AND ANALOGOUS MACHINES FOR FORGING OR SHAPING METAL PRODUCTS.

Claims use since 1925.

FOR CAT FOOD.
Claims use since Nov. 29, 1940.

Reg. No. 405,583. Registered Feb. 8, 1944. CLYMAN FARMS, INC., Hartford, Wis., a corporation of Wisconsin. Republished by registrant, present address Clyman, Wis.

Aunt Nellie's Farm Cheese

The words "Farm Cheese" are disclaimed apart from the mark as shown.
FOR CHEESE.
Claims use since May 17, 1943.

Reg. No. 407,947. Registered July 11, 1944. FRANCO-ITALIAN PACKING COMPANY, Terminal Island, Calif., a corporation of California. Republished by registrant.

GEM-OF-THE-SEA

The notation "Of-The-Sea" is disclaimed.
FOR CANNED FISH—NAMELY, CANNED TUNA.
Claims use since Sept. 10, 1940.

Reg. No. 409,246. Registered Sept. 26, 1944. JANE M. SHATTUCK, New York, N. Y., assignor to Frank G. Shattuck Company. Republished by Frank G. Shattuck Company, New York, N. Y., a corporation of Massachusetts.

BIACAKE SHOP

The word "Shop" is disclaimed apart from the mark as shown.
FOR CAKES, PIES, PASTRY, BREAD, COOKIES, CRACKERS, JAMS, JELLIES, FRUIT PRESERVES, CHILI SAUCE AND MAYONNAISE, CANDIES AND CONFECTIONS—NAMELY, ORANGE MARMALADE, CHERRY CONSERVE, AND BRANDIED MINCEMEAT.
Claims use since Oct. 1, 1914.

Reg. No. 409,505. Registered Oct. 10, 1944. MISSION DRY CORPORATION, Los Angeles, Calif., a corporation of Delaware. Republished by registrant.

MISSION
"EASY-WAY"

The descriptive expression "Easy-Way" is disclaimed apart from the mark as shown.
FOR SHERBET BASE (A FOOD FLAVOR FOR FOUNTAIN AND RESTAURANT USE).
Claims use since Jan. 28, 1944.

Reg. No. 409,506. Registered Oct. 10, 1944. MISSION DRY CORPORATION, Los Angeles, Calif., a corporation of Delaware. Republished by registrant.

MISSION
"REDIMIX"

The word "Redimix" is disclaimed.
FOR SHERBET BASE (A FOOD FLAVOR FOR FOUNTAIN AND RESTAURANT USE).
Claims use since June 13, 1938.

Reg. No. 408,701. Registered Aug. 29, 1944. MUTUAL CITRUS PRODUCTS COMPANY, Anaheim, Calif., a corporation of California. Republished by registrant.

BEV-ADE

The word "Ade" is disclaimed apart from the mark as shown.
FOR POWDERED FRUIT BASE FOR USE IN MAKING JELLIES, JAMS, PRESERVES, AND FOR FLAVORING SALAD DRESSING, CAKES, AND OTHER FOODS.
Claims use since Dec. 15, 1942.

Reg. No. 418,035. Registered Nov. 27, 1945. POLIS & HAGAN, Edinburg, Tex., a copartnership. Republished by registrant.

FOR FRESH CITRUS FRUITS AND FRESH VEGETABLES—NAMELY, TOMATOES.
Claims use since Feb. 5, 1945.

Reg. No. 419,319. Registered Feb. 12, 1946. J. T. GIBBONS, INC., New Orleans, La., a corporation of Louisiana. Republished by registrant.

TWO-A-DAY

FOR SCRATCH FEEDS FOR POULTRY.
Claims use since September 1933.

Reg. No. 419,614. Registered Feb. 26, 1946. J. T. GIBBONS, INC., New Orleans, La., a corporation of Louisiana. Republished by registrant.

GIBBMILK

FOR DAIRY FEED.
Claims use since 1925.

Reg. No. 421,225. Registered May 21, 1946. INTERSTATE COTTON OIL REFINING CO., Sherman, Tex. Republished by Mrs. Tucker's Foods, Inc., Sherman, Tex., a corporation of Delaware.

MARBASE

FOR VEGETABLE OIL SHORTENING AND HYDROGENATED OIL FOR USE IN MANUFACTURING OLEOMARGARINE.
Claims use since Sept. 24, 1945.

Reg. No. 421,306. Registered May 28, 1946. J. T. GIBBONS, INC., New Orleans, La., a corporation of Louisiana. Republished by registrant.

BESTO

FOR FEED FOR HORSES AND MULES, SCRATCH FEED FOR POULTRY, AND PIGEON FEED.
Claims use since Nov. 1, 1910.

Reg. No. 422,222. Registered July 9, 1946. INTERSTATE COTTON OIL REFINING CO., Sherman, Tex. Republished by Mrs. Tucker's Foods, Inc., Sherman, Tex., a corporation of Delaware.

GLEAM

FOR VEGETABLE OIL SHORTENING.
Claims use since Sept. 24, 1945.

Reg. No. 422,223. Registered July 9, 1946. INTERSTATE COTTON OIL REFINING CO., Sherman, Tex. Republished by Mrs. Tucker's Foods, Inc., Sherman, Tex., a corporation of Delaware.

NYLENE

FOR VEGETABLE OIL SHORTENING.
Claims use since Sept. 24, 1945.

Reg. No. 425,839. Registered Dec. 3, 1946. GREEN BAY CANNING CORPORATION, Green Bay, Wis., a corporation of Wisconsin. Republished by registrant.

TA-KO-MA

FOR CANNED VEGETABLES—NAMELY, SWEET PEAS, EARLY PEAS, SHOESTRING CARROTS, DICED CARROTS, WHOLE BEETS, CUT BEETS, DICED BEETS, AND SHOESTRING BEETS.
Claims use since on or about Jan. 1, 1907.

Reg. No. 429,528. Registered May 6, 1947. VERITY MILLS, INC., Buffalo, N. Y., a corporation of New York. Republished by registrant.

FOR RATIONS FOR COWS, HORSE FEED, DOG FEED, POULTRY MASH, CHICKEN LAYING AND BREEDER MASH, AND CHICKEN GRAINS.
Claims use since about Feb. 27, 1940.

Reg. No. 429,831. Registered May 20, 1947. OLD VIRGINIA PACKING COMPANY, INC., Front Royal, Va., a corporation of Virginia. Republished by registrant

MAJOR

FOR FRUIT JELLIES, FRUIT JAMS, FRUIT PRESERVES, AND MINCE MEAT.
Claims use since April 1936.

Reg. No. 431,162. Registered July 15, 1947. THE PAGE MILK CO., Merrill, Wis., a corporation of Delaware. Republished by registrant.

FOR SPECIAL VITAMIN A AND VITAMIN D ENRICHED EVAPORATED MILK.
Claims use since February 1940.

Reg. No. 432,573. Registered Sept. 9, 1947. JEWETT & SHERMAN CO., Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

GOLD BOND

FOR COFFEE, TEA, COCOA, GROUND PEPPER, FLAVORING EXTRACTS, PICKLES, OLIVES; CONDIMENTS—NAMELY, PREPARED MUSTARD, CATSUP, CHILI SAUCE, AND VINEGAR; PEANUT BUTTER, SANDWICH FILLING, SANDWICH SPREAD, MAYONNAISE, THOUSAND ISLAND DRESSING, HONEY, RICE, AND FRUIT PRESERVES.
Claims use since May 1907.

CLASS 47

WINES

Reg. No. 313,628. Registered June 5, 1934. GIOVANNI VAI, Los Angeles, Calif. Republished by registrant, present address Ontario, Calif.

EL CAMINO REAL

FOR WINES.
Claims use since Dec. 5, 1933.

Reg. No. 349,369. Registered Aug. 24, 1937. GIOVANNI VAI, Los Angeles and Ontario, Calif. Republished by registrant.

Glorieta

FOR WINES.
Claims use since Nov. 9, 1936.

Reg. No. 349,370. Registered Aug. 24, 1947. GIOVANNI VAI, Los Angeles and Ontario, Calif. Republished by registrant, present address Ontario, Calif.

MIRALINDA

FOR WINES.
Claims use since Nov. 9, 1936.

CLASS 48

MALT BEVERAGES AND LIQUORS

Reg. No. 314,422. Registered June 26, 1934. THE WILLIAM SIMON BREWERY, Buffalo, N. Y., a corporation of New York. Republished by registrant.

Old Abbey

FOR ALE.
Claims use since about Feb. 5, 1934.

Reg. No. 315,354. Registered July 24, 1934. THE WILLIAM SIMON BREWERY, Buffalo, N. Y., a corporation of New York. Republished by registrant.

The words "Simon Pure" are disclaimed apart from the mark as shown. The drawing is lined for red.
FOR BEER AND ALE.
Claims use since Nov. 15, 1896.

Reg. No. 364,195. Registered Jan. 24, 1939. TERRE HAUTE BREWING COMPANY, INC., Terre Haute, Ind., a corporation of Indiana. Republished by registrant.

FOR BEER.
Claims use since Mar. 17, 1934.

Reg. No. 375,124. Registered Feb. 6, 1940. TERRE HAUTE BREWING COMPANY, INC., Terre Haute, Ind., a corporation of Indiana. Republished by registrant.

CHAMPAGNE VELVET
BRAND

The word "Brand" is disclaimed apart from the mark as shown.
FOR BEER.
Claims use since March 1935.

Reg. No. 414,104. Registered May 29, 1945. MOUNT CARBON MANUFACTURING AND SUPPLY COMPANY, Pottsville, Pa., a corporation of Delaware. Republished by registrant.

FOR BEER.
Claims use since Apr. 15, 1936.

CLASS 49

DISTILLED ALCOHOLIC LIQUORS

Reg. No. 310,242. Registered Feb. 13, 1934. BENJAMIN P. LILIENTHAL, San Francisco, Calif. Republished by Haas Brothers, San Francisco, Calif., a corporation of California.

W. A. LACEY

FOR WHISKEY.
Claims use since 1892.

Reg. No. 312,991. Registered May 15, 1934. GIOVANNI VAI, Los Angeles, Calif. Republished by registrant, present address Ontario, Calif.

EL CAMINO REAL

FOR BRANDIES.
Claims use since Dec. 5, 1933.

Reg. No. 321,546. Registered Feb. 5, 1935. COUNTRY CLUB SODA COMPANY, INC., Springfield, Mass., a corporation of Massachusetts. Republished by registrant.

The word "Whiskey" is disclaimed apart from the mark as shown. The drawing is lined for the colors black, yellow, or gold, gray, and red.
FOR WHISKEY.
Claims use since Dec. 1, 1933.

CLASS 50

MERCHANDISE NOT OTHERWISE CLASSIFIED

Reg. No. 105,851. Registered Aug. 24, 1915. INGRAM-RICHARDSON MANUFACTURING COMPANY, Beaver Falls, Pa., a corporation of Pennsylvania. Republished by registrant.

PORCELIRON

FOR ENAMELED METAL SIGNS.
Claims use since Feb. 2, 1915.

Reg. No. 106,233. Registered Oct. 19, 1915. INGRAM-RICHARDSON MANUFACTURING COMPANY, Beaver Falls, Pa., a corporation of Pennsylvania. Republished by registrant.

PORCELIRON

FOR ENAMELED METAL DOOR-PLATES.
Claims use since Feb. 27, 1915.

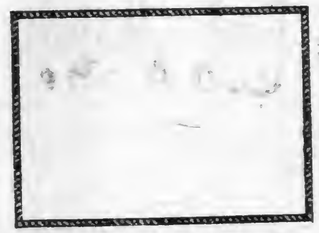
Reg. No. 169,084. Registered June 5, 1923. AMERICAN HAIR FELT CO., Chicago, Ill. Republished by American Hair & Felt Company, Chicago, Ill., a corporation of Delaware.

OZITE

FOR FELT.
Claims use since Oct. 24, 1921.

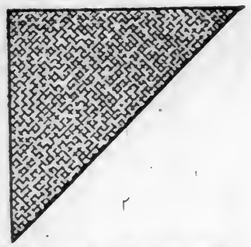
Reg. No. 172,349. Registered Aug. 28, 1923. AMERICAN HAIR FELT CO., Chicago, Ill. Republished by American Hair & Felt Company, Chicago, Ill., a corporation of Delaware.

OZITE



FOR HAIR CARPET CUSHIONS AND HAIR SEAT CUSHIONS.
Claims use since Oct. 24, 1921.

Reg. No. 262,347. Registered Oct. 8, 1929. AMERICAN HAIR & FELT COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.



The representation of the goods is disclaimed apart from the mark as shown. The portrait shown is fanciful.
FOR HAIR CARPET CUSHIONS.
Claims use since Dec. 7, 1928.

Reg. No. 262,427. Registered Oct. 8, 1929. AMERICAN HAIR & FELT COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

The drawing is lined to indicate orange.
FOR HAIR-FELT CARPET CUSHIONS AND HAIR-FELT SEAT CUSHIONS.
Claims use since Apr. 1, 1925.

Reg. No. 263,747. Registered Nov. 12, 1929. AMERICAN HAIR & FELT COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

The drawing is lined to indicate orange.
FOR HAIR-FELT CARPET CUSHIONS AND HAIR-FELT SEAT CUSHIONS.
Claims use since June 1, 1925.

Reg. No. 282,766. Registered Apr. 28, 1931. AMERICAN HAIR & FELT COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

SLO-ROL

FOR FELTS FOR MINIATURE GOLF COURSES.
Claims use since Dec. 3, 1930.

Reg. No. 286,584. Registered Sept. 1, 1931. AMERICAN HAIR & FELT COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

UNDO-FELT

The word "Felt" is disclaimed apart from the mark as shown.
FOR UNDERLINING FOR FLOOR COVERINGS SUCH AS CARPETS AND LINOLEUM.
Claims use since Dec. 30, 1930.

Reg. No. 322,961. Registered Mar. 26, 1935. AMERICAN HAIR & FELT COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

Red Knight

FOR HAIR-FELT CARPET CUSHIONS AND HAIR-FELT SEAT CUSHIONS.
Claims use since Apr. 17, 1934.

Reg. No. 324,578. Registered May 21, 1935. AMERICAN HAIR & FELT COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

PURPLE KNIGHT

FOR HAIR-FELT CARPET CUSHIONS AND HAIR-FELT SEAT CUSHIONS.
Claims use since Apr. 17, 1934.

Reg. No. 336,201. Registered June 30, 1936. J. A. WRIGHT & Co., Keene, N. H., a corporation of New Hampshire. Republished by registrant.

SIL VALET

FOR KIT CONTAINING A METAL POLISH, A SPONGE, CHAMOIS, BRUSHES, AND OTHER INSTRUMENTS FOR CLEANING OF METALS.
Claims use since Dec. 1, 1935.

Reg. No. 336,202. Registered June 30, 1936. J. A. WRIGHT & Co., Keene, N. H., a corporation of New Hampshire. Republished by registrant.

FOR KIT CONTAINING A METAL POLISH, A SPONGE, CHAMOIS, BRUSHES, AND OTHER INSTRUMENTS FOR CLEANING OF METALS.
Claims use since Dec. 1, 1935.

Reg. No. 336,696. Registered July 14, 1936. AMERICAN HAIR & FELT COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

AMHACO
BROADFELT

The word "Broadfelt" is disclaimed apart from the mark as shown.
FOR FELT CARPETS OR RUGS.
Claims use since Feb. 13, 1935.

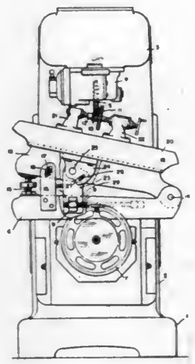
Reg. No. 429,313. Registered Apr. 29, 1947. LEON H. ZEUTHEN, Minneapolis, Minn. Republished by registrant.

"Les-Lee"

FOR GARMENT HANGERS.
Claims use since Aug. 1, 1939.

REISSUES

NOVEMBER 30, 1948



23,052
ADHESIVES FROM VEGETABLE PROTEINOUS MATERIAL
Glenn Davidson, Aurora, Ill.
No Drawing. Original No. 2,394,043, dated February 5, 1946, Serial No. 330,573, April 19, 1940. Application for reissue January 4, 1947, Serial No. 720,301
16 Claims. (Cl. 106—154)

5. A process of making an adhesive, which comprises dissolving rosin in about an equal amount of a fatty oil acid, then incorporating mahogany soap, and mixing with vegetable proteinous material, and adding water, hydrated lime, and caustic alkali for dispersion, in succession.

14. An adhesive material consisting essentially of soya bean flour and about 2–50 pounds per hundred thereof of a mahogany soap, and an alkali to give the desired consistency.

23,053
GEAR FINISHING
Max B. Mentley, Detroit, Mich., assignor to National Broach & Machine Company, Detroit, Mich., a corporation of Michigan
Original No. 2,411,973, dated December 3, 1946, Serial No. 471,162, January 2, 1943. Application for reissue June 14, 1948, Serial No. 32,900
6 Claims. (Cl. 90—1.6)

1. The method of finishing a shoulder gear which comprises meshing at crossed axes the gear solely with a bevel gear-like cutter having its larger end nearest the shoulder, rotating the

gear and cutter while in mesh and during the rotation relatively reciprocating the gear and cutter axially of the gear.

PLANT PATENTS

GRANTED NOVEMBER 30, 1948

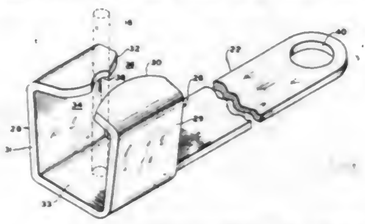
Owing to the fact that almost all of the illustrations of the plant patents are in colors, it is not practicable to print a cut of the drawing.

811
ROSE PLANT
Eugene S. Boerner, Newark, N. Y., assignor to Jackson & Perkins Company, Newark, N. Y., a corporation of New York
Application May 6, 1947, Serial No. 746,231
1 Claim. (Cl. 47—61)

A new and distinct variety of rose plant of the Floribunda class, characterized as to novelty by the color of the flowers and their change from that in the bud stage to that in the full blown stage, the large size and shape of the flowers, the large number of petals and their arrangement, the strong fragrance of the sweet rose geranium foliage, and the distinctive form and color of the foliage, substantially as shown and described.

812
ROSE PLANT
Eugene S. Boerner, Newark, N. Y., assignor to Jackson & Perkins Company, Newark, N. Y., a corporation of New York
Application May 13, 1947, Serial No. 747,699
1 Claim. (Cl. 47—61)

A new and distinct variety of rose plant, characterized as to novelty by the shape of its blooms and their habit of deepening in color as the bloom grows older, its habit of upright growth and bushiness, and its foliage and filament coloring, substantially as shown and described.

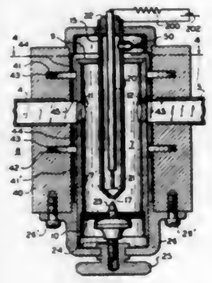


PATENTS

GRANTED NOVEMBER 30, 1948

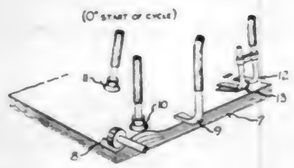
2,454,759
METHOD OF PREPARATION OF DIMETHYL SILICONE GUMS
Moyer M. Safford, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
No Drawing. Application June 11, 1946, Serial No. 676,119
4 Claims. (Cl. 260—46.5)

1. The method of making a solid, elastic, curable methylpolysiloxane containing an average of from 1.98 to 2.0 methyl groups per silicon atom, which method comprises contacting a liquid polymeric dimethylsiloxane containing an average of from 1.98 to 2.0 methyl groups per silcon atom and containing up to 2 mol per cent copolymerized monomethylsiloxane with from 1 to 50 per cent, by weight, based on the weight of the liquid methylpolysiloxane, of a sulfuryl halide.



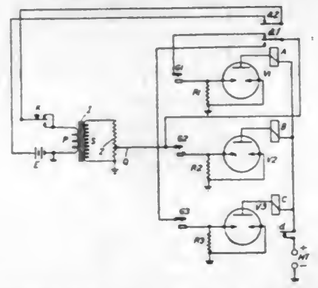
2,454,760
ELECTRICAL CONNECTOR
George M. Anderson, Highlands, N. J.
Application October 28, 1943, Serial No. 507,990
4 Claims. (Cl. 173—269)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A clip for connecting electrical circuit elements to a vacuum tube electrode comprising, a body portion connectable to the electrical circuit elements, a pair of resilient walls formed at one end of and at right angles to said body portion, cooperating inwardly directed coplanar flanges, parallel to the body portion, formed at the extremities of said walls and at right angles thereto, and means associated with said flanges adapted to receive and grip said vacuum tube electrode therebetween said means consisting of opposed convex-shaped ends on said flanges, and a concave gripping portion positioned at the central area of at least one of said concave shaped ends, so that said electrode may be moved into position between said flanges from either direction and may be securely gripped therebetween without auxiliary means.



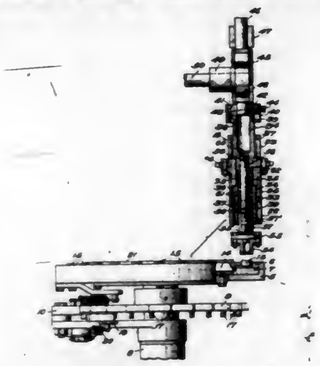
2,454,761
ULTRA HIGH FREQUENCY DEVICE
Wilmer L. Barrow, Concord, Mass., and Walter W. Mieher, Mineola, N. Y., assignors to The Sperry Corporation, a corporation of Delaware
Application November 20, 1942, Serial No. 466,530
27 Claims. (Cl. 315—39)

2. A gas discharge device for ultra high frequencies, comprising a gas-filled cavity resonator resonant at the operating frequency of said device, means operably connected to said resonator for coupling ultra high frequency energy to said cavity at a voltage anti-nodal position thereof, means operably connected to said resonator for



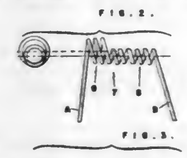
abstracting energy from said cavity also at a voltage anti-node, and means connected to said resonator for maintaining a cold discharge therein at a voltage anti-node thereof spaced from said coupling and abstracting means.

2,454,762
SHEET FEEDING METHOD AND APPARATUS THEREFOR
Frank R. Belluche, Racine, Wis., assignor to The Christensen Machine Company, Racine, Wis., a corporation of Wisconsin
Application May 24, 1946, Serial No. 672,095
9 Claims. (Cl. 271—20)



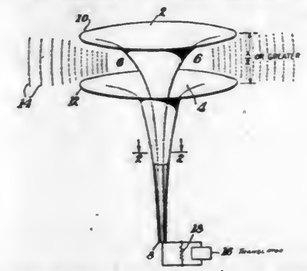
2. The hereindescribed method of feeding sheets off a stacked supply, which comprises: successively separating the rear edge portion of each sheet as it becomes the topmost, from the sheets therebeneath; positively moving the separated rear edge portion of each sucecssive sheet forward in two steps, the first step being far enough to uncover the rear edge portion of the next sheet sufficiently to be acted upon, and the second step in the movement occuring while the rear edge portion of the next sheet is undergoing the first step of its forward movement; and blowing sheet-separating-and-forwarding - air simultaneously under the topmost sheet as its rear edge portion undergoes the second step of its forward movement and under the next sheet as its rear edge portion undergoes the first step of its forward movement.

2,454,763
ELECTRICAL SYSTEM FOR GAUGING A DIMENSION BY THE WIDTH OF A SPARK GAP
Herbert Stephens Bishop, London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application May 23, 1944, Serial No. 536,951
In Great Britain June 1, 1943
13 Claims. (Cl. 177—311)



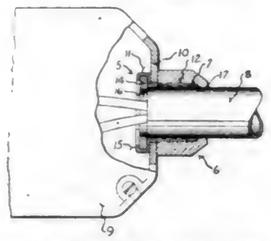
1. An electrical device for comparing a physical dimension of an article with a standard physical dimension, including two spark gaps, means for setting the lengths of said gaps respectively corresponding to said physical dimensions, parallel circuit means for applying a sparking voltage simultaneously to said gaps and means for indicating a particular gap across which a spark passes, whereby said first mentioned dimension is checked.

2,454,764
MILLING TOOL
Harvey M. Braucher, Baltimore, Md.
Application September 11, 1946, Serial No. 696,327
3 Claims. (Cl. 90—14)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



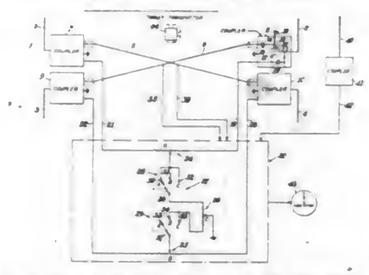
1. A tool mounting for use with a work processing machine comprising a yoke, a cam in said yoke and means for rotating it for reciprocating the yoke, means for guiding the yoke in its reciprocating movements, a hollow spindle connected to and reciprocated by said yoke, said spindle being rotatably connected with the yoke, a sleeve on said spindle and rotatable therewith, connections between the sleeve and the spindle constructed and arranged to permit a sliding movement between the spindle and sleeve, means for rotating the sleeve and consequently the spindle, a plunger slidable in the lower end of the spindle for attachment of a work engaging tool, a spring backing said plunger, a stem extending into said spindle threadedly connected with the plunger whereby said plunger may be adjusted relative to work pieces; and means for limiting the movement of the plunger in the spindle.

2,454,765
ELECTRIC HEAD LAMP PROJECTOR AND INCANDESCENT LAMP THEREFOR
Reginald K. Braunsdorff, East Orange, N. J., assignor to Tung-Sol Lamp Works, Inc., Newark, N. J., a corporation of Delaware
Application September 28, 1944, Serial No. 556,115
31 Claims. (Cl. 176—34)



1. In an electric headlamp, a reflector, an incandescent lamp in the reflector having a lighting beam filament of the continuous coil type, said filament having its end portions formed of different coil diameters and the whole filament being positioned in the vicinity of the focal point of the reflector and at an angle to the axis of the lamp with the different diameter end portions thereof disposed on the opposite sides of the reflector axis.

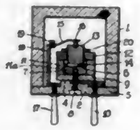
2,454,766
BROAD BAND ANTENNA
Leon N. Brillouin, Providence, R. I., assignor to Federal Telephone and Radio Corporation, Newark, N. J., a corporation of Delaware
Application April 24, 1943, Serial No. 484,335
2 Claims. (Cl. 250—33.63)



1. An antenna system having a substantially constant reactance over a frequency band of several harmonics comprising antenna elements providing two coaxial surfaces of revolution, the surface of each element having a flared portion and a tapering neck portion, each flared portion terminating in an outer rim, said rims having substantially equal diameters and being spaced apart a distance of at least one half wave length at the operating frequency, said flared and neck portions so combining that said surfaces define a wave propagating path having a variable surge impedance the value of which varies less than the ratio of ten to one over a length of said path equal to one wave length at the operating frequency.

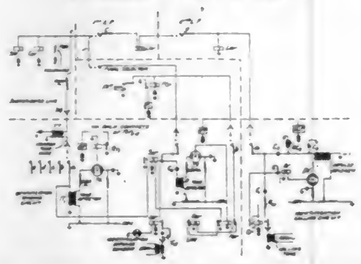
2,454,767
CONDUIT FITTING
Herman J. Brushaber, Milwaukee, Wis.; Ralph E. Brushaber executor of said Herman J. Brushaber, deceased
Application July 27, 1946, Serial No. 686,611
7 Claims. (Cl. 285—123)

1. A fitting for anchoring and coupling smooth surfaced conduit and pipe in which a tubular male member is externally threaded to receive a nut, and means are provided for grasping a conduit or pipe received within the male member upon tightening of the nut, characterized by the fact that: the male member is stamped from sheet metal and has an integral non-circular enlargement thereon to provide means for grasping the male member to hold the same against turning, and a metal stop abutment is clinched within the non-circular enlargement to reinforce the same and limit endwise insertion of a conduit or pipe into the male member.



2,454,768
DIRECTION FINDING ANTENNA SYSTEM
Gordon S. Burroughs, Forest Hills, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application June 25, 1945, Serial No. 601,386
14 Claims. (Cl. 343—113)

1. In combination, an antenna system having a plurality of upper and lower radiant acting elements mounted in the same plane, each of said elements having separate output circuits, and means controlling the gain of said upper element circuits and separate means for independently controlling the gain of said lower element circuits for balancing said outputs.



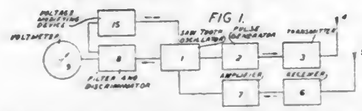
2,454,769
PIEZOELECTRIC CRYSTAL SUPPORT
Francoise A. M. Busnel, Lyon, France, assignor to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application March 1, 1943, Serial No. 477,643.
In France January 23, 1942
1 Claim. (Cl. 171—327)

A piezo-electric mounting comprising a support, two terminals secured to said support, a cylindrical electrode element mounted on said support, means electrically connecting said electrode with one of said terminals, a quartz crystal disk having substantially the same diameter as said electrode element and resting on a flat electrode face of the latter, a casing for said quartz crystal disk, said casing including a cylindrical insulating sleeve surrounding said electrode element and quartz crystal disk and extending axially beyond the latter, a cover plate resting against one end face of said sleeve at a distance from said quartz crystal disk, said cover plate being provided with a central threaded bore, a screw plug electrode screwed into and traversing said bore to have its inner electrode face disposed at an adjustable distance from the elec-

trode face of said cylindrical electrode element, and resilient means mounted on said support to press said cover plate against said sleeve, including a spring blade extending substantially radially of said screw plug electrode at about the level of the outer face thereof, a centering pin mounted on the inner end of said blade and adapted to engage a central recess provided in said outer face of said screw plug so as to urge the latter and said cover plate against said sleeve, and means electrically connecting said screw plug electrode with said second terminal, including a metal bracket mounted in said support and electrically connected with said second terminal, said bracket carrying and being electrically connected with the outer end of said spring blade.

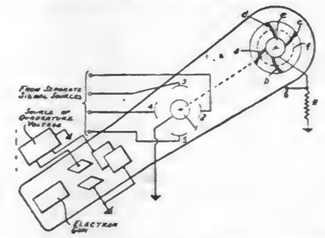
2,454,770
IDENTIFICATION CIRCUIT ARRANGEMENT FOR AUTOMATIC OR SEMIAUTOMATIC TELEPHONE SYSTEMS
Lucien A. B. Cabes, Antwerp, Belgium, assignor to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application January 22, 1943, Serial No. 473,271
In the Netherlands April 25, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires April 25, 1961
6 Claims. (Cl. 179—18)

1. In a telephone system, a plurality of numerically designated lines, means including non-numerical and numerical switches for connecting calling lines with called lines, a set of multiple terminals in the numerical switches for each of said lines, said terminals being arranged in groups, a brush for each numerical switch co-operating with its terminals, a source of alternating current of predetermined frequency,



means for connecting said source over an operated non-numerical switch to the calling line, a detector responsive to said source of alternating current, means for connecting said detector to a group of lines including the calling line, another detector responsive to said source of alternating current, means for connecting the last-mentioned detector with the brush of a numerical switch, means including the last-mentioned detector for operating said brush to select the terminals of the calling line, a device for producing impulses representing the designations of the lines, a source of A. C. of different frequency for said device, a receiver responsive to the last-mentioned frequency, and means for connecting said device with said receiver over said numerical and non-numerical switches.

2,454,771
DRILL BIT ASSEMBLY
Walter E. Carr, Spokane, Wash., assignor, by decree of distribution, to Sarah Jane Carr, Spokane, Wash.
Application May 8, 1944, Serial No. 534,542
4 Claims. (Cl. 287—126)



4. A drill bit assembly comprising a drill rod including a bit shank having curved cam sides tapered towards the axis of said rod, a drill bit including an annular skirt having internal cam sides mating with the cam sides on said bit shank and tapered to correspond therewith, said drill rod having an integral collar against which said skirt seats to thereby index the maximum tapered engagement of said cam sides and thereby preclude longitudinal driving of said tapers against each other, the cam sides on said skirt having sufficient clearance from the cam sides on said bit shank to afford a loose fit in the initial position and to afford a tight frictional engagement when rotated a fraction of a turn, said drill bit having a cutting head larger than said skirt, and square shoulders formed at the rear of said cutting head to engage a tool for longitudinally driving said bit off from said shank.

2,454,772
PULSE ECHO SYSTEM FOR DISTANCE MEASURING
Prafulla Kumar Chatterjea and Leslie Wilfred Houghton, London W. C. 2, England, assignors to Standard Telephones and Cables Limited, London, England, a British company
Application December 10, 1942, Serial No. 468,570
In Great Britain March 20, 1942
4 Claims. (Cl. 343—13)

1. System for measuring the distance of an object comprising a sawtooth wave oscillator having a normal operative period, a pulse generator controlled by said saw-tooth wave oscillator for generating electrical pulses, a radio transmitter, means for modulating the output of said radio transmitter by said electrical pulses, means for receiving and detecting the pulse modulated waves after reflection by said object whereby electrical pulses are obtained, means for applying said received electrical pulses to said saw-tooth wave oscillator to initiate the fly-back stroke thereof prior to the normal termination of said period and thereby to control its frequency, an indicating device, means for deriving from an output of said saw-tooth wave oscillator a voltage proportional to the frequency of the resultant generated sawtooth waves, and means for applying said voltage to said indicating device.

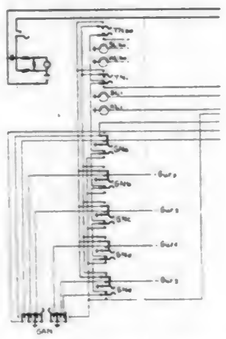
2,454,773
PULSE MULTIPLEX TRANSMITTER EMPLOYING A CATHODE-RAY TUBE TIME MODULATOR
Prafulla Kumar Chatterjea and Leslie Wilfred Houghton, London, England, assignors to Standard Telephones and Cables Limited, London, England, a British company
Original application March 14, 1944, Serial No. 526,566. Divided and this application October 6, 1945, Serial No. 620,818. In Great Britain April 7, 1943
5 Claims. (Cl. 179—15)

3. A multi-channel pulse modulator comprising means to produce a beam of electrons, beam deflection means, a source of control wave energy, means for applying said control wave energy to said deflecting means to cause the beam to have a given sweep movement, a plurality of signal channel input circuits, a plurality of deflection means each associated with a separate one of said input circuits, to control deflection of the beam successively during its sweep movement according to increments of the input signals of said circuits, and beam responsive means presenting narrow target areas for impingement by electrons of said beam, one for each signal channel, said target areas being disposed at an acute angle to the direction of signal deflection of said beam for the corresponding signal channel to produce pulses of energy modulated according to the corresponding signal deflections of said beam.

2,454,774
ANTENNA
Frank O. Chesus, Jackson Heights, and Frank G. Thomas, Islip, N. Y., assignors to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application August 29, 1945, Serial No. 613,329
13 Claims. (Cl. 250—33)

1. An antenna having two radiating elements the dimensions of which are suitably chosen for relatively wide frequency band operation, one only of said elements having connections to a transmission line of given impedance, the other of said elements being substantially twice the length of said one element and having the lower half of its length surrounded by the same, the

upper half of said other element being a radiating portion, a conductor extending coaxially within said other element and included in one of said connections, and a resistor extending through an orifice intermediate the ends of said



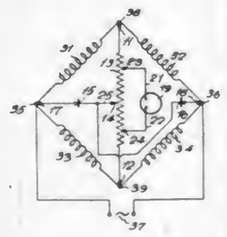
other element and connected in series between said conductor and the adjacent end of said one element, the general arrangement being such that energy transfer is obtained between the two said elements and an impedance match is provided between said antenna and said transmission line.

2,454,775

ELECTRIC ALARM SIGNALING SYSTEM

Eigil Cohrt, Copenhagen, Denmark, assignor to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware

Application May 1, 1943, Serial No. 485,405
In Denmark July 13, 1940
7 Claims. (Cl. 179—5)



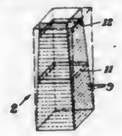
1. In a telephone system with alarm device having a command-station, a telephone at said command-station, a two wire main line connected to said telephone at said command-station, a plurality of two wire subscriber lines and a plurality of subscriber telephones each including a bell circuit connected across the associated subscriber's line when said subscriber's telephone is in its inoperative position and a microphone circuit substituted for said bell circuit across said subscriber's line when said subscriber's telephone assumes its operative position, the combination of a calling circuit for each individual subscriber, individual talking keys at said command-station to close each of said calling circuits, a calling relay in each of said calling circuits to connect, upon being energized, the called subscriber's line to the main line, a ringing machine common to all subscribers, a ringing circuit for each subscriber adapted to be connected to said common ringing machine, an answer relay for each subscriber, a ringing relay for each subscriber, an energizing circuit for each ringing relay including a slow working back contact of said calling relay, a stick circuit for each ringing relay containing a back contact of the corresponding answer relay and a fast working front contact of said calling relay, said ringing relay being adapted to break the subscriber's line intermediate said calling relay and the subscriber's telephone and to connect said ringing circuit through a winding of the answer relay to the part of the subscriber's line connected to said telephone, each answer relay being adapted to remain deenergized when a circuit through its winding is closed over the corresponding bell circuit and to become energized when it is traversed by current flowing through the subscriber's microphone circuit, a source of microphone current for each subscriber's telephone, a microphone current circuit connecting said source of microphone current across the corresponding subscriber's line over a winding of said answer relay, a back contact of the ringing relay and a front contact of the calling relay, a number of group keys at said command-station, a number of group calling relays each energized upon operation of the corresponding group key to close a predetermined group of calling circuits, and an alarm relay for each subscriber energized over a front contact of the corresponding group calling relay, each alarm relay having a back contact inserted in the corresponding microphone current circuit.

2,454,776

INDICATING CIRCUIT FOR ALTERNATING-CURRENT BRIDGES

Harold B. Conant, Lincoln, Nebr.

Application June 8, 1945, Serial No. 598,393
2 Claims. (Cl. 171—95)



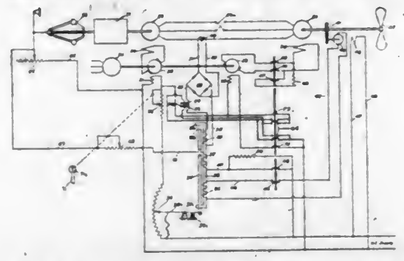
2. An alternating-current bridge circuit comprising a plurality of impedances arranged with one pair of opposite terminals adapted to be connected to a source of alternating-current energy, a voltage divider connected to a second pair of opposite terminals of said bridge circuit, a full-wave rectifier connected between the electrical center of said voltage divider and said first pair of terminals whereby unidirectional currents between said source and said second pair of terminals traverse said voltage divider during both halves of a cycle of said alternating-current energy, and a direct-current responsive instrument connected to said voltage divider at points equally spaced on opposite sides of said electrical center.

2,454,777

METHOD OF MANUFACTURING PIEZO CRYSTALS

Walter Irving Cronan, New York, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware

Application December 26, 1944, Serial No. 569,745
6 Claims. (Cl. 51—283)



6. The method of manufacturing piezo crystal blanks of different frequency characteristics, comprising the following steps: piling up the said blanks one above the other to form a loaf, joining said piled up blanks to form a rigid block, grinding at least two of the four sides of the said loaf at a predeterminded angle of less than 90° to the base in order to taper said loaf to a largest predeterminded size on one end and a smallest predetermined size on the other end of the said loaf, then separating all of the blanks of the said loaf, thereby producing a blank of lowest predetermined frequency at one end, a blank of highest predetermined frequency at the other end of the loaf, and a plurality of blanks of intermediate frequencies between the said highest and said lowest frequencies.

2,454,778

ELECTRICAL CONTROL SYSTEM

Herman H. Curry, United States Coast Guard

Application June 7, 1945, Serial No. 598,180
14 Claims. (Cl. 318—147)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

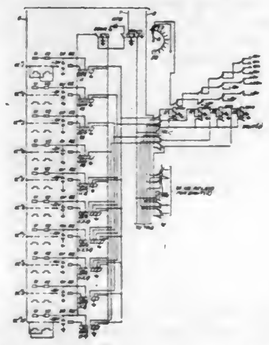
14. In a propulsion system, in combination, a prime mover, an alternating-current generator mechanically coupled thereto, a motor selectively operable as a synchronous and as an induction motor and energizable from said generator, field windings for said motor and generator, separate exciters for each of said field windings, field windings for each of said exciters connected in parallel to a source of direct current, means for selectively securing a speed range for said motor extending above and below synchronous speed of said motor at idling speed of said engine, field-control means for manually adjusting motor- and generator-exciter fields, automatic field-control means associated with said manually-operated field-control means including a solenoid-operated variable resistor in series with the said motor- and generator-exciter fields; solenoid means consisting of a plurality of coils about a common core-and-armature system for varying said variable resistor, the ampere-turns of one of said coils being responsive to motor speed, the ampere-turns of another of said coils being responsive to current flowing between said generator and motor, and the ampere-turns in a third of said coils being responsive to prime mover speed, the said third coil being arranged to oppose the other two, means for adjusting the ampere-turns in the said third coil and such that the ampere-turns in said third coil are selectively greater than the combined ampere-turns of the said other two coils during operation in one of said speed ranges and less than the combined ampere-turns in the said other two coils during operation in the other speed range, such that an increase in motor speed and generated current acts to increase resistance of said variable resistor in the subsynchronous speed range but to decrease resistance of said variable resistor in the synchronous speed range.

2,454,779

METHOD FOR THE PREPARATION OF METHALLYLBENZENE AND RELATED COMPOUNDS

David Davidson, New York, N. Y., and Samuel J. Kahn, Rutherford, N. J., assignors to The Trubek Laboratories, Incorporated, East Rutherford, N. J., a corporation of New Jersey

No Drawing. Application July 26, 1947, Serial No. 764,008
13 Claims. (Cl. 260—668)

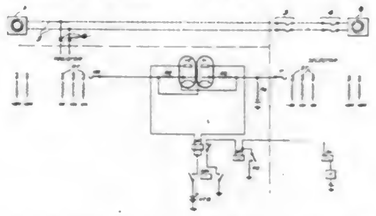


1. The method for the preparation of methallylbenzene and certain para-alkyl methallylbenzenes which comprises heating at pyrolysis temperatures in admixture with at least a stoichiometric amount of a material selected from the group consisting of alkali metal salts of acids having a pK value within the range 4–7 and alkaline earth metal salts of acids having a pK value within the range 4–7 a compound having the generic formula A—P—X, in which A is a substituent selected from the group consisting of hydrogen and alkyl radicals having from one to seven carbon atoms, P is the para-phenylene radical, and X is a substituent selected from the group consisting of the chloro-tertiary-butyl, bromo-tertiary-butyl and iodo-tertiary-butyl radicals.

2,454,780

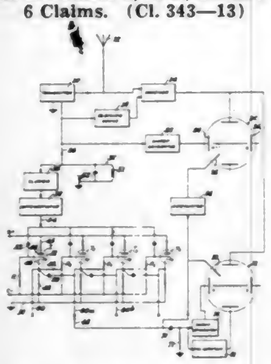
TELECOMMUNICATION SWITCHING SYSTEM

Gerald Deakin, New York, N. Y., assignor to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware



Application August 28, 1943, Serial No. 500,412
3 Claims. (Cl. 177—353)

3. A system for selectively connecting one or more sources of discrete marking potentials from

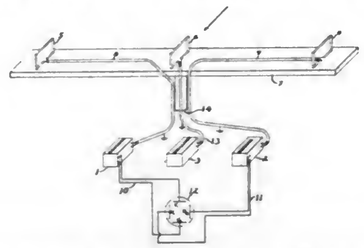


a plurality thereof to one or more marking potential storing points in response to the transient selection of one or more controlling potentials from a plurality thereof, including pluralities of sources of discrete controlling potentials, comparing potentials, and marking potentials, one or more marking potential storing points, an electronic switching device for responding to a controlling potential of transient duration to connect an individual marking potential to a potential storing point in accordance therewith, means for transiently selecting one controlling potential at a time and applying it to the switching device, said device comprising a plurality of potential comparing means each one for comparing any controlling potential applied to the device with a predetermined comparing potential to perform a switching operation when it is substantially equal thereto, each potential comparing means comprising an electron discharge apparatus whose electrodes include two cathodes, two control grids and at least one anode and afford two electron discharge paths, means including a gas discharge tube having a control electrode and a main gap for performing the switching operation, means for applying to the control grid associated with one discharge path and to the cathode associated with the other all controlling potentials applied to the switching device, means for applying to the other control grid and to the other cathode a predetermined one of the comparing potentials, a common output path for the two electron discharge paths including an anode resistance and a source of anode potential connected in series, means for connecting said control electrode to the end of said anode resistance farthest from said source of anode potential, and a source of energizing potential for said main gap, the characteristics of the discharge apparatus and of the gas tube and the values of the anode resistance, the source of anode potential and the source of energizing potential being selected so that the the gas tube will ionize to perform the switching operation only when potentials of substantially the same value are applied to both grids and cathodes, and means including one or more sets of marking potential selecting relays, each set being individually associated with one storing point and responsive to the ionization of a particular gas tube to connect to said storing point one of the sources of marking potentials which corresponds to said particular tube.

2,454,781
MATCHED POTENTIAL CONTROL SYSTEM
Gerald Deakin, New York, N. Y., assignor to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application September 17, 1945, Serial No. 616,909
9 Claims. (Cl. 179—18)

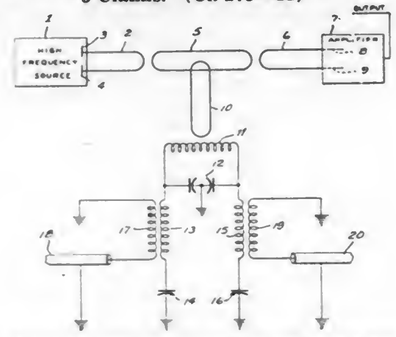
1. An electrical control system comprising two triodes, and actuating means including two opposed elements each responsive to current from a different one of the triodes and operative when the two opposed elements are in balance, and means for initially inhibiting the operation of the actuating means for a limited period longer than transient undesired balancing of said element during operation, whereby false operation of the actuating means is prevented.

2,454,782
ADJUSTABLE EXPANDED SWEEP FOR RADAR OSCILLOSCOPES
Louis A. de Rosa, Staten Island, N. Y., assignor to Federal Telephone and Radio Corporation, Newark, N. J., a corporation of Delaware
Application December 8, 1942, Serial No. 468,198
6 Claims. (Cl. 343—13)



1. In a radio detection system having means to transmit impulses and receiver means including first and second oscillographs each with a sweep producing means to receive and indicate echo pulses caused by obstacles in response to transmitted impulses; the combination therewith of reference indicator control means comprising means to generate a series of pulses in response to impulse transmission, means providing a plurality of conductive paths, means to restrict conduction of said paths in a time relation corresponding to the occurrence of said pulses, means to selectively obtain energy from said conductive paths thereby producing a reference pulse of given duration selectively displaced with respect to the occurrence of said impulse transmission, means to apply said reference pulse to said first oscillograph to produce thereon a reference indicator designating a time interval corresponding to said given duration, and means responsive to energy of said reference pulse to synchronize the sweep of said second oscillograph with the part of the sweep of said first oscillograph designated by said reference indicator.

2,454,783
RADIO DIRECTION FINDER
Edward N. Dingley, Jr., Arlington, Va.
Application December 2, 1936, Serial No. 113,794
4 Claims. (Cl. 343—116)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

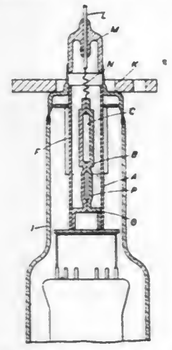


1. Apparatus as described, comprising a pair of radio wave collector loops laterally spaced apart, and unconnected to each other, a third loop equi-distant from the loops of said pair, all of said loops being mutually parallel, a rotatable member upon which all of said loops are fixed, an oscillator connected to supply energy to said third loop to be radiated therefrom, the frequency of the energy from said oscillator differing from that of the energy from a distant source received by said collector loops by a value within the audio

range, an amplifying receiver connected to each of the loops of said pair, and a cathode ray oscilloscope having its vertical deflection plates connected to the audio output leads of one of said

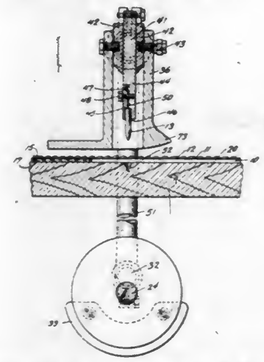
receivers and its horizontal deflection plates connected to the audio output leads of the other of said receivers, whereby to indicate the phase relation between the outputs of the two receivers.

2,454,784
HIGH-FREQUENCY POWER SUPPLY TO MULTIPLE LOADS
James S. Engel, New Rochelle, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application March 29, 1944, Serial No. 528,552
3 Claims. (Cl. 178—44)



1. A high frequency circuit comprising a source of high frequency power having a balanced output circuit, a high impedance circuit tuned to the frequency of said source, means coupling said high impedance circuit to said balanced output circuit in such manner as to maintain the latter in balance, means to balance said high impedance circuit with respect to ground, a pair of low impedance circuits, one connected between one side of said high impedance circuit and ground and the other connected between the other side and ground, and a pair of output circuits, one coupled to each of said low impedance circuits.

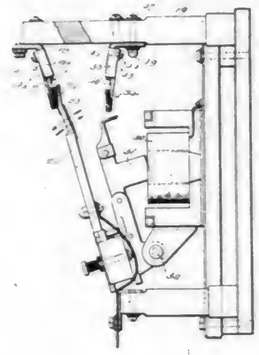
2,454,785
METHOD OF MAKING UREA-ALDEHYDE RESIN DISPERSIONS
Loy S. Engle, Harrington Park, and Edward Sheridan, South Bound Brook, N. J., and Earl K. Fischer, Long Island City, N. Y., assignors to Interchemical Corporation, New York, N. Y., a corporation of Ohio
No Drawing. Application June 11, 1941, Serial No. 397,548
3 Claims. (Cl. 260—33.4)



1. The method of dispersing pigment in a heat-convertible area-aldehyde resin without gelling the resin, which comprises malaxating a mixture of the pigment and a 60% to 90% solution of the resin in a solvent boiling within the range of 100° C. to 250° C., while cooling the malaxating machine, the proportion of pigment to resin solution being such as to yield a malaxatable plastic.

2,454,786
ELECTRON DISCHARGE APPARATUS
Christopher Henry Foulkes, London, England, assignor to Standard Telephones and Cables Limited, London, England, a British company
Application November 20, 1943, Serial No. 511,099
In Great Britain July 17, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires July 17, 1962
10 Claims. (Cl. 250—27.5)

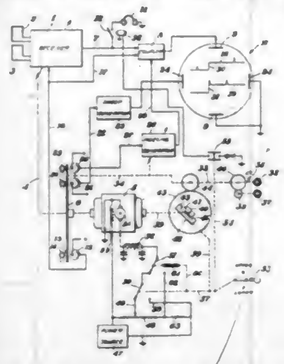
1. A resonator structure having a bunching zone, a catching zone and an intermediate drift space, and a drift tube structure surrounding the drift space, including co-extensive abutting flat metal sections having registering integral off-set portions forming the drift tube.



2,454,787
PROCESS FOR DRY EXPANSION OF WOOD VENEER
Joseph R. Francek, Fox River Grove, Ill., assignor to Edmund J. Sheehan, Chicago, Ill.
Original application August 18, 1943, Serial No. 499,079. Divided and this application September 28, 1944, Serial No. 556,185
5 Claims. (Cl. 144—309)

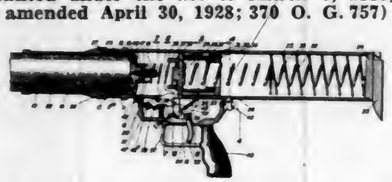
1. The method of expanding and flexing a wood veneer sheet backed with a sleazy material com-

prising piercing the veneer in a series of piercings arranged along lines disposed diagonally to the grain while holding the fibers of the veneer in place upon one side with said backing closing the spaces caused by said sharp points.



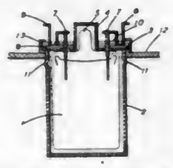
2,454,788
MULTIPLE CONTACTOR
Joseph F. Frese, Baltimore, Md., assignor to The Monitor Controller Company, Baltimore, Md., a corporation of Maryland
Application February 5, 1945, Serial No. 576,313
5 Claims. (Cl. 200—166)

1. A multiple contactor comprising, a multiplicity of resilient strip members stacked face to face and united at one end and free to move in a fan-like spread at their opposite ends as said strip members are moved toward or away from an abutting contact, said resilient strip members having their ends bent at an angle to the surface thereof and having a pair of symmetrically arranged spaced apertures at said bent ends, said sheet-like contact members enveloping said bent ends and being extruded into the pair of symmetrically arranged apertures in the bent ends of said strip members for forming contacts operative to establish progressive connection with said fixed contact, said contact members each extending in substantially parallel planes substantially normal to the face of said strip members.



2,454,789
TUNING CONTROL MECHANISM
Frederick W. Frink, East Orange, N. J., and Murray Kaplan, Brooklyn, N. Y., assignors to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application June 16, 1945, Serial No. 599,908
17 Claims. (Cl. 250—20)

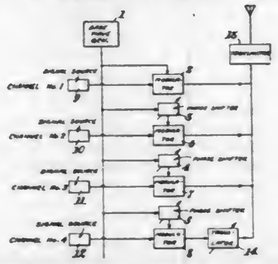
1. In a frequency scanning receiver, means for adjusting said receiver to a desired tuned position, comprising a motor for scanning the tuning means of said receiver over a predetermined range, an indexing generator controlled by said motor to provide an indexing indication of the desired tuned position, means for adjusting said indexing indication over said frequency range, a detent rotatable with said motor, a stop means rotatable with respect to said detent under control of said means for adjusting said indexing indication, and means for moving said stop means



into the path of said detent to stop said motor in the tuned position indicated by said index.

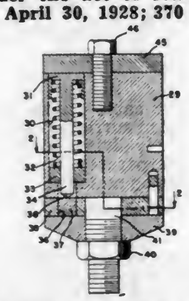
2,454,790
FIRING MECHANISM
Emil Garrett, United States Marine Corps
Application April 22, 1944, Serial No. 532,236
9 Claims. (Cl. 42—1)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

8. A mortar comprising a tubular casing, movable means within said casing for containing ammunition in a firing position, a closure at the end of said containing means juxtaposed to said ammunition, said closure having a spring biased percussion firing means therein, a spring driven striker for said firing means, and spring means mounted between said striker and said closure for maintaining said firing means in an impact receiving position with respect to said striker.



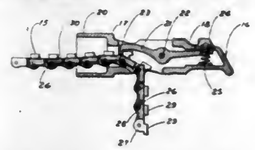
2,454,791
VACUUM TUBE AND MOUNTING THEREFOR
William Thomas Gibson, London, England, assignor to Standard Telephones and Cables Limited, London, England, a British company
Application January 5, 1946, Serial No. 639,286
In Great Britain January 16, 1945
6 Claims. (Cl. 250—27.5)

1. An electron discharge device comprising an envelope of insulating material having conductors for the electrodes of the device sealed through said envelope, a metal envelope enclosing said insulating envelope, a base plate provided with



apertures and mounted on said metal envelope with said conductors passing through said apertures, and metallic tags secured to said conductors adjacent said apertures whereby said discharge device is effectively screened.

2,454,792
PULSE MULTIPLEX COMMUNICATION SYSTEM
Donald D. Grieg, Forest Hills, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application August 19, 1944, Serial No. 550,184
17 Claims. (Cl. 179—15)



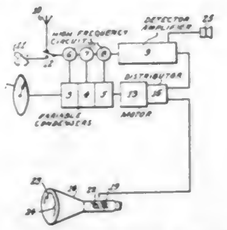
1. A multi-channel communicating system comprising means for producing for each of a plurality of channels a separate pulse train time modulated in accordance with a corresponding signal, means to time differently the pulses of the different channels to interleave the different pulse trains together as a single train of pulses, pulse position translating means in at least one of said channels, means for transmitting said interleaved train of pulses over a common transmitting medium; pulse receiving means having a plurality of receiving channels; a plurality of channel pulse train segregating means, one for each of said receiving channels; pulse position translating means in at least one of said receiving channels, and demodulating means in each of said channels.

2,454,793
SHOCK GAUGE
Charles H. Grogan, West Falls Church, Va., and Charles E. Crede, Winchester, Mass.
Application July 18, 1944, Serial No. 545,529
4 Claims. (Cl. 73—12)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A shock gage comprising a body, non-resistably deformable material inserts therein, a series of masses each having an end in contact with said material, resilient means exerting different forces in one direction on the several masses, whereby the sizes of the depressions said ends make in the surface of said material due to displacement of each of the several masses during a shock constitute a measure of said shock.

2,454,794
SASH HOLDER
Alfred Hakanson, Alhambra, Calif.
Application July 31, 1945, Serial No. 608,067
1 Claim. (Cl. 292—264)

In a sash holder adapted to hold a sash member in a chosen angular position with respect to a frame member to which the sash member is hinged, the combination which comprises a chain formed of a plurality of adjoining links, each having a bifurcated end and an extension on the opposite end adapted to project within the bifurcated end of the adjoining link, a pin journalled through the bifurcated end of each link and through the extension of the adjoining link, a boss on the upper edge of each of the extensions adapted to engage the bifurcated end of the adjoining link to prevent flexure of the chain in more than one direction, means for fastening an end of the chain to one of the members, and a clamp adapted to be mounted on the other member for holding a given length of chain between the two members by engagement with one of said bosses.

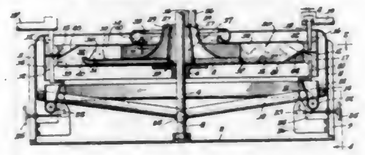


2,454,795
POLYMERIZATION OF ROSIN
Burt L. Hampton, Jacksonville, Fla., assignor, by mesne assignments, to The Glidden Company, Cleveland, Ohio, a corporation of Ohio
No Drawing. Application June 10, 1946, Serial No. 675,827
14 Claims. (Cl. 260—97)

1. The process for polymerizing rosin which comprises the step of treating rosin in liquid phase with a small amount to about 10% of a catalytic material selected from the group consisting of cobaltous chloride and cobaltous bromide, for a time of between about one-half to about 100 hours, at temperatures between about 50° C. and 165° C.

2,454,796
POLYMERIZATION OF ROSIN
Burt L. Hampton, Jacksonville, Fla., assignor, by mesne assignments, to The Glidden Company, Cleveland, Ohio, a corporation of Ohio
No Drawing. Application June 10, 1946, Serial No. 675,829
10 Claims. (Cl. 260—97)

1. The process for polymerizing rosin which comprises the step of treating rosin in liquid phase with an effective amount less than 1% of a catalytic material selected from the group consisting of the chlorides and bromides of antimony, in combination with a small amount of free hydrogenhalide selected from the group consisting of hydrogen chloride and hydrogen bromide, said treating step being carried on at temperatures between about 50° C. and 165° C. for a time sufficient to effect polymerization of at least some of the rosin.



2,454,797
RADIO-ELECTRIC RECEIVER, PARTICULARLY FOR WATCH ON BROAD FREQUENCY BANDS
René Hardy, Lyon, France, assignor to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application May 24, 1943, Serial No. 488,294
In France May 17, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires May 17, 1961
25 Claims. (Cl. 343—115)

1. A combined transmission supervision and direction finding system comprising a receiver, means to tune said receiver through a predetermined band of frequencies, an indicating device, means to produce an indication on said device each time said receiver receives a signal from a transmitter, means to separate the indications thus produced so as to identify the frequencies corresponding thereto, a direction finding antenna system associated with said receiver, means to change the directivity of said antenna system, and means to indicate on said indicating device a direction of any particular transmitter being received by said receiver.

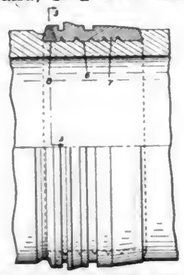
18. A combined transmission supervision and monitoring system comprising a control receiver, means to tune said control receiver through a predetermined band of frequencies, an indicating device, means to produce an indication on said device each time said receiver receives a signal from a transmitter, means to separate the indications thus produced on said indicating device in a predetermined manner so that the frequency of the signals received may be identified, a monitoring receiver, means to tune said receiver through said same band of frequencies, and means to produce on said indicating device an indication corresponding to the frequency at which said monitoring receiver is tuned.

2,454,798
CENTRIFUGAL SEPARATION OF SOLIDS ACCORDING TO SPECIFIC GRAVITY
Joseph Harrington, Riverside, Ill.
Application March 21, 1945, Serial No. 583,953
3 Claims. (Cl. 209—155)

1. In a device of the class described, in combination with a rotatable turret or head, a pair of screens disposed concentrically about and spaced from the edge of said turret, said turret being provided with a series of spaced apart, radial channels, means providing a series of chambers in said channel, said chambers opening at the outer periphery of the turret adjacent one of said screens, means providing a horizontal imperforate partition dividing said chamber and screens into screened compartments, means for delivering liquid carrying solids of different specific gravities therein to said turret to cause said turret to centrifuge said liquids into said chambers, means for delivering controlled additional liquid to said chambers in sufficient amounts whereby the major portion of the liquid in said chambers will not pass through one of said screens but will back up in said chambers and flow inwardly toward the center of rotation of the turret, means disposed between said chambers and the axis of rotation of said turret for conducting said backed up liquid into a channel that is separate from said chamber, means for delivering said backed up liquid carrying the lighter constitutent to said second screen under the influence of centrifugal force created by said turret for causing said liquid to pass through said second screen and said lighter constituent to be retained by said second screen, and means for collecting said last mentioned retained constituent from said second screen.

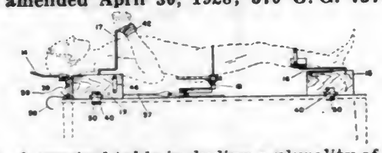
2,454,799
METHOD OF PRODUCING PROTECTIVE COATINGS ON MAGNESIUM POWDER
David Hart and Henry J. Eppig, Dover, N. J.
No Drawing. Application December 9, 1944, Serial No. 567,500
1 Claim. (Cl. 148—6.21)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

The method of producing a moisture resistant coating on magnesium powder which comprises contacting said powder for about half an hour at room temperature with a solution consisting of about 0.2 percent of an alkali metal hydrogen sulphate, from about 5 percent to about 10 percent of an alkali metal dichromate and the remainder water.



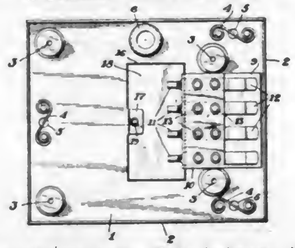
2,454,800
INSULATED ELECTRIC CABLE AND INSULATION THEREFOR
Sidney R. Hartstein, New Brunswick, N. J., and Fred Stolte, St. Albans, N. Y., assignors to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application August 4, 1945, Serial No. 608,875
18 Claims. (Cl. 174—28)

1. In an electric cable having a longitudinal conductor, insulation surrounding said conductor and comprising finely divided air-retaining diatomaceous silica incorporated in a binder of strong and flexible insulating material.



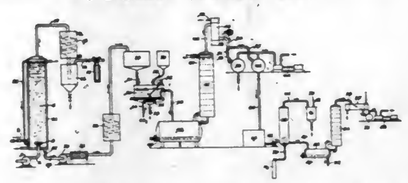
2,454,801
ROTATING BAND
Harold H. Himmer, Aberdeen, Md.
Application April 23, 1945, Serial No. 589,829
4 Claims. (Cl. 102—93)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In combination with a rotating band of gilding metal for a projectile; a steel band mounted on the projectile and directly behind the rotating band, said steel band being of a



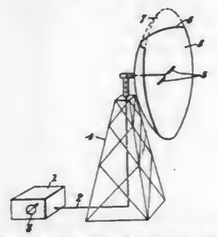
smaller external diameter than the rotating band and of a greater diameter than the projectile.

2,454,802
PORTABLE SURGICAL TABLE
Herbert E. Hipps, United States Navy
Application May 4, 1945, Serial No. 592,053
9 Claims. (Cl. 311—7)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A surgical table including a plurality of platforms and means for detachably securing them together to define a base assembled upon a common horizontal support and comprising adjacent thigh platforms having edge recesses which form an opening in the base, a pelvic rest positioned in the opening and having a post extending upwardly through the opening and a pair of diverging supporting bars at opposite sides of the post, and adjustable head, arm, and leg rests supported by other platforms forming the table.

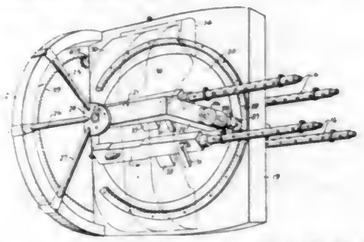
2,454,803
CONNECTING BASE PLATE
Ignatius J. Israelski, Jersey City, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application January 20, 1945, Serial No. 573,795
2 Claims. (Cl. 173—328)



1. A connecting base plate between two electrical devices, comprising a box open at the bottom, a top plate substantially flat, a plurality of terminals insulatedly fastened to said top plate within the box, a plurality of contact springs, each of which is connected with one of said terminals, said fastening and connecting means being such as to maintain both the terminals and spring contacts accessible through openings in said top plate, said contact springs being adapted to receive contact bolts of one of the said electrical devices, and portions of said base plate being depressed from the plane of said top toward the plane of its open bottom, and perforated to secure said plate to the substantially plane surface of the other one of said electrical devices.

2,454,804
MANUFACTURE OF TETRALOL
Robert Johnson, Verona, Pa., assignor to Koppers Company, Inc., Pittsburgh, Pa., a corporation of Delaware
Application March 20, 1946, Serial No. 655,773
6 Claims. (Cl. 260—618)

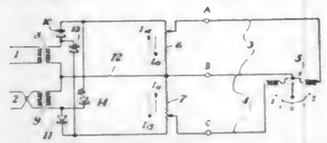
1. A process for the production of alpha tetralol from tetralin comprising the steps of: passing a gas containing oxygen through tetralin in liquid phase containing in suspension about 1 per cent of a comminuted metal carbonate catalyst and oxidizing tetralin to tetralin peroxide at a temperature between about 80° and 120° C.; treating the tetralin oxidation reaction product with an aqueous caustic solution at a temperature between about 60° and 120° C. to convert the tetralin peroxide to a mixture of alpha tetralone and alpha tetralol; decanting an oily mixture of tetralin, tetralone, and alpha tetralol from the caustic solution; distilling the decanted mixture in vacuo and separating tetralin therefrom; adding copper-oxide chromium-oxide catalyst to the remaining mixture of alpha tetralone and alpha tetralol; subjecting the admixture to hydrogen under pressure and at a temperature between about 90° to 110° C. and thereby hydrogenating alpha tetralone to alpha tetralol; distilling under vacuum to recover alpha tetralol.



2,454,805
VERTICAL SCANNING ANTENNA-REFLECTOR SYSTEM
Armig G. Kandoian, New York, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application May 7, 1945, Serial No. 592,409
2 Claims. (Cl. 250—33.65)

1. A method for scanning a given vertical angular zone by means of the electromagnetic radiation of a transmitter, comprising producing a given vertical pattern at a given frequency and at a constant power output, introducing a distortion in said pattern to improve the relative field

intensity in a given angular zone by diverting radiating power to said zone, and progressively varying the frequency of transmission, whereby said distortion progressively changes its position with the change in frequency to scan said given zone.

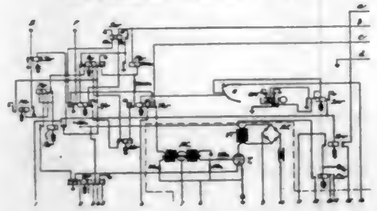


2,454,806
MEANS FOR MOUNTING MACHINE GUNS IN AIRPLANES
Paul H. Kemmer, Fairfield, and Carl E. Reichert and Charles S. Butt, Jr., Dayton, Ohio
Application July 9, 1943, Serial No. 493,982
3 Claims. (Cl. 89—37.5)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A gun turret structure having a field of fire covering a spherical sector with a vertex angle greater than 180° for use on opposite outboard positions of an aircraft to provide a complete sphere of fire about the aircraft comprising; an annular base member adapted to be secured to an aircraft structure; a cup-shaped turret member having an axis of revolution passing concentrically through an open end thereof, said turret member adjacent its open end and said annular base member being juxtaposed in relatively movable concentric relation wherein said turret member may rotate about said axis of revolution throughout 360°; operator-controlled power actuated means operatively associated with said cup-shaped turret and annular base members to power rotate said cup-shaped turret member; a U-shaped gun mount journaled at the ends thereof within said cup-shaped turret member rotatable about an axis perpendicular to said cup-shaped turret member axis of revolution through an angle greater than 180°; a turret support having a circular opening therein concentric to said gun mount axis in which the closed portion of said U-shaped gun mount is operable in an arc in close relation to the periphery of said circular opening; gun means mounted on said gun mount to point substantially radially outward from said gun mount axis of rotation, said cup-shaped turret member having slots therein through which said gun means are operative; and operator-controlled power actuated means operatively associated with said turret support and said U-shaped gun mount to power rotate said gun mount about its axis whereby said gun means are actuatable to be directed throughout a sperical field of fire greater than a hemisphere.

2,454,807
CONTROL CIRCUITS
Arthur Kennedy, Wood-Ridge, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application January 23, 1946, Serial No. 642,937
5 Claims. (Cl. 175—363)

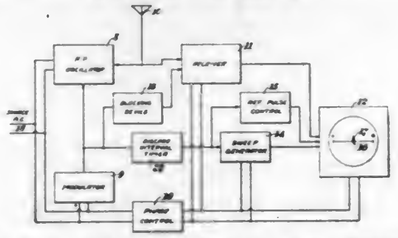
2. A control circuit comprising a pair of potentiometers, two sources of voltage to be compared, and two rectifiers, connections from one source through one rectifier to one potentiometer, connections from the second source through the second rectifier to the second potentiometer, means including a third rectifier for passing a direct current component of said one source through said second potentiometer opposite in direction to the current from said second source,



including a fourth rectifier means for passing a direct current component of said second source through said one potentiometer opposite in direction to the current from said one source, and a center connection joining a point on the connection between the two sources of voltage with a point of the connection between the two potentiometers.

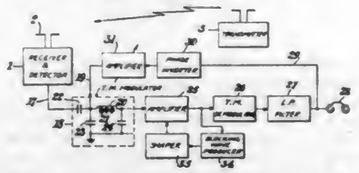
2,454,808
REAGENT AND PROCESS FOR RESOLVING EMULSIONS
Willard H. Kirkpatrick and Doyne L. Wilson, Sugar Land, Tex., assignors to Visco Products Company, Houston, Tex., a corporation of Delaware
No Drawing. Application February 23, 1946, Serial No. 649,744
8 Claims. (Cl. 252—342)

1. A process for breaking emulsions of the water-in-oil type comprising subjecting the emulsion to the action of a blown mixed ester of a polyhydric alcohol and a mixture of at least two dissimilar unsaturated carboxy acids wherein at least one of said acids is a carbocyclic resin acid and another of said acids is a fatty acid having at least 8 and not more than 32 carbon atoms in the chain, the total acids forming the lesser of said carboxy acids component being at least 30% by weight of the whole of said carboxy acids mixture, said ester being blown to a soft, viscous condition.



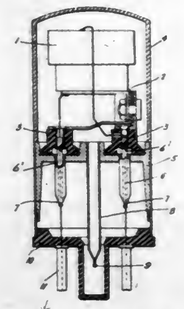
2,454,809
TELEPHONE SYSTEM UTILIZING REGISTER CONTROLLED FINAL SELECTOR SWITCHES
Jacob Kruithof, Ladislas Kozma, and Martinus den Hertog, Antwerp, Belgium, assignors to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application January 16, 1943, Serial No. 472,624
In the Netherlands June 10, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires June 10, 1961
22 Claims. (Cl. 179—18)

1. In a telephone exchange system, a plurality of numerically designated lines, switching means including final selectors for connecting a calling



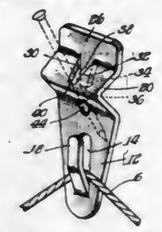
with a called line, each of said selectors having sets of bank contacts to which lines are connected, brushes cooperating with said contacts, means for moving said brushes over said contacts in succession, a register controller, an impulse device associated with the calling line for operating said register controller in accordance with the designation of the called line, switches for associating said register controller with a final selector, means directly controlled by the register controller for operating said brushes to select a line in accordance with the tens and units designations thereof, and signals characteristic for the lines sent through the moving brushes of the final selector to the register controller controlling the operation thereof.

2,454,810
RADIO TRANSMITTING AND RECEIVING SYSTEM
Emile Labin, New York, N. Y., assignor to Federal Telephone and Radio Corporation, Newark, N. J., a corporation of Delaware
Application January 23, 1943, Serial No. 473,310
18 Claims. (Cl. 343—5)



7. A method of operating a radio detection system having a transmitter to transmit recurring impulses and a receiver together with a cathode ray oscillograph to receive and indicate echoes of the transmitted impulses, which method comprises energizing simultaneously directly the circuits of the system with alternating current, correlating the generation of a sweep potential for the oscillograph to occur in synchronism with the occurrence of said impulses, and causing the peak portions of said current to occur in the circuits of said receiver and said oscillograph during the sweep interval of said oscillograph.

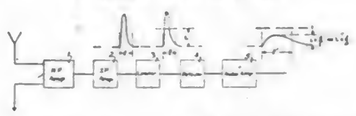
2,454,811
PULSE SIGNALING SYSTEM
Emile Labin, New York, and Donald D. Grieg, Forest Hills, N. Y., assignors to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application April 17, 1945, Serial No. 588,844
17 Claims. (Cl. 250—20)



1. A method of changing the time displacement of time modulated pulses comprising demodulating the time modulated pulses to obtain the signal energy thereof, and time modulating the time modulated pulses with the energy thus obtained.

2,454,812
ELECTROMECHANICAL AMPLIFIER
Marc A. Lalande, Lyon, France, assignor to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application November 29, 1943, Serial No. 512,123
In France March 23, 1940
3 Claims. (Cl. 179—171)

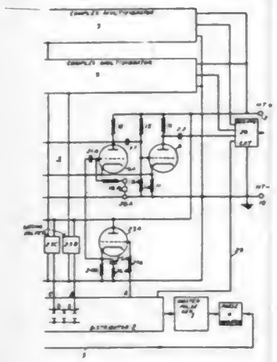
1. An electro-mechanical telephone amplifier unit comprising, a cup-like metal shell having a cylindrical side wall terminating at one end in a circular opening, a base plate covering and sealing said opening, a plurality of insulated connector pins rigidly mounted on said base plate and projecting away from said shell, a metal partition dividing the space within said shell into a base compartment adjacent said base plate and a working compartment remote from said base plate, insulating means mounted on said partition within said working compartment, an electro-mechanical telephone amplifier unit of the acoustically coupled type positioned within said work compartment and supported on said insulating means out of direct contact with said shell, a plurality of lead wires extending through said partition and said base compartment and electrically insulated from each other and connected to said connector pins to provide electrical connections to said amplifier unit, and a body of gas filling said working chamber and surrounding said amplifier unit to provide the acoustical coupling for said amplifier unit, said gas having a high thermal conductivity as compared with air whereby the heat produced by the operation of said amplifier unit is transmitted efficiently to the surrounding metal walls of said shell with the result that the heat is dissipated rapidly and at a steady rate.



2,454,813
PICTURE HANGER
Charles O. Larson, Sterling, Ill.
Application November 27, 1944, Serial No. 565,331
7 Claims. (Cl. 248—32)

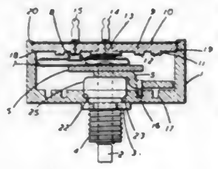
1. A picture hanger comprising a fastener of relatively flat sheet metal of a single and uni-

form thickness throughout, said fastener being formed adjacent one end with means for suspending the cord of a picture to be hung, a part of the fastener spaced from said means being bumped or formed outwardly transversely of its length in angular formation, the fastener on either side of the bumped out portion presenting flat surfaces in a common plane, one of the inner walls of the substantially V-shaped bumped out portion providing a nail shank guiding surface, the other angularly disposed wall of the V-shaped bumped out portion being slitted to provide a free tongue and a nail receiving slot or hole, one end of the slot lying substantially in the plane of the nail guiding surface, and the edge of the free tongue being bent downwardly into substantially the same plane as the common plane of the flat portions with its edge lying opposite the aforesaid wall guiding surface, and spaced therefrom a distance slightly less than the shank of the nail received through the nail opening whereby the shank of said nail is supported first by one end of the nail slot and by the nail guiding surface and by the oppositely located edge of the free tongue, said nail contacting portions of the fastener serving as guides for guiding the nail at the proper angle into the wall.



2,454,814
INTERFERENCE REDUCING RADIO RECEIVER
Gerard J. Lehmann, New York, N. Y., assignor to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application April 13, 1943, Serial No. 482,909
In France August 30, 1941
5 Claims. (Cl. 250—20)

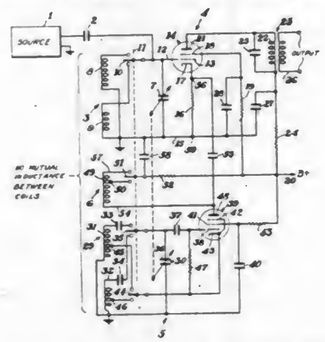
1. In a radio receiver, the combination of a high frequency amplifier having a wide frequency band width, with respect to the maximum signal frequency band transmitted, a further amplifier stage having a frequency band width equal to the maximum signal-frequency to be transmitted, and coupling means comprising an amplitude limiting device and passing the frequency band width of said high frequency amplifier, interconnecting said amplifiers, the said amplifier having a band width equal to the maximum signal-frequency being constituted by a stage of audio-frequency amplification.



2,454,815
MULTICHANNEL PULSE COMMUNICATION SYSTEM EMPLOYING COMPLEX MULTIVIBRATOR MODULATORS
Maurice Moise Levy, London, England, assignor to Standard Telephones and Cables Limited, London, England, a British company
Application November 10, 1945, Serial No. 627,947
In Great Britain October 3, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires October 3, 1964
17 Claims. (Cl. 179—15)

12. A transmitter for a multichannel electric pulse communication system comprising one or more complex multivibrators comprising a group of two or more amplifying valves having corresponding electrodes connected in parallel, means for rendering all the said valves non-conducting, a further amplifying valve, circuit means coupling said valves to said further amplifying valve for multivibrator operation, and means for conditioning a selected one of the said valves to operate in conjunction with said further amplifying valve to generate an electric pulse while maintaining all the other valves of the said group in a non-conducting condition; a master pulse generator adapted to supply regularly repeated master pulses to a pulse distributor, means for deriving a plurality of separately timed sensitizing pulses from the distributor in response to

each master pulse, means for applying the sensitizing pulses in rotation to the group valves of the said complex multivibrators, means for applying respective channel modulating signals to each of the said group valves, means for deriving time-phase modulated channel pulses from the separate amplifying valves of each complex multivibrator, means for mixing the said channel pulses with synchronizing pulses derived from the said distributor, and means for transmitting the mixed pulses over a communication medium.

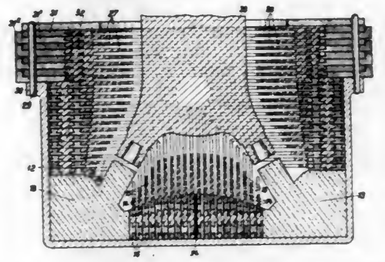


2,454,816
POTENTIOMETER
Maurice Moise Levy, London, England, assignor to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application October 22, 1946, Serial No. 704,972
In Great Britain February 14, 1946
1 Claim. (Cl. 201—55)

An electrical potentiometer of box-like form comprising a spindle mounted axially in the box, a roughly spiral resistance element on the interior surface of one end plate, a roughly spiral guide on the interior surface of the other end plate and furnished with positive end stops, the spindle carrying a rotatable assembly comprising a first radial arm carrying a first cursor cooperating with the spiral resistance strip, a second radial arm carrying a second cursor co-operating with the spiral guide, and a wiper electrically connected to the first cursor and wiping over a fixed contact disc plate mounted on the

end plate carrying the spiral resistance whereby there is continuous electrical connection between the resistance strip and the fixed contact plate through the first cursor.

2,454,817
MIXER CIRCUIT ARRANGEMENT
Lester L. Libby, East Orange, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application December 27, 1944, Serial No. 569,964
4 Claims. (Cl. 250—20)



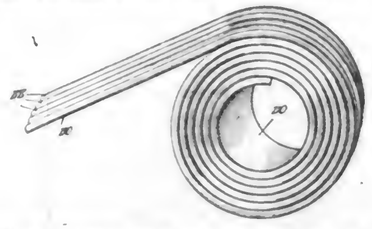
1. A source of alternating current energy, an oscillator including a tank circuit, a mixer adapted to mix energy from said source and said oscillator, said mixer having an input circuit coupled to said source, said input circuit and said tank circuit each being adapted to be tuned over a band of frequencies with the tank circuit tracking said input circuit, and a tuned circuit coupling the oscillator and mixer, said tuned circuit being fixedly tuned to a frequency at the lower end of the tank circuit band of frequencies.

2,454,818
GUN RECOIL SPRING SURGE DAMPENER
Victor F. Lucht, Washington, D. C.
Application March 7, 1946, Serial No. 652,754
8 Claims. (Cl. 89—44)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a recoiling gun, a cylindrical cradle fixed against recoil and counterrecoil and provided with interior bearing elements, a gun tube mounted concentrically within said cradle and slidably carried by said bearing elements for recoil and counterrecoil, a breech ring on said gun tube, a support fixedly mounted on said cradle and extending breechwardly alongside said breech ring, first cooperable guide elements carried respectively by said breech ring and said support and relatively slidable in the directions of recoil and counterrecoil but interlockable against twisting action of said gun tube on its axis with respect to said cradle, the breechward extent of the interlocking effectiveness of said guide elements being less than the length of the recoil stroke of said gun tube, and second cooperable guide elements carried respectively by said gun tube and said cradle muzzlewardly of said first guide elements and relatively slidable in the directions of recoil and counterrecoil but interlockable against twisting action of said gun tube about its axis with respect to said cradle, said second guide elements being arranged to take effect prior to the end of the effectveness of said first guide elements and to continue effective during completion of the recoil stroke.

2,454,819
MOLD
Ernest Mayer, Leipzig, Germany; vested in the Attorney General of the United States
Original application April 8, 1941, Serial No. 387,531. Divided and this application January 12, 1945, Serial No. 572,575. In Germany November 25, 1939
6 Claims. (Cl. 22—126)

1. A mold comprising a core, a group of superposed sand core plates disposed in face to face contact and positioned edgewise in spaced relation to said core, a metal holder plate secured remote from said core to another edge of each sand core plate, and conduit means formed between the metal plates for permitting passage of gas and air from said core plates.



2,454,820
MAKING HEXACHLOROBUTADIENE
Earl T. McBee, West Lafayette, Ind., and Lawrence W. Devaney, Beacon, N. Y., assignors to Purdue Research Foundation, West Lafayette, Ind., a corporation of Indiana
No Drawing. Application December 4, 1944, Serial No. 566,650
5 Claims. (Cl. 260—655)

1. The method which includes: continuously passing a mixture of a chlorinated butane averaging between about four and about eight chlorine atoms per molecule and chlorine in excess of that theoretically required to convert said chlorobutane to perchlorobutane into a reaction zone maintained at a temperature between about 425° and about 550° centigrade; and, separating hexachlorobutadiene from the reaction product.

2,454,821
GLAZING AND CAULKING MATERIAL
Philip L. McKee, Pana, Ill., assignor to National Greenhouse Co., Pana, Ill., a corporation of Illinois
Application February 2, 1944, Serial No. 520,771
14 Claims. (Cl. 20—56.4)

12. An article of manufacture comprising a spirally wound roll of plastic weatherstripping formed of a plurality of parallel uniformly tacky strands of inelastic putty-like insulating material and a carrier having surfaces common to adjacent strands and adhesively securing the strands in lateral juxtaposition, and said roll being releasably held in spiral form by adhesion of each

individual strand of an inner winding with an outer winding of the roll, whereby an end strand

may be entirely detached without unwinding the companion strands.

2,454,822

LUBRICANTS FOR TEXTILE MATERIALS

Abraham Moscowitz, New York, N. Y., assignor to L. Sonneborn Sons, Inc., a corporation of Delaware

No Drawing. Application November 21, 1946, Serial No. 711,475

6 Claims. (Cl. 252—8.7)

1. A textile treating agent which comprises a hydrocarbon textile lubricating oil and substantially dissolved therein at least 28% alkali metal petroleum mahogany sulfonate obtained by reacting a petroleum mahogany sulfonate solution in an organic substantially water immiscible solvent for said sulfonate, with an oxidation agent selected from the group consisting of oxidation agents having an oxidation potential in such solution by reason of "available" O_2 and those having an oxidation potential in such solution by reason of "available" Cl_2 in amount and for a period of time sufficient to yield for its said at least 28% sulfonate solution a Saybolt viscosity at 100° F. of not in excess of 600 seconds.

2,454,823

VISCOSITY REDUCTION OF PETROLEUM MAHOGANY SULFONATE HYDROCARBON SOLUTIONS

Abraham Moscowitz, New York, N. Y., assignor to L. Sonneborn Sons, Inc., a corporation of Delaware

No Drawing. Application November 21, 1946, Serial No. 711,476

8 Claims. (Cl. 260—504)

1. Process for reducing the viscosity of petroleum mahogany sulfonate solutions, which comprises treating a petroleum mahogany sulfonate solution in an organic substantially water-immiscible solvent for said sufonate with an alkali metal chlorite and an alkali metal hypochlorite in a proportion of 0.5 to 4 parts by weight of hypochlorite for every 1 part by weight of chlorite and in amount and for a period of time sufficient to appreciably reduce the normally relatively high viscosity of said solution due to the sulfonate dissolved therein.

2,454,824

VISCOSITY REDUCTION OF PETROLEUM MAHOGANY SULFONATE HYDROCARBON SOLUTIONS

Abraham Moscowitz, New York, N. Y., assignor to L. Sonneborn Sons, Inc., a corporation of Delaware

No Drawing. Application November 23, 1946, Serial No. 711,834

10 Claims. (Cl. 260—504)

1. Process for reducing the viscosity of petroleum mahogany sulfonate solutions which comprises treating the petroleum mahogany sulfonate solution in an organic substantially water immiscible solvent for said sulfonate at an acid pH with elemental chlorine in amount and for a period of time sufficient to appreciably reduce the normally relatively high viscosity of said solution due to the sulfonate dissolved therein.

2,454,825

VISCOSITY REDUCTION OF PETROLEUM MAHOGANY SULFONATE HYDROCARBON SOLUTIONS

Jacob Faust, Belleville, N. J., assignor to L. Sonneborn Sons, Inc., a corporation of Delaware

No Drawing. Application November 23, 1946, Serial No. 711,837

10 Claims. (Cl. 252—33.4)

1. A viscosity reduced petroleum mahogany sulfonate solution which essentially consists of a petroleum mahogany sodium sulfonate solution in an organic substantially water immiscible solvent for said sulfonate having normally a relatively high viscosity due to said sulfonate dissolved therein of in excess of 600 seconds Saybolt at 100° F. for a sulfonate content of at least 28%, and, substantially dissolved in said solution at least one phthalic acid derivative selected from the group consisting of substantially oil soluble phthalic acid esters of alkylene glycols, phthalic acid esters of alkylene glycol ethers and alkyl phthalates in amount sufficient to appreciably reduce said normally high viscosity to below 600 seconds Saybolt at 100° F.

2,454,826

VISCOSITY REDUCTION OF PETROLEUM MAHOGANY SULFONATE HYDROCARBON SOLUTIONS

Leo Liberthson, New York, N. Y., and Jacob Faust, Belleville, N. J., assignors to L. Sonneborn Sons, Inc., a corporation of Delaware

No Drawing. Application November 23, 1946, Serial No. 711,838

7 Claims. (Cl. 252—33.4)

1. Process for reducing the viscosity of petroleum mahogany sodium sulfonate solutions which comprises reacting a petroleum mahogany sodium sulfonate solution in an organic substantially water immiscible solvent for said sulfonate, said solution containing at least about 28% of said sulfonate and having a viscosity of in excess of 600 seconds Saybolt at 100° F. by reason of said sulfonate, with an oxidation agent having an oxidation potential in said solution by reason of "available" O_2, and selected from the group consisting of chromic acid, dichromates, permanganates, perchlorates and peroxides, in amount and for a period of time sufficient to reduce the said viscosity of such hydrocarbon solution to a point sufficiently low to yield for a sulfonate content of said solution of 28 to 40%, a viscosity below 600 seconds Saybolt at 100° F.

2,454,827

VISCOSITY REDUCTION OF PETROLEUM MAHOGANY SULFONATE HYDROCARBON SOLUTIONS

Abraham Moscowitz, New York, N. Y., assignor to L. Sonneborn Sons, Inc., a corporation of Delaware

No Drawing. Application February 21, 1947, Serial No. 730,200

9 Claims. (Cl. 260—504)

1. Process for reducing the viscosity of petroleum mahogany sulfonate solutions which comprises treating a petroleum mahogany sulfonate solution in an organic substantially water immiscible solvent for said sulfonate at a neutral to alkaline pH substantially of from 7 to 9 with chlorine dioxide in amount and for a period of time sufficient to appreciably reduce the normally relatively high viscosity of said solution due to the sulfonate dissolved therein to a point sufficiently low to yield for a 28–40% solution of said sulfonate in a petroleum hydrocarbon a viscosity below 600 seconds Saybolt at 100° F. said solvent being substantially inert to the action of chlorine dioxide.

2,454,828

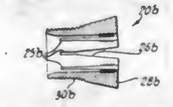
VISCOSITY REDUCTION OF PETROLEUM MAHOGANY SULFONATE HYDROCARBON SOLUTIONS

Jacob Faust, Belleville, N. J., assignor to L. Sonneborn Sons, Inc., a corporation of Delaware

No Drawing. Application July 1, 1947, Serial No. 758,463

7 Claims. (Cl. 252—33.4)

1. A viscosity reduced petroleum mahogany sulfonate solution which essentially consists of a petroleum mahogany sodium sulfonate solution in an organic substantially water immiscible solvent for said sulfonate having normally a relatively high viscosity due to said sulfonate dissolved therein of in excess of 600 seconds Saybolt at 100° F. for a sulfonate content of at least 28%, and, substantially dissolved in said solution 0.5 to 5% of at least one member selected from the group consisting of substantially oil soluble diethylene glycol and diethylene glycol alkyl ethers.



2,454,829

ELECTRICAL CONNECTOR

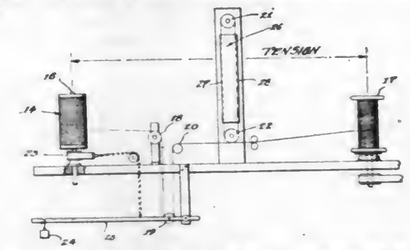
Kenneth Neijstrom, Harrisburg, Pa., assignor to Aircraft-Marine Products, Inc., Elizabeth, N. J., a corporation of New Jersey

Application January 7, 1944, Serial No. 517,313

1 Claim. (Cl. 287—75)

An electrical connector collet including an integrally formed annulus and exteriorly flared end portion: said end portion being divided into prongs by longitudinally extending slots which flare in a direction away from said annulus, each arm being integrally carried by said annulus, the radial thickness of each arm being progressively less as measured inwardly from its free end, there being a substantially cylindrical bore extending axially longitudinally straight through said annulus and end portion, the grain of the metal in said prongs running longitudinally of said end portion and following the outward flare of said prongs, and the exterior surfaces of said end portion being of the compacted metal which is found on the surface of cold rolled stock, bar stock, and the like.

2,454,830



TENSIONED ROVING AND METHOD OF FORMING SAME

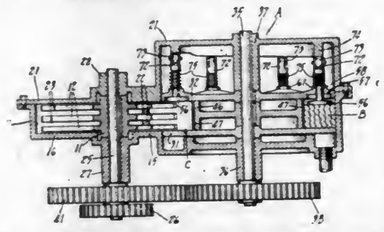
Russell B. Newton, Danville, Va., assignor to Dan River Mills, Incorporated, a corporation of Virginia

Application October 14, 1944, Serial No. 558,635

3 Claims. (Cl. 28—75)

1. The method of bonding fibers to form a filament like linear element of high density and tensile strength, which comprises impregnating roving with material to act as a bonding agent, stretching said roving to substantially its breaking point, setting said material while said roving

is so stretched to form a final product without spinning, and coating the final product with a material such as latex and the like to form a smooth surface.



2,454,831

CONVEYER TO FISH CANNING MACHINE

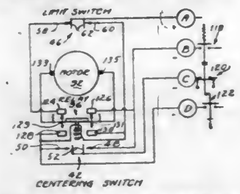
Ronald E. J. Nordquist, Maplewood, N. J., assignor to American Can Company, New York, N. Y., a corporation of New Jersey

Application May 29, 1946, Serial No. 673,113

8 Claims. (Cl. 198—210)

7. In a fish canning machine, the combination of a supply tunnel for fish storage, a pair of spaced rotatable discs disposed adjacent said tunnel and constituting a pair of oppositely disposed movable walls of said tunnel for advancing cut pieces of fish through the tunnel, a plurality of yieldable clamping plates carried by one of said discs for clamping the fish pieces in place against the other of said discs during the travel of the fish pieces through the tunnel, and cam means for moving said clamping plates into and out of clamping position.

2,454,832

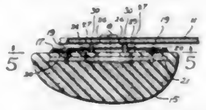


ELECTRIC SERVO

Charles L. Paulus, Dayton, Ohio

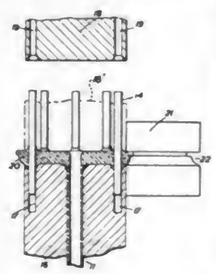
Application February 20, 1946, Serial No. 649,107

3 Claims. (Cl. 318—282)



(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In an electric servo unit having a frame, an output shaft having bearings in said frame and



adapted to rock in said bearings, an electric motor, said motor having first and second terminals carried by said frame, and a speed reducing gear train connecting said motor to said output shaft, the improved control mechanism which comprises a first power terminal of one polarity, a second, a third and a fourth power terminal of the other polarity, a relay coil, relay first and second contact members, relay third and fourth contact members, relay fifth and sixth contact members, yieldable means biasing said relay fifth and sixth contact members into engagement with said relay first and second contact members respectively, a relay core operative upon energization of said coil to move said relay fifth and sixth contact members into engagement with said relay third and fourth contact members, respectively, centering switch first and second contact members, a centering switch third contact member normally out of electrical contact with the centering switch first and second contact members, a centering switch cam operative when rotated one direction to engage said centering switch third contact member with said centering switch second contact member and operative when rotated in the other direction to engage said centering switch third contact member with said centering switch first contact member, limit switch first and second contact members, a limit switch third contact member normally in electrical contact with the limit switch first and second contact members, a limit switch cam operative when rotated in one direction to disengage the limit switch third contact member from the limit switch first contact member, and operative when rotated in the other direction to disengage the limit switch third contact member from the limit switch second contact member, and electrical conductors connecting said first power terminal to the limit switch third contact member; connecting said second power terminal to the centering switch first contact member and the relay second contact member; connecting said third power terminal to the centering switch third contact member; connecting the said fourth power terminal to the said centering switch second contact member, to one end of said relay coil and to said relay third contact member; connecting the other end of said relay coil to the said relay fourth contact member and to the limit switch second contact member; connecting the said relay first contact member to the said limit switch first contact member; and connecting the said relay fifth and sixth contact members to the motor first and second terminals, respectively.

2,454,833
TRUSS
Wilbert C. Pfahl, Silver Lake, Ohio
Application July 13, 1946, Serial No. 683,521
3 Claims. (Cl. 128—106)

1. An attachment for truss pads or the like to be mounted on a truss frame or similar supporting part, comprising a backing plate having a circular opening therein, means for releasably securing said plate to a truss pad, outer and inner disc-like elements of greater size than said plate opening for spanning between the edge portions thereof at opposite sides of the plate, adjustable means operable from the inner side of said plate for clamping said elements together against said opposite sides of the plate in various rotatably adjusted positions relatively of the plate about the center of said opening thereof, and means on said outer element independently of said adjustable means for securing the attachment to said supporting part.

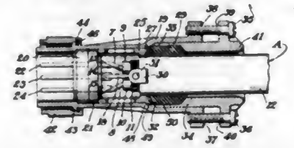
2,454,834
MANUFACTURE OF BASE ASSEMBLIES FOR ELECTRIC DISCHARGE TUBES
Stephen John Powers, London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application January 12, 1944, Serial No. 517,945
In Great Britain April 21, 1943
5 Claims. (Cl. 49—78)

1. The method of making a base assembly for an electric discharge tube which comprises locating conductor wires in peripheral slots of a disc of fusible material, softening the disc by heat, squeezing the disc to press the disc into contact with the wires, and applying a rolling action around the edge of the disc in such a manner as to close the slots around the wires so that the wires are hermetically sealed in the disc.

2,454,835
N-PROPYL DIAMINODIPHENYLSULFONE AND PROCESS FOR OBTAINING SAME
Albert L. Rawlins, Grosse Pointe Woods, Mich., assignor to Parke, Davis & Company, Detroit, Mich., a corporation of Michigan
No Drawing. Application March 29, 1943, Serial No. 481,007
3 Claims. (Cl. 260—397.6)

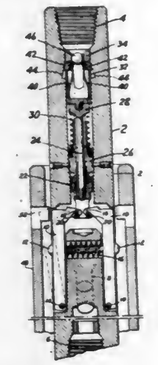
1. A compound of the formula.

2,454,836
FOOT PAD
Philip D. Rayner, New York, N. Y.
Application November 1, 1945, Serial No. 626,080
1 Claim. (Cl. 128—80)



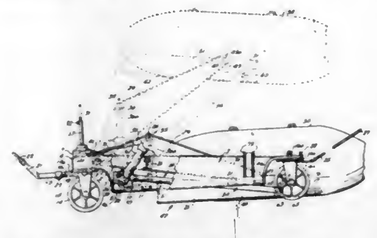
An appliance to underlie the foot for preventing undesired relaxation in the arch, said appliance comprising a fabric casing having an upper wall lying against the foot and a lower wall adapted to lie against the sole of the shoe, a form sustaining partition lying parallel to and between said walls and co-extensive therewith to hold said casing against contraction, wrinkling, and folding, a resilient strap secured at its ends to the sides of the casing for detachably securing said casing against the bottom of the foot, said bottom wall being continuous throughout its length and width and free of projections or protuberances, said upper and lower walls being joined at one end to close said casing and terminating at the other end to form an opening into said casing for the insertion of a compressible resilient cushion between said form sustaining partition and a wall of said casing, and the pull of said strap retaining said cushion against movement relatively to said casing when said casing is applied to the foot.

2,454,837
PROCESS OF SOLUBILIZING PROTOGENOUS SUBSTANCES
James A. Reyniers, Niles, Mich., assignor to Amino Acids, Inc., Wilmington, Del., a corporation of Delaware
No Drawing. Application May 17, 1946 Serial No. 670,531
2 Claims. (Cl. 99—18)



1. The hereindescribed process of producing a highly assimilable and nutritious food substance, which comprises: subjecting macerated liver, while suspended in water, to carbon dioxide under approximately 600 pounds per sq. in. pressure at a temperature of approximately 50° C. for twenty or more hours.

2,454,838
PLUG ASSEMBLY
Avery G. Richardson, Boonton, N. J., and Murray Kaplan, Brooklyn, N. Y., assignors to Federal Telephone and Radio Corporation, Newark, N. J., a corporation of Delaware
Application April 24, 1943, Serial No. 484,366
3 Claims. (Cl. 173—361)



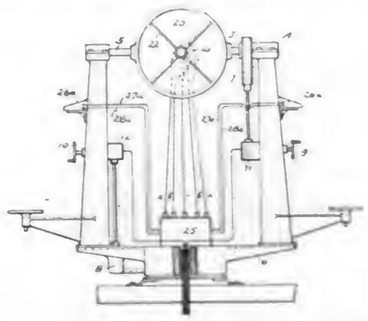
1. In a plug assembly for the extremity of an electric cable having one or more conductors, the combination of a tubular body to receive the end of said cable, a disc-shaped insert of insulating material disposed in said tubular body, a plurality of prongs positioned on one face of said disc-shaped insert, each of said prongs having a terminal on the opposite face of said insert, means forming electrical connections within said body between said terminals, respectively, and the conductors of said cable, an insert retainer sleeve within said body, adjacent said disc-shaped insert, a ring-shaped resilient member within said body, adjacent said retainer sleeve, and around said cable, a compression sleeve partially within said body, adjacent said resilient member, and around said cable, and tightening means on the exterior of said body and said compression sleeve, whereby operation of said tightening means will tend to compress said resilient member between said compression sleeve and said retainer sleeve.

2,454,839
RETRIEVING APPARATUS
Roland Ring, Houston, Tex., assignor to Sperry-Sun Well Surveying Company, Philadelphia, Pa., a corporation of Delaware
Application March 5, 1945, Serial No. 581,050
2 Claims. (Cl. 294—97)

1. Means for retrieving a whipstock from a bore hole comprising a body arranged to be included in a drill string above the bit, means carried by said body and expandible outwardly to engage a whipstock or the like, and means operable by liquid pressure to release said expandible means, said means comprising a member providing a piston normally providing free passage of liquid but arranged to be closed by an element lowered through the drill string to restrict flow and provide a closed piston movable under liquid pressure, movement of said member releasing said element so that the passage of liquid is thereafter unimpeded and so that the member may then move to its original position capable of a subsequent operation upon lowering of another element.

2,454,840
FIGHTER AIRPLANE BOMB LIFT
Warren W. Ryan, Dayton, Ohio
Application October 2, 1946, Serial No. 700,631
8 Claims. (Cl. 214—130)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A bomb transporting and elevating truck comprising a vehicle support having a pair of horizontally spaced longitudinal side frames and connecting transverse cross frame means adjacent one end of the side frames to form an unobstructed U-shaped vertical opening between the side frames facing rearwardly, a load lifting lever frame comprising laterally spaced interconnected lifting levers pivotally connected at one



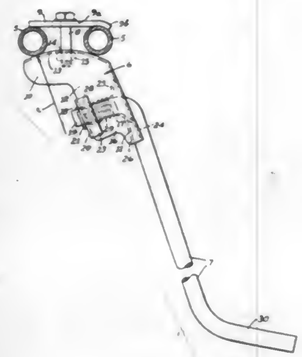
end to the cross frame means to swing vertically through the U-shaped opening adjacent the side frames, a bomb receiving carrying and lifting platform disposed between the spaced lifting levers of the lever frame having a vertical unobstructed U-shaped opening therethrough facing in the same direction as the other U-shaped opening and pivotally connected to the outer ends of the lifting levers on aligned pivots, a stabilizing link member pivotally connected at one end to the cross frame means of the vehicle support below, rearwardly, and substantially midway between the pivotal connections of the lifting levers with the vehicle cross frame means and said stabilizing link member having laterally spaced side bars extending rearwardly through the U-shaped opening of the vehicle support below the lifting levers substantially in the plane of movement of the lifting levers and connected to the U-shaped bomb receiving carrying and lifting platform below and rearwardly of the pivotal connection between the bomb lifting platform and the lifting levers, whereby upward swinging movement of the lifting lever frame elevates the bomb lifting platform from a bomb receiving position in the U-shaped opening of the vehicle support to an elevated bomb loading position above the vehicle support with the stabilizing link member stabilizing the bomb lifting platform during vertical swinging movements of the lever frame, and elevating means operable between the transverse cross frame means of the vehicle support and the lifting lever frame, connected to the lifting lever frame intermediate the opposite ends of the lifting levers for swinging the lifting levers and the bomb lifting platform upwardly out of the U-shaped opening and lowering the same from an elevated position through the U-shaped opening.

2,454,841

APPARATUS FOR DETECTING THE PRESENCE AND POSITION OF AN INVISIBLE BODY BY INFRARED RADIATION

William Sackville, United States Army, Berkeley, Calif., assignor to the United States of America as represented by the Secretary of War

Application July 16, 1938, Serial No. 219,593
3 Claims. (Cl. 250—83.3)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



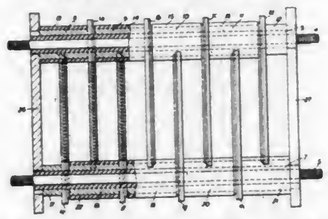
1. An apparatus of the character described, comprising a base, means supporting the base for rotation about a vertical axis, reflector supports carried by the base, a reflector swiveled between the supports for movement about an axis normal to that of said base, manual control means mounted on said supports for actuating said reflector and base about their respective axes to effect adjustment of the reflector in azimuth and elevation, detector means disposed within the focal region of the reflector, said means including a container, and a plurality of oppositely paired spaced segments of material sensitive to radiant energy annularly arranged within the container, indicating means mounted upon each of said supports, and an electro-responsive mechanism positioned upon the base and controlling said indicating means, said electro-responsive mechanism including means in electrical relation with the segments for balancing out the effect of background radiation when said segments receive an equal amount of energy stimulus and for indicating through said indicating means, changes in background radiation when the said segments receive an unequal amount of energy stimulus.

2,454,842

BICYCLE KICK STAND

Earl L. Schofield and Walter R. Lustig, Rockford, Ill., assignors to The Atwood Vacuum Machine Company, Rockford, Ill., a copartnership composed of Seth B. Atwood and James T. Atwood

Application September 3, 1946, Serial No. 694,556
7 Claims. (Cl. 280—301)



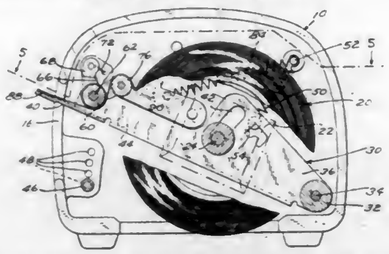
1. In a device of the character described, a one-piece sheet metal bracket bent to provide a substantially horizontal attaching portion, designed to engage the underside of a bicycle frame, and a downwardly and outwardly inclined perforated swivel bearing portion to receive a prop member, the two portions being rigidly interconnected and reinforced by opposed side flanges bent downwardly and inwardly from said attaching and bearing portions, a combination bearing and reinforcing plate of elongated form perforated intermediate the ends to receive the prop member and bent outwardly at opposite ends to provide end flanges, said plate being fastened to said bracket in transverse relation to the back of the bearing portion thereof abutting the edges of the flanges thereon, and with its end flanges abutting the outer faces of said flanges, an elongated prop member having a transverse upper end portion for pivotal support thereof designed to turn in the aforesaid perforations in said plate and in the swivel bearing portion of said bracket, and means for securing the attaching portion of said bracket to said bicycle frame.

2,454,843

METAL RECTIFIER

Arthur Mackenzie Searle, London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware

Application January 14, 1944, Serial No. 518,239
In Great Britain February 4, 1943
3 Claims. (Cl. 175—366)



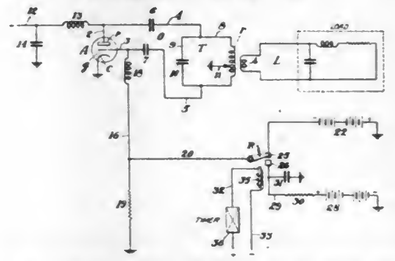
1. An assembly of dry contact rectifier discs comprising a series of discs each provided with a pair of longitudinally aligned marginal slots, a first longitudinal assembly member engaging one of the slots of certain of said discs, clamping means on said assembly member conductively interconnecting the discs thus engaged and holding the same in rigidly spaced relationship, a second longitudinal assembly member engaging one of the slots of the remaining discs, clamping means on said second member conductively interconnecting said remaining discs and holding the same in rigidly spaced relationship, means maintaining said two assembly members in spaced parallel relationship, and means for preventing the angular displacement of said discs, said last means including insulating means carried by each of said assembly members and engaging the other slot of each of the discs carried by the opposite member.

2,454,844

DISPENSER FOR MEASURED LENGTHS OF PRESSURE SENSITIVE TAPE

Everett E. Sharpe, Shelton, N. Y., assignor to Better Packages Incorporated, a corporation of New York

Application September 7, 1946, Serial No. 695,422
6 Claims. (Cl. 271—2.4)



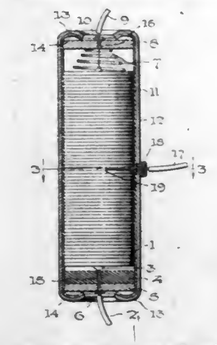
2. A tacky tape dispenser comprising a support for a supply roll of tape, an adhesion roller, a movable support for the adhesion roller permitting movement of the adhesion roller in a direction to draw tape from the supply roll and in a reverse direction, means for preventing rotation of the adhesion roller by the tension of the tape being drawn from the supply roll when the adhesion roller is moved in a direction to draw tape, and means for preventing rotation of the adhesion roller in the opposite direction after the length of tape previously drawn from the supply roll has been dispensed.

2,454,845

HIGH-FREQUENCY OSCILLATOR CIRCUIT FOR INDUCTION HEATING APPARATUS

Vernon W. Sherman, Summit, and Carson McKeag Wheeler, Montclair, N. J., assignors to Federal Telephone & Radio Corporation, New York, N. Y., a corporation of Delaware

Application May 4, 1943, Serial No. 485,582
6 Claims. (Cl. 250—36)



1. In combination: an oscillator tube having anode, cathode and control grid electrodes; a feedback oscillation circuit connected to said electrodes; a source of voltage normally connected to said grid, the potential of said source having a value which prevents oscillation being developed in said oscillation circuit; a supplemental source of voltage comprising a capacitor, a resistance, and a capacitor charging means connected in series relation, the potential of said supplemental source having a value sufficient to initiate oscillations in said circuit; and means for connecting said supplemental voltage source to said grid for a predetermined period of time.

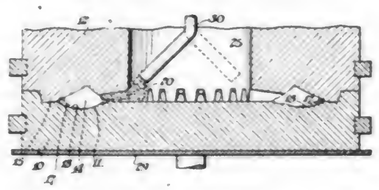
2,454,846

RECTIFIER STACK

Murray Fontaine Skinker, Montclair, N. J., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware

Application March 22, 1945, Serial No. 584,138
1 Claim. (Cl. 175—366)

A rectifier comprising a stack of rectifier elements, said stack being divided so that the elements in one portion are conductive in the opposite direction to the elements in the other portion, a metal tube enclosing said stack having a lateral opening therethrough substantially at the division between the two groups of rectifier elements, a metal disk at one end of said stack, an insulating disk intermediate said metal disk and one end of said stack, both of said disks having connecting openings through them, a



first lead wire extending through said last openings and connected to the one end of said stack, a second metal disk adjacent the other end of said tube and having an opening therethrough, spring means intermediate said second metal disk and the other end of said stack, a second lead wire extending through said last opening and connected to the other end of said stack said first lead being attached to said first metal disc, and said second lead being attached to said second metal disc, the ends of said metal tube being crimped about the edges of the two metal disks to form a rectifier stack under spring pressure within said metal tube, insulating means intermediate said metal tube on the one hand and said metal disks and said stack on the other hand, and a third lead extending through the opening in said metal tube and connected to adjacent oppositely connected elements in said stack.

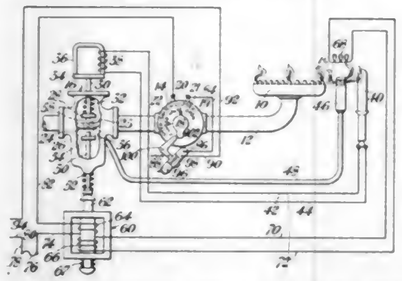
2,454,847

MOLD, MOLD CHARGING, AND MOLDING PROCESS

Fred A. Slack, Jr., Penn Valley, Pa., assignor to H. D. Justi & Son, Inc., Philadelphia, Pa., a corporation of Pennsylvania

Application April 29, 1944, Serial No. 533,298
25 Claims. (Cl. 18—34.1)

1. The method of molding utilizing a mold having a mold cavity, a passage communicating therewith and a reservoir bore which comprises feeding powdered plastic molding material into the reservoir bore, subjecting the powdered plastic material in the reservoir bore to force to transfer it from the reservoir bore through the passage and into the mold cavity, continuing the force while continuing the feeding to the reservoir bore until a compact column of powdered plastic molding material is disposed in the mold cavity and passage, feeding additional plastic material to the reservoir bore to form a termination for said column in the reservoir bore, plasticizing the column of molding material, then subjecting the plasticized material in the mold cavity to molding pressures by compression of the material in the reservoir bore by force separate and independent of the force for transferring the unplasticized material into the mold cavity.



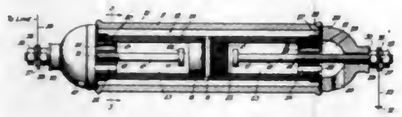
20. In molds, separable means having a common axis defining a mold having a central molding-material reservoir substantially concentric with the axis, a plurality of generally radial mold cavities, a plurality of sprue channels connecting the respective mold cavities and the reservoir, means for rotating the mold about its said common axis to subject material in the reservoir to force urging it into the sprue channels and mold cavities, said reservoir arranged to receive molding material during such rotation, and piston means separate from and operated after the mold rotation has been effective to fill the mold cavities for subjecting the material remaining in the reservoir and that disposed in the sprue channels and mold cavities to molding pressure.

2,454,848

SAFETY CONTROL SYSTEM FOR FUEL BURNERS

Charles K. Strobel, Pittsburgh, Pa., assignor to Robertshaw-Fulton Controls Company, a corporation of Delaware

Application March 2, 1945, Serial No. 580,672
15 Claims. (Cl. 158—117.1)



1. A safety control system for fuel burners having main and pilot burners, comprising in combination, electromagnetic control means biased to a position for preventing flow of fuel to at least the main burner, electromagnetic reset means operable when energized for overcoming said bias and resetting said control means in a fuel flow permitting position, means for establishing an energizing circuit means for said reset means, means responsive to the presence of a flame at the pilot burner for energizing said control means sufficiently to hold the same in said fuel flow permitting position thereof after the same has been reset by said reset means, and switching means having a timing element connected in said circuit means for rendering the same inoperative upon expiration of a predetermined period following establishment thereof and during which said control means has had time to become energized.

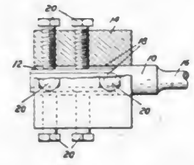
2,454,849

ELECTRIC CIRCUIT INTERRUPTER

Charles L. Stroup, Oak Park, Ill.

Application February 24, 1944, Serial No. 523,620
7 Claims. (Cl. 175—30)

1. In a device of the class described, in combination, a tubular housing of insulating material, a plug of insulating material fitting closely within said tubular housing and forming a peripheral pressure-confining arc path between the juxtaposed peripheral surfaces of said housing and said plug, at least one of said juxtaposed surfaces being capable of evolving an arc extinguishing medium when subjected to the heat of an arc, said tubular housing providing a relatively large space into which the arc extinguishing medium and the arc can expand from between said surfaces and having a discharge opening at the end away from said plug, and electrodes at opposite ends of said plug between which an arc may be struck along said peripheral pressure-confining arc path, at least one of said electrodes extending in an axial direction from the end of said plug and through



said spaces, said extending electrode being bared and its outer surface openly exposed throughout a substantial portion of its length to the adjacent peripheral end of said pressure-confining arc path whereby a fixed and axially extending conducting path is provided along which one end of an arc striking along said pressure-confining arc path anywhere about the periphery thereof is adapted, while remaining in contact with the outer surfaces of said electrode, to be forced axially of the extending electrode between its outer surface and the inner surface of said housing by the expansion of said arc extinguishing medium in said space due to the heat of the arc, said extending electrode being bared and its outer surface openly exposed to the peripheral end of said pressure-confining arc path for a length to permit extension of the arc and accompanying increase in the resistance of the arc path sufficient to render any arc to which the interrupter is likely to be subjected non-self-sustaining.

2,454,850

TORSION SPECIMEN AND HOLDER FOR SAME

Delbert M. Van Winkle, Newton, and Donald C. Buffum, Cambridge, Mass.

Application November 28, 1944, Serial No. 565,562
6 Claims. (Cl. 73—99)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

5. A torsional test specimen comprising right circular cylindrical end sections separated by an intermediate right circular cylindrical test section of lesser diameter than said end sections and coaxial with said end sections, the transition between each end section and said test section being smooth and gradual, each said end section having a plurality of uniformly spaced flats formed thereon parallel with the axis of said sections, each said flat being separated from adjacent flats by the cylindrical surfaces of the respective end sections.

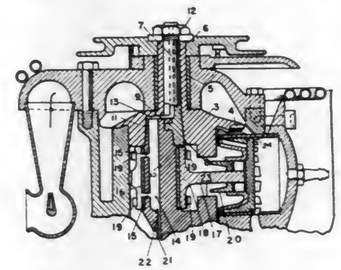
2,454,851

INSULATING MATERIAL CONTAINING POLYSTYRENE AND PLASTICIZER AND METHOD OF MAKING

Arthur J. Warner, South Orange, N. J., and Myron Bakst, Alexandria, Va., assignors to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware

No Drawing. Application June 2, 1945, Serial No. 597,381
10 Claims. (Cl. 260—29.1)

5. A composition of matter comprising high molecular weight polymerized styrene, low molecular weight polymerized styrene, and a plasticizer; the molecular weight of the high molecular weight polymerized styrene being in the range of about 60,000 to 150,000; the molecular weight of the low molecular weight polymerized styrene being in the range of about 6,000 to 30,000; and the ingredients being present in proportions falling within the following approximate ranges, by weight per cent of the total composition:



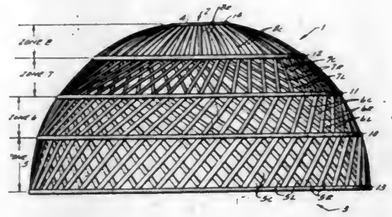
High molecular weight polymerized styrene	50 to 70
Low molecular weight polymerized styrene	18 to 30
Plasticizer	10 to 20

2,454,852

FAN BLADES IN OPENING OF ROTARY VALVE IN TWO-CYCLE SUPERCHARGED ENGINE

Douglas K. Warner, Sarasota, Fla.

Application May 20, 1946, Serial No. 670,986
8 Claims. (Cl. 123—73)



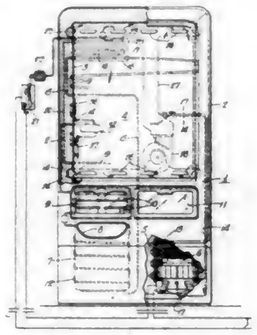
8. In a 2 cycle internal combustion engine having piston closed inlet ports, a disc acting as a valve closure and an opening therein containing fan blades, tips of said blades discharging directly into said inlet ports, inlet edges of said blades of greater length than outlet tip edges and located nearer the axis of said disc and said inlet edges curved forwardly in the direction of motion of said disc, whereby gas picked up by said fan blades may be accelerated smoothly and delivered in small amount but at very high pressure relative to a given piston speed due to said tips extending out from the center of said engine as far as said inlet ports.

2,454,853

RIBBON PARACHUTE

Friedrich S. Weinig, Stuttgart-Moehringen, Germany

Application December 10, 1947, Serial No. 790,752
13 Claims. (Cl. 244—145)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

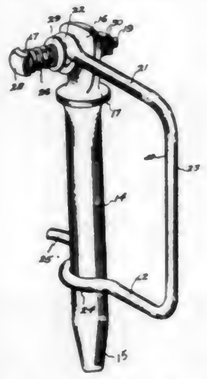


1. In a ribbon parachute canopy of substantially hemispherical shape, a plurality of adjoining circumferential sections, each composed of closely spaced strips of flexible ribbon-like material extending obliquely across each other in

opposite directions from opposite edges of the sections to form a reticulated canopy of rhombic shaped air permeation openings distributed substantially uniformly throughout the sections.

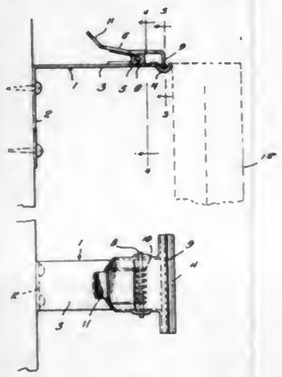
2,454,854
DRYING WOUND PACKAGES
Graeme G. Whytlaw, Swarthmore, Pa., assignor to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
No Drawing. Application October 3, 1944, Serial No. 557,062
10 Claims. (Cl. 34—7)

1. A method of drying a wound filamentary package of annular shape comprising the steps of covering the outer and end surfaces of the package with an imperforate moisture-absorbent sheet of non-fibrous material produced from a solution of cellulose and subjecting all surfaces of the wrapped package to a heated drying medium.



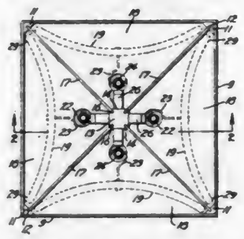
2,454,855
REFRIGERATOR HUMIDITY CONTROL
John J. Bauman, Abington, Pa., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application July 10, 1945, Serial No. 604,161
8 Claims. (Cl. 62—6)

1. In means for regulating humidity in an evaporator-cooled high humidity chamber, the combination with dehumidifying means, of an actuator for said means responsive to variation in the temperature differential between the said evaporator and the air within said chamber.



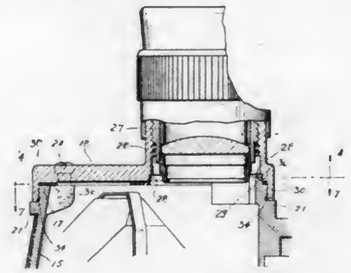
2,454,856
SAFETY COUPLING PIN FOR TRAILER HITCHES
Paul Bible, Hollis, Okla.
Application March 13, 1946, Serial No. 654,087
1 Claim. (Cl. 280—33.15)

In a coupling pin, an elongated stem having a flattened head, a threaded bolt extending transversely through said flattened head and protruding therefrom at substantially right-angles, a keeper pivotally connected at one end to said bolt, a coil spring carried by said bolt and engaging said keeper at its point of contact with said bolt, means carried by said bolt for regulating the tension of said spring and to hold the keeper in a locked position against accidental release, the keeper having an elongated bridge portion extending in spaced longitudinal relation to the stem when the keeper is in a locked position, said keeper having a locking arm at one end extending substantially at right-angles to said bridge portion and normally overlying a portion of said stem, said locking arm having a bowed portion adapted to fit snugly around a portion of said stem to lock the bowed portion of the keeper



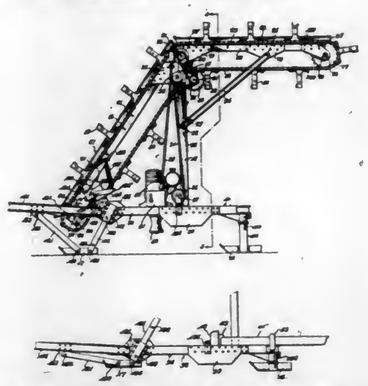
against accidental release from the stem and prevent the swinging of the keeper relative to the stem, said coil spring providing a yieldable means to hold the bowed portion of the keeper snugly positioned around said stem and against accidental release while at the same time facilitating manual release thereof.

2,454,857
CLAMP BRACKET
Edwin E. Bish, East Detroit, Mich.
Application May 29, 1945, Serial No. 596,543
2 Claims. (Cl. 248—101)



1. In a device for holding a receptacle, the combination with a vertically-disposed arm adapted to be secured to a supporting surface, and a horizontally-disposed arm having an end secured to said first-named arm, of a clamping means operatively secured to said horizontally-disposed arm, said means comprising a trough on the other end of said horizontally-disposed arm for the reception of an edge of said receptacle, a jaw member on said horizontally-disposed arm and mounted for movement into and out of contacting engagement with said trough for releasably holding the edge of said receptacle within said trough.

2,454,858
GARMENT HANGER BIN
John C. Burt, Oakland, Calif.
Application December 29, 1945, Serial No. 638,006
5 Claims. (Cl. 211—49)

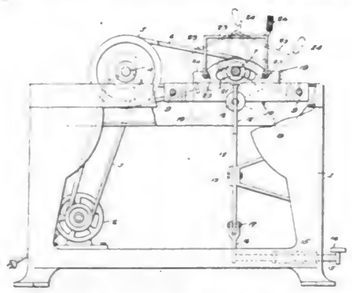


1. A portable bin for storing and displaying garment hangers having opposed ends and a hook member medially of such ends comprising a substantially horizontal rectangular base, interconnected vertical side walls rising from the respective sides of said base, a center post rising vertically from substantially the center of said base, vertical partitions extending between said center post and the junctions of said side walls and combining therewith to divide said bin into a plurality of substantially triangular shaped open top compartments adapted to receive said garment hangers, a vertical guide rod in each compartment adapted to be engaged by the hook element of said hangers, and said guide rod rising from said base being disposed with relation to spaced points on said partitions of a compartment adapted to be engaged by said opposed ends of said garment hanger, said walls and partitions and said guide rod cooperating in each compartment whereby said hangers in a plurality thereof placed in said compartment are retained in a vertically aligned stack and are restrained against substantial relative horizontal movement with respect to each other and said partitions.

2,454,859
WATER- AND WEATHERPROOFING CONSTRUCTION OF CASINGS FOR BINOCULARS
Percival H. Case, New York, N. Y., assignor to Universal Camera Corporation, New York, N. Y., a corporation of New York
Application October 25, 1944, Serial No. 560,281
3 Claims. (Cl. 88—34)

1. In a binocular, a casing comprising a body having one open end of irregular outer contour formed with a flat terminal face, a flange extending outwardly from the periphery of said body in spaced relation to said terminal face thereof, an ocular-carrying cover for said body comprising a plate mounted in juxtaposition to the terminal face of the body end and having a rim in end abutting engagement with said flange and in surrounding engagement with the outer surface of the body end, means for providing a seal inwardly of the cover rim comprising a gasket disposed between the terminal face of the body end and the opposed inner face of the juxtaposed cover plate, and means for providing a seal between the cover rim and the body end adjacent the flange inwardly of the abutting portions of said rim and flange.

2,454,860
PORTABLE ELEVATOR FOR LOADING TRUCKS
James R. Clark, Mobile, Ala.
Application January 29, 1946, Serial No. 644,001
2 Claims. (Cl. 198—233)



1. In a loading device, a lightweight metal frame providing a support for a power unit and having a base frame portion and an upwardly extending portion providing an inclined portion, a boom having one end pivotally secured to the upper end of said upwardly extending portion to provide for raising and lowering said boom, a conveyor having endless conveyor elements and providing an upper run extending over said inclined portion and said boom and a lower run returning through the upwardly extending portion of said frame, drive means for driving said conveyor elements from said power unit, and means for raising and lowering said boom, said device being provided with retractable supporting members for supporting said frame, one end of said base frame portion having horizontally extending portions engageable with and releasably attachable to rearwardly extending portions of a truck body to enable said device to be carried by said truck during operation of said device and when said supporting members are retracted.

2,454,861
MACHINE FOR CUTTING HANDHOLES
Alva Claybourne Coker, San Antonio, Tex.
Application July 23, 1945, Serial No. 606,570
5 Claims. (Cl. 144—136)

1. A machine for producing hand holes in case ends, including a frame, coaxial opposed routing bits mounted thereon, the distance between the bits being greater than the thickness of the work to be cut, means for rotating the bits, a carriage slidably mounted on the frame between the bits for movement in a line with the axis of the bits, whereby to shift work carried thereby into engagement with either bit, a substantially verti-

cally disposed lever positioned below the carriage, the lever being fulcrumed intermediate its ends to the frame, a yoke at the upper end of the lever proportioned to embrace and engage the carriage at opposed sides of the carriage, a foot pedal connected intermediate its ends to the

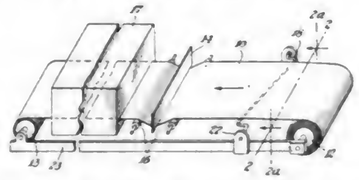
lower end of the lever, whereby to swing the lever in either direction about its fulcrum point, a work holding jig tiltably mounted in the carriage and positioned normally to support the work between and out of contact with the respective bits, and means under the control of the operator for rocking the jig relative to the carriage.

2,454,862

PRODUCT AND PROCESS OF REACTING ALKENYL SUCCINIC ESTERS WITH SULFUR

George T. Collins, Philadelphia, Pa., assignor to Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York

No Drawing. Application April 13, 1944, Serial No. 530,937
8 Claims. (Cl. 260—75)



1. A composition of matter comprising the reaction product of an alcohol ester of an alkenyl-substituted succinic acid containing at least 3 carbon atoms in the alkenyl substituent with elemental sulfur, in which product from 0.1% to 20% of sulfur based on the weight of the ester is combined with said ester.

2,454,863

WEB TENSION EQUALIZING DEVICE

Guy J. Crocker, New Brunswick, N. J., assignor to Industrial Tape Corporation, a corporation of New Jersey

Application July 21, 1945, Serial No. 606,338
8 Claims. (Cl. 271—2.1)

6. Tension control apparatus comprising in combination means for moving a web in the direction of its length and a tension bar adapted to contact the web across the width of the web and pivoted on an axis disposed across the web, the bar being rotatable on its axis in response to variation of tension on opposite edges of the web, the portion of the bar midway between the edges of the web coinciding with the axis of the bar and the portion of the bar contacting the web being inclined in opposite directions from the axis whereby rotation of the bar about its axis inclines said last mentioned portion with respect to the normal plane of the web.

2,454,864

PACKAGE OF INDIVIDUAL CLEANSING TISSUE

Robert G. Dexter, Lexington, Mass., assignor to Barkley & Dexter, Boston, Mass., a partnership composed of Fred W. Barkley and Robert G. Dexter

Application February 20, 1947, Serial No. 729,853
1 Claim. (Cl. 206—57)

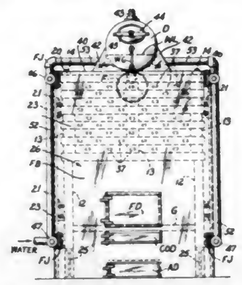
As a new article of manufacture, a rectangular sheet of cleansing tissue having the marginal portions thereof folded in opposite directions and along two spaced longitudinally extended fold lines to form a relatively narrow multi-ply strip, said strip being rolled into compact rolled form, and a relatively narrow band secured at one end thereof to the free end of the outer ply of said rolled strip, said band being wrapped about said rolled strip and having a portion thereof adjacent its other end adhesively but detachably connected to an underlying portion of said band to retain the sheet in rolled form until ready for use, said other end of said band being free and providing a tab of sufficient length to be easily grasped by the fingers to break said adhesive connection and unwrap said band from about the rolled sheet, said band serving as a handle when unwrapped for shaking the rolled and folded sheet into substantially flat form.

2,454,865

TIME-DELAY NETWORK

Michael J. Di Toro, Brooklyn, N. Y., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill., a corporation of Illinois

Application June 18, 1945, Serial No. 599,987
4 Claims. (Cl. 178—44)



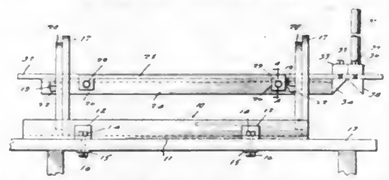
1. A time-delay network for translating signal components included within a predetermined range of frequencies comprising, an elongated conductive member, an elongated winding mounted in concentric relationship with respect to said conductive member, and a sheet of dielectric material coiled in the space between said conductive member and said winding for insulating but electrically coupling said winding along its length to said conductive member to provide a distributed capacitance along said winding, said sheet of dielectric material having a length approximately equal to that of said winding, having a minimum width at least equal to the circumference of said conductive member and having a variation in width such that the thickness of the coil thereof varies in a predetermined manner along the length of said winding to effect a desired variation of said distributed capacitance along said winding.

2,454,866

BOILER OF TUBULAR-SECTION TYPE

Andrew J. Gallaher, St. Louis, Mo.

Application November 9, 1946, Serial No. 708,978
6 Claims. (Cl. 122—225)



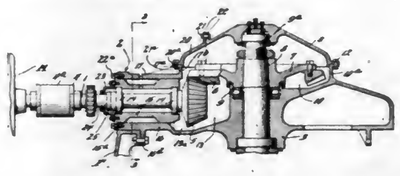
1. In a sectional boiler, a plurality of sections assembled in lateral adjacence, each section being formed of interconnected, substantially vertical and substantially horizontal tubular portions, such portions including a pair of vertical legs, one at each end of the section, a plurality of vertically spaced cross tubes above the fire box region of the boiler, with short tubing elements interconnecting successive cross tubes of the section, and with the vertical legs of the several sections collectively constituting lateral fire box closures, a steam drum in an upper region of the assembly, a takeoff header connected to the steam drum, and extended along and connected laterally to a plurality of the sections in an upper region of the assembly of sections, a return header similarly connected to the steam drum, connected laterally to a plurality of the sections with the return header connected into lower regions of the several sections.

2,454,867

BUS BAR BENDER

Joseph W. Garrett, Detroit, Mich.

Application November 29, 1946, Serial No. 713,173
6 Claims. (Cl. 153—20)



1. A bus bar bending machine comprising an elongated base arranged to be secured to a supporting surface, a pair of plates secured to extend at right angles from said base at longitudinally spaced points, said plates being provided with aligned circular openings, rotary annuli mounted on said plates with their openings aligned with the circular plate openings, means for limiting rotation of said annuli to predetermined arcs and for locking said annuli in selected positions of rotation relative to said plates, an elongated bus bar support extending through the openings of said annuli and fixed to said annuli, guide bars extending along opposite sides of said support, means affording lateral adjustment of said guide bars to engage the opposite side edges of a bus bar positioned lengthwise on said support for positioning said bus bar relative to the sides of said support with one end of the bus bar projecting longitudinally beyond the adjacent end of said support, bending means arranged to be secured to the bus bar comprising a first pair of bending bars secured at opposite sides of said end of the bus bar with one of said bending bars engaged with the adjacent end of the support, and a second pair of bending bars to be secured at opposite sides of the bus bar outwardly of said first pair of bending bars, and a handle on one of said second pair of bending bars for swinging said second pair of bending bars relative to said first pair of bending bars so as to bend the bus bar at a point between said pairs of bending bars.

2,454,868

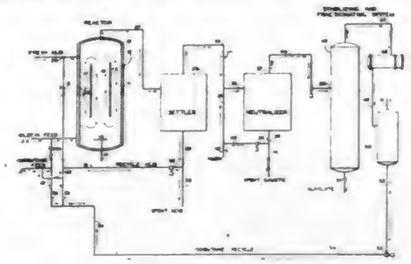
REMOVABLE DRIVE SHAFT UNIT FOR PULVERIZING MILLS

William A. Gibson and Charles W. Mayer, Allentown, Pa., assignors to Bradley Pulverizer Company, Boston, Mass., a corporation of Massachusetts

Application June 26, 1947, Serial No. 757,236
4 Claims. (Cl. 74—606)

4. A pulverizing mill comprising a vertically disposed center shaft and a horizontal drive shaft, said drive shaft having a bevel pinion operatively engaging the underface of a bevel ring gear mounted upon the center shaft, a housing enclosing said ring gear and providing a gear chamber therefor, a closure for the top of the gear chamber, a centering bearing carried by said closure and encircling the upper end of the center shaft, said housing including a bearing box encircling the drive shaft and communicating at one end with the interior of the gear chamber, said bearing box comprising a block having a channel extending along its face adapted to provide a seat for a cylindrical bearing cartridge encircling the drive shaft and a removable cover providing a semi-annular recess adapted to seat upon the block and embrace the upper side of the bearing cartridge, said block having a clearance pocket located below said pinion and extending a limited distance outwardly in line with the drive shaft, said pocket being so constructed and arranged as to afford withdrawal clearance for said pinion by simultaneously swinging the drive shaft upwardly and axially through the uncovered upper side of said bearing box, the closure for the gear chamber having a removable section overlying the pinion disposed beyond the centering bearing and being contiguous to the removable cover for the bearing box.

2,454,869



ALKYLATION METHOD

Arthur R. Goldsby, Beacon, and Claude W. Watson, Tuckahoe, N. Y., assignors to The Texas Company, New York, N. Y., a corporation of Delaware

Application February 24, 1943, Serial No. 476,896
3 Claims. (Cl. 260—683.4)

1. A process for the synthesis of hydrocarbons which comprises passing a stream of alkylatable hydrocarbons through a reaction chamber hav-

ing permeable walls, passing a stream of corrosive mobile alkylation catalyst through said reaction chamber in intimate contact with said hydrocarbons, introducing into said reaction chamber through said permeable walls a non-corrosive hydrocarbon fluid comprising olefins, maintaining alkylation conditions within said chamber to effect reaction of said alkylatable hydrocarbons with said olefins, and introducing said olefins at such rate so as to avoid undesirably high concentrations of olefins in the reaction mixture and so as to interpose a relatively catalyst-free barrier between the catalyst-hydrocarbon mixture and the walls of the reaction chamber.

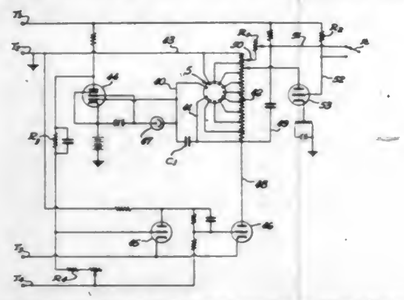
2,454,870

APPARATUS FOR USE IN APPLYING WIRE TO ROWS OF PLANTS

Frank J. Grisanti, Forrestville, N. Y.

Application December 26, 1947, Serial No. 793,974
6 Claims. (Cl. 242—95)

1. An apparatus for use in applying two wires to two adjacent rows of plants, including an outer stationary tube, means for mounting said tube on a vehicle, an inner tube rotatably mounted within said outer tube and having its ends extending beyond the ends of the outer tube, collars secured to said inner tube at the ends of said outer tube to limit the longitudinal movement of said inner tube relatively to said outer tube, reels mounted on the ends of the inner tube beyond the ends of the outer tube in position to discharge wire from coils mounted on said reels above said rows of plants, the length of said tubes being such that said reels will be spaced apart a distance substantially equal to the distance between the rows of plants.



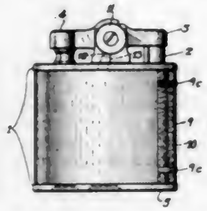
2,454,871

NONLINEAR ELECTROOPTICAL SYSTEM

Norman R. Gunderson, Pasadena, Calif.

Application October 9, 1946, Serial No. 702,172
17 Claims. (Cl. 250—41.5)

1. In a nonlinear electro-optical system: an electron multiplier phototube provided with an anode, a photocathode and multiple electrostatic focusing, secondary emission electrodes; and means responsive to variations of phototube anode current resulting from phototube light input variations, for causing modification of the voltage across the multiple electrodes in an inverse feed back manner whereby the voltage across the multiple electrodes is a virtually logarithmic function of the light exciting the photocathode of the phototube.

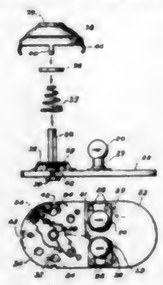


2,454,872

FUEL INDICATING LIGHTER

Alexander Harris, Scobeyville, N. J., assignor to Ronson Art Metal Works, Inc., a corporation of New Jersey

Application December 5, 1944, Serial No. 566,691
1 Claim. (Cl. 67—7.1)



A cigar lighter having a fuel receptacle, an absorbent filling of cotton therein which is treated with a direct aniline dye insoluble in fuels of the naphtha type, to render the filling of different color as colorless fuel is added thereto and consumed therefrom, said receptacle having a wall portion of translucent material adjacent said filling to expose the color thereof to view while the receptacle is closed.

2,454,873

CONTROL SWITCH ASSEMBLY

Abraham Hollins and Jesse Hollins, New York, N. Y.

Application November 7, 1944, Serial No. 562,336
1 Claim. (Cl. 200—168)

In an electric switch assembly comprising a housing, a switch base secured within said housing, a vertical shaft rotatably supported on said base and projecting through said housing to carry an operating lever, a contact arm mounted on said shaft for rotation therewith, and a plurality of fixed contact elements carried by said base and engageable by said arm in the rotation thereof, a hollow member having one open end, a plurality of tongues projecting from said open end of the hollow member and engaging the base to lock the terminal face of said open end in surface engagement with the base, the hollow member defining a chamber inclosing said contact arm and said contact elements and having an opening through which the rotatable shaft extends, an element for closing said opening carried by the shaft within said chamber, and resilient means on the shaft between said element and the contact arm for maintaining said element in closing position to provide a substantially sealed structure within the housing and for concurrently urging the contact arm toward the base.

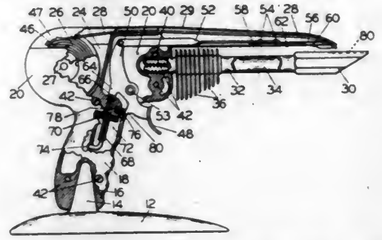
2,454,874

COVERING FOR PREVENTING ICE FORMATION ON AIRCRAFT

Wilson H. Hunter, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York

Application April 23, 1943, Serial No. 484,183
9 Claims. (Cl. 244—134)

1. A protective covering for preventing the accumulation of ice on aircraft, said covering comprising electrically conductive composition including resilient rubber-like material having particles of electrically conductive substance therein, said covering being more conductive in spaced-apart portions thereof than in an intervening portion thereof, and conductor means including flexible elements disposed within and interconnected electrically with said spaced-apart portions for passing electrical heating current to and through said portions to obtain a higher temperature at said intervening portion than at said spaced-apart portions, the power dissipation characteristics of said electrically conductive composition being such as to provide the different temperatures at said portions for effectively preventing said accumulation of ice.



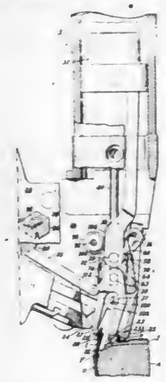
2,454,875

SOLDERING IRON

Robert W. Hyde, Englewood, N. J.

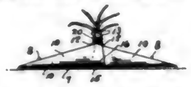
Application November 9, 1945, Serial No. 627,596
5 Claims. (Cl. 113—105)

1. In a soldering iron of the type having a strip of solder arranged to be successively advanced and retracted with respect to the iron tip, the combination of a first retractible member arranged to engage the solder to advance and retract the same, and a locking member arranged to engage the solder to prevent retraction of the solder when engaged therewith, said retractible member being arranged to disengage the locking member from the solder during the first phase of its retracting movement whereby solder is released from the locking member for retraction.



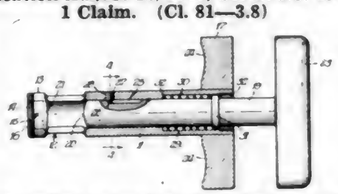
2,454,876

GRIPPER MECHANISM



Robert H. Lawson, Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey

Application February 28, 1947, Serial No. 731,489
12 Claims. (Cl. 12—4)

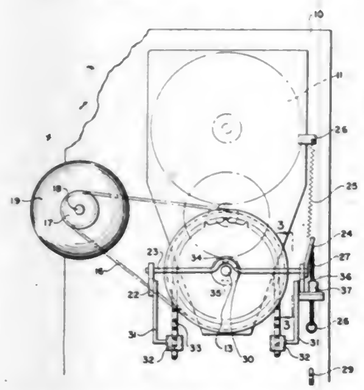


12. Mechanism for tensioning upper materials, including an upper and a lining, over a last comprising an upper-tensioning gripper, operating means connected to the gripper and movable first to effect closing of said gripper and, thereafter, movement thereof in a direction to tension the upper materials over the last, a lining-pulling gripper including a pair of pivotally connected jaws slidably mounted on the upper-tensioning gripper, yieldable means tending to close said jaws, cam means associated with said operating means for opening said jaws, a latch connected to said jaws and adapted to engage a shoulder on said operating means upon movement thereof sufficient to permit closing of said jaws by the yieldable means, means for disengaging said latch after a predetermined movement of said jaws by said operating means, and means associated with said upper-tensioning gripper for opening said jaws substantially as said upper-tensioning gripper is closed.

2,454,877
CHRISTMAS TREE STAND
William M. Lewis, Brownfield, Tex.
Application March 25, 1946, Serial No. 656,841
2 Claims. (Cl. 248—44)

1. In a Christmas tree stand comprising a base, inclined flaps extending from the ends of the base with their inner ends interlocked on opposite sides of a tree trunk receiving hole therein, upstanding lugs on opposite sides of the hole, inclined triangular flaps formed on the first mentioned flaps with their inner ends directed inwardly from the edge of the base and disposed in overlapping relation, lugs formed on the base inwardly of its side edges receiving the lower portions of the triangular flaps, a nail in the base perpendicularly aligned with the tree trunk receiving hole, and means securing the upstanding lugs to the tree trunk.

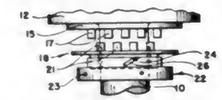
2,454,878
FUSE PULLER
Albert R. Marler, Forest Park, Ill., assignor to Carl C. Sittler, Chicago, Ill.
Application August 12, 1943, Serial No. 498,270
1 Claim. (Cl. 81—3.8)



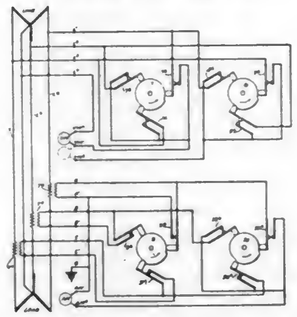
A fuse puller formed of insulated material for pulling elongated cartridge fuses from the electric contact elements with which the fuses normally are associated comprising a tubular body portion terminating at one end in a hook-shaped member, a fuse seat on the hook-shaped member, a stem movable longitudinally in said tubular body, a transversely curved end forming a fuse seat at the end of the stem lying opposite to the seat on the hook-shaped member and in position to cooperate with the seat on the hook-shaped member in engaging and holding a fuse on said first named seat, a pin extending radially inwardly on said tubular body portion, an elongated slot in said stem adapted to receive and cooperate with said pin to thereby prevent rotation of said stem and maintain the fuse seats on said stem and hook-shaped member in proper relation to snugly engage the opposing sides of the curved portion of a fuse, means normally maintaining said stem in position to urge the stem in a predetermined direction whereby the seat on the stem is normally positioned away from the seat on the hook-shaped member, a handle member on the stem, a handle member on the body whereby the seat on the stem is moved toward holding position with respect to the other seat when an urging action toward each other is applied to the two handles.

2,454,879
FISHING TACKLE
Benjamin Joseph Mattingly, Center Point, Tex.
Application August 16, 1944, Serial No. 549,692
1 Claim. (Cl. 43—27)

In combination with a fishing hook including a shank having an enlarged portion substantially opposite the barb of the hook, a coil spring closely coiled with its lower end portion around the shank below the enlarged portion thereof and loosely surrounding the shank above such enlargement and having its upper end of loop form so as to provide a finger piece for expansion of the convolutions of the spring to permit insertion of live bait between selected convolutions of the spring, said finger piece being in such close proximity to the shank of the hook as to enable the operator to press the finger piece against the shank while sliding the finger piece along the shank.

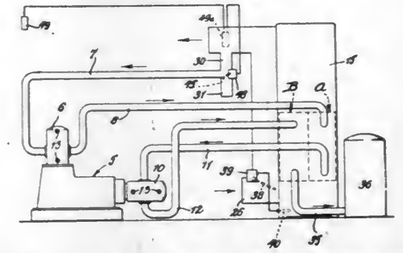


2,454,880
DRIVING MEANS FOR ROLLING DOORS
Nathan Michelman, New York, N. Y.
Application September 12, 1946, Serial No. 696,538
7 Claims. (Cl. 74—407)



2. In a driving mechanism for rolling doors, a driven shaft, transmission means for operatively connecting said driven shaft to a rolling door shaft, a pulley keyed to said driven shaft, an electric motor driving said pulley, a driving wheel free on said driven shaft and displaceable thereon between an engaged position wherein it is drivingly coupled to said pulley and a disengaged position wherein it is not so coupled, means for manually rotating said wheel, resilient means for normally maintaining said wheel in its disengaged position, a control shaft substantially perpendicular to said driven shaft, hand-operated means for rotating said control shaft to an angularly displaced position, an eccentric member fast to said control shaft adjacent said wheel, said member when said control shaft is so rotated engaging said wheel and displacing the same to its engaged position whereby to permit manual operation of the mechanism, switch means actuable to render said electric motor inoperative, and means operatively associated with said hand-operated means for maintaining said switch means actuated while said shaft is in an angularly displaced position.

2,454,881
ADJUSTABLE STROKE ECCENTRIC MECHANISM
Nathan Michelman, New York, N. Y.
Application September 12, 1946, Serial No. 696,539
4 Claims. (Cl. 74—571)



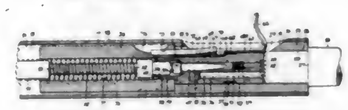
4. In an adjustable stroke eccentric mechanism, in combination with a reciprocating driver for a reciprocable member; a driving shaft, an outer eccentric free on said inner eccentric, means for operatively connecting said outer eccentric to said driver for the reciprocable member, a member keyed to said driving shaft and axially slidable between two extreme positions, a first set of teeth fast on said keyed member and disposed along a circle concentric with said inner eccentric, a second set of teeth fast on said outer eccentric and matable to said first set, said sets of teeth being in interlocking engagement with one another drivingly to connect said keyed member to said outer eccentric when said keyed member is in one extreme position and being disengaged when said keyed member is in the other extreme position, a member free on said driving shaft, means for rotating said free member, mutually engaging cam and follower means in said keyed member and free member for actuating said keyed member between said two extreme positions thereof in response to a rotation of said free member, and means for rotating said outer eccentric with respect to said inner eccentric when said sets of teeth are disengaged, whereby to vary the eccentricity of said outer eccentric with respect to said driving shaft and to adjust the stroke of the reciprocable member.

2,454,882
MEANS FOR OBTAINING LOAD AND VOLTAGE RECORDINGS OF ELECTRICAL DISTRIBUTION SYSTEMS ON A SINGLE RECORDER
Thurman Oakley, Belleville, Ill., assignor to James R. Kearney Corporation, St. Louis, Mo., a corporation of Missouri
Application June 9, 1943, Serial No. 490,182
2 Claims. (Cl. 346—33)

1. A mechanism for recording load current or voltage of the various circuits of a multiple-wire electrical distribution system, comprising a single recording meter, a selector switch, electrical conducting means for electrically connecting said selector switch to the various circuits of an electrical distribution system, and electrical conducting means for electrically connecting said selector switch to the recording meter, said selector switch including means operable to successively establish electrical connection from the various circuits of the distribution system directly to the recording meter so that only one circuit of the distribution system is subjected to measurement at a time, and to maintain such electrical connections with said recording meter for desired time periods during which recordings are made by said recording meter, said means of said selector switch being arranged for such operation that time periods of interruption between successive recording operations of the recording meter are provided for which vary in length.

2,454,883
APPARATUS FOR COOLING COMPRESSED GASES
Martin H. Oistad, Port Washington, and Allan E. Williams, White Plains, N. Y., assignors to Niagara Blower Company, Buffalo, N. Y., a corporation of New York
Application December 22, 1943, Serial No. 515,310
16 Claims. (Cl. 62—2)

1. In combination with a compressor having means for compressing a stream of noncondensible gas having a component which liquifies on cooling the compressed gas and a jacket through which a stream of cooling water is circulated, means forming a chamber having an air inlet and an air outlet, a fan arranged to force a current of air from said inlet, through said chamber and out through said outlet, a cooling coil arranged in the current of air passing through said chamber, means for discharging and distributing water over said cooling coil to wet the exterior of said cooling coil and to evaporate and absorb heat therefrom, means for conducting said stream of non-condensible gas through said cooling coil to cool said gas and liquify said component, and means for collecting said liquified component.

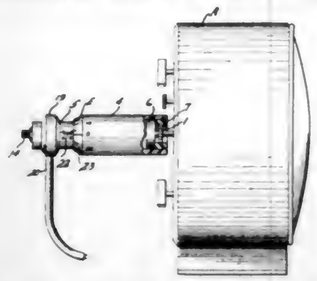


2,454,884
CLEANING DEVICE FOR CONDUITS
William H. Peaden, Muskogee, Okla.
Application April 19, 1945, Serial No. 589,221
6 Claims. (Cl. 15—242)

1. A cleaning means for a conduit comprising an elongated element insertible within said conduit in a direction lengthwise thereof, laterally disposed scrapers carried by said element at points therealong, means coacting with an end

portion of the element and the conduit for supporting the element for both rotary movement and reciprocatory movement, and combined cam and spring operated means for reciprocating the element upon continuous rotation of the element in one direction.

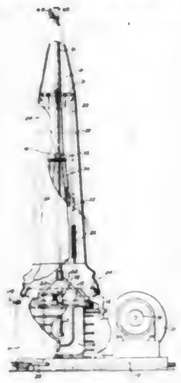
2,454,885
DETACHABLE OPERATING HANDLE FOR RETRACTING BREECH BOLTS
Thomas R. Robinson, Jr., Newtown, Conn., assignor to The Marlin Firearms Company, New Haven, Conn., a corporation of Connecticut
Application August 6, 1947, Serial No. 766,663
26 Claims. (Cl. 42—16)



1. In a firearm, including in combination: a receiver having a breech-bolt chamber; a breech-bolt reciprocably mounted in said chamber, said breech-bolt having a longitudinal socket open in one direction; a transverse abutment remote from the open end of said longitudinal socket and facing in a direction opposite thereto; and a breech-bolt operating-handle having a resilient-element fitted in said socket and an integral abutment remote from the socket-fitting resilient-element, said resilient socket-fitting element being arranged to bear inwardly to hold the integral abutment of said bolt-operating means resiliently in juxtaposition to the transverse abutment of said breech-bolt.

2,454,886
PREVENTION OF MIST AND FROST ON GLASS AND SIMILAR SHEET MATERIAL
Reuben Hillel Sapiro, Pinner, England
No Drawing. Application May 17, 1943, Serial No. 487,383. In Great Britain April 16, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires April 16, 1962
6 Claims. (Cl. 106—128)

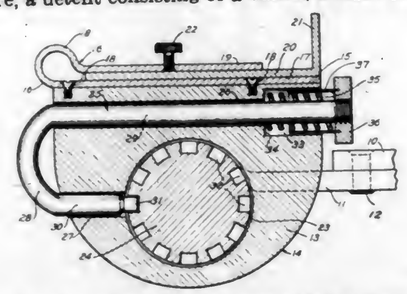
5. For use in treating a transparent cellulosic film for adhesive application to sheet glass and similar transparent rigid material to render it non-misting and non-frosting, a liquid composed of gelatin 40 grams, nitro-cellulose 1 to 5 grams, glacial acetic acid 250 to 400 ccs, sodium choleate 10 to 15 grams, water 100 to 150 ccs, industrial methylated spirit 600 to 750 ccs.



2,454,887
TIME SWITCH
Edgar R. Schott, Benton, Mo.
Application February 14, 1947, Serial No. 728,605
6 Claims. (Cl. 200—35)

6. In a time controlled switch, including a shaft having means constantly rotating the same at a substantially uniform speed; the improvement comprising a pair of cylindrical members, means operatively connecting one of said members to said shaft for rotation therewith, said members including opposed end portions formed to telescope together said end portions including extremities formed with complementary threads adapted to be threadedly engaged, said threads being formed to move said members relatively in a telescopically-closing direction upon rotation of said shaft, said end portions inwardly of said threads comprising smooth surfaces permitting free sliding relative movement of said members in a telescopically-closing direction upon disengagement of said threads, spring means loading said members for relative telescopic closing move-

ment, a switch carried by one of said members, and means operatively connecting said switch to said spring, whereby to actuate said switch upon said free sliding relative movement of said members in a telescopically-closing direction.

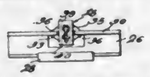


2,454,888
GARMENT FINISHING DEVICE
Julian C. Shaw and Harry E. Blettner, Cincinnati, Ohio, assignors to The American Laundry Machinery Company, Cincinnati, Ohio, a corporation of Ohio
Application February 14, 1946, Serial No. 647,611
16 Claims. (Cl. 223—70)

1. A finishing device of the character described, comprising a base having an open supporting ring, a bag having one end open and secured to said ring, means for causing the flow of a gas under pressure through said ring into the space within said bag, a series of ribs distributed at intervals around said bag and secured thereto, and yielding means connected to said ribs and opposing bag inflation.

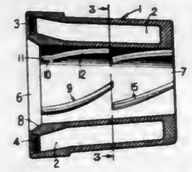
2,454,889
AUTOMOBILE SERVICE TABLE
George I. Shelton and Henry L. Dowell, Athens, Tex.
Application January 31, 1946, Serial No. 644,494
2 Claims. (Cl. 311—21)

2. A service table comprising a body member having a clamp means for engaging a horizontal flange of an automobile dash panel, said body having a horizontal bore, a pivot pin journalled in said bore and projecting beyond the body member, a table member, said table member having a pair of spaced brackets, each bracket having a bearing for respective ends of the pivot pin and rigidly fixed thereto, said body member having an opening transverse to the bore, said opening having a concentric enlargement at one end, a second opening being formed in said body member parallel to the first opening and intersecting said bore, a detent consisting of a shank, a bight por-



tion and a bill, said shank being slidably disposed in said first named opening and said bill being slidably engaged in the second named opening and of a length to project into said bore, a helical spring seated within the concentric enlargement of the first opening and disposed about the shank, an operating knob on the shank and engaging the spring, and said pivot pin having circumferentially spaced teeth for selective engagement by said bill.

2,454,890
ANTIOXIDANTS FOR MINERAL OIL LUBRICANTS AND COMPOSITIONS CONTAINING THE SAME
Herschel G. Smith, Wallingford, and Troy L. Cantrell, Lansdowne, Pa., and John G. Peters, Audubon, N. J., assignors to Gulf Oil Corporation, Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application April 9, 1947, Serial No. 740,482
16 Claims. (Cl. 252—51.5)

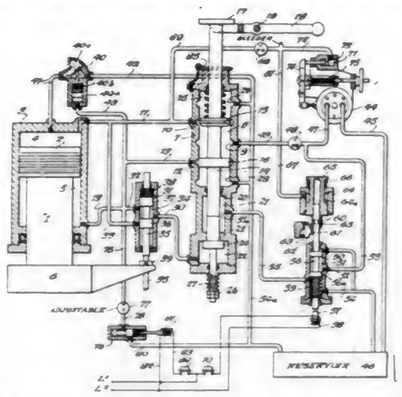


1. The process of preparing an addition agent for mineral oil lubricants which comprises condensing from 1 to 4 mols of benzyl benzoate, 1 to 6 mols of N-dimethylaniline and 0.5 to 6 mols of formaldehyde per mol of benzyl benzoate in the presence of an activated clay catalyst at a temperature not in excess of 350° F., and recovering the condensation product.

2,454,891
POCKET FOOTBALL GAME APPARATUS
Edward A. Spause, Philadelphia, Pa.
Application May 23, 1947, Serial No. 749,901
4 Claims. (Cl. 273—94)

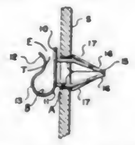
3. In game apparatus involving a game board having a longitudinal slot with playing position marks therealong, a dual indicator comprising a first element having slots formed in its opposite ends slidably receiving the edges of said slot to enable sliding said first element to different selected positions along said slot designated by said position marks, and a second element rotatably mounted on said first element on an axis extending transversely across said slot, said second element having peripheral facets to designate different phases of play in the positions assumed by said first element relative to said playing position marks when said second element is rotated to bring different facets uppermost, said second element comprising a block positioned in said slot in the game board and formed with a bore rotatably receiving a portion of said first element, said portion of said first element being substantially cylindrical and formed with a circular keyway, and said second element having a key inserted in said keyway whereby axial movement of said second element relative to said first element is precluded.

2,454,892
BLAST FURNACE TUYÈRE
John H. Sprow, Jackson, Ohio
Application May 22, 1946, Serial No. 671,461
5 Claims. (Cl. 266—41)



1. A tuyère comprising a body portion having a bore extending therethrough, a series of helicoid ribs projecting radially inwardly from the surface of said bore and extending a portion of the length of the bore, and a second series of helicoid ribs projecting radially inwardly from the surface of said bore and extending along a portion of the length of the bore, said ribs of the first series being staggered relative to the ribs of the second series so as to provide clear paths longitudinally of said surface of the bore to facilitate cleaning by means of a bar or the like inserted in the bore and passed along such surface substantially in the same plane as the axis of the bore.

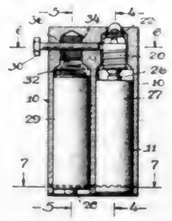
2,454,893
FLUID-OPERATED MOTOR
Thomas F. Stacy, Piqua, Ohio, assignor to The French Oil Mill Machinery Company, Piqua, Ohio
Application July 1, 1941, Serial No. 400,607
24 Claims. (Cl. 60—52)



1. Improved operating means for a hydraulic motor having a main cylinder, a retraction cylinder, and a ram element operated in opposite directions by fluid pressures in said cylinders, which comprises a source of operating fluid under pressure, a main control valve having a valve element selectively movable between three positions, in one of which it connects said source to said main cylinder and releases fluid from said retraction cylinder, in another of which it connects said source to said retraction cylinder and releases fluid from said main cylinder, and a third position intermediate said two positions at which it prevents escape of fluid from said retraction cylinder, releases fluid from said main cylinder and by-passes fluid from said source, means for yieldingly urging said valve element into said another position, hydraulic means for releasably preventing movement of said valve element by said urging means into said another position, fluid actuated means for moving said valve element into said one position to start an advance of said ram element, an auxiliary valve controlling said fluid actuated means and having a control member, means yieldingly urging said

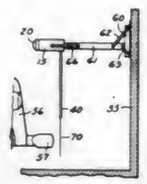
control member into a position in which it makes said fluid actuated means ineffective on said element, means for shifting said control member into a position in which it causes operation of said fluid actuated means, means for latching

said control member in said last named position, and means responsive to an operating condition of said motor when said element is moving under pressure existing in said main cylinder for releasing said control member from said latching means to cause a retraction of said element.



2,454,894
HOOK
Raymond F. Tatom, Seattle, Wash., assignor to Boeing Airplane Company, a corporation of Delaware
Application January 1, 1944, Serial No. 516,739
5 Claims. (Cl. 24—73)

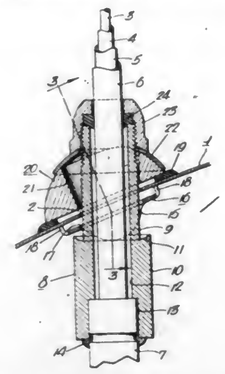
1. A hook comprising a substantially rectangular base plate, a hook portion on one side of said base plate and including two strips spaced edgewise and springing from one edge of said base plate, and two legs springing from points symmetrically arranged at opposite sides of a reference line on said base plate parallel to the edge from which said two hook portion strips spring, and located between parallel lines on the base plate perpendicular to such reference line and extending from the adjacent edges of said hook portion strips at their junctions with said base plate, said legs projecting beyond the side of said base plate opposite that on which said hook portion is located and parallel to a plane perpendicular to said reference line, said legs further having mutually convergent free end portions.



2,454,895
FLASHLIGHT
Orville D. Thurnell and Joseph J. Cannistra, Chicago, Ill.
Application April 18, 1946, Serial No. 663,188
3 Claims. (Cl. 240—10.65)

1. An electric lamp adapted for pocket use comprising a solid electrically non conductive plastic case, the said case consisting of a clear methacrylate resin shape, the said shape having therein two bored cavities in parallel relationship to each other and adapted to receive battery cells, each of the said bored cavities having smaller diameter concentric bore extensions thereof in like parallel relationship, at least one of the said smaller bore extensions terminating in an aperture on the surface of said methacrylate resin shape, an

incandescent light bulb protruding slightly thru said aperture, a means for closing and breaking the electrical circuit, a metallic base channel to make contact between the battery cells, upstanding flanges on said channel with inwardly disposed arms, and grooves on said plastic case in juxtaposition with said inwardly disposed arms, whereby said channel is slidably engaged by and retained in place.



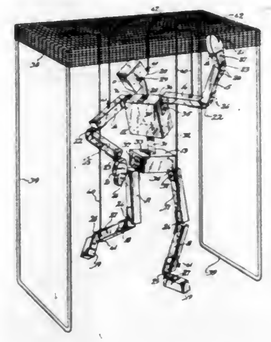
2,454,896
AUTOMOBILE POSITION SIGNAL
Ellis Traub, Worcester, Mass.
Application December 26, 1946, Serial No. 718,493
3 Claims. (Cl. 177—311)

1. An automobile position signal adapted for mounting adjacent to the rear wall of a garage and comprising an electric lamp, a frame to support the lamp in position to be seen readily by the operator of an automobile entering the garage, a normally open switch to control the flow of electric current to the lamp, an actuator supported by the frame and free to move rearwardly for a considerable distance, the actuator being in position to be engaged by a portion of an automobile approaching the wall and thus be moved rearwardly, and connections between the actuator and the switch effective to close the switch upon a slight rearward movement of the actuator and to open the switch upon further rearward movement of the actuator.

2,454,897
ANTENNA MOUNTING
Charles A. Trowbridge, Roxborough, Pa., assignor to Ben Snyder and Gerson Snyder, copartners trading as Snyder Mfg. Company, Philadelphia, Pa.
Application May 13, 1946, Serial No. 669,276
9 Claims. (Cl. 248—44)

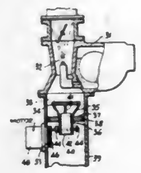
1. In an antenna mounting of the character described, a sleeve adapted to extend through an opening in a wall, a support rockably supported by said sleeve and arranged to engage one side of said wall at a plurality of points about the axis of the sleeve, a member arranged for positioning

at the other side of the wall and having therein an opening for said sleeve, and means on said sleeve operable to fixedly secure said support, said sleeve and said member relative to each other and to said wall.



2,454,898
SHADING PROCESS FOR PHOTOGRAPHS
Harry J. Tuthill, St. Louis, Mo.
Application April 5, 1946, Serial No. 659,824
11 Claims. (Cl. 41—46)

1. The process of applying dots to a graphic composition which consists in providing a thin sheet of transparent flexible material having a multiplicity of perforations extending therethrough, laying such perforated sheet upon said graphic composition, applying to the exposed face of said sheet a liquid solvent therefor which flows through the perforations therein to the underside thereof and causes said sheet to removably adhere to said graphic composition, and then applying to said exposed surface of said sheet a viscous marking fluid which flows through said perforations and adheres to said graphic composition in the form of dots corresponding to the shape, size and spacing of said perforations.

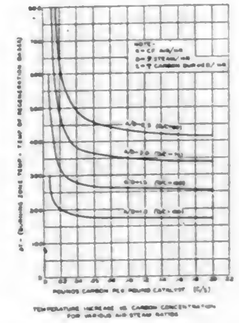


2,454,899
AID TO ART PRACTICE AND INSTRUCTION
Kathryn B. Twomey, Chicago, Ill.
Application August 1, 1945, Serial No. 608,147
5 Claims. (Cl. 35—28)

1. A poseable, skeletonoid block model of the character described, for use as an aid to art practice and instruction in visual perspective, which comprises a plurality of blocks, each block being a unitary structure and representing a subdivision of a human skeleton, and means for nondetachably articulating said blocks to form said model and to permit the model to be posed in a plurality of attitudes; each of the blocks, representing the skull, the bony thorax, the pelvis, the humerus, the femur, the paired bones of the forearm and the paired bones of the leg, being bounded

externally entirely by rectangular plane surfaces disposed in substantially parallel pairs.

2,454,900
METHOD AND MEANS FOR CARBURETING AIR FOR FUEL MIXTURES
Alfred Vang, Newark, N. J.
Application July 15, 1943, Serial No. 494,770
9 Claims. (Cl. 123—119)



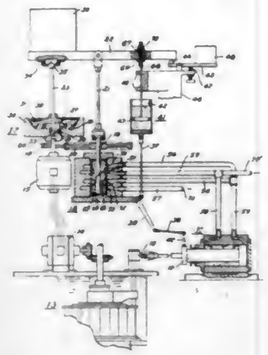
2. Means for the carburetion of air and fuel mixtures of internal combustion engines comprising guide means for the passage of a mixture of air and fuel vapors, a diaphragm aimed along said passage for the fuel and supported along its edges, and means for imparting vibrations to said diaphragm, said diaphragm being supported in an annular member and said diaphragm being aimed by moving said annular member.

2,454,901
CONTROL OF TEMPERATURE IN REGENERATION OF SOLID HYDROCARBON CONVERSION CATALYSTS
Roy E. Vinyard and Wendell W. Roach, Borger, Tex., and Bradley Skinner, Bartlesville, Okla., assignors to Phillips Petroleum Company, a corporation of Delaware
Application June 24, 1944, Serial No. 541,922
5 Claims. (Cl. 196—52)

2. An improved process for the catalytic conversion of hydrocarbons in which an elongated bed of solid catalyst is alternately contacted with hydrocarbons under conversion conditions causing deposition of carbonaceous material thereon and with oxygen to remove said carbonaceous material by combustion, which comprises passing through such a bed a stream of hydrocarbons under such conversion conditions and for such a time to deposit at least 0.02 pound carbon per pound of catalyst, then purging hydrocarbons

from said catalyst bed, then regenerating said catalyst bed at the maximum permissible temperature which said catalyst can withstand without permanent impairment of its activity by passing through said bed from one end to the other end thereof a regeneration gas comprising oxygen and an inert diluent maintained in constant proportions throughout said regeneration until sufficient oxygen has passed therethrough to effect combustion of the carbon on said catalyst by passage of a narrow burning zone entirely through said bed, the total heat of combustion being removed as sensible heat of spent regeneration gas, the regeneration gas entering said bed at a constant inlet temperature and containing a total amount of diluent D during the entire regeneration period in accordance with the equation

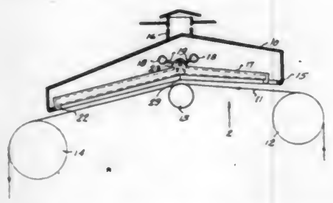
$$\frac{C}{S}=\frac{\frac{h_S}{h_D}}{\frac{D}{C}-\frac{Q-K\Delta T}{h_D\Delta T}}$$



where C=the weight of carbon deposited; S=weight of catalyst; h_S=the specific heat of the catalyst; h_D=the specific heat of the diluent; D=weight of the diluent; Q=the heat of combustion of carbon; ΔT=the temperature difference between the said maximum permissible temperature and the inlet temperature of the regeneration gas; and K=a constant which is equal to

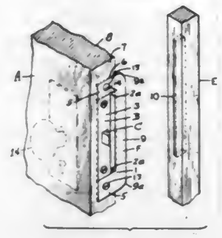
$$h_F\frac{F}{C}$$

where h_F is the specific heat of the spent regeneration gas or flue gas produced in the combustion zone and F is the volume of flue gas produced in burning C weight of carbon with the volume of oxygen required for complete combustion thereof; thereby effecting regeneration of said catalyst at a burning zone temperature equal to said maximum permissible temperature for said catalyst, but avoiding temperature in excess of said maximum temperature at any point in said bed during said regeneration.



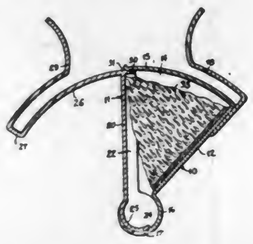
2,454,902
SPEED GOVERNOR
Henry E. Warren, Ashland, Mass.
Application July 14, 1944, Serial No. 544,996
3 Claims. (Cl. 264—17)

3. A tachometer for measuring or controlling speed, comprising a cup-shaped rotatable member, a plurality of balls disposed within said member for co-operation with the interior surface thereof, retainers constructed and arranged to permit limited motion of said balls upon rotation of said member, an abutment resting upon said balls, and means loosely coupling said abutment



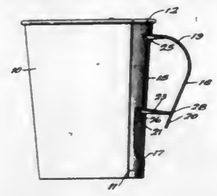
to said member for rotary movement therewith and axial movement thereto, the axis of said abutment being tilted at a small angle to the axis of said member.

2,454,903
STEAMING OR VAPORIZING MEANS
Karl Weik, Detroit, Mich., assignor to Fabricon Products, Inc., River Rouge, Mich., a corporation of Michigan
Application October 8, 1945, Serial No. 620,948
1 Claim. (Cl. 34—79)



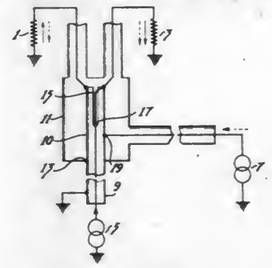
Apparatus for steaming or vaporizing a recently inked travelling web of paper comprising a steam box having a considerable length along the web and having a width at least equal to the inked part of the web, said box being hollow, the wall of the box nearer the web being closely adjacent the web and having a narrow slot extending across the web and communicating the interior of the box with the space between said wall and said web, said box being completely sealed except for said slot, means for introducing steam into the box, and deflectors in said box adjacent said means for preventing entering steam from impinging directly on said web through said slot, said deflectors including flanges at the edges of the slot projecting from the slotted wall of the box towards the opposite wall, and formations projecting from said opposite wall towards the flanges, said slot being approximately midway between the forward and rear ends of the box whereby the web may be preheated by the forward part of the box before it reaches the slot and whereby the web, steamed at the slot, may be heated after it passes the slot by the rear part of the box, and an exhaust hood closely surrounding said box for exhausting steam from the space between the web and the box.

2,454,904
DOOR LOCK PROTECTOR
John R. Wylie, San Francisco, Calif.
Application October 7, 1944, Serial No. 557,682
2 Claims. (Cl. 292—346)



1. An article of manufacture comprising a single sheet of metal forming a body, said body having a recess with wings forming the sides of the recess, said wings lying in the plane of the body and in the plane of the recess, the wings being securable to the end of a door in a position to cause the end of a door lock to be received in the recess and the body to project beyond the outer door surface, the body being adapted to be received in a recess of a door stop when the door is closed.

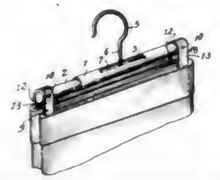
2,454,905
FRUIT JUICE EXTRACTOR
Neal C. S. Allen, Bennington, Vt.
Application April 15, 1946, Serial No. 662,388
4 Claims. (Cl. 100—41)



1. A fruit juice extractor comprising a pair of members pivotally secured to each other at their lower portions for hinged movement on a pivot axis and each having an end wall, a pair of side walls, and a top wall, the top wall of each section being arcuate and the side walls and top wall of one member being adapted to telescope with relation to the side walls and top wall of the other member, when the two members are moved towards each other on their pivot axis, said members having arcuate portions on their lower ends, the arcuate portion of one member telescoping with relation to the arcuate portion of the other member, and rotatably mounted therein, the outer arcuate portion having a hole therein, which is normally closed by the arcuate portion on the lower end of the other member, when the parts are in open position, and which is adapted to be opened when the two parts are pressed towards each other into telescopic relation to allow fruit juice extracted from a piece of fruit disposed between the two members to flow out through said hole.

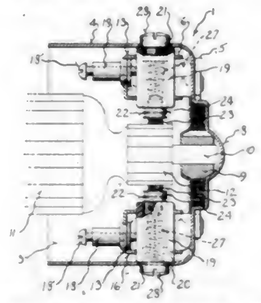
2,454,906
PAPER CUP AND HANDLE THEREFOR
Walter E. Amberg, Beverly Shores, Ind., assignor, by mesne assignments, to Lily-Tulip Cup Corporation, New York, N. Y., a corporation of Delaware
Application November 19, 1945, Serial No. 629,447
5 Claims. (Cl. 229—52)

2. A paper cup comprising a side wall, a collapsible handle thereon including a vertically arranged inverted T-shaped handle portion hinged at its top to the side wall, and a pair of vertically arranged arm portions on each side of the leg of the T-shaped handle portion hinged at their tops to the side wall below the hinge point of the handle portion and hinged at their bottoms to the cross of the T-shaped handle portion, said handle adapted to lie close to the side wall of the cup to permit nesting of a plurality of cups, and said handle adapted to be folded upwardly from the side wall by folding at said hinge points and bending of the handle portion.



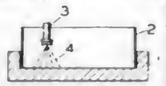
2,454,907
RADIO-FREQUENCY NETWORK
George H. Brown, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application November 21, 1945, Serial No. 630,073
3 Claims. (Cl. 250—33)

1. An antenna system including an isolation network comprising a first coaxial input line, a conductive sleeve surrounding one end of said line and connected to the outer conductor of said line at a point near said end, the end portion of the outer conductor of said line including a longitudinal slot, the end of the inner conductor of said line being connected to the end of the outer conductor of said line at one side only of said slot, a second coaxial input line with its outer conductor connected to said sleeve and its inner conductor coupled to the outer conductor of said first input line within said sleeve, and a pair of coaxial output lines with their outer conductors connected to said sleeve and their inner conductors connected to the end of the outer conductor of said first input line on opposite sides respectively of said slot, dipole radiator means coupled to one of said output lines, and further dipole radiator means



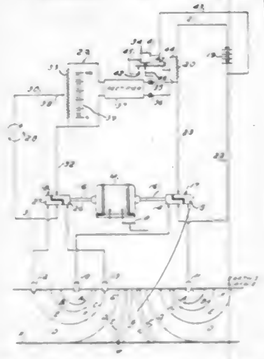
at right angles to said first radiator means and coupled to the other of said output lines, one of said output lines being one-quarter wavelength longer than the other.

2,454,908
HANGER
Frederick L. Buxton, Burbank, Calif.
Application July 14, 1945, Serial No. 605,073
4 Claims. (Cl. 223—95)



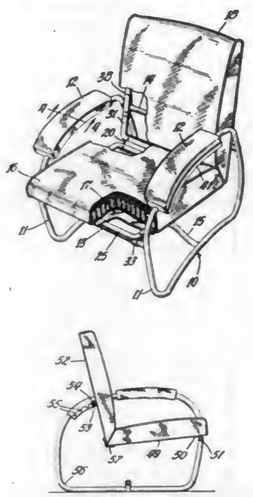
1. A hanger for engagement with a pair of trouser legs comprising a single tubular element, a rod positioned therein to slide axially thereof, a coil compression spring carried concentrically within the tubular element and urging the rod outwardly from the tube, a supporting hook passing through a motion limiting slot formed in the tube to cooperate therewith as a stop to limit motion of said rod which would otherwise be produced by said spring, said hook being secured rigidly to the rod to thereby prevent relative rotational movement between said tube and rod, and the rod and the tube having at their opposed ends a pair of spaced gripping legs.

2,454,909
BRUSH MOUNTING FOR ELECTRIC MOTORS
Eric Bylund, Genoa, Ill., assignor to John Oster Manufacturing Company, Racine, Wis., a corporation of Wisconsin
Application July 27, 1946, Serial No. 686,612
3 Claims. (Cl. 171—323)



1. In an electric motor: a housing having a side wall and an end wall; an armature rotatable in said housing and having a commutator adjacent to said end wall thereof; a brush supporting fixture fixed to said housing adjacent to said end wall thereof, said fixture including spaced apart substantially parallel side walls interposed between the commutator and the side wall of the housing and lying in planes normal to a radius of the commutator, said walls of the fixture having apertures arranged on a common axis normal to the axis of the commutator; an insulating brush holding tube loosely received in said apertures so as to be supported from said fixture walls a predetermined distance from said end wall of the housing and with its axis normal to the axis of the commutator; a brush carried by said tube for engagement with the commutator; and means on said fixture accessible only from the inside of the housing for detachably holding said tube against axial shifting relative to the fixture.

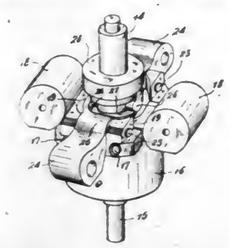
2,454,910
METHOD OF APPLYING COATINGS TO MOLDED OR CAST ARTICLES
William P. Carr, Rossford, Ohio, assignor to The De Vilbiss Company, Toledo, Ohio, a corporation of Ohio
Application April 4, 1946, Serial No. 659,658
5 Claims. (Cl. 18—59)



1. A method of applying a coating to a molded article which comprises first providing a mold in which the article is to be formed, then coating the mold surface with an adhesive substance of nonpermanent nature, partially imbedding inert particles in the adhesive substance, applying a coating of material to be a permanent part of the molded article over the imbedded inert particles, filling the balance of the mold with molding material, permitting the molding material to harden, withdrawing the formed article from the mold, and finally removing any nonpermanent adhesive substance from the surface of the article leaving the inert particles fixed in the article with their outer ends protruding to the extent they were embedded in the adhesive substance.

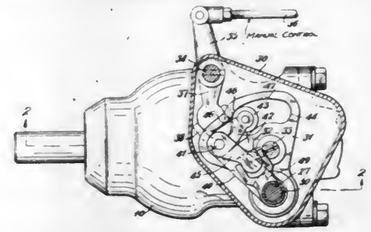
2,454,911
GEOLOGICAL EXPLORATION SYSTEM
Dayton H. Clewell, Dallas, Tex., assignor, by mesne assignments, to Socony-Vacuum Oil Company, Incorporated, New York, N. Y., a corporation of New York
Application August 12, 1944, Serial No. 549,209
7 Claims. (Cl. 175—182)

1. A method of electrical prospecting which comprises applying alternating current between spaced points on the earth's surface to produce a system of equipotential surfaces, locating detecting stations at points on a selected one of said equipotential surfaces, varying the frequency of said alternating current to change the potential difference between said detecting stations by an amount due to reflections from a subsurface boundary, and measuring said resultant potential difference.



2,454,912
SPRINGY ADJUSTABLE SEATING STRUCTURE
Marion Morgan Cunningham, South Bend, Ind., assignor to Mishawaka Rubber and Woolen Manufacturing Company, Mishawaka, Ind., a corporation of Indiana
Application October 30, 1944, Serial No. 560,978
8 Claims. (Cl. 155—116)

4. In a seating structure of the class described the combination of three independent individual assemblies joined together in associated cooperative relation, two of the assemblies being a seat back and a seat bottom respectively and each comprising a fabric panel tautly stretched on a surrounding flat marginal frame consisting of a springy flat bar extending continuously around and lying flatwise in the plane of the fabric panel, said bar being of such width that it is substantially rigid and unyielding in the plane of the fabric panel and relatively thin and resiliently bendable transversely to the plane of the fabric panel and said other assembly being a supporting frame for said seat back and said seat bottom, said seat bottom and said seat back being connected together solely at their respective rear and lower ends and said supporting frame being connected with said seat bottom and seat back solely at side marginal places thereof remote from their aforesaid rear and lower end connection, the connection of the said supporting frame with one of said other two independent individual assemblies being a pivotal connection and with the other of the said two assemblies being an adjustable connection whereby that assembly is movable forwardly and rearwardly to optional positions on the supporting frame.

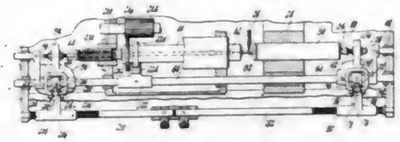


2,454,913
CENTRIFUGAL GOVERNOR
Louis De Marco, Cleveland, Ohio
Application September 27, 1944, Serial No. 555,978
6 Claims. (Cl. 264—15)

1. In a centrifugal governor, a shaft, control means movable axially relative to said shaft, a set of weights mounted to turn with the shaft and to swing on parallel axes under the influence of centrifugal force for moving said control means in one axial direction under speed increases throughout the range of the governor, a second set of weights mounted independently of the first set to turn with the shaft and to swing on parallel axes separate from said first named axes and function-

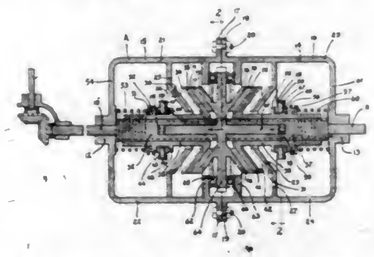
ing at low speeds to augment the action of the first set, but adapted to be forced inward by the control means at higher speeds for opposing by centrifugal force the effect of the first set.

2,454,914
SPEED CONTROL MECHANISM
Louis De Marco, Cleveland, Ohio
Application November 23, 1945, Serial No. 630,360
15 Claims. (Cl. 264—3)



1. In engine control mechanism, a control member movable in a predetermined path only, a bell crank lever pivoted to said control member, a throttle operating element articulated with one arm of said bell crank lever, the other arm thereof carrying a follower, and cam means engaged by said follower, whereby the effect upon said throttle operating element of a given movement of said control member may be modified by cam contour.

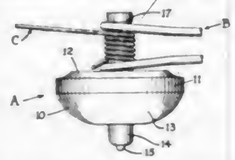
2,454,915
ISOLATION OF LIPOVITELLENIN FROM EGG YOLK
Harry L. Fevold and Adele Lausten Dimick, Berkeley, Calif., assignors to United States of America as represented by the Secretary of Agriculture
No Drawing. Application May 21, 1947, Serial No. 749,606
4 Claims. (Cl. 99—14)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A process for isolating lipovitellenin from egg yolk comprising mixing egg yolk with water, centrifuging the mixture, discarding the separated solids adding ether to the supernatant liquid, allowing the liquid to stand to form three layers, namely, an upper layer containing fatty material dissolved in ether, an intermediate layer of crude lipovitellenin, and a lower layer containing water and water soluble proteins and removing the intermediate layer of lipovitellenin.

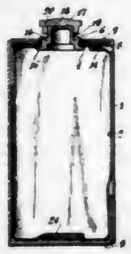
2,454,916
MACHINE TOOL
Ralph M. Gamble, Springfield, Vt., assignor to Jones & Lamson Machine Company, Springfield, Vt., a corporation of Vermont
Application February 18, 1946, Serial No. 648,423
8 Claims. (Cl. 51—215)

1. In a screw threading machine, a frame, a tool on said frame, a spindle rotatably mounted and axially movable on said frame, a chuck within said spindle, a ram axially movable on said frame in alignment with said spindle, cam actuated means for moving said ram to push a work piece to said chuck, automatic means for causing said chuck to grip a work piece pushed thereto, and means for axially moving said spindle and ram as a unit while the tool is in operative engagement with the work piece.



2,454,917
BRAKE AND CLUTCH MECHANISM FOR TRANSMISSIONS
George A. Geddes, Minneapolis, Minn.
Application June 15, 1944, Serial No. 540,449
4 Claims. (Cl. 192—18)

1. A transmission comprising a casing, a pair of spaced aligned shafts supported by said casing, a coaxial gear supported between said shafts, a pair of friction means on said gear, a clutch means slidably mounted upon each of said shafts for movement toward or away from said gear, means for moving said clutch means toward or away from said gear, said clutch means comprising an outwardly extending flange having a friction surface on opposed faces thereof, friction means on said casing, certain of said friction surfaces on said flanges engaging corresponding friction means on said gear when moved toward said gear and the other friction surfaces on said flanges engaging the corresponding friction means on said casing when said flanges are moved away from said gear to hold the corresponding clutch means and shaft upon which it is mounted from rotation.

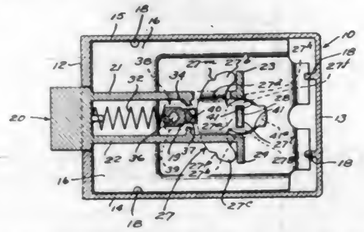


2,454,918
SPINNING TOP
George A. Geddes, Minneapolis, Minn.
Application March 14, 1946, Serial No. 654,281
3 Claims. (Cl. 46—72)

1. A holder for use in conjunction with a top having an axial shaft, a groove encircling said shaft near the upper end thereof and a body encircling the shaft near the lower end thereof, the holder comprising an elongated handle having a pair of hook shaped members projecting from one end thereof one above the other in spaced relation, the uppermost of said hook

shaped members being engageable about said shank in said groove and the lower of said hook shaped members being engageable about said shank adjacent the upper end of said body, said hook-shaped members being shaped with an open side extending transversely of the longitudinal handle axis.

2,454,919
MULTIPLY CONTAINER WITH DISPENSING OUTLET SECURED THERETO
Cora L. Hagan, South Ozone Park, N. Y., assignor to The Lord Baltimore Press, Baltimore, Md., a corporation of Maryland
Application January 19, 1943, Serial No. 472,907
5 Claims. (Cl. 222—569)

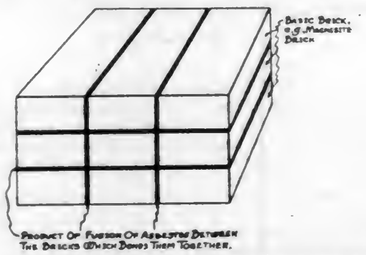


4. In a container, the combination of an inner container, an outer container having a plurality of folded tuck-in flaps for closing one end thereof, two of said flaps extending toward each other with their ends juxtaposed, said containers having registering apertures, the aperture in said outer container extending through a plurality of said folded flaps, a neck part extending through said registering apertures, means for securing portions of said containers adjacent said apertures to said neck part to secure together said folded flaps and said inner container, and means on the exterior of the portion of the neck extending through said apertures for securing a closure thereto.

2,454,920
LOCK CONSTRUCTION
Emil J. Heineman, Chicago, Ill., assignor, by mesne assignments, to Keil Lock Co. Inc., Charlestown, N. H., a corporation of New Hampshire
Application February 2, 1945, Serial No. 575,748
3 Claims. (Cl. 292—169)

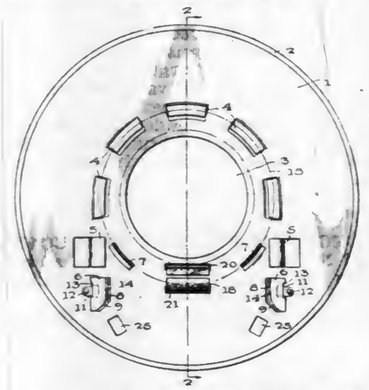
1. A lock construction comprising a casing having a wall in the form of a back plate, the back plate having a hole to receive a screw and the casing having a threaded hole, a spring-biased bolt projectible into or out of the casing, a cam member loosely journalled in the back

plate having operating connections with the bolt for actuating the bolt, and operatively connected to a key operated connector bar, a device made of sheet metal and having a base portion resting against the external face of said back plate and having an operating portion projecting through the hole in the back plate having an inclined bearing surface directed away from said cam, a



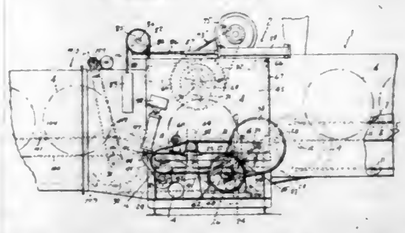
screw threaded into the threaded casing hole for holding the back plate and said device assembled to the casing, said operating portion of said device and said cam having interengageable parts for releasibly holding said cam member and bolt against movement and comprising a notched portion on the cam engaging a projection on said operating portion aforesaid.

2,454,921
PRODUCTION OF ALUMINUM FLUORIDE GELS
Heinz Heinemann, Upper Darby, Pa., assignor to Porocel Corporation, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application February 28, 1946, Serial No. 651,047
4 Claims. (Cl. 23—88)



1. A method for producing an aluminum fluoride gel, which comprises digesting alumina with at least a chemically equivalent amount of aqueous hydrofluoric acid, the quantity of water in the reactant mixture being such as to give hydrofluoric acid of a concentration between 30% and 40%, and drying the resulting gel.

2,454,922
BASIC REFRACTORY STRUCTURE
Everett C. Hite, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a corporation of Ohio
Application July 31, 1943, Serial No. 496,949
8 Claims. (Cl. 72—37)



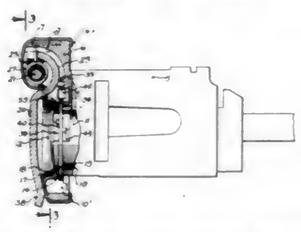
1. In the construction of a refractory structure from basic brick, the improvement which consists in providing a layer of asbestos between adjacent bricks, and heating said structure to a temperature of at least about 2600° F. and thereby fusing said asbestos and bonding the bricks.

2,454,923
EMERGENCY WHEEL
Alleyne C. Howell, Jr., Dallas, Tex.
Application February 20, 1946, Serial No. 648,882
18 Claims. (Cl. 301—38)

7. A device of the class described comprising a disc wheel, a series of main retaining lugs formed at one side thereof, and arranged substantially in a semi-circle, guide lugs, mounting lugs, and auxiliary retaining lugs, the guiding lugs, the mounting lugs and the auxiliary retaining lugs being formed at the same side of the disc wheel as the main retaining lugs, the main retaining lugs, the guiding lugs, and the mounting lugs forming a generally U-shaped space into which the wheels of an automobile or the like may pass when the disc wheel is to be mounted thereon, auxiliary retaining lugs being positioned at opposite sides of a median line, at the half of the wheel opposite said main retaining lugs and within said U-shaped space, said auxiliary retaining lugs being adapted to engage behind the rim of an automobile or like wheel after it has been placed in the base of said U-shaped space and to cooperate with said main retaining lugs to retain the disc wheel on the rim of the automobile or like wheel.

2,454,924
BARREL WASHER
George L. Hurst, San Francisco, Calif., assignor of one-half to Alexander Bauer and one-half to Ernest Thompson, both of San Francisco, Calif.
Application May 19, 1944, Serial No. 536,315
8 Claims. (Cl. 15—57)

1. In a barrel washer, means for supporting a barrel on its side for rotation about its longitudinal axis and for so rotating said barrel, a rotary brush supported for rotation about an axis parallel with the aforesaid horizontal axis but offset to one side thereof, means supporting said brush for said rotation and for engagement with one



end of said barrel during rotation of the latter, said brush being positioned to extend across the said axis of rotation of said barrel and to the sides of said barrel for scrubbing the entire exposed surface of said end upon one revolution of such barrel on its axis, said brush being movable axially of its axis of rotation toward and away from said barrel, pneumatically actuated means connected with said brush for so moving said brush axially thereof toward said barrel during said rotation of said brush, valve and spring means associated with said pneumatically actuated means for respectively rendering the latter inoperative for so moving said brush toward said barrel and for moving said brush away from said barrel.

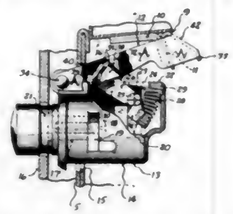
2,454,925

AUTOMATIC KEYHOLE LOCK COVER

Edward N. Jacobi, Milwaukee, Wis., assignor to Briggs & Stratton Corporation, Milwaukee, Wis., a corporation of Delaware

Application March 2, 1945, Serial No. 580,506
12 Claims. (Cl. 70—455)

1. In a lock: a lock body having a bore opening to the front face of the body; a key controlled lock cylinder rotatable in the bore; a cover movably mounted on the lock body and engageable over the front face thereof to cover the front of the lock cylinder; a spring for yieldingly urging the cover to its closed position; retaining means for holding the cover in an open position providing access to the lock cylinder, said retaining means being movably carried by the lock body and operatively engaged with a part on the cover when the same is moved away from the front of the lock cylinder to uncover the same; and means for disabling said retaining means comprising, a cam rotatable with the lock cylinder and engageable with the retaining means upon rotation of the cylinder toward key removing position to carry the retaining means out of engagement with said part on the cover so as to free the cover for spring propelled motion toward its closed position.



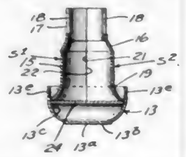
2,454,926

LOCK DEVICE FOR COMPARTMENT DOORS

Edward N. Jacobi, Milwaukee, Wis., assignor to Briggs & Stratton Corporation, Milwaukee, Wis., a corporation of Delaware

Application April 6, 1945, Serial No. 586,879
13 Claims. (Cl. 70—81)

1. A lock device for compartment doors, comprising: a lock body; a U-shaped latch bolt pivoted at its open end from the forward end of the lock body and having opposite side arms embracing the lock body and extending rearwardly from said pivot; a lever carried by the lock body for pivotal motion on an axis parallel to the latch bolt pivot axis and near the rear of the lock body; a motion transmitting connection between the lever and the lock bolt such that pivotal motion of the lever in opposite directions is translated into pivotal motion of the latch bolt to carry the same to and from an operative position at which the closed end of the bolt engages behind a striker plate on the compartment; a spring re-



acting between the lock body and the bolt for yieldingly holding the latch bolt in an operative projected position; and means on the lock body operable through said lever for moving the latch bolt to a retracted inoperative position.

2,454,927

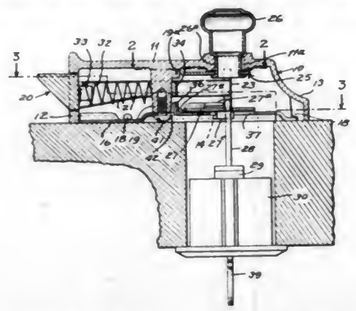
KNOB CONSTRUCTION FOR LOCKS

Ludwig J. Kalwo, Bronx, N. Y., assignor, by mesne assignments, to Keil Lock Co. Inc., Charlestown, N. H., a corporation of New Hampshire

Application February 2, 1945, Serial No. 575,921
5 Claims. (Cl. 292—347)

5. A knob construction for latches which has a hand gripping end and a bearing end comprising a plurality of independent, identical sheet metal stampings complemental to each other along their longitudinal axes, bent to an arcuate, semi-tubular shape, said stampings having abutting side edges and forming, when assembled, a hollow shank which at one end is tubular in cross section, the end edges at the other end falling in substantially a single plane, and a cap element on said last mentioned end having a peripheral flange portion encasing said end edges of said stampings and by which said stampings are held against separation from each other and against relative displacement, and a collar engaging the shank adjacent the first end and cooperating with the cap element to restrain separation in rotation in the bearing.

2,454,928



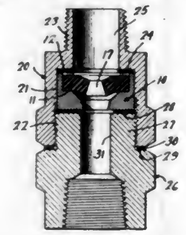
LOCK CONSTRUCTION

Ludwig J. Kalwo, Bronx, N. Y., assignor, by mesne assignments, to Keil Lock Co. Inc., Charlestown, N. H., a corporation of New Hampshire

Application February 2, 1945, Serial No. 575,922
4 Claims. (Cl. 292—169)

4. A lock construction comprising a casing having a bolt movable into and out of the casing and a spring biasing the bolt outwardly of the casing, abutment portions, and cam members operable selectively from each side of the casing to move the bolt inwardly of the casing and against said spring biasing whereby said spring reacts upon said cam members so that at least a portion of the latter, when one of said cams is actuated to withdraw the bolt, moves into operable

relationship to one of said abutment portions, said abutment portions and said cam members having co-acting, inter-engageable parts comprising a member on one and a notch on the other forming a detent whereby, upon engagement of said parts, said cam and the bolt are held against movement, and means mounting said cam members for movement and for guiding them during movement to bring said cam portions into operative relation to one of said abutment portions,



and providing sufficient looseness so that the reaction of said spring biasing upon one of said cam members effects bodily displacement of the cam and abutment portions relative to each other to bring said inter-engageable parts into inter-engagement and hold said bolt in retracted position, at least one of said cam members being connected to a connecting bar rotated adjacent one end by a key controlled plug and at its other end extending into said cam in keying engagement and with radial play.

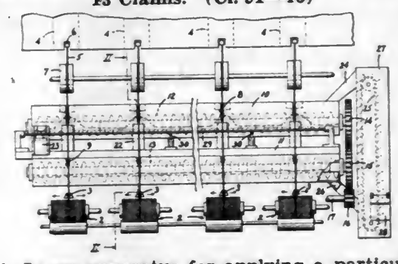
2,454,929

FLOW CONTROL

Leslie A. Kempton, Chicago, Ill., assignor to The Dole Valve Company, Chicago, Ill., a corporation of Illinois

Application July 17, 1944, Serial No. 545,312
7 Claims. (Cl. 138—45)

1. A fluid control device for maintaining a substantially uniform fluid delivery rate including a seat member having a central opening therethrough, said opening being defined by at least one frusto-conical surface, and a resilient annular member seated on said member over said opening, said annular member having a central opening therethrough substantially aligned with said opening in said seat member, said frusto-conical surface of said seat member which defines at least a part of said seat member opening being arranged to diverge toward said resilient annular member and terminating adjacent said resilient annular member at a point spaced radially outwardly from said opening in said resilient annular member, the central portion of said annular member being deflectable by fluid pressure into the frusto-conical portion of said seat member opening whereby to increase the area of the end of the opening in said annular member at the seat and to decrease the opposite end of said opening.



4. A fluid control device comprising a casing having a passageway therein, a shoulder in said passageway facing the inlet side of the passageway and extending radially inwardly from the side wall of the casing, an elastic member seated on said shoulder so as to extend radially toward the wall of said casing and having its outer periphery substantially radially confined beyond said shoulder so that the incoming fluid acts endwise against the member, said member having an orifice therethrough in a region of said member spaced inwardly of the radially inner edge of said shoulder to provide for flexing of the central portion of said member in a direction toward the outlet side of said passageway upon flow of fluid through said orifice, said shoulder being centrally recessed to receive the deflected central portion of said member, the opening in said member forming said orifice being enlargeable on the outlet side of the passageway and decreaseable in the area on the inlet side of the passageway upon deflection of said central portion in response to the pressure of the fluid acting endwise against said member.

2,454,930

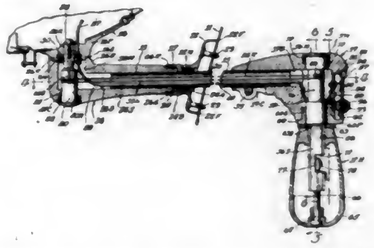
APPARATUS FOR TREATING FILAMENTARY MATERIAL

William H. Kreamer, John C. Klingener, and Ernest K. Bauer, Meadville, Pa., assignors to American Viscose Corporation, Wilmington, Del., a corporation of Delaware

Application September 15, 1945, Serial No. 616,582
13 Claims. (Cl. 91—46)

1. In an apparatus for applying a particulate material to a traveling strand, a container, screw conveyor means therein for propelling the particulate material longitudinally thereof, said means having a gap provided in the screw blading thereof whereby the material piles up to a higher level in the container adjacent said gap, and means for conveying a strand through the pile of material thus formed.

2,454,931



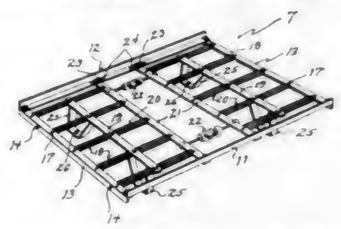
AUTOMOTIVE SPOTLIGHT

Raymond T. Larson, Park Ridge, Ill., assignor, by mesne assignments, to Arnolt Corporation, a corporation of Indiana

Application September 5, 1946, Serial No. 694,903
6 Claims. (Cl. 240—61.13)

1. In a universal spotlight, an elongated cylindrical mounting tube, means fixed at one end of said tube and affording a bearing, a lamp secured on said bearing for rotation on an axis perpendicular to the axis of said tube, a flexible cable operatively connected to said lamp for imparting rotation to said lamp and extended through said

tube, a handle base secured to the other end of said tube and having a transverse chamber formed therein and a longitudinal bore establishing communication between said tube and said transverse chamber, a stud having a central bore formed therethrough and having a cylindrical outer surface adjacent one end and a non-circular outer surface throughout at least a portion of the balance of its length, means forming part of said base and disposed at one end of said chamber to afford a first bearing for rotatably supporting said stud, a removably associated end wall for said



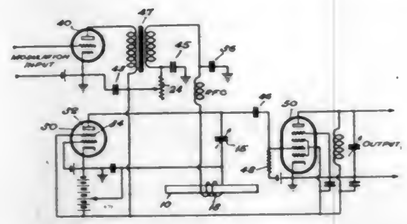
chamber affording a second bearing for said stud, means at said one end of said stud for limiting movement of the stud in one direction relative to said base, a hollow handle element surrounding and fixed to the other end of said stud in a rotatively inter-locked relation to said non-circular surface of said stud and acting against said end wall to hold said end wall in position and limit endwise movement of said stud in the other direction relative to said base, said stud having a transverse opening intersecting said longitudinal bore, and said cable being extended into said transverse opening and said longitudinal bore of said stud and into said hollow handle, and means disposed in said hollow handle and adjustably fixing said cable to said stud.

2,454,932

SPRING SUPPORTED ROCKING CHAIR

Walter J. La Valliere, Sheboygan, Wis.

Application November 7, 1946, Serial No. 708,231
6 Claims. (Cl. 155—50)



5. A spring suspension for rocking chairs of the type having a leg structure and a chair structure resiliently supported thereon, comprising: a rigid frame having front, rear, and side rails; means for securing said frame to one of said structures; a pair of supporting bracket members lying within said rigid frame, each including a bar substantially parallel to an adjacent one of the side rails of the frame, and legs extending rigidly from the bar; means for securing said legs to the other of said structures; tension springs connecting each of said bracket members with the adjacent side rail of the frame; and means for maintaining said springs under tension.

2,454,933

FREQUENCY MODULATION

David G. C. Luck, Hightstown, N. J., assignor to Radio Corporation of America, a corporation of Delaware

Application February 17, 1943, Serial No. 476,145
11 Claims. (Cl. 179—171.5)

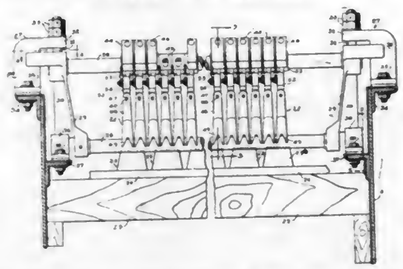
4. In a system as described, a magnetostrictive vibrator, a field winding in a circuit including a source of current for producing a magnetic field wherein said vibrator is located, an oscillation generator circuit the frequency of operation of which is controlled by said magnetostrictive vibrator located in said magnetic field produced by current in said field winding, a variable impedance effectively in the path of said current, and a source of control potentials associated with said impedance for varying the strength of the current in said field winding in accordance with said control potentials and correspondingly varying the instantaneous frequency of the oscillations generated.

2,454,934

ELECTRICAL OXYGEN VAPORIZER AND PROTECTING COVER

John A. Mathis and Roland W. Milan, Pinckneyville, Ill.

Application January 24, 1947, Serial No. 724,202
9 Claims. (Cl. 62—1)



8. Apparatus for converting liquid oxygen and the like into gas comprising, a double wall insulating vessel for the liquid, said vessel being of generally spherical shape, an electrical heater element in said vessel, a thermostatic switch in said vessel adjacent said heater element, upper and lower cap members for the outer wall of said vessel, said cap members being provided with adjacent rim portions, a reinforcing cable interlacing said cap members around the rim portions thereof, a bracket upstanding from the top cap member, a warming tube connected to a gas outlet from said vessel, said tube being coiled about said bracket, gas pressure responsive switch means supported by said bracket, a relay supported by said bracket, circuit means connecting said switches for operation in series to control said relay, and circuit means for connecting said heater element through contacts on said relay to a source of power.

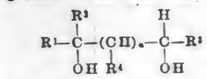
2,454,935

CONTINUOUS WIRE AND STRIP ELECTRO-PROCESSING MACHINE

Constantine G. Miller, Chicago, Ill., assignor to The Meaker Company, Chicago, Ill., a corporation of Illinois

Application June 27, 1945, Serial No. 601,837
1 Claim. (Cl. 204—209)

Apparatus for electroplating simultaneously a plurality of strips comprising a tank containing electrolyzing solution, a plurality of fixed soluble anodes in said solution, means for moving said strips through the solution, and means for maintaining a relatively constant distance between said strips and anodes, said last mentioned means comprising a frame including an upper and a lower rod extending in parallel relationship across said tank, said lower rod comprising a supporting member located beneath the strips and adapted to be located beneath the surface of the electrolyzing solution and supporting said strips in parallel relationship, said frame having means for adjusting said lower rod and the strips supported thereon toward said anodes as said anodes become smaller, a plurality of conducting fingers swingably mounted on said upper rod and yieldably held in contact with the strips, and an insulating sleeve mounted on each of said fingers, said means for maintaining a relatively constant distance between said strips and anodes including brackets mounted on the tank sides, vertically mounted screws and nuts mounted on said frame, said screws extending through said brackets and supported thereon, a pair of arms forming parts of said frame and extending downwardly on opposite sides of the tank and connecting together in rigid relationship said upper and lower rods for adjustably maintaining the position of said frame, including said lower rod, and guides on the opposite vertical sides of said tank for guiding said pair of arms, said lower rod and said conducting fingers and for opposing the frictional drag of said strips on said fingers and lower rod, said arms serving to maintain the proper distance between the lower ends of said fingers and said lower rod.



2,454,936

PROCESS FOR PREPARING UNSATURATED ALCOHOLS

Glen H. Morey, Terre Haute, Ind., assignor to Commercial Solvents Corporation, Terre Haute, Ind., a corporation of Maryland

No Drawing. Application January 22, 1944, Serial No. 519,346
3 Claims. (Cl. 260—642)

2. In a process for preparing a mixture of organic compounds comprising a greatly preponderant proportion of isomeric monohydric unsaturated alcohols and a lesser proportion of the corresponding dienes, the steps which comprise adding a relatively small but effective percentage of water not substantially exceeding about 10 per cent by weight to an aliphatic dihydric alcohol of the following structural formula:

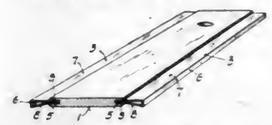
in which R^1 and R^2 are alkyl radicals, R^3 and R^4 are selected from the group consisting of hydrogen and alkyl radicals and n is an integer from 1 to 4 inclusive, adding thereto a dehydration catalyst selected from the group consisting of p-toluenesulfonic acid, iodine, aniline hydroiodide and hydrogen iodide, rapidly distilling the mixture, condensing the distillate whereby a water layer and an oil layer are formed, continuously returning the water layer to the distillation vessel throughout the distillation process, while collecting the oil layer, and recovering the isomeric monomeric monohydric unsaturated alcohols.

2,454,937

PROCESS OF TREATING GLYCERIDE OILS WITH ACTIVATED MAGNESIUM OXIDE

Wendell W. Moyer and Ralph A. Marmor, Decatur, Ill., assignors to A. E. Staley Manufacturing Co., Decatur, Ill., a corporation of Delaware

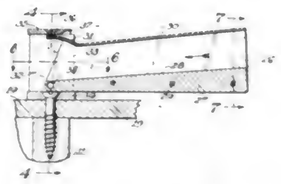
No Drawing. Application August 5, 1944, Serial No. 548,304
7 Claims. (Cl. 260—427)



1. The process of treating glyceride oil, which comprises mixing said oil with activated magnesium oxide prepared by heating hydrated magnesium oxide for about three hours at a temperature lying within the range of about 350° C. to about 500° C. to stabilize the oil against reversion characteristics, and thereafter separating said oil from said magnesium oxide.

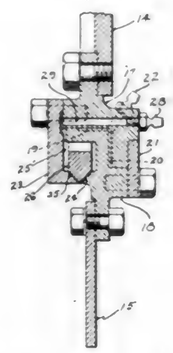
2,454,938

EDGE FOR T-SQUARE AND THE LIKE



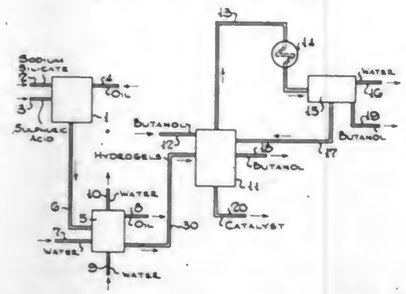
James Nash, Milwaukee, Wis., assignor to Eclipse Moulded Products Company, Milwaukee, Wis., a corporation of Wisconsin

Application August 2, 1944, Serial No. 547,654
4 Claims. (Cl. 33—112)



4. In a T-square or the like for use on drafting surfaces, a body strip having a horizontal longitudinally extending groove in its edge face, and a generally flexible edge member secured in said groove and extending outwardly therefrom, said edge member gradually tapering in thickness from a lesser cross-section at the inner longitudinal portion to a greater cross-section at the outer longitudinal portion for insertion of the inner portion in said groove and to provide flexibility of the edge at the mouth of said groove, the outer lower corner of said edge member extending lower than the bottom of the strip to effect initial contact of the edge with the drafting surface before the strip touches the same to load the edge and maintain tight contact with the drafting surface, and the tapered shape and flexibility of the edge at the mouth of said groove disposing the outer face of the edge on a vertical plane substantially at right angles to the drafting surface after the strip touches the same and the edge is loaded.

2,454,939
COIN AND DISK PROJECTOR FOR AMUSEMENT DEVICES
Raymond S. Oakes, Brookfield, Ill.
Application April 11, 1946, Serial No. 661,428
3 Claims. (Cl. 273—129)



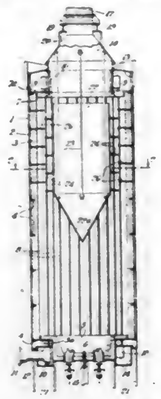
1. As an article of manufacture, a coin propelling device comprising a drum provided with a through slot, means for supporting said drum for rotation about a vertical axis, and a coin chute having a slanting runway secured at one end in said slot for pivotal movement about a horizontal axis intersecting said vertical axis.

2,454,940
SEAL FOR CHUTES OF CONCRETE MIXERS
Harry C. Peters, Milwaukee, Wis., assignor to The T. L. Smith Company, Milwaukee, Wis., a corporation of Wisconsin
Application July 27, 1946, Serial No. 686,633
8 Claims. (Cl. 259—161)

1. A closure for the mouth of a rotatable concrete mixing drum, including a non-rotatable part covering the central portion of the mouth of the drum, an annular rotatable part surrounding the non-rotatable part and engageable with the edge of the drum, and a bearing between said parts permitting free rotation of the rotatable part relative to the non-rotatable part, characterized by the provision of: a seal located between the bearing and the inside of the drum to prevent the passage of grout and liquid to the bearing from inside the drum, comprising adjacent annular surfaces on the rotatable and non-rotatable parts shaped to form an annular groove having diverging sides and opening radially inwardly; and an expanding spring ring in said groove maintained in contact with the diverging sides thereof by its own inherent resilience.

2,454,941
DRYING HYDROGEL CATALYSTS BY DISTILLING WITH BUTANOL
Jerry A. Pierce and Charles N. Kimberlin, Jr., Baton Rouge, La., assignors to Standard Oil Development Company, a corporation of Delaware
Application February 25, 1944, Serial No. 523,938
6 Claims. (Cl. 252—254)

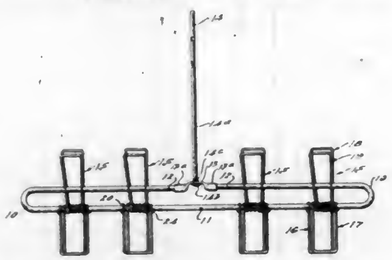
1. Process for preparing dry adsorbent gels from hydrogels which comprises mixing said hydrogel with normal butanol, distilling the water from said hydrogel as an azeotrope with said butanol at least until the particles are no longer capable of agglomorating and removing the butanol from the dehydrated hydrogel.



2,454,942
PREPARATION OF SPHERICAL ADSORBENT PARTICLES
Jerry A. Pierce and Charles N. Kimberlin, Jr., Baton Rouge, La., assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application August 23, 1944, Serial No. 550,863
16 Claims. (Cl. 252—273)

4. An improved process for preparing spherical particles of a natural adsorbent which comprises dispersing finely divided natural adsorbent and a hydrosol in a partially water-miscible liquid, agitating the dispersion until the hydrosol sets to a hydrogel to form spherical particles of gel and adsorbent and removing the particles from the liquid.

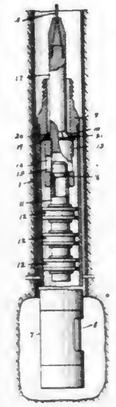
2,454,943
HEATER FOR HYDROCARBON FLUIDS
Carl S. Reed, New York, N. Y., assignor to The Lummus Company, New York, N. Y., a corporation of Delaware
Application July 17, 1945, Serial No. 605,612
4 Claims. (Cl. 196—116)



1. A heater for a hydrocarbon fluid comprising a furnace chamber, substantially parallel heating tubes arranged over the inner surface of a wall of said chamber, burner means disposed to conduct combustion within a region of the chamber adjacent one portion of the length of said tubes for radiant heating thereof, a deflector disposed inwardly of the tubing and having a wall in opposed face-to-face relation to said chamber wall and overlying another length portion of the tubes, said deflector being constructed and arranged to direct the products of combustion between said walls for convection heating of the portion of the tubes therebetween, a set of transversely spaced concurrent baffles oblique with respect to the tubes extending laterally outward from said deflector wall and having notches

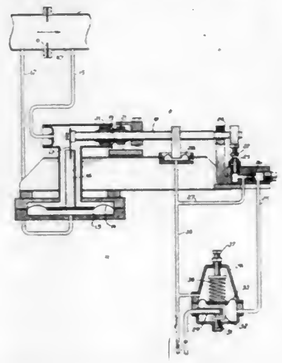
at their outer edges receiving the inner portion of the periphery of the respective tubes, a set of baffles spaced similarly to the first-mentioned baffles and similarly oblique extending laterally inward from said chamber wall and having notches at their inner edges receiving the outer

portion of the periphery of the respective tubes, said sets of baffles together defining a plurality of oblique concurrent channels for flow of the combustion products therethrough, and the tubes extending across said channels in the paths of the combustion products therein.



2,454,944
GARMENT HANGER
Harry E. Reynolds, Detroit, Mich.
Application May 2, 1945, Serial No. 591,444
7 Claims. (Cl. 223—85)

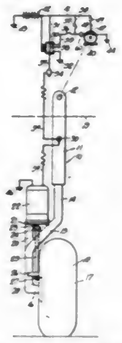
1. A garment hanger comprising a supporting frame including a wire member, and one or more garment clips mounted on said member, each clip comprising a pair of cooperating garment gripping portions depending from said member and a pair of finger gripping portions extending upwardly from said member, said clip being formed from a single length of wire and having a plurality of spring coils at the juncture of said pairs of garment and finger gripping portions through which said member extends.



2,454,945
BAILER
John M. Reynolds, Shreveport, La.
Application September 9, 1944, Serial No. 553,428
3 Claims. (Cl. 166—19)

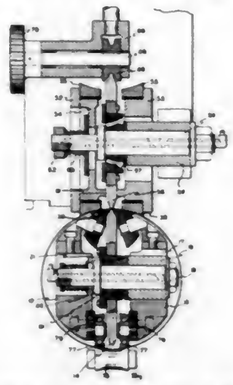
1. A bailer comprising, a barrel having an entrapping chamber provided with entrapping means at its inlet, a plunger reciprocable in said chamber and adapted upon reciprocation to draw a load into the chamber and cause the liquid therein to be expelled therefrom to thereby induce inflow into the chamber past the entrapping means, a valve seat at the upper end of the chamber against which the upper end of the plunger may seat, said bailer having a restricted

liquid passageway between the seat and upper end of the plunger when said end is seated against said seat, an annular valve on, and movable with, the plunger and having its free margin flexible for closing said passageway and retaining in the chamber at least a substantial portion of the pressure existing in the well in which the bailer may be lowered to be subsequently utilized to facilitate unloading said chamber.



2,454,946
PRESSURE TRANSMITTING INSTRUMENT
Albert J. Rosenberger, Chicago, Ill., assignor to Republic Flow Meters Company, Chicago, Ill., a corporation of Illinois
Application March 22, 1944, Serial No. 527,525
5 Claims. (Cl. 137—153)

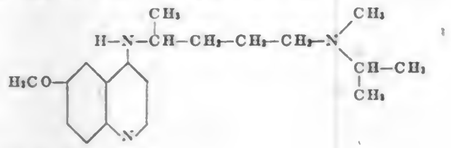
5. A pressure transmitting instrument comprising a control valve for producing a regulated control fluid pressure, means responsive to a condition to be measured to control the valve, a supply connection to the valve, a restricted orifice in the supply connection, and a regulating device in the supply connection anterior to the orifice connected to the control valve to vary the pressure



delivered to the orifice, the regulating device being responsive to the control fluid pressure and the delivered pressure to maintain a constant differential therebetween.

2,454,947
WHEEL STARTER
John F. Schroeder, South Bend, Ind.
Application November 16, 1944, Serial No. 563,650
13 Claims. (Cl. 244—103)

1. In combination, an aircraft strut including a cylinder and a shaft projecting longitudinally from and shiftably carried by said cylinder, an aircraft wheel carried by said shaft, a bracket carried by said shaft, a motor mounted on said bracket, and a driving connection between said motor and said wheel, said wheel being aligned with said strut cylinder and said strut shaft being laterally off-set and supporting said bracket at said off-set, said driving connection including a drive shaft connected to said motor by a sheer coupling and journaled in a bearing carried by said strut shaft, a gear pinion on said drive shaft, and a ring gear on said wheel in mesh with said pinion.

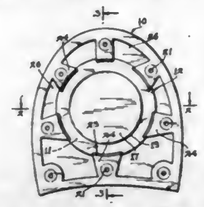


2,454,948
ELECTRIC RESISTANCE SEAM WELDING APPARATUS
Clifford S. Seltzer, Warren, Ohio, assignor to The Taylor-Winfield Corporation, Warren, Ohio, a corporation of Ohio
Application September 15, 1944, Serial No. 554,324
11 Claims. (Cl. 219—6)

1. In apparatus for side seam welding of tubular can bodies moving in succession along a predetermined path the combination of a welding horn of current conductive material positioned in said path and onto which pre-formed but unwelded can bodies are moved, a welding wheel electrode journaled in the rear end portion of said horn and adapted to have rolling contact with the inner surface of the can bodies as the latter traverse said horn, means anchoring said horn against longitudinal movement comprising a current-conductive support connected to and extending radially outward of the opposite end of said horn, means to propel can bodies to be welded onto and along said horn in succession with the unwelded longitudinal edges thereof passing on opposite sides of said support, an external welding wheel electrode opposing said first mentioned welding wheel electrode, means to rotate and apply welding pressure through said external wheel electrode, and means to rotate said first mentioned wheel electrode comprising a driving shaft extending through said support radially into said horn.

2,454,949
4-DIALKYLAMINOALKYLAMINO-6-METHOXYQUINOLINE
Horace A. Shonle and Arthur M. Van Arendonk, Indianapolis, Ind., assignors to Eli Lilly and Company, Indianapolis, Ind., a corporation of Indiana
No Drawing. Application April 1, 1944, Serial No. 529,186
1 Claim. (Cl. 260—288)

The new antimalarial comprising the compound having the following general formula



and its salts.

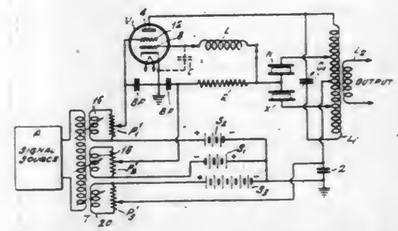
2,454,950
STABILIZED CELLULOSE ACETATE
William John Simpson and Donald Finlayson, Spondon, near Derby, England, assignors to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application August 6, 1946, Serial No. 688,706. In Great Britain August 21, 1945
4 Claims. (Cl. 106—182)

1. A composition of matter consisting essentially of cellulose acetate and, to reduce the destructive action of ultra violet light on the cellulose acetate, from 1–10% of the di-ester, of resorcinol, with a monohydroxy-monocarboxylic acid in which the hydroxyl group and the carboxyl group are directly attached to a nucleus selected from the group consisting of benzene nuclei and naphthalene nuclei.

2,454,951
SPRING HEEL FOR FOOTWEAR
Herbert H. Smith, Bay Shore, N. Y.
Application July 21, 1947, Serial No. 762,387
5 Claims. (Cl. 36—35)

1. A spring heel arrangement comprising a heel formed of resilient material, a recess within the heel having its bottom closed to provide at the bottom of the recess a body of resilient material adapted to be compressed inwardly within the recess as the shoe is worn and weight placed upon the shoe heel, a spring arrangement disposed within the recess and adapted to be compressed as the shoe is worn, means for securing the heel to a shoe bottom, said spring arrangement comprising two plates and a coil spring extended between the two plates, the plate in the open end of the recess being connected to the side wall of the recess whereby to temporarily retain the spring arrangement within the resilient heel material at least until the heel has been secured to the shoe, said plate adapted to engage with heel material portions, said portions overhanging the top of the recess and being spaced around the recess, said plate being a circular disc of uninterrupted circularity around its periphery, there being minor recesses in the top of the heel beyond the spring receiving recess, said minor recesses spaced around the last-named recess in alternation with said overhanging heel material portions.

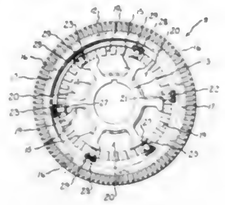
2,454,952
MEASUREMENT OF CORROSIVE CHARACTERISTICS OF THE SOIL
Robert L. Starkey, New Brunswick, N. J., and Kent M. Wight, Philadelphia, Pa., assignors to American Gas Association, Inc., New York, N. Y., a non-profit membership corporation of the State of New York
Application April 12, 1946, Serial No. 661,566
1 Claim. (Cl. 204—195)



In apparatus for testing wet sub-surface soils to determine the pH and E_h values thereof, an elongated tube normally closed at one end which is substantially pointed so as to be adapted to be pushed into the earth to the depth at which the soil is to be tested, an assembly of electrodes mounted within said tube adjacent said end, one of said electrodes being of a reference half cell type, a second being of a pH responsive type and a third being formed of platinum, connections to said electrodes running up through the tube for connection of said first and second electrodes and said first and third electrodes to potential measuring apparatus to obtain readings indicative respectively of the pH and E_h values of the soil, said tube being formed with a lateral opening adjacent said end for admitting earth therein to surround said electrodes, and closure means for said opening comprising a tube surrounding said first mentioned tube and being formed with an aperture adjacent said opening, and also being rotatable from its upper end to permit bringing its aperture into register with said opening after the device has been pushed into the earth, whereby the soil may then enter and surround said electrodes, said tubes at least at the portions thereof adjacent said electrodes being formed of insulation material.

2,454,953
SAW FITTING DEVICE
Thomas Stennitt, Lansdowne, Ontario, Canada
Application June 16, 1947, Serial No. 754,989
5 Claims. (Cl. 76—46)

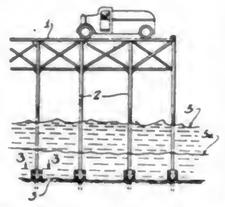
1. A saw fitting tool comprising a metal block having a plane upper surface and a marginal bevelled surface at each end of the block in contiguous relation to said upper surface, said bevelled surfaces being at different degrees of angularity, a channel member having flat parallel legs and a web connecting said legs, and means removably securing the channel member to a lateral face of said block in longitudinally arranged relation thereto with the free ends of the legs in upwardly disposed position, the outer surface of one of the legs being in abutting relation to said lateral face.



2,454,954
FREQUENCY MODULATION
George L. Usselman, Port Jefferson, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application May 16, 1944, Serial No. 535,828
9 Claims. (Cl. 179—171.5)

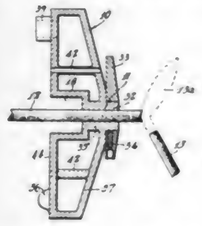
1. A signalling system comprising a wave generator of the type wherein an electron discharge device has an anode, a cathode, and a control grid coupled regeneratively, for the generation of oscillations, by a tank circuit including reactance between the anode and control grid with a point on the reactance coupled to the cathode of the device, an inductance in series in the connection between the first mentioned reactance and the control grid of the device, said inductance being of a magnitude substantially equal to the reactance of the capacity between the control electrode and cathode of the device with respect to voltages of the frequency of the generated oscil-

iations, an additional control electrode in said device, connections to said control grid for modulating the current through the tube in accordance with signals to correspondingly vary the phase of feedback and the frequency of the oscillations generated, and connections to said additional control grid for applying control potentials thereto in phase opposition with respect to the control potentials applied to said control grid to prevent undesired amplitude modulation of the generated oscillations.



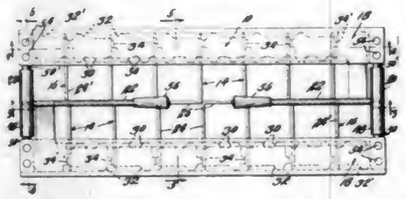
2,454,955
ROTOR FOR ELECTRIC MOTORS AND METHOD OF MAKING THE SAME
Theodore R. Wieseman, Milwaukee, Wis., assignor to The Louis Allis Company, Milwaukee, Wis., a corporation of Wisconsin
Application June 7, 1947, Serial No. 753,155
6 Claims. (Cl. 171—252)

1. A rotor for electric motors comprising a spider having a hub and radially outwardly projecting angularly spaced arms, the outer end surfaces of which are equi-spaced from the rotor axis; a stack of annular laminations encircling and mounted upon said spider arms with the inner peripheral portions of the laminations seated on the outer end surfaces of the arms, said inner peripheral portions of the laminations having a multiplicity of angularly spaced notches with the spacing therebetween considerably less than the angular spacing between the spider arms; one of said spider arms having a keyway in its outer end; a key seated in said keyway and received in one of said notches of each of the laminations whereby said key aligns the notches of all of the laminations; a key received in aligned notches opposite each of said spider arms, said other keys being seated upon the outer end surfaces of the spider arms; and welding securing each of said other keys to its respective spider arms so that said other keys coact with the first named key to secure the stack of laminations against turning with respect to the spider.



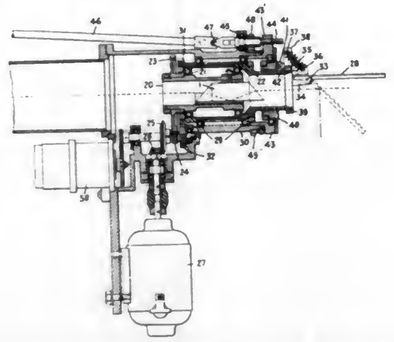
2,454,956
SYSTEM FOR CORROSION PROTECTION
Garth L. Young, Los Angeles, Calif., assignor to Signal Oil and Gas Company, Los Angeles, Calif., a corporation of Delaware
Application June 21, 1944, Serial No. 541,414
7 Claims. (Cl. 204—197)

1. A system for protection of steel members against localized corrosion of said members under local stress, which comprises a structural steel member immersed in sea water, which member is subjected to stress at an area of the surface of said member immersed in said water, a structural steel envelope enveloping said area and directly connected electrically with said stressed members, which envelope is relatively unstressed and adapted to permit the formation of a quiescent cell of said water between said envelope and said member when said system is immersed in sea



water, said quiescent cell being at said stressed area.

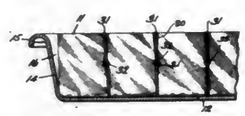
2,454,957
WATER-COOLING JACKET
Ernest Fredrick Zimmerman, Orange, Calif., assignor of one-half to John P. Filbert, Los Angeles, Calif.
Application August 4, 1947, Serial No. 765,871
4 Claims. (Cl. 176—119)



1. An electrode holder of hollow wall construction arranged for the passage therethrough of cooling fluid, said holder having a central position through which an electrode is arranged to pass, said holder having a fluid inlet opening with a wall adjacent thereto to direct a stream of cooling fluid around said central position with a swirling movement.

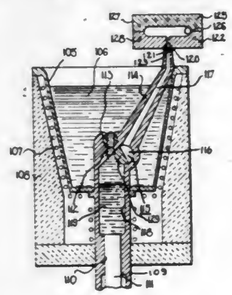
2,454,958
ICE TRAY
Sven W. E. Andersson, Evansville, Ind., assignor to Servel, Inc., New York, N. Y., a corporation of Delaware
Application April 5, 1946, Serial No. 659,959
13 Claims. (Cl. 62—108.5)

12. A grid for dividing an ice cube tray into compartments, said grid comprising a flexible, vertical partition and members connected to the upper part of said partition at points spaced therealong and projecting horizontally from the top of the partition, said members being movable to flex said partition by the application thereto of opposed forces parallel to but displaced laterally from the partition.



2,454,959
OPTICAL APPARATUS FOR SHOWING ROTATING PARTS AT REST
Norman F. Barnes, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application February 18, 1946, Serial No. 648,428
1 Claim. (Cl. 88—14)

Apparatus for continuously producing a stationary image of a revolving object comprising apparatus having an image revolving prism mounted for rotation on its image revolving axis, a mirror for reflecting an image of an object at one side of said axis along said axis so that the same may be observed through the prism, a motor for revolving both the prism and the mirror on said axis, with the mirror revolving at twice the speed of the prism, a synchronous motion transmitting system including a Selsyn device driven by said motor and a Selsyn device adapted to be driven by the rotating object, and a differential Selsyn device electrically connected in said system between the first two mentioned Selsyn devices, speed control means for said motor for obtaining a predetermined speed relation between said mirror, prism and rotating object such that the image of the rotating object as reflected by said mirror and observed through said prism will appear stationary, said speed control means including a phase angle responsive electronic controller for said motor which controller is responsive to changes in phase relation detected by said synchronous motion transmitting system when said speed relation departs from said predetermined relation, said differential Selsyn having a pair of relatively rotatable normally stationary windings through which the motion transmitting system is inductively coupled, and means for adjusting the relative rotary positions of said windings for the purpose of shifting the angular rotative relation between said mirror and rotating object.

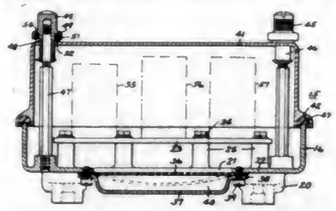


2,454,960
ICE TRAY
Harrison C. Berkeley, Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application July 3, 1944, Serial No. 543,331
8 Claims. (Cl. 62—108.5)

1. A unitary molded plastic freezing tray, comprising: an integrally molded container pan and a longitudinal partition having its bottom edge molded to the pan bottom but having its end edges substantially detached from the end walls of said pan whereby to increase the flexing distortability of this integrally molded unit, a series of spaced separate cross partitions intersecting said longitudinal partition and retained substantially in normal freezing position by an interlocking relationship therebetween and thereby

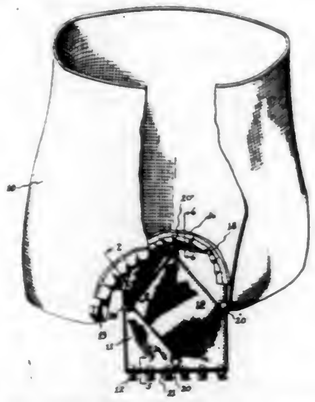
forming a unitary pan and grid structure, the edges of said cross partitions being movable relative to the adjacent pan walls whereby to increase the distortability of the unitary pan and grid structure to facilitate the removal of the frozen ice blocks by manual flexing.

2,454,961
METHOD AND APPARATUS FOR CASTING ALUMINUM
Morris F. Booth, Alden, Mich.
Application June 7, 1943, Serial No. 489,929
11 Claims. (Cl. 22—70)



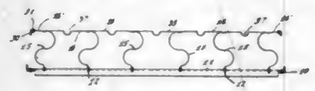
8. An apparatus for die casting that includes, a metal pot for holding a supply of molten die casting metal, means forming a chamber having a portion thereof disposed within the metal pot, an inlet passage in said chamber forming means through which molten metal from said pot can pass into said chamber, valve means for opening and closing said passage means, a discharge spout extending from said chamber, valve means in said discharge spout for opening and closing the same, a body of molten metal within the lower portion of said chamber having a lower melting temperature than said casting metal which is floated thereupon upon opening of said inlet valve, and plunger means reciprocable in said chamber for applying pressure upon said low temperature metal to transfer casting metal from said chamber through said spout into a mold adapted to be associated therewith and carry said low temperature metal into said spout to fill the same when casting said casting metal within a mold cavity.

2,454,962
CONTAINER FOR ELECTRICAL APPARATUS
James V. Brown, Anderson, Ind., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application April 10, 1944, Serial No. 530,413
4 Claims. (Cl. 174—18)



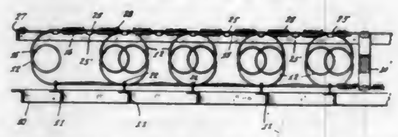
1. A container for enclosing hermetically an electrical device therein comprising, a pair of

cup-shaped members removably secured to each other and in hermetically sealed relation to form a large chamber, one of said members having an opening in its bottom wall and having apertures in one of its side walls; terminals extending through the apertures and connected with the device supported within the chamber; resilient nonporous insulating material between the terminals and the marginal walls of each aperture to insulate each terminal from the said member and also to seal hermetically the spaces between each terminal and the member to prevent fluid from passing through the apertures; a flat non-porous yieldable diaphragm closing the opening; a deformed plate detachably secured to the bottom



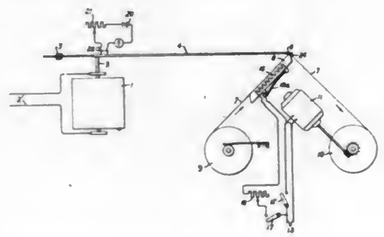
wall of the specified one member for clamping the peripheral edge of the diaphragm between the bottom wall to close the opening and forming a sealed joint thereabout and at the same time forming a small chamber with air trapped therein between the diaphragm and plate, said diaphragm adapted to move into the small chamber and compress the trapped air therein when air trapped within the large chamber expands, due to heat, and thereby prevent the trapped air in either chamber from passing through any of the sealed joints and also prevent outside fluid from entering the chambers through any of the sealed joints when the air within the large chamber contracts.

2,454,963
UNDERGARMENT CONSTRUCTION
Ida Combs, Philadelphia, Pa.
Application June 8, 1946, Serial No. 675,427
2 Claims. (Cl. 2—43)



1. In an undergarment of the panty girdle type having an elastic trunk portion, an elastic crotch stitched to the lower rear edge of the trunk portion, a plurality of fabric loops stitched arcuately around the lower front edge of the trunk portion, a plurality of hook fasteners attached to the front edge of the crotch and adapted to engage the loops, a washable fabric insert adapted to be secured to the elastic crotch, a plurality of fabric loops on said crotch, a plurality of hook fasteners on the insert adapted to be secured in said last-mentioned loops to retain the insert in position on the crotch, a length of fabric material stitched on the inside of the trunk portion, and a corresponding length of fabric material stitched to the outside of the front portion, said fabric length adapted to overlie and enclose the fasteners for the crotch and trunk.

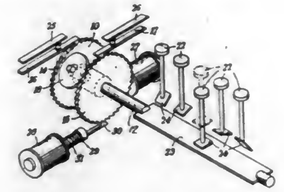
2,454,964
BED SPRING
Charles J. Elder, Muncie, Ind., assignor to The Moore Company, Muncie, Ind., a corporation of Indiana
Application July 20, 1944, Serial No. 545,770
7 Claims. (Cl. 5—247)



1. A bed spring, comprising a generally rectangular base frame, a plurality of rows of spring elements having their lower ends secured to said base frame, each of said elements being formed of flat spring stock bent into a general S shape, an open, generally rectangular border frame disposed over said base frame, the upper end of each spring element at each end of each row being provided with an integral extension disposed substantially in the plane of the border frame and secured to the adjacent side of said border frame, each of the remaining elements of each row being provided with an integral extension projecting toward the adjacent side of the border frame and secured to the upper end of the next element in the same row, a strip of spring stock interconnecting the upper ends of the middle pair of elements in each row, resilient means connecting said element-extensions and strip of each end row of elements to the adjacent end of the border frame, and resilient means interconnecting the element-extension and strips of adjacent rows of elements.

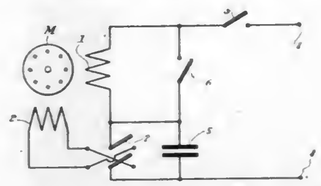
2,454,965
BED SPRING
Charles J. Elder, Muncie, Ind., assignor to The Moore Company, Muncie, Ind., a corporation of Indiana
Application September 1, 1944, Serial No. 552,283
5 Claims. (Cl. 5—247)

1. In a bed spring, a base frame, a plurality of spring elements mounted on said base frame, each of said spring elements being formed of wire bent to provide an upper stretch and end stretches each including at least one helical turn, the upper stretches of said elements being substantially coplanar, and flexible means connecting such upper stretches with each other, said elements being arranged in parallel rows with their upper stretches extending transversely of the rows, said base frame being provided with element-supporting members extending parallel to the rows of spring elements and provided in their upper edges with alined T-shaped slots, each of said elements including two juxtaposed lower stretches extending between adjacent ones of said members and disposed in the T-slots therein, each of said lower stretches being provided at its end with an open eye disposed in a horizontal plane and terminating in a reversely bent hook, each of said hooks being disposed in a T-slot and the two lower stretches of the element crossing each other between the two adjacent supporting members.



2,454,966
HEATED STYLUS INKLESS RECORDER
Harold T. Faus, Lynn, Mass., assignor to General Electric Company, a corporation of New York
Application February 14, 1947, Serial No. 728,554
6 Claims. (Cl. 346—112)

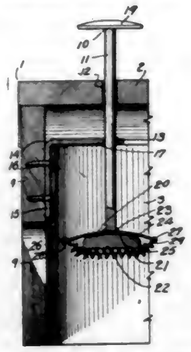
1. Recording apparatus comprising a recording platen having a relatively sharply rounded straight edge, means for supporting a recording sheet over such edge such that the record sheet is bent thereover, a recording arm having a stylus resting lightly on the record sheet only at such bent portion, said stylus being heated and having a straight edge record sheet contacting surface at approximately right angles to the first-mentioned straight edge and a recording motion generally transversely of the record sheet opposite the straight edge of said platen, the record sheet having a paper backing of one color and a recording surface of a contrasting color, such surface being of such character as to be softened by heating, and means in addition to the stylus for heating such recording surface which is in contact with the recording stylus sufficiently to soften such surface to permit its removal by the transverse recording motion of the stylus at the point of contact sufficiently to render visible the paper backing as a record.



2,454,967
ELECTRIC SELECTIVE SIGNALING SYSTEM
Leslie Richard Frost, Southampton, England
Application January 8, 1947, Serial No. 720,841
In Great Britain June 6, 1944
5 Claims. (Cl. 177—353)

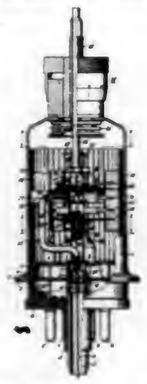
1. A mechanism, operable at will to function either as a sender or as a receiver for an electric selective signalling system of the kind specified, and comprising a differential gear, having two coaxial sun wheels and a planet wheel meshing with both of said sun wheels and mounted for bodily rotation about the common axis of the sun wheels, the planet wheel being coupled to the control element so as to be moved forwardly or in a reverse direction in relation to the sun wheels according to the movement of the control element, a set of keys or equivalent manipulative members operatively connected to the control element, each key serving, when operated, to move the control element to a definite position allotted to that key, means associated with the sun wheels for constraining them, on movement of the planet wheel as aforesaid, to execute a relative rotation which is determined in direction and extent by the direction and extent of said movement of the planet wheel, and a two-way

electrical unit which is effective on the one hand, in response to actuation of the setting means aforesaid, to produce a variable signal for actuating the distant receiver which is representative of the direction and extent of said relative rotation of the sun wheels, and on the other hand to produce, in response to a signal received from a distant sender, relative rotation of said sun wheels which is determined as regards both direction and extent by said signal.



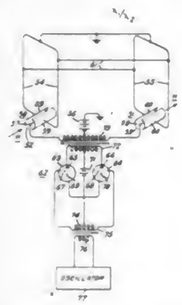
2,454,968
SINGLE-PHASE INDUCTION-MOTOR CONTROL SYSTEM
Harry B. Fuge, Somerville, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey
Application July 13, 1945, Serial No. 604,961
9 Claims. (Cl. 318—203)

1. In a system of motor control, an alternating current supply circuit, an induction motor having two angularly-displaced stator windings connected in series circuit across said supply circuit, dephasing means connected in shunt with one of said windings, and means for selectively shunting said other and normally unshunted one of said windings with a low impedance path whereby to effect braking of said induction motor.



5. In a motor control system, an induction motor having series-connected stator windings with inclined axes, means for reversing the connections of the first one of said windings with respect to the other one, reactance means disposed in shunt circuit relation with the first one of said windings, a source of single phase electrical energy, first switch means for connecting and disconnecting said series-connected windings across said source, and second switch means for connecting and disconnecting a low impedance shunt path around the normally unshunted one of said windings.

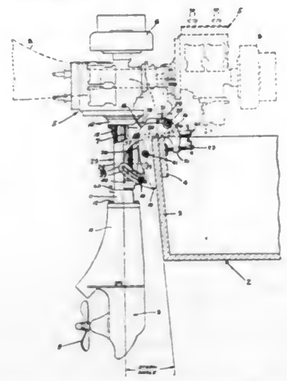
2,454,969
FOOTREST AND PEDAL EXTENSION
Philip Kaufman and Reyn Stovall, Kansas City, Mo.
Application October 7, 1946, Serial No. 701,770
3 Claims. (Cl. 84—232)



1. In a device of the character described, a footrest having a top supported by front and side walls with one of the side walls provided with an opening for providing access to a pedal of a piano, said top having an opening, a bracket having a bearing opening, means for attaching the bracket to said rest with the bearing opening registering with the opening in said top, a stem slidably supported in said openings, a foot-engaging head on said projecting end of the stem, a pedal engaging head on the other end of said stem adapted to extend transversely across the pedal, and a coil spring adapted to engage the underside of the pedal and having ends connected with ends of said pedal engaging head for frictionally gripping the pedal therebetween.

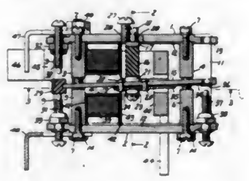
2,454,970
ULTRA HIGH FREQUENCY ELECTRIC DISCHARGE DEVICE
James M. Lafferty, Colonie, N. Y., assignor to General Electric Company, a corporation of New York
Application October 16, 1943, Serial No. 506,501
12 Claims. (Cl. 315—5)

1. An ultra high frequency electric discharge device of the velocity modulation type comprising an enclosing metallic envelope, a cylindrical heat conducting member disposed within said envelope and in thermal contact therewith at a plurality of points, a disk-type anode structure supported by and in thermal contact with said cylindrical member, said anode structure including a centrally located, apertured cavity resonator, a thermionic cathode positioned below said anode structure, a disk-type repelling electrode positioned above said anode structure, and a plurality of insulating members hermetically sealed to all said electrodes supporting said cathode and said repelling electrode from said anode structure in spaced relation therewith.



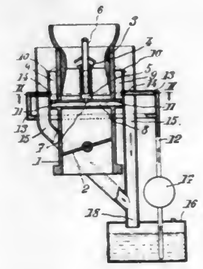
2,454,971
FREQUENCY MODULATION
Robert V. Langmuir, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application May 22, 1946, Serial No. 671,460
4 Claims. (Cl. 332—5)

2. Apparatus for generating an alternating electrical potential of variable frequency comprising a pair of oscillators each adjusted to oscillate at a different characteristic frequency when isolated from the other, mutual coupling means for coupling the electromagnetic fields of said oscillators whereby the mutual interaction of said fields causes said oscillators to oscillate at a common frequency, power means for imposing an energizing voltage on each of said oscillators, and control means for varying the relative amounts of power in each of said oscillators whereby said common frequency may be varied, said mutual coupling means having an intermediate value of mutual coupling such that said common frequency may be caused to vary continuously throughout a substantial range of frequencies, said control means including a source of alternating voltage and a push-pull amplifier for imposing said voltage upon said oscillators in push-pull manner whereby the voltage upon each of said oscillators varies between a maximum and a minimum value during each cycle of said alternating voltage with substantially 180 degree electrical phase displacement between the voltages upon each oscillator.



2,454,972
MOUNTING FOR OUTBOARD MOTORS
George W. Martin, Eau Claire, Wis.
Application January 20, 1945, Serial No. 573,768
9 Claims. (Cl. 248—4)

1. A mounting for outboard motors comprising a stern bracket, a supporting member pivoted on said bracket and adapted to receive and support an outboard motor, a rocker pivoted on the stern bracket at a point below said first mentioned pivot and located rearwardly of the boat transom, one end of said rocker being operatively connected to said supporting member, and a horizontal and forwardly extending control element carried by the stern bracket and connected to the opposite end of the rocker whereby when

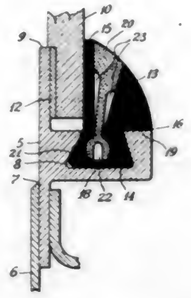


the control element is manipulated to impart pivotal movement to the rocker, pivotal movement is also imparted to the supporting member, whereby the stern angle of the outboard motor may be quickly varied without interrupting the operation of the outboard motor.

2,454,973
POLARIZED ELECTROMAGNETIC CONTROL DEVICE
Charles R. Mason, Ballston Spa, N. Y., assignor to General Electric Company, a corporation of New York
Application December 1, 1944, Serial No. 566,061
4 Claims. (Cl. 175—339)

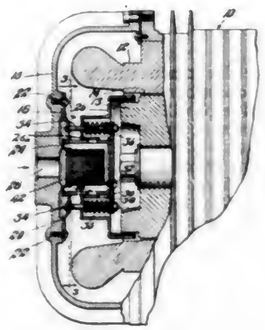
1. A direct current electromagnet comprising two relatively thin substantially similar rectangular members each having two spaced pole pieces extending substantially perpendicularly from one face of the member near the ends thereof, means positioning said members substantially parallel with their respective pole pieces opposed and spaced to provide two predetermined air gaps comprising four bar-type permanent magnets mounted between said members adjacent the corners thereof to present like poles of one polarity to one of said members and like poles of opposite polarity to the other of said members, an armature of low retentivity magnetic material, means pivotally supporting said armature with its ends movable in the air gaps between said opposed pole pieces toward diagonally opposite pole pieces comprising a notched support secured to one of said members intermediate the pole pieces thereof and projecting in the same direction as the pole pieces, torsion spring means bridging the notch in said support and secured to said armature, means for canting said support relatively to said one member whereby to vary the armature position in which said torsion spring means is unstressed, and energizing winding means around said armature and between said members for controlling the movement of the armature in dependence on the direction of current flow in the windings and the position of the armature relatively to diagonally opposite pole pieces.

2,454,974
LIQUID DISTRIBUTING DEVICE
André Mennesson, Neuilly-sur-Seine, France, assignor to Société Anonyme Solex, Neuilly-sur-Seine (Seine), France, a society of the French Republic
Application March 1, 1945, Serial No. 580,439
In France September 23, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires September 23, 1961
10 Claims. (Cl. 261—36)



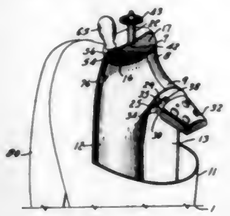
1. A device for maintaining a constant level of liquid in a chamber having a normally vertical axis irrespective of different inclinations thereof, which comprises, in combination with said chamber, at least two other chambers distributed at regular intervals and at the same distance around said axis and fixed with respect thereto, means for constantly feeding liquid to each of said second mentioned chambers, said second mentioned chambers having respective overflow edges all located in a plane at right angles to said axis, passages for connecting said second mentioned chambers with the inlet of said first mentioned chamber, said passages including calibrated orifices for controlling the rate of flow of liquid therethrough, said calibrated orifices having the same dimensions respectively so that the variations of the respective heads of liquid, on the inlet of the first mentioned chamber resulting from varying inclinations of the whole, compensate one another, so as to give a constant resultant head of liquid on said inlet.

2,454,975
WINDOW MOLDING
Perry H. Pelley, Wichita, Kans., assignor to Beech Aircraft Corporation, Wichita, Kans., a corporation of Delaware
Application April 5, 1946, Serial No. 659,761
7 Claims. (Cl. 189—78)



1. Window molding comprising a ductile retainer strip having a dovetail rib at the base of the same and a slot extending inwardly through the body of the strip and enlarged in a key cavity within said dovetail rib and a locking strip engageable in said slot and having an enlarged head portion at the inner edge engageable in inter-

locked relation in said cavity and said enlarged head portion at the inner edge of the locking strip

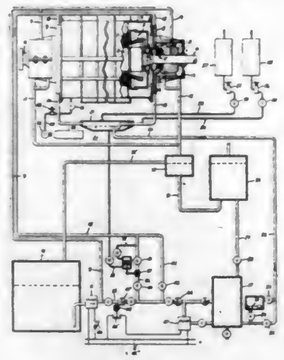


being split to collapse in being forced through the slot into said cavity.

2,454,976
COMPRESSOR LOAD PROTECTOR
Clyde E. Ploeger, Evansville, Ind., assignor to Servel, Inc., New York, N. Y., a corporation of Delaware
Application September 7, 1946, Serial No. 695,452
4 Claims. (Cl. 230—24)

1. In combination a compressor, an electric motor for operating said compressor, a valve connected to said compressor for varying the load thereon, said valve being provided with a member constructed of magnetic material disposed within the magnetic leakage field of said motor to be attracted thereby for moving said valve in one direction, means opposing the attraction of the magnetic leakage field urging said valve in the opposite direction, the construction and arrangement being such that when the magnetic leakage field is of maximum intensity, as at the instant of starting the motor, the valve is moved in one direction to unload the compressor and as the motor approaches running speed the valve is moved in the opposite direction to load the compressor, thereafter during operation of the compressor the valve modulates between open and closed positions in accordance with the intensity of the magnetic field as reflected by the load on the compressor.

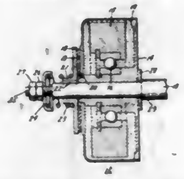
2,454,977
ADJUSTABLE SHOULDER SUPPORT FOR GARMENT FINISHING APPARATUS
John H. Richa and Frank E. Hanson, Kansas City, Mo.
Application March 10, 1947, Serial No. 733,575
15 Claims. (Cl. 223—70)



1. In a garment finishing apparatus including a support, a neck form including a breast and back portion, a bracket carrying the neck form on the support, a lug extending inwardly from the breast portion of said neck form having an opening therein, laterally extending shoulder supporting arms pivotally connected to said lug, a rod slidable in said opening in the lug and having its lower end threaded, means connecting the shoulder supporting arms with the lower end of the rod for slidably supporting the rod in the opening in said lug, and latch means engageable with the rod when the shoulder supporting arms are in extended position to hold said arms in extended position.

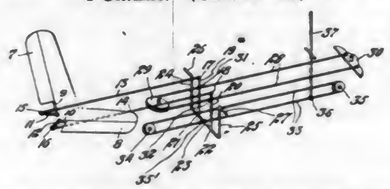
2,454,978
4-ALKYLMORPHOLINE SULFUR TRIOXIDE COMPOUNDS
Mario Scalera, Somerville, N. J., Charles T. Lester, De Kalb, Ga., and Elizabeth M. Hardy, Bound Brook, N. J., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application January 18, 1946, Serial No. 642,102
4 Claims. (Cl. 260—247)

1. A sulfur trioxide compound of 4-hydrocarbon substituted morpholine in which the hydrocarbon substituent is an aliphatic hydrocarbon radical having not more than five carbon atoms.



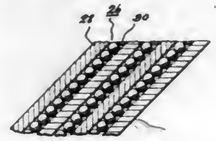
2,454,979
GAS FILLED MACHINE
De Witt S. Snell and Lloyd P. Grobel, Schenectady, N. Y., assignors to General Electric Company, a corporation of New York
Application January 17, 1947, Serial No. 722,542
5 Claims. (Cl. 171—252)

1. A machine having a gas-filled casing and a rotatable member with a shaft extending through said casing, means for supplying gas under pressure to said casing, a chamber formed by spaced members sealingly engaging the shaft at the region of its egress from said casing, said chamber being maintained by said sealing members at a pressure between that of the casing and the surrounding atmosphere whereby gas continuously enters the chamber from the casing by flow past the inner of said members, means supplying a flow of oil along the shaft at the outer of said members to prevent leakage of gas past said outer member, said oil being a carrier of air which tends to accumulate within said chamber, means for continuously conducting gas and air from the chamber, and means for controlling the rate of said conduction, said last-named means being controllably adjustable in a range which includes



the minimum rate of flow adequate to keep the purity of gas within the casing at an effective cooling level.

2,454,980
DAMPER
Morton Sobell, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application May 16, 1945, Serial No. 594,089
5 Claims. (Cl. 74—574)



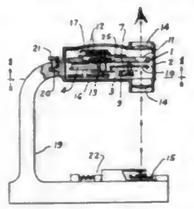
1. A damping device for preventing oscillation of a rotary servomotor comprising a flywheel and means for connecting said flywheel to said motor, said connecting means comprising viscous and friction couplings connected in series relation said flywheel forming an internal part of said viscous coupling which part is driven by viscous contact.

2,454,981
AIRCRAFT CONTROL
Jesse L. Vint, Jr., Wichita, Kans., assignor to Beech Aircraft Corporation, Wichita, Kans., a corporation of Delaware
Application July 31, 1945, Serial No. 608,003
4 Claims. (Cl. 244—83)

1. In combination, movable aircraft control surfaces mounted for conjoint and reverse operations, actuating levers for simultaneously shifting said control surfaces both in the same or reverse directions, movably supported coaxial fulcrums for said levers, means for rocking said levers in opposite directions on said coaxial fulcrums to accomplish reverse operation of said control surfaces and including pivotal connections with the levers adapted to serve as fulcrums for said levers when said coaxial fulcrums are shifted, and means for effecting the shifting of said coaxial fulcrums about the centers of said pivotal connections to accomplish simultaneous operation of the control surfaces in the same direction, said last mentioned means including a support carrying the coaxial fulcrums and mounted to swing about a center substantially coinciding with the centers of said pivotal connections when said actuating levers are equalized.

2,454,982
FILTER ELEMENT
De Loss D. Wallace, Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application May 17, 1945, Serial No. 594,229
12 Claims. (Cl. 210—169)

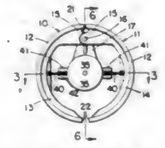
1. A new article of manufacture comprising a filter element, consisting of, a strong metal backing plate having bonded thereto a layer of sintered non-compacted spherical metal powder one particle thick throughout its entire extent, each particle of metal powder being in abutting engagement with adjacent particles.



5. A new article of manufacture comprising, a filter element consisting of; a strong metal supporting plate having a layer of non-compacted sintered spherical metal powder bonded to each side thereof, each of said layers being one particle thick, each particle of metal powder being in abutting relation with adjacent particles.

10. A new article of manufacture comprising, a filter of at least three strata consisting of two layers of substantially non-porous material having interposed therebetween a layer of sintered metal powder which is one particle thick throughout its extent, said layer being fabricated from spherical metal powder particles of 150 mesh size or larger wherein each particle of metal powder abuts adjacent particles.

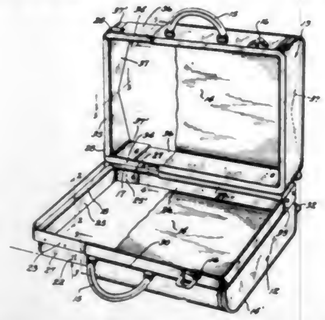
2,454,983
STROBOSCOPIC APPARATUS FOR CALIBRATING TIME INDICATING DEVICES
Joseph M. Weinberger, Brooklyn, N. Y., assignor of one-half to Tessie Weinberger, Brooklyn, N. Y.
Application October 27, 1944, Serial No. 560,686
2 Claims. (Cl. 88—14)



1. A device for calibrating a time indicating device comprising an oscillating member and a stationary member; said oscillating member comprising a solid disc provided with a radially disposed slot; said stationary member being disposed adjacent to said oscillating member and provided with a corresponding slot; means for imparting oscillatory motion to said oscillating member; means for regulating the rate of oscillation of said oscillating member; an optical system disposed along an axis through the slot in said stationary member; a numbered dial and indicating

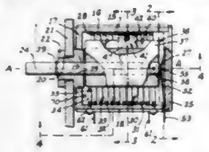
hands attached to said motion producing means; a case enclosing and containing the hereabove mentioned means; said case being provided with a window for viewing said hands and dial, a

mounting to position said optical system along said axis, the case being provided with a slot for adjusting said regulating means; and a supporting stand; said stand being provided with means to detachably receive said case.



2,454,984
CONTRACTILE FILM SPOOL
Edward G. Bader, Hawthorne, Calif., assignor to Mitchell Camera Corporation, West Hollywood, Calif., a corporation of Delaware
Application May 30, 1945, Serial No. 596,733
6 Claims. (Cl. 242—72)

1. In a collapsible and expansible winding spool, the combination of a mounting hub adapted for removable placement on a spindle, a pivot carrying bracket on the hub and extending radially from it, a hinge pivot carried by the bracket on an axis parallel to and radially spaced from the hub axis, a pair of semi-cylindric winding drum members arranged in cylindric formation with their diametral faces spaced apart and each pivoted on the hinge pivot so that the hinge pivot lies between the two spaced diametral faces and lies relatively close to one of the opposed pair of diametral face edges of the members, and means, including an actuating member movable axially of the hub, for moving the two winding drum members relatively about the hinge pivot.

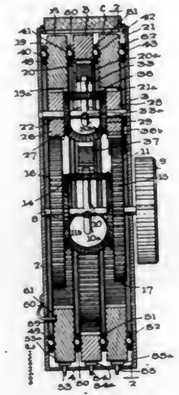


2,454,985
FRAME CONSTRUCTION FOR SOFT-SIDED LUGGAGE
George G. Barton, Racine, Wis., assignor to Hartmann Company, Racine, Wis., a corporation of Wisconsin
Application April 16, 1947, Serial No. 741,825
1 Claim. (Cl. 190—49)

In a box-type hand luggage case, an open-faced section of U-form in section having rigid top, bottom and end walls including reinforcing panels therein and a flexible side wall having its edge portions secured to and covering the top and bottom walls, the top and bottom walls including rails into which marginal portions of the panels are rabbeted, said panels being of less length than the rails to provide overhanging rail portions, the end walls including rails formed with grooves into which marginal portions of the end wall panels are secured, the end wall panels having angular end extensions interiorly lapping, and secured to, end portions of the top and bottom wall panels, there being recesses at each end of said top and bottom walls, said recesses being formed by end faces of said top and bottom wall panels, by the adjacent unlapped outer surfaces of said angular end wall extensions, and by the

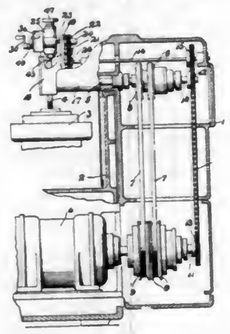
adjacent overhanging rail portions, a sheet of flexible covering material applied to the outer face of each end wall panel, edge portions of the latter sheets being folded under and secured in superimposed relation to edge portions of the flexible wall and such superimposed edge portions being flushly accommodated within said recesses of the top and bottom walls.

2,454,986
VARIABLE RESISTANCE DEVICE
Arnold O. Beckman, Altadena, Calif., assignor to National Technical Laboratories, South Pasadena, Calif., a corporation of California
Application October 22, 1945, Serial No. 623,644
23 Claims. (Cl. 201—56)



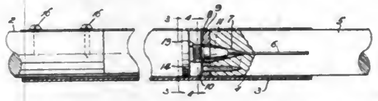
1. In a variable resistor, the combination of: a resistance element providing a plurality of turns extending around an axis, there being a space between adjacent turns of the same configuration as said resistance element; a contact assembly including a guide element of a size to extend loosely into said space when said contact assembly is at a given distance from said turns, said contact assembly providing a contact spaced from said guide element and retained in contact with one of said turns by said guide element as said contact assembly moves along said resistance element; a rotor journalled to turn about said axis; and means for mounting said contact assembly to move along said rotor at said given distance from said turns to retain said guide element loosely in said space while advancing said contact along said resistance element.

2,454,987
CALCULATING MACHINE
Donald Byal Bradner, Cincinnati, Ohio
Application June 4, 1947, Serial No. 752,549
42 Claims. (Cl. 235—79.5)



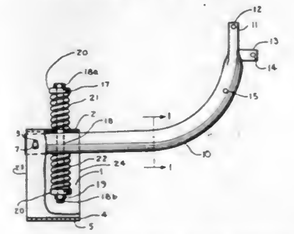
1. A calculating machine comprising a housing, three movable scale members mounted in said

housing, means for moving said scale members including means for controlling the movement of each of said scale members relative to the other two scale members and relative to said housing, said means being so constructed and arranged as



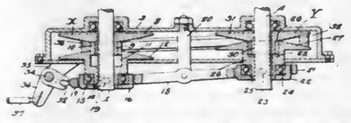
to substantially maintain the algebraic relationship $M_A+M_C=M_B$, in which M_A, M_C and M_B represent the linear movement of the respective scale members in the same direction relative to a fixed point on said housing.

2,454,988
GRINDER SPEED CONTROL
Vincent W. Bunker, Grand Rapids, Mich., assignor to Gallmeyer & Livingston Company, Grand Rapids, Mich., a corporation of Michigan
Application June 25, 1945, Serial No. 601,488
6 Claims. (Cl. 51—134.5)



1. In a machine of the class described, a grinding wheel, a rotatable shaft on which the grinding wheel is carried, a power driving shaft, change speed driving means between said shafts for varying the speed of rotation of the first shaft with respect to a constant speed rotation of the power driving shaft, a third shaft mounted for rotation, means connecting said third shaft with said change speed mechanism for actuating said mechanism on rotation of the third shaft, a dressing implement for dressing the grinding surface of the wheel movable toward or away therefrom, means for simultaneously moving said dressing implement and turning the third shaft, and independent means for rotating said third shaft.

2,454,989
AUXILIARY TOOL HANDLE
Carl H. Carlson and William Russell, Chicago, Ill.
Application July 22, 1946, Serial No. 685,488
3 Claims. (Cl. 287—119)



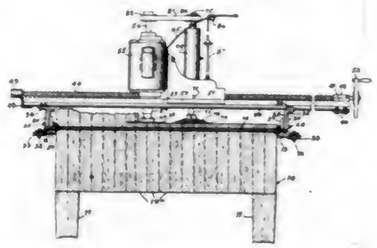
1. In an auxiliary tool handle, a sleeve for attachment to the original handle, a round bar snugly received in said sleeve for rotation and movement longitudinally thereof, said bar formed with a longitudinal slot in one end and with a recess in said end registering with said slot, a disc in said sleeve flush with and secured to said bar and formed with a threaded perforation aligned with said bar recess, and an expander in said sleeve adjustable longitudinally thereof and locked against rotation therein, said expander having a threaded portion for engagement with said threaded disc perforation.

2,454,990
IMPLEMENT SEAT SUPPORT
Cecil W. Chindlund, Storm Lake, Iowa
Application September 30, 1946, Serial No. 700,207
3 Claims. (Cl. 155—51)

1. In a seat support for cross-country vehicles a bracket adapted to be secured to the vehicle frame, a seat supporting arm, one end of which is adapted to support a seat and the other end of which is pivotally connected to the said bracket and resilient means disposed intermediate the said two ends of the supporting arm for yieldingly supporting said arm, said resilient means comprising a bolt passed vertically thru aligned holes in said bracket and said arm, spring-restraining means at each end of said bolt, a spring confined between the upper end of said bolt and the top of said bracket and a second spring confined between the lower end of said bolt and the bottom of said arm.

2,454,991
VARIABLE-SPEED TRANSMISSION
Grady Carlyle Cooke, Winston-Salem, N. C.
Application August 17, 1945, Serial No. 611,041
1 Claim. (Cl. 74—230.17)

A transmission including a housing, spaced pulleys mounted for rotation in the respective end



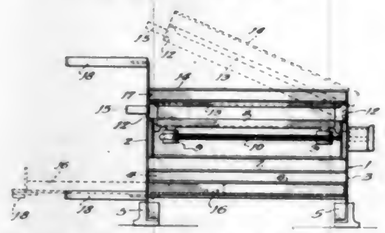
portions of the housing, each pulley including spaced disks, a hub on one of the disks of each pulley, a sleeve freely rotatable on each hub, the other disk of each pulley having a recess for the reception of the hub and in which the sleeve is freely rotatable and slidable, hubs projecting from the outer faces of the recessed disks and journaled in one wall of the housing, the inner faces of the disks of each pulley diverging outwardly, a transversely tapered endless belt supported by and between the disks of the two pulleys, a centrally fulcrumed lever mounted on the outside of the housing, rings rigid with the ends of the lever, anti-friction bearings in the rings of the lever, the hub of the recessed disk of each pulley being journaled in and movable with one of said bearings, both bearings being supported for swinging movement in the rings, and drive and end-driven shafts operatively connected to the respective pulleys, aligned rock shaft bearings rigid with the housing, a rock shaft rotatably supported by said last named bearings, a fork carried by and rotable with the rock shaft, a pivotal connection between the fork and one of the rings, and means under the control of an operator for imparting rotatable movement to the rock shaft to shift the recessed disks in opposite directions respectively.

2,454,992

APPARATUS FOR RESURFACING MEAT BLOCKS

George L. Coleman, Fayetteville, N. C., assignor of one-half to William O. Huske, Fayetteville, N. C.

Application June 16, 1945, Serial No. 599,848
1 Claim. (Cl. 144—2)



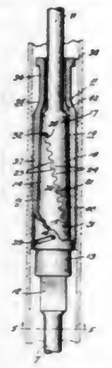
Apparatus for re-surfacing meat blocks comprising a pair of angle irons each having a vertical web and a horizontal web, a pair of bolts penetrating the ends of the angle irons for clamping the vertical web of the angle irons to the sides of the meat block, a U-shaped bracket associated with each angle iron and having two rollers mounted in the vertical portions thereof for engaging the upper side of the horizontal web of the angle iron, each of said U-shaped members having a pair of brackets secured thereto, and provided with horizontal legs and a grooved wheel mounted in each leg for engaging the outer edge of the horizontal portion of the angle irons, the upper ends of the U-shaped members having secured thereto a pair of spaced angle bars extending above the meat block, and spanning the distance between the two U-shaped members, the last-named angle bars having a horizontal web which is secured to the U-shaped members and a vertical web, the remote sides of the vertical webs having each a bar secured thereto and extending the length of the last-named angle bars, each of said bars being broader at its top than at its bottom portion to form a dove-tailed trackway, a motor mount having a dove-tailed groove in its lower surface for engaging the bars secured on the remote sides of the last-named angle bars, a motor mounted on one side of said motor mount and having a downwardly projecting shaft, a cutter mounted on the shaft, a screw threaded rod having a hand wheel and being mounted on the upper portions of the U-shaped members and threadably engaging the motor mount for moving it along the last-named angle bars to move the cutting tool into engagement with a portion of the meat block, while the assembly comprising the U-shaped members and the last-named angle bars together with the motor mount is moved longitudinally of the first-named angle bars to cut away a portion of the meat block.

2,454,993

COOKING UNIT

Charles P. Crawford, Chicago, Ill.

Application April 13, 1945, Serial No. 588,161
5 Claims. (Cl. 219—35)



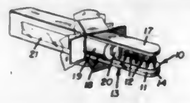
1. A cooking unit comprising an oven open at the top, a transverse grating in the oven, a heating element supported below the grating, a second grating hinged to the top of the oven so as to be capable of swinging from a position somewhat above and parallel to the other grating to an idle position at one side of the oven, a tray of a size and shape to allow it to be positioned between the two gratings, and elements on the upper grating to hold the tray in position when placed thereon.

2,454,994

COUPLING

Basil H. Crippen, Titusville, Pa.

Application August 29, 1947, Serial No. 771,327
2 Claims. (Cl. 287—104)



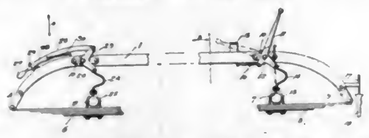
1. A coupling for sucker rods and the like, comprising a head coupling member rigid with and carried by the upper portion of one of said rods, a foot coupling member rigid with and carried by the lower portion of another of said rods superjacent to said first mentioned rod, said head and foot coupling members each including an elongated beveled end and a juncture portion between said beveled end and its respective rod, said juncture portion being coaxial with the axis of its respective rod, said elongated beveled end extending in the direction of the length of its respective rod and offset with respect to the axis of its respective juncture portion providing a shoulder at the juncture portion facing toward the end of the coupling member, said beveled ends being complemental to form a part of a scarf-joint between the rods, the confronting faces of said complemental beveled ends being provided with rack-like teeth extending crosswise of the coupling, interfitting with one another and formed and arranged to space the terminals of each beveled end from the said shoulder of its companion coupling member when the teeth are in said interfitting relation, and means releasably holding said coupling members with said teeth in said interfitting relationship.

2,454,995

DISPOSABLE TOOTH CLEANING KIT

Elwood M. Curran, Los Angeles, Calif.

Application December 13, 1946, Serial No. 716,119
2 Claims. (Cl. 132—84)



1. A disposable tooth cleaning kit comprising a tooth brush head, bristles extending laterally from the head, a handle attached to the brush head and extending from one end thereof in longitudinal alignment therewith, said handle having a pair of spaced parallel scores extending transversely thereof in spaced relation to the head, a container containing tooth cleansing compound lying on the handle between the bristles and the score nearest thereto and the handle being bent along the scores to overlie the container and the bristles to form a guard therefor.

2,454,996

SPRING HOLDING DEVICE FOR VEHICLES

Francis L. Dahleen, Los Angeles, Calif.

Application June 27, 1945, Serial No. 601,841
2 Claims. (Cl. 280—150)

1. A spring holding device for a vehicle having right and left frame members and a spring supported wheel axle comprising, a guide on one of said members, a shaft transversely seated in said frame members above said axle, arms on the ends of said shaft, clamps on the axle below said arms, normally slack flexible elements extending from said arms to the said clamps, a notched bar pivotally hung on one of said arms and extending through said guide, the bar being lengthwise movable in the guide to rotate the shaft and thereby to tighten said flexible elements, a notch of the bar engaging the guide to maintain the elements taut.

2,454,997

METHOD OF FORMING EYES ON WIRE

Israel Diamond, Washington, D. C., assignor of one-fourth to Ruth Diamond, one-fourth to Doris Diamond, one-fourth to Mildred Diamond, and one-fourth to Herbert H. Diamond, all of Washington, D. C.

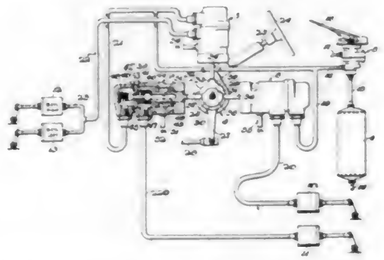
Application March 16, 1944, Serial No. 526,760
2 Claims. (Cl. 140—104)

1. The method of manufacturing a knot in the end of a steel wire consisting in bending the end of the wire into the form of a U having a short leg and a long leg, bending the short leg at a point adjacent the base of the U substantially at right angles and across the long leg with the long leg overlying the short leg, then while holding the two legs in this position twisting the loop thus formed at the base of the U about the axis of the short leg through an angle of approximately 360° so that a wrap is made about the short leg, then bending the free end of the short leg through an angle of approximately 90° toward the loop and generally in the plane of the loop to form a neat knot.

2,454,998

LIGHTER SHELL AND METHOD OF MAKING SAME

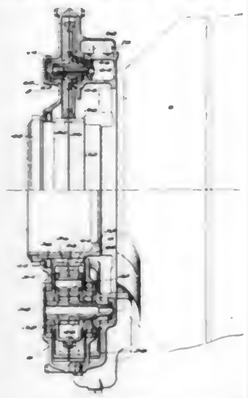
Cornelius D. Dosker, Louisville, Ky., assignor to Gamble Brothers, Louisville, Ky., a corporation of Kentucky



Application February 14, 1944, Serial No. 522,337
9 Claims. (Cl. 114—26)

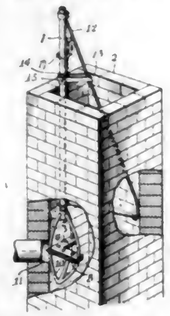
1. In a process of fabricating a shell section, having upwardly curved main (side and end) walls connected by an upwardly and horizontally curved corner wall, comprising: providing a flat sheet having a bottom area and a corner area flanked by side and end areas, said areas being so disposed that the corner area and its flanking end area are separated from the side and bottom areas, respectively, by one line while the corner area and its flanking side area are separated from the end and bottom areas, respectively, by a second line which intersects the first line substantially at a right angle, the corner area containing an inner stave zone and an outer segment zone, the stave zone having a base coinciding with one of said intersecting lines and which extends from said base toward the opposite edge of the corner area, the segment zone occupying the remainder of the corner area with its base coinciding with the other intersecting line; bending the sheet along one of said intersecting lines so that the one flanking area curves upwardly to form one of the main walls and the corner area curves upwardly from the other flanking area; blanking the corner area to form a series of staves, extending across the stave zone from its base to the segment zone and tapering in the same direction, and a sector occupying the corner angle formed by the segment zone base and the adjacent outer edge of the corner area, the arc of the sector extending through the segment zone; assembling the staves and sector to form the corner wall by

bending the sheet along the other intersecting line in a manner to cause the other flanking area to curve upwardly from the bottom area and form the other main wall and the staves to curve from their base convergingly toward the sector with their ends positioned along the arc of the sector; and securing the staves and sector in assembled relationship.



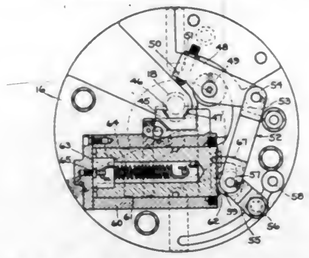
2,454,999
COMBINED BRAKE AND STEERING MECHANISM
Wilfred A. Eaton, Oakville, Conn., assignor to Bendix-Westinghouse Automotive Air Brake Company, Elyria, Ohio, a corporation of Delaware
Application May 23, 1946, Serial No. 671,833
4 Claims. (Cl. 180—18)

1. In a braking system for a vehicle having a pair of front brakes, a pair of rear brakes, and a steering mechanism, a fluid pressure actuator for each of said brakes, pedal controlled means for conducting fluid pressure to all of said actuators including a valve device for each of the rear brake actuators, and a valve device for both of the front brake actuators, each of said valve devices including a valve resiliently urged toward closed position, and rotatable cam means controlled by movement of the steering mechanism for positively maintaining said valves of all of said valve devices in open position when said mechanism is moved to straight-ahead steering position, and for selectively allowing said valves of the first named valve devices to close depending upon the direction of turn of the steering mechanism, said cam means being constructed and arranged to allow the valve of the second named valve device to close in response to movement of the steering mechanism in either direction from straight-ahead steering position.



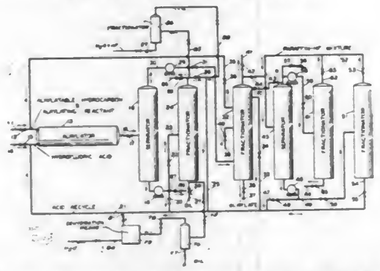
2,455,000
ELECTRICALLY OPERATED PITCH CHANGING MECHANISM
Archibald Graham Forsyth, Cheam, England, assignor to The Fairey Aviation Company Limited, Hayes, Middlesex, England
Application August 12, 1943, Serial No. 498,366
4 Claims. (Cl. 170—163)

1. A control unit for variable pitch propeller systems and adapted to be disposed surrounding the propeller drive shaft between the propeller hub structure and the engine, said control unit comprising a sleeve having gear teeth on the periphery thereof and mounted to rotate with a propeller drive shaft, a second sleeve having gear teeth on the periphery thereof and carried by said first sleeve for relative rotary movement with respect thereto, rotation of said second sleeve being adapted to effect pitch changing movement, a pair of electric motors, means for connecting said motors to drive said second sleeve relatively to said first sleeve, a control circuit for said motors including a plurality of fixed pitch limit switches and a selective switch arm cooperating therewith, and means in said circuit for applying additional voltage to said motors when pitch changing movement is to be effected toward certain predetermined pitch positions, and means actuated by relative movement between said sleeves for controlling said circuit to cut off said motors



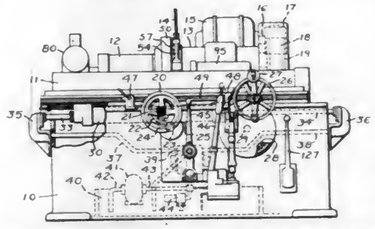
when predetermined pitch positions have been attained, said last-named means comprising a pair of co-axially mounted gear wheels, one of said gear wheels engaging with said gear teeth on said first sleeve and driven thereby, the other of said gear wheels engaging with said gear teeth on said second sleeve and driven thereby, a shaft co-axially mounted with respect to said gear wheels, and said switch arm comprising a shaft driven in a direction parallel to the axis of said gear wheels by the relative movement between said gear wheels.

2,455,001
CHIMNEY SCRAPER
Victor Fortin, La Tuque, Quebec, Canada
Application November 1, 1944, Serial No. 561,378
3 Claims. (Cl. 15—243)



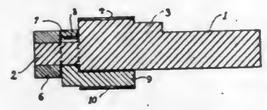
3. A chimney scraping device comprising a rod, a set of fingers diverging downwardly from the lower end of said rod and having their lower ends joined together, a blade carrier supported by said fingers, a blade mounted in said carrier and lying in a plane perpendicular to said rod, a spring arm extending downwardly from the upper end of said rod and laterally from the rod on a side thereof opposite the edge of said blade, and a chain attached to the lower end of said arm and extending upwardly along said rod, said chain being slidably guided on said rod.

2,455,002
CRANKPIN GRINDING MACHINE
Francis W. Foudy, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a corporation of Massachusetts
Application June 15, 1946, Serial No. 677,000
8 Claims. (Cl. 51—237)



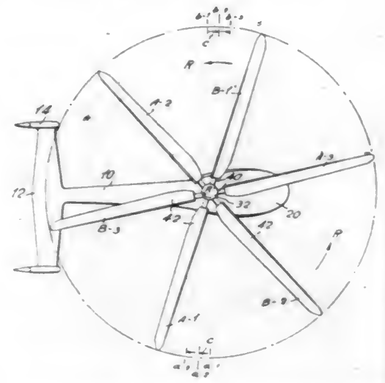
1. In a crank pin grinding machine having a work head, a rotatable spindle supported thereby, a pot chuck on one end of said spindle including a crank shaft support fixedly mounted on said chuck, a pivotally mounted clamping arm on said chuck to clamp a crank shaft on said support, a fluid pressure piston and cylinder to actuate said clamping arm, a piston type safety valve therefor which is arranged so that fluid under pressure opens said valve, a ball check valve associated with the safety valve to pass fluid under pressure to said chuck cylinder, and a solenoid to close said valve to exhaust fluid from the pot chuck.

2,455,003
ALKYLATION OF PARAFFINS IN PRESENCE OF HYDROFLUORIC ACID
Frederick E. Frey, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
Application December 23, 1941, Serial No. 424,204
13 Claims. (Cl. 260—683.4)



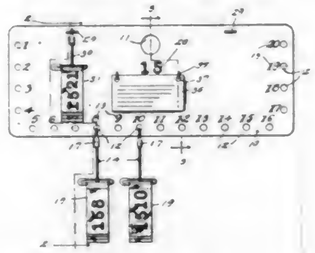
1. In a process of alkylating a low-boiling alkylatable paraffin in the presence of hydrofluoric acid, the steps which comprise separating from an alkylation reaction mixture originating in such a process a liquid acid phase comprising hydrofluoric acid associated with dissolved organic impurities formed during said alkylation, and a dissolved low-boiling paraffin, and water introduced into the process with said paraffin reactant, fractionally distilling from said acid phase a low-boiling mixture containing substantially all of said dissolved low-boiling paraffin and a sufficient amount of said hydrofluoric acid to form a minimum boiling azeotropic mixture therewith, treating the residue to remove water and said dissolved organic impurities and to recover all of its content of hydrofluoric acid in such condition that it is suitable for reuse for effecting alkylation, and passing purified substantially anhydrous hydrofluoric acid so obtained to said alkylation reaction.

2,455,004
GRINDING MACHINE
John I. Garside, West Boylston, Mass., assignor to Norton Company, Worcester, Mass., a corporation of Massachusetts
Application September 7, 1945, Serial No. 614,912
13 Claims. (Cl. 51—108)



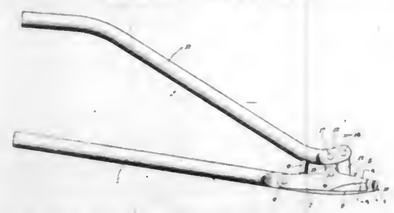
1. In a grinding machine having a transversely movable slide, means rotatably to support a grinding wheel on said slide, means including a piston and cylinder automatically to feed said slide transversely toward and from a work piece to grind the same, a work support intluding a rotatable work supporting turret to support a plurality of work pieces, an index mechanism to index said turret successively to position a plurality of work pieces in an operative position, and means including a piston and cylinder successively to clamp said work pieces in an operative position on said turret during grinding operation.

2,455,005
INTERNAL PIPE WRENCH
Lee R. Hall, Tonasket, Wash.
Application October 30, 1945, Serial No. 625,576
1 Claim. (Cl. 81—72)



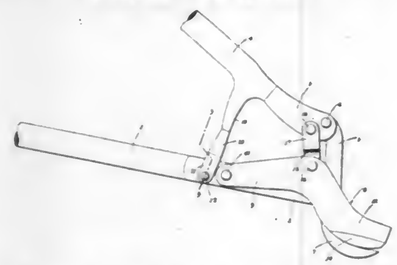
An internal pipe wrench comprising a shank; a main segmental gripping member integral with said shank formed at its outer end; a stub shaft projecting from the outer end of the shank the central longitudinal axis of said stub shaft coinciding with that of the shank; a movable segmental gripping member opposed to the main gripping member; an offset hub integral with said movable segmental gripping member; said hub having a slot through which said stub shaft projects; said gripping members having their peripheral surfaces fluted to form longitudinally extending teeth concentric with the central longitudinal axis of said shank; said main segmental gripping member having a cam surface; said movable segmental gripping member having an inner surface cooperating with said cam surface for moving said movable segmental gripping member outwardly radially when the latter is rotated about said stub shaft.

2,455,006
COUNTERTORQUE MECHANISM FOR HELICOPTERS
Russell R. Hays, Lawrence, Kans.
Application July 31, 1945, Serial No. 607,961
11 Claims. (Cl. 244—17)



2. In a counter-torque mechanism for a lifting propeller, means for successively, transversely depressing different blades of said propeller at opposite phases of rotation to simultaneouly create torque and lift forces of equal and opposite sign, and means for mounting said blades to resist said depressing means by relatively increasing the aerodynamic loading of said blades in response to said transverse depression.

2,455,007
MARKING SYSTEM
Homer C. Hayslip, Atlanta, Ga., assignor of one-half to Paul E. Arnall, Griffin, Ga.
Application June 5, 1946, Serial No. 674,577
1 Claim. (Cl. 40—19.5)

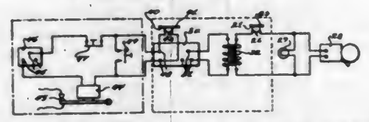


In an article cleaning identifying system, a plurality of supporting members, each member having an identification indicia, a plurality of groups of article identification tags for each member, tag suspending members for said tags carried by each supporting member, means removably securing each of said tags on its respective suspending member, indicia carried by said tags correlated with said identification indicia of said supporting member for identifying each tag relative to said supporting member, certain groups comprised of a plurality of said tags on the same suspension member having additional indicia arranged in consecutive order, indicia on said supporting member adjacent the suspension means for the remaining groups of tags, the remaining groups each comprising a plurality of said tags having additional indicia corresponding to the indicia on said supporting member for each of said remaining groups.

2,455,008
SURGICAL CAST CUTTER
Arthur J. Hood, Reno, Nev.
Application January 13, 1945, Serial No. 572,683
4 Claims. (Cl. 30—173)

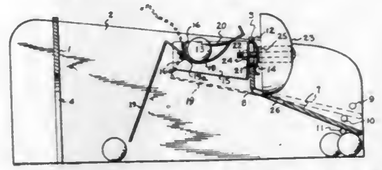
1. A cast cutter comprising a lower handle, a lower jaw projecting forwardly in rigid relation from the lower handle, an upper jaw comprising a pair of spaced apart parallel sides which straddle the lower jaw, means pivoting the upper jaw adjacent its rear end on the lower jaw for cooperating cast cutting movement, an ear projecting upwardly in rigid relation from the lower jaw intermediate its ends and between the sides of the upper jaw, an upper handle disposed above and in vertical alinement with the lower handle, a fork on the forward end of the upper handle, said ear projecting into the fork adjacent its forward end, a cross pin pivoting said ear in the fork, a rigid link projecting at its upper end into the fork to the rear of the ear, another cross pin pivoting the link in the fork, said link depending from said other cross pin between the sides of the upper jaw, and a separate cross pin pivoting the lower end portion of the link in said lower jaw.

2,455,009
SURGICAL CAST SHEARS
Arthur J. Hood, Reno, Nev.
Application March 28, 1945, Serial No. 585,329
5 Claims. (Cl. 30—251)



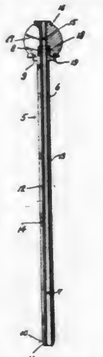
1. Shears comprising upper and lower longitudinally extending handles, means transversely pivotally connecting said handles together for relative swinging movement, a tongue-like jaw projecting from one handle, a generally U-shaped jaw mounted on the other handle for cooperative shearing action with the tongue-like jaw, the latter progressively entering the U-shaped jaw upon closing of the shears, and stop means arranged to limit closing movement of the shears to a point at which said tongue-like jaw is short of fully closed position relative to said U-shaped jaw.

2,455,010
THERMOHYDROMETER
Arnold Hoyer, Conshohocken, Pa., assignor, by mesne assignments, to Owens-Illinois Glass Company, Toledo, Ohio, a corporation of Ohio
Application November 5, 1943, Serial No. 509,112
1 Claim. (Cl. 73—34)



In a thermohydrometer, a molded body comprising a barrel and a thermometer housing, said barrel being disposed exteriorly of and parallel with respect to said housing, said barrel and said housing merging into a terminal cylindrical chamber having an open end, said barrel, housing and chamber forming an integral structure, said body having an impervious wall common to and separating said barrel from said housing, said wall terminating in spaced relation to said chamber, a float in said barrel, a thermometer, that end of said housing merging into said chamber having means supporting said thermometer with the indicating portion thereof in said housing and the bulb portion thereof in said chamber, said supporting means sealing said housing from said chamber, the other end of said housing merging into said barrel to form a closed end for said housing, an apertured plug closing the open end of said cylindrical chamber, said plug having an annular flange overlying the edge of said chamber end, and a flexible hose connected to said plug aperture, said plug having a recess adapted to accommodate the free end of said hose to hold the hose in bent position.

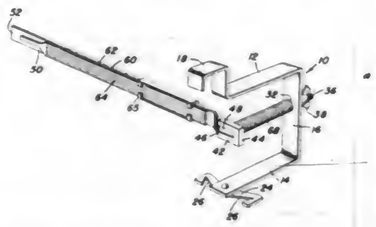
2,455,011
THERMAL ALARM APPARATUS
Clarence W. Ingels, St. Albans, N. Y.
Application May 23, 1946, Serial No. 671,885
16 Claims. (Cl. 177—311)



2. A thermally responsive signalling means for indicating temperature changes above a predetermined temperature comprising; a snap acting thermally responsive element responsive to a predetermined temperature, signalling means operable by a movable portion of said element, a heat conducting member, and a cooling member, said element being adapted in the normal position thereof to be in direct heat exchange relation with said heat conducting member and in the actuated position thereof in direct heat exchange relation with said cooling member, whereby said signalling means is intermittently operated when the temperature of said heat conducting member reaches or exceeds said predetermined temperature and at a frequency which is a function of the temperature of said heat conducting member.

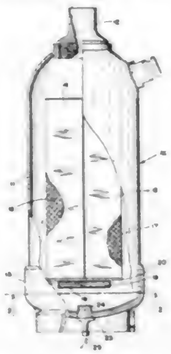
2,455,012
MARBLE GAME
Frederick H. King, Detroit, Mich.
Application May 17, 1944, Serial No. 535,999
3 Claims. (Cl. 273—127)

1. In a game, the combination with a target element having an upper marble receiver and a lower trip arm for encounter by a projectile, of a carrier for said target element having substantially parallel walls between which said receiver is normally disposed, and means pivoting the target element on the carrier between the trip arm and receiver, the carrier walls being formed at their upper margins with a pair of opposed lips disposed rearwardly of the normal seating position of the marble and projecting toward each other to restrain the marble from ejection from the carrier due to an impact not acting on the trip arm.



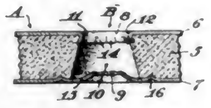
2,455,013
FISH HOOK REMOVER
Anthony S. Klinicki, Detroit, Mich.
Application January 28, 1947, Serial No. 724,908
1 Claim. (Cl. 43—29)

In a fish hook remover comprising, an elongated outer tube including a collar adjacent its inner end and having a longitudinal slit extending therethrough and its outer end bevelled and its inner end threaded, an elongated slit inner tube rotatably disposed in the outer tube with its slit registrable with the slit in the outer tube and its inner end extending beyond the threaded end of the outer tube, a knob threaded on the threaded end of the outer tube and having a slit therein registering with the slits in the inner and outer



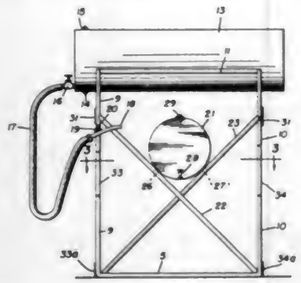
tubes, a pin securing the knob on the inner end of the inner tube, a shoulder formed on the periphery of said collar, and a stop-pin secured to the lower surface of said knob in the path of said shoulder to limit rotation of the inner tube within the outer tube when the aforesaid slits are in registered relation.

2,455,014
AXE SHARPENING DEVICE
Theodore Lee, Bejou, Minn.
Application November 7, 1947, Serial No. 784,691
3 Claims. (Cl. 76—82)



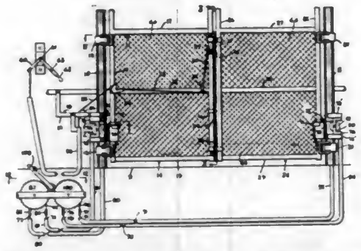
1. An axe sharpening device comprising a substantially U-shaped base member, means carried by one end of said base member for engaging the head of an axe, a pivotal latch carried by the other end of said base member having a recess for engaging one edge of an axe handle, a support member carried by said base member, a file removably secured to said support member, and means urging said file against an axe head.

2,455,015
MEANS FOR IGNITING PROPELLANT IN ROCKET MOTORS
Harry W. Mace, Glendale, and Beverly H. Chamberlain, Pasadena, Calif., assignors to Aerojet Engineering Corporation, Azusa, Calif., a corporation of Delaware
Application January 3, 1946, Serial No. 638,742
5 Claims. (Cl. 60—35.6)



1. In a rocket motor of the type having a tubular combustion chamber with a nozzle at one end of the chamber and the chamber being closed at the other end, a container containing propellant within the chamber with the exposed surface of the propellant facing the wall of the chamber, an inflammable substance placed at the end of the container adjacent the closed end of the chamber, and an ignitor placed through the closed end so that the heat from the ignitor ignites the inflammable substance causing flame to carry to the propellant surface.

2,455,016
LATH BOARD
George A. Buttress, Los Angeles, Calif.
Application April 11, 1944, Serial No. 530,538
3 Claims. (Cl. 72—124)

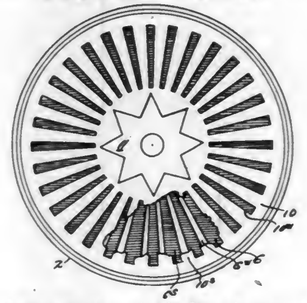


1. In a lath board embodying a plaster layer interposed between a fibrous front cover sheet and a back cover sheet having plaster-receiving apertures extending therethrough formed by axially aligned holes in said sheets and plaster layer, the construction in which the marginal portions of the back cover sheet surrounding the holes in said sheet project transversely from the adjacent margins of the walls surrounding the holes in the plaster layer into the path of plaster delivered to the apertures to restrict flow of plaster through the apertures; the projecting marginal sheet portions surrounding the holes in the back cover sheet being curved in section into the holes in the plaster layer to oppose thrust of plaster pressed thereagainst from the interior of the holes in the plaster layer.

2,455,017
STORAGE TANK RACK
Claud E. McCormick, Snyder, Tex.
Application December 4, 1946, Serial No. 714,096
3 Claims. (Cl. 211—71)

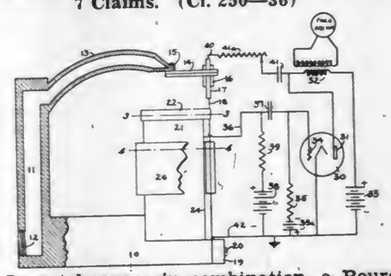
2. A storage tank rack of the class described comprising an open-style framework embodying horizontal base means, and pairs of upstanding front and rear uprights attached to and rising from said base means, the upper ends of said uprights being connected together by horizontal head rails, and being further connected together by horizontal transversely disposed semi-circular members adapted to accommodate a substantially cylindrical elongated storage tank, and pairs of crossed rods connected at their respective outer ends to adjacent ones of said uprights, the pairs of crossed rods being disposed on opposite sides of the frame structure and being interconnected by horizontal stabilizing rods defining substantially V-shaped seats adapted to support a second storage tank.

2,455,018
GATE OPERATING MEANS
Irma B. McKeown, Charlotte, N. C.
Application December 11, 1944, Serial No. 567,751
2 Claims. (Cl. 39—52)



1. An enclosure having an opening provided with a vertically disposed post at each side of the opening, a pair of gates disposed in side-by-side relation for closing the opening, each of said gates having vertically disposed outer frame members disposed in alinement with the posts on each side of the enclosure and pivotally mounted on the posts, each post having mounted thereon a pair of laterally extending arms each provided with a pulley, the outer frame member of each gate having thereon a pair of arms to the end of each of which a cable is attached, a pair of drums disposed in side-by-side relation and located remotely from the enclosure, said drums having a medial portion of a cable wound thereabout and the two ends of the cable on one drum extending to one set of said pulleys and being attached to the arms extending laterally from the vertically disposed outer frame member of one gate, and the two ends of the cable on the other drum extending to the other set of pulleys and being attached to the arms on the other gate.

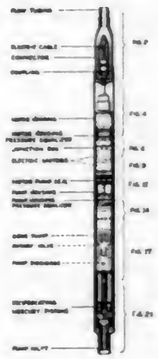
2,455,019
PENCIL HOLDER
Robert M. McNeill, Hollywood, Calif.
Application December 20, 1944, Serial No. 569,002
4 Claims. (Cl. 120—21)



1. A body member having an axial bore and a reduced portion provided intermediate its length with external threads, said portion having a reduced cylindrical end extending beyond the area of the threads thereon, a tip having a cylindrical pocket and a bore in the end thereof, said tip having internal threads at a point above said pocket to engage the external threads on the reduced portion of said body member, a cylindrical body of compressible material loosely fitting within said pocket and provided with a longitudinal bore larger than a pencil extending therethrough, a ferrule fitting over the top of said body and having an aperture coaxial with the bore therein and having a sliding fit with said pencil, said ferrule being engageable by said reduced cylindrical portion when said body member and tip are moved relatively to each other to compress said cylindrical body of compressible material about the pencil extended through the longitudinal bore of the body and tip.

2,455,020
ECLIPTIC FLASHER LAMP
Harry W. McQuaid, Los Angeles, Calif.
Application November 10, 1944, Serial No. 562,885
3 Claims. (Cl. 40—130)

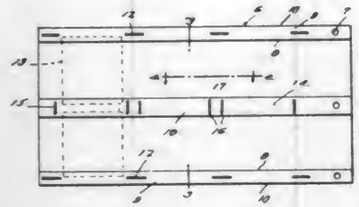
1. A flashing lamp including a source of light, coordinate light controlling and relatively movable members and means to effect said movement; said members having circular systems of equinumerous, concurrently registerable windows for the emission of the light and certain zone groups of the windows being of differentiated light emitting areas whereby to produce the effect of lateral swaying and expanding and contracting spot zones during the periods of registration of the differentiated windows while the remaining windows of the systems are all blocking out the light.



2,455,021
PRESSURE METER
Frank Rieber, New York, N. Y., assignor to Interval Instruments, Inc., New York, N. Y., a corporation of New York
Application January 29, 1944, Serial No. 520,200
7 Claims. (Cl. 250—36)

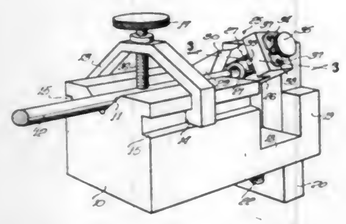
4. In a telegauge, in combination, a Bourdon tube subjected to pressure variations, a magnet, a wire connected to said Bourdon tube and extending transverse to the field of said magnet, a support for the other end of said wire, said magnet extending for a length along the wire substantially more than one third the length of the wire

and centrally disposed with regard to said wire, an oscillator, means responsive to vibrations of said wire transverse to said field for controlling the frequency of said oscillator, and means operated by said oscillator for passing alternating current through said wire of the oscillator frequency.



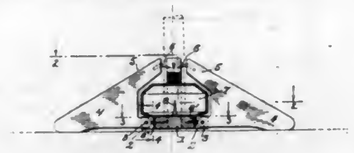
2,455,022
SUBMERSIBLE DOUBLE-ACTING FLUID PISTON DEEP WELL PUMP
Benjamin F. Schmidt, Los Angeles, Calif.
Application August 8, 1944, Serial No. 548,518
15 Claims. (Cl. 103—46)

13. In a submersible oil well pump structure, a fluid filled housing containing the following instrumentalities: an electric motor; a high pressure pump operatively connected to said motor for pumping an operating fluid, said pump including intake and discharge ports; a plurality of valves for opening and closing said ports; a rotatable ring cam for actuating said valves; a reduction gearing operatively connected to said motor; means connecting said reduction gearing to said ring cam; means defining a pair of actuating chambers each containing a quantity of said operating fluid and a quantity of mercury; means communicating said intake and discharge ports with said actuating chambers; means defining a pair of crude oil pumping chambers each containing a quantity of mercury; means interconnecting said pumping chambers with said actuating chambers; means defining inlet and outlet connections to said pumping chambers; check valves in each of said inlet and outlet connections; a plurality of flexible elements disposed within said housing and defining an interior space of variable volume; means communicating said spaces with said crude oil outlet connections to produce within said housing substantially the same pressure as that against which said crude oil is pumped; a shell for enclosing said housing and having inlet and outlet orifices for crude oil to be pumped and having an electric cable inlet; means in said shell for maintaining said housing in centrally spaced relation with respect to said shell; and means within said shell for preventing rotation of said housing upon operation of said motor.



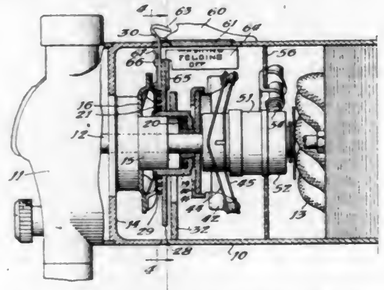
2,455,023
PHOTOALBUM LEAF
Herbert F. Schmiege, Chesaning, Mich.
Application July 29, 1944, Serial No. 547,271
1 Claim. (Cl. 129—20)

In a loose-leaf for photo albums, a sheet of flexible cardboard, said sheet being substantially rectangular, the respective longitudinal edges of said sheet being folded laterally and inwardly against one face, then doubled upon themselves and directed outwardly, folded over the marginal edge portions to the opposite face of said sheet, the free terminal edges constituting keeper flaps and the doubled folds on the first-named face forming similar keeper flaps, a plurality of longitudinally disposed staples secured through all folds and said sheet and being arranged at predetermined longitudinally spaced points, said staples being situated inwardly of the adjacent marginal edge portions of the sheet proper and defining, between themselves, keeper pockets for adjacent end portions of the snap-shots or the like, a pair of longitudinally extending strips,



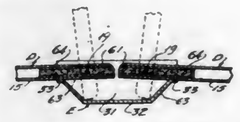
said strips being arranged on and against opposite faces of the median portion of the sheet proper and in alignment with each other, a plurality of transversely disposed staples securing the strips to the sheet and positioned at longitudinally spaced points, certain of said last-named staples being disposed in pairs and close parallelism to secure the portions of the strips therebetween in direct contact with the main sheet, the remaining portions defining open-edged loops, said loops being in alignment with said keeper pockets, the closely spaced transverse staples being positioned distances apart considerably less than the lengths of the outer longitudinal marginal staples, whereby to assist in guiding one in locating and assembling the staples and securing the parts together.

2,455,024
DRILL JIG
Harold W. Schneider, Terrell, Tex.
Application September 9, 1946, Serial No. 695,716
5 Claims. (Cl. 77—62)



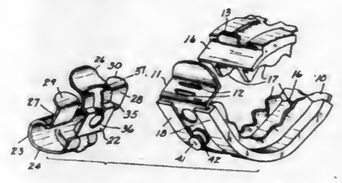
1. A centering drill jig including a body having a bifurcated end and a work receiving recess, clamping means for holding a workpiece in predetermined relation to the bifurcated end of said body, a bushing plate disposed for vertical sliding displacement between the bifurcations in the ends of said body and guided thereby, an interchangeable bushing carried by one end of said plate, an elongated and oscillatable centering lever having a longitudinal slot to receive the inner end of said bushing, said centering lever having a recess intermediate its ends provided with a V-shaped end confronting a workpiece in said jig body and adapted to engage said workpiece when said lever is oscillated and laterally moved, to effect vertical movement of said bushing plate and alignment of said bushing with the center of said workpiece.

2,455,025
CHRISTMAS TREE HOLDER
Clarence J. Schroeder, Sheboygan, Wis.
Application June 8, 1945, Serial No. 598,343
1 Claim. (Cl. 248—47)



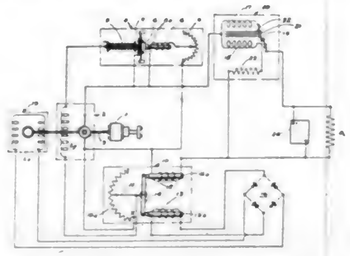
A holder for Christmas trees comprising a rectangular base block having recesses therein, a rectangular fluid cup secured to the upper face of the base block having inwardly beveled lips for restricting the mouth of the cup, an anchor pin extending upwardly from the cup bottom, supporting feet having inwardly overhanging arms above the cup extending over and protecting the beveled face mouth of said cup, ears extending from the feet fitted into the base block recesses, pivots connecting the feet ears and said block, and pins extending inwardly from the ends of the feet arms, the same being circumferentially aligned, with reference to the feet pivots, for piercing engagement with a tree centrally seated upon the cup anchor pin.

2,455,026
MOTOR-DRIVEN FOOD MIXER
Arthur W. Seyfried, Racine, Wis., assignor to Scovill Manufacturing Company, Waterbury, Conn., a corporation of Connecticut
Application March 20, 1945, Serial No. 583,789
2 Claims. (Cl. 172—36)



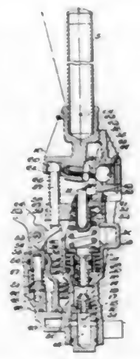
1. In a motor driven food mixer comprising a motor, a cylindrical motor housing having a circumferentially extending slot in the wall thereof, speed control mechanism located in the motor housing adjacent said slot and including a rotatable disk, and a manually operable control lever connected to one side of said disk and extending through said slot for free floating movement therein; the improvement, which comprises an elongated relatively narrow window in the housing wall adjacent said slot and disposed at right angles thereto, a mixing indicator member including a flange portion connected to the other side of said disk for movement with said lever, a spring on said one side of the disk and bearing against a wall of the circumferentially extending slot, said indicator member further including a relatively thin arcuate plate conforming with the wall of the housing and disposed adjacent said wall within the housing for movement directly beneath said window upon movement of the lever in said slot in effecting adjustment of the motor speed, and individual indicia on said plate designating various operations at predetermined motor speeds and being individually visible through said window upon movement of the lever to effect the corresponding motor speeds.

2,455,027
LITTER STRETCHER-BAR ASSEMBLY
Samuel G. Thomson, Flushing, N. Y.
Substituted for application Serial No. 455,906, August 24, 1942. This application October 9, 1946, Serial No. 702,294
3 Claims. (Cl. 5—82)



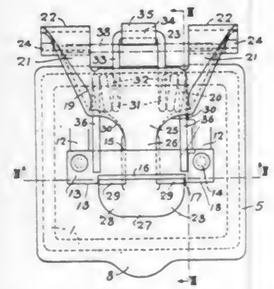
1. A mid-joint for litter stretcher-bar assemblies including a pair of proximal and spaced stretcher-bar ends, a channel like member including a web and a pair of flanges, said ends fitting closely between said flanges, pivot pins passing through said flanges and ends, and lips on the free edges of the flanges against which the said ends tend to engage upon expansion of the litter.

2,455,028
FASTENING DEVICE
George A. Tinnerman, Cleveland, Ohio, assignor to Tinnerman Products, Inc., Cleveland, Ohio, a corporation of Ohio
Application July 16, 1945, Serial No. 605,218
9 Claims. (Cl. 248—74)



1. A fastening device comprising a strip of metal bent intermediately to provide two arms which extend in the same general direction, one of the arms being narrower than the other and having a slot extending longitudinally thereof, and having a boss deformed therefrom adjacent one end of the slot and providing a recess for the head of a pin that is adapted to extend through the slot, and the other arm being bifurcated adjacent the free end thereof, the bifurcated portions being disposed on opposite sides of the first arm and cooperating therewith to provide a three-point engagement with a support that extends therebetween.

2,455,029
ELECTRICAL CONTROL SYSTEM
Ernest J. Vogt, Pasadena, Calif., assignor to Aerojet Engineering Corporation, Azusa, Calif., a corporation of Delaware
Application November 1, 1944, Serial No. 561,475
2 Claims. (Cl. 322—23)

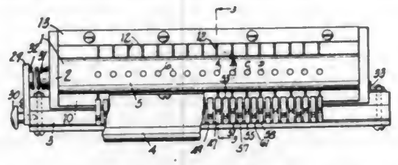


1. In a system comprising a generator, an electrical load operated from the generator and a prime mover for driving the generator, apparatus for regulating the generator comprising a solenoid having through it a current proportional to the load current, a plunger operable in said solenoid, a second solenoid having a current through it responsive to the prime mover speed, a second plunger operable by the second solenoid, a field winding associated with the generator, a rheostat in series with the field winding, said rheostat having a movable arm correlated with both of said plungers, such that an increase of current through the first solenoid and a decrease of current through the second solenoid both tend to increase the resistance of the rheostat, and decrease of current through the first solenoid and increase of current through the second solenoid both tend to reduce the resistance of said rheostat.

2,455,030
FLUID PRESSURE CONTROL MECHANISM
Stephen Vorech, Elyria, Ohio, assignor to Bendix-Westinghouse Automotive Air Brake Company, Elyria, Ohio, a corporation of Delaware
Application December 9, 1944, Serial No. 567,419
11 Claims. (Cl. 303—52)

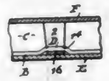
1. Fluid pressure control valve mechanism including a casing having an inlet chamber, an outlet chamber, an exhaust port, valve means for normally permitting communication between said outlet chamber and exhaust port and for preventing communication between said inlet and outlet chambers, means including a control lever having a release position and operable on movement from release position to operate said valve means to prevent communication between said outlet chamber and exhaust port and to permit communication between said inlet and outlet chambers, an auxiliary inlet chamber having a connection with said first named inlet chamber, an auxiliary inlet valve in said connection, means including a manually operable trigger normally positioned to maintain said auxiliary inlet valve in closed position, and means operable on initial movement of said control lever from release position for tripping said trigger to permit opening of the auxiliary inlet valve.

2,455,031
JOURNAL BOX STRUCTURE
Theodore R. Weber, Latrobe, Pa., assignor to American Locomotive Company, New York, N. Y., a corporation of New York
Application November 1, 1944, Serial No. 561,345
9 Claims. (Cl. 308—47)



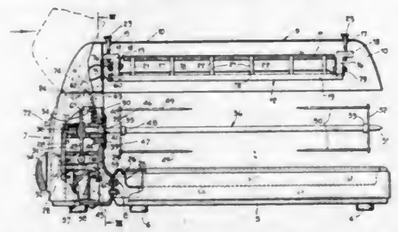
1. A journal box structure comprising a journal box having an open face and a hinge cam lug at its top; a closure including an eyeless cover for said open face and a transverse bar spaced at its center from the outer face of said cover providing a slot and rigidly secured at its ends to said cover face; a member hinged to said lug, extending downwardly through said slot in spaced relation to said cover at said slot to permit angling between said member and closure, said member having a lower portion with an outwardly directed flange in engagement with the bottom edge of said bar for supporting said closure; and a torsion spring having coils engaging, and exerting an outward force against, said member between said lug and bar and having an upwardly extending portion engaging, and exerting an inwardly directed force against, the cam of said lug and having a downwardly extending portion engaging, and exerting a cover-closing force against, said closure.

2,455,032
MUSICAL INSTRUMENT
Alfred O. Williams, Richland, Mich.
Application September 17, 1947, Serial No. 774,612
15 Claims. (Cl. 84—1.01)



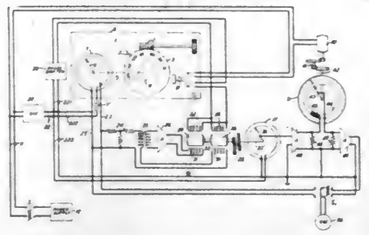
13. A harmonica-like playing instrument for actuating an electric tone producing system comprising a body member having a plurality of forwardly opening tone bores, pistons disposed in said bores, a plurality of contact reeds secured to said body, said reeds being engageable with said pistons for movement thereby, a slide member

slideably secured to said body member and spring urged in one direction, pairs of electrical contacts carried by said slide member and spaced to the front and rear of said reeds, a common



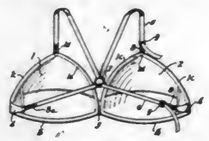
conductor extending from said reeds on said body to said tone forming mechanism, and a plurality of conductors extending from said contacts to the elements of said tone forming mechanism.

2,455,033
PRINTER'S KNOCKOUT
Charles W. Wright, Tipton, Kans.
Application March 23, 1946, Serial No. 656,633
2 Claims. (Cl. 22—5)



2. In combination with a stereotype casting box having a lid and bottom portion, a matrix in the casting box and lying upon said bottom portion, said matrix having a blank space with an uneven surface, a printer's knock-out arranged in the casting box adjacent to the blank space of the matrix and adapted to exert pressure thereon when the lid of the casting box is closed, and a flexible member associated with said printer's knock-out and the matrix to prevent distortion of the blank space when pressure is applied thereto by the printer's knock-out.

2,455,034
HOME BARBECUE DEVICE
Richard R. Zoegall, Los Angeles, Calif.
Application October 26, 1944, Serial No. 560,461
2 Claims. (Cl. 219—19)

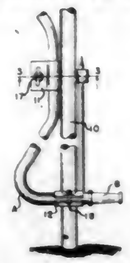


1. In a food cooking device of the character described: a base; an upright hollow pedestal disposed at one end of said base and having spaced front and back walls; a hood-like reflector; means hingedly mounting the reflector on said hollow pedestal with the hinge axis of said connection near the front wall so that the top of the pedestal supports the reflector in a substantially horizontal position extended out over the base; and means concealed within the hollow pedestal and actuated from the exterior thereof for swinging the reflector on its hinge connection.

2,455,035
AVERAGING MECHANISM
Hendrik W. Bode, Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application January 30, 1946, Serial No. 644,272
5 Claims. (Cl. 235—61)

1. Averaging mechanism comprising means for obtaining a voltage varying in accordance with a quantity to be averaged over a defined time interval, means for defining the time interval, a movable member, means for driving the member at a velocity proportional to the voltage, means actuated by the member for producing a second voltage increasing in accordance with the displacement of the member and means controlled by the defining means for deriving from the second voltage a third voltage proportional to the second voltage divided by the time interval over which the quantity is to be averaged.

2,455,036
BRASSIÈRE
Gypsy A. Boylan, Rocky River, Ohio
Application March 22, 1946, Serial No. 656,271
3 Claims. (Cl. 2—42)

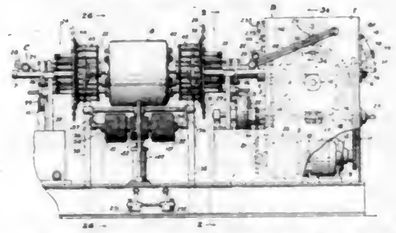


1. A garment of the class described comprising a pair of cup members connected together at their inner sides, strap members connected at their opposite ends to the top and outer side portions of said cup members, the end portions of the strap members adjacent to their connections to the top portions of the cup members being adapted to extend over the shoulders of a wearer for supporting the garment, and a connecting member through which the intermediate portions of said strap members extend, said connecting member having a single opening and being of circular shape and rounded throughout to permit said strap members to slide freely endwise through said connecting member independently of each other and equalize the tension on said strap members during bodily movement of the wearer.

2,455,037
LAWN WASHER AND SPRINKLER SUPPORT
Emil Robert Bremer, Alameda, Calif.
Application February 15, 1946, Serial No. 647,889
1 Claim. (Cl. 248—87)

In a device of the class described, a hose receiving clamp fixed to a stick near the upper end thereof, a second hose receiving clamp fixed to

the stick near the lower end thereof and arranged at right angles to the first clamp, a bearing fixed to the stick adjacent the lower clamp and at right angles thereto, a sticking pin pivotally connected



to said bearing, and a keeper for the sticking pin fixed to the stick on a side opposite the first clamp to resiliently hold the sticking pin in an inoperative position.

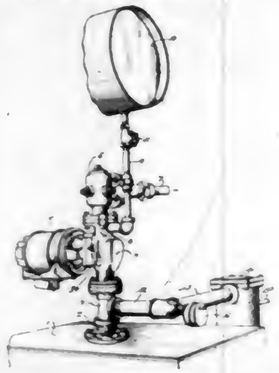
2,455,038

APPARATUS FOR BUILDING TIRES

Walter J. Breth, Akron, Ohio, assignor to The General Tire & Rubber Company, Akron, Ohio, a corporation of Ohio

Application June 14, 1944, Serial No. 540,306
17 Claims. (Cl. 154—10)

12. A tire building machine comprising a tire building drum having an end opening and a bead seating shoulder portion surrounding the opening, an expansible fabric folding member movable axially into and out of an end opening of the drum to an inner position within the drum or to an outer position laterally clear of the drum, said member having a fabric engaging periphery normally of slightly less diameter than said opening, means operable while said folding member is in its inner position to fold an inner fabric ply radially inwardly over the drum shoulder and to apply a bead ring to the fabric overlying the shoulder, means for moving said folding member axially outwardly to fold the inner ply against the interior of the bead ring, means operable while said folding member is in its outer position to fold an outer ply of fabric radially inwardly over the outside of the bead ring, means for moving said folding member inwardly to fold said outer ply against the interior of the bead ring, and means for expanding said folding member to apply radial pressure to the interior of the bead.



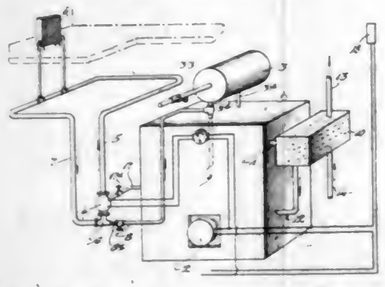
16. A tire building machine comprising a tire building drum having a bead positioning shoulder at an end thereof, a fabric folding disc coaxial with the drum and of a diameter but slightly less than the bead opening of the tire, said disc being movable axially toward and away from said end of the drum, power operated means for moving said disc outwardly to a position beyond the end of the drum and inwardly into the bead opening of a tire on the drum, a mechanism for folding outer plies of tire fabric inwardly over the outer face of the tire bead and into the path of said disc while said disc is spaced outwardly from the end of the drum and means to move the disc axially toward the drum to fold the fabric against the interior of the tire bead.

2,455,039

HOT-WATER HEATING SYSTEM

Frederick C. Broderick, Glencoe, Ill.

Application September 18, 1944, Serial No. 554,683
4 Claims. (Cl. 237—8)



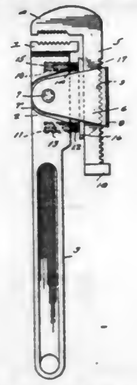
2. In a combined hot water system for heating space and domestic water comprising a supply boiler, a radiator supply conduit, a heat exchanger supply conduit and a pump for moving heated water to the radiator supply conduit, a diversion T positioned in the system between the boiler and the supply conduits and adapted to direct some of the water moved by the pump to each supply conduit and a check valve between the T and the radiator supply conduit to prevent water not moved by the pump from entering the radiator supply conduit.

2,455,040

HEATING SYSTEM

Frederick C. Broderick, Glencoe, Ill.

Application September 18, 1944, Serial No. 554,684
5 Claims. (Cl. 237—63)



2. In a hot water system comprising a boiler, a pump, radiating elements, a supply pipe from said pump to said radiating elements, a return pipe from said radiating elements, means for continuously directing a portion of the flow of return water to the pump and a portion to the boiler, said means comprising a three port connection, one port leading from the return pipe, another to the pump, a return conduit leading from the other port to the boiler, a supply conduit from the boiler to the pump, manual valves in said conduits for proportioning the flow of return and supply water to the pump, an expansion tank on said boiler and connected therewith, said return conduit leading to a point above the boiler and into said boiler therefrom and a pipe connecting said return conduit to said tank at a point above the boiler.

2,455,041

PIPE WRENCH HAVING A PIVOTED AND ADJUSTABLE OUTER JAW

Rochelle D. Bryan, Glenmora, La.

Application August 14, 1945, Serial No. 610,799
1 Claim. (Cl. 81—103)

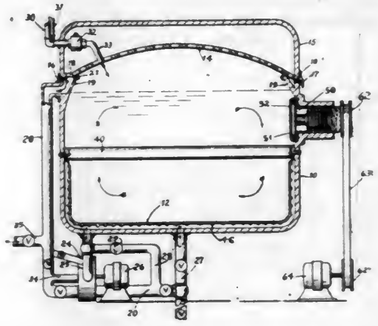
A quick acting pipe wrench comprising a relatively stationary jaw element comprising a shank stock terminating at its lower end in a handle, a fixed jaw on the upper end of said stock having an upper toothed jaw face arranged at right angles to said stock, a pair of vertically spaced bores opening through one side of said stock, said bores being parallel to said fixed jaw, helical springs fitting said bores and projecting axially beyond said one side of said stock, pins axially inserted in the outer ends of said helical springs and extending into said bores whereby said pins are yieldably restricted to axial movement in said bores parallel to said fixed jaw and are permitted only limited lateral movement in said bores, a saddle extending between and fixed to the outer ends of said pins, said springs, pins and saddle being arranged relative to each other in a manner to maintain said saddle parallel to said stock and at right angles to said fixed jaw, a movable jaw element comprising a straight shank of rectangular cross-section having a jaw on its upper end projecting laterally therefrom and having a toothed gripping face on its underside confronting and co-extensive with said fixed jaw and extending at right angles to said straight shank, the side of said straight shank adjacent said shank stock of said stationary jaw element slidably engaging said saddle, the side of said shank of said movable jaw element remote from said shank stock being formed therealong with teeth, a U-shaped yoke having legs slidably engaging the opposite sides of said straight shank and pivotally engaging said shank stock, said yoke having a flat web portion, teeth on the inner surface of said flat web portion to interengage with the teeth on said movable jaw element shank and prevent longitudinal movement of the jaw elements relative to each other, and a pivot pin extending through said yoke legs and said shank stock at a point intermediate said bores in said shank stock on an axis at right angles to said bores, said helical springs being compressed between the inner ends of said bores and said saddle whereby said saddle is constantly yieldably engaged with the adjacent side of said straight shank of said movable jaw element.

2,455,042

PROCESS OF PLASTICIZING POLYVINYL CHLORIDE COMPOSITIONS

Leslie Budworth Morgan, Baguley, and Paul Russell, Austin Atkinson Gibson, Robert Arbuthnott Kinnear, and Reginald Grime Heyes, Welwyn Garden City, England, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain

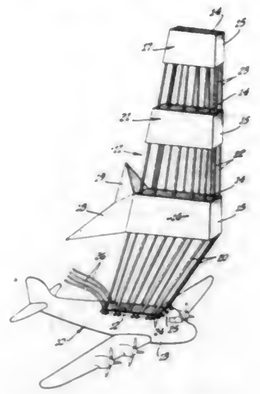
No Drawing. Application May 16, 1946, Serial No. 670,310. In Great Britain March 28, 1945
11 Claims. (Cl. 260—34.2)



1. The process of producing improved polyvinyl chloride compositions which comprises heating a powdered vinyl chloride polymer in which the vinyl chloride content is at least 95% and which is substantially free of volatile constituents, at a temperature between 75° C. and 150° C. until the polymer partially softens, and thereafter uniformly distributing the polymer at a temperature below 60° C. in a substantially non-volatile plasticising agent in which it is substantially insoluble at room temperature.

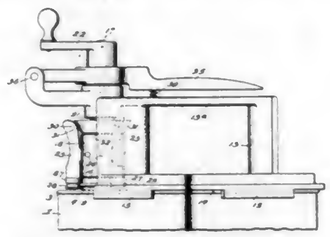
2,455,043

CLOTHES CLEANSING AND FLUID EXTRACTING APPARATUS HAVING A FLEXIBLE CLOTHES SQUEEZING DIAPHRAGM



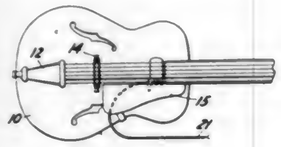
Taylor P. Calhoun, Worcester, Mass.; Ann E. Calhoun administratrix of said Taylor P. Calhoun, deceased

Application April 5, 1946, Serial No. 659,792
12 Claims. (Cl. 68—21)



1. Laundry apparatus comprising a tub for a cleansing fluid, a perforated partition therein and a cup shaped, impervious, flexible diaphragm therebelow forming a washing and clothes squeezing chamber, means for moving the diaphragm to squeeze clothes against the partition and a clothes washing device mounted on a tub wall independently of the diaphragm which has a fluid impeller movable from an operative to an inoperative impelling relationship with said fluid and to a position where it does not materially interfere with the squeezing movement of the diaphragm.

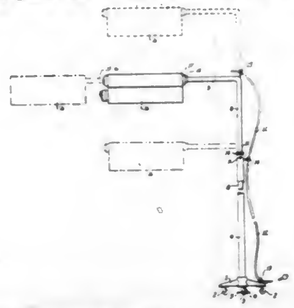
2,455,044
PARACHUTE
Harry Caplan, Los Angeles, Calif.
Application November 19, 1945, Serial No. 629,587
7 Claims. (Cl. 244—139)



1. In apparatus of the character described, an airplane, a parachute comprising a box-like fabric frame having sides and a top, means comprising a plurality of lines connecting said parachute with said airplane, and an auxiliary parachute connected to one side of said fabric parachute frame, tapered to a point to maintain the first-named frame in predetermined relationship with the direction of the air flow around said first-named parachute and supplement the latter in suspending the airplane.

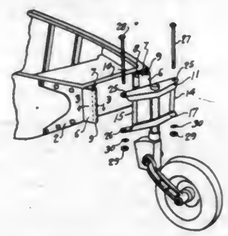
2,455,045
HAND SEALER FOR CONTAINERS
John Coyle, Baltimore, Md., assignor to Continental Can Company, Inc., New York, N. Y., a corporation of New York
Application July 6, 1945, Serial No. 603,549
2 Claims. (Cl. 113—24)

1. A hand sealer for container closures comprising a supporting frame adapted to rest on the end seam of a container having a nozzle, means carried by the frame for preventing lateral movement thereof on the end seam, said frame having a bearing centered directly over the nozzle of the container, a sleeve mounted in said bearing for rotation and for endwise movement, a crank attached to the sleeve for rotating the same, a hand operated lever pivoted to the frame and connected to the sleeve for moving said sleeve endwise, a shaft mounted in said sleeve and means for connecting the shaft to the sleeve whereby the shaft is rotated with the sleeve and the sleeve is permitted to move endwise of the shaft, a sealing head mounted on said shaft and rotatable therewith, a chuck carried by the shaft and sealing head so that the shaft and head may rotate relative to the chuck, a plurality of seaming levers carried by said head, curling rollers carried by said levers, springs associated with the levers for moving the curling rollers radially outwardly away from the chuck, and a control cam carried at the lower end of said sleeve and adapted to engage the upper ends of said levers for moving the curling rollers inwardly toward the chuck.



2,455,046
GUITAR MAGNETIC MICROPHONE
Harry De Armond, Toledo, Ohio, assignor to Rowe Industries, Toledo, Ohio
Application March 20, 1946, Serial No. 655,759
3 Claims. (Cl. 84—1.16)

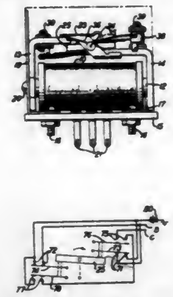
1. In an electromagnetic pick up device, said pick up adapted to fit between the strings and casing of a musical instrument and including a thin, oblong shaped casing having an open, box-like base portion and a top cover portion, the core of said electromagnetic device comprising a flat elongated magnet, magnetized from one flat face as one pole to the other flat face as the other pole, a juxtaposed section of non-magnetic material and a second piece of elongated magnetic material positioned at right angles to said first-mentioned magnet, said sections forming a thin transversely magnetized core of compact construction; a winding consisting of a large number of turns of conductive wire surrounding said three elements of said core binding the same in correlative position, said winding being located between said core and the walls of said box-like base, said base forming one of the pole pieces of said magnets; the other pole including two metal pieces, including one flat elongated section of metal extending over one end of said windings and said first mentioned elongated magnetic material of said core; and another pole piece located over said last mentioned magnet and having a tongue extending over the other end portion of said winding said top cover being of magnetically impermeable material and having a depending flange closely fitting over the side walls of said bottom box-like base portion of said casing to retain the parts in assembled position.



2,455,047
ADJUSTABLE HEATER SUPPORT
Charles C. Doyle, Willoughby, Ohio
Application February 15, 1945, Serial No. 578,103
1 Claim. (Cl. 248—161)

In combination as a support for an electric heater having an elongated, concavo-convex body, a horizontal arm on which said body is mounted for both sliding and rotation to change the position of its operative face with reference to the work, means for securing the body to the arm in adjusted position and a pedestal comprising a pair of telescopically connected mem-

bers permitting adjustment of said arm vertically and also about a vertical axis.

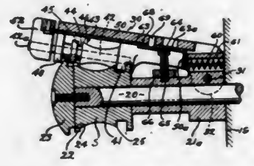


2,455,048
ATTACHMENT FOR TRAILER BOAT CASTER UNITS
Stanley R. Du Brie, Detroit, Mich., assignor to Detroit Engineering Laboratories, Inc., Detroit, Mich., a corporation of Michigan
Application June 4, 1947, Serial No. 752,347
7 Claims. (Cl. 9—1)

1. Means for attaching a caster unit to an end of a trailer boat comprising a pair of metal straps adapted to be secured to the opposite sides, and adjacent the end, of a boat, said straps each having a portion adapted to project beyond the end of the boat, a pair of vertical sockets supported one on each of the projecting ends of the straps, a rigid framework having a pair of vertically opposed openings at each end, a caster wheel swiveled on said framework centrally thereof, the said framework being positioned over said socket members with the opposed openings aligned with, and positioned at the opposite ends of, the socket members, and means passing through said openings and socket members for detachably securing the framework to the socket members.

2,455,049
SHOCKPROOF ELECTROMAGNETIC CIRCUIT CONTROLLER
Paul G. Edwards and Harold W. Herrington, Verona, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application March 15, 1944, Serial No. 526,530
4 Claims. (Cl. 200—87)

1. In a shock-proof switching device, a dynamically balanced armature mounted for rotation about its transverse center axis, a contact spring fixed to the upper surface of said armature, a contact spring fixed to the lower surface of said armature, and a pair of circuit terminating stationary contacts for each of said contact springs having corresponding contacts electrically interconnected, said pairs of contacts being so disposed relative to their corresponding contact springs that each pair of stationary contacts is bridged thereby when said armature is in its normal position to effect duplicate parallel



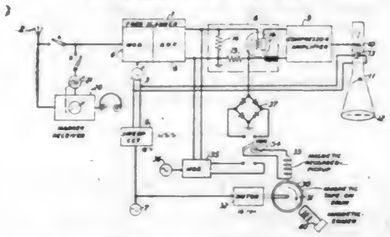
closures of the circuit terminated by said stationary contacts, the arrangement of said springs on said armature relative to their stationary contacts being such that the accidental movement of said springs, caused by shock, relative to their stationary contacts precludes the simultaneous openings of the bridges effected by said springs.

2,455,050
NONDUSTING DETERGENT COMPOSITIONS
Sidney Eisenberger, New York, and Samuel Machlis, New Rochelle, N. Y., assignors to O. D. Chemical Corporation, New York, N. Y., a corporation of New York
No Drawing. Application January 11, 1947, Serial No. 721,666
6 Claims. (Cl. 252—138)

4. A non-dusting detergent composition consisting essentially of from about 10% to 50% of a complex mixture of alkyl naphthalene sulfonates in which the alkyl groups contain from 3 to 6 carbon atoms, about 10% to 50% of tetrasodium pyrophosphate and from about 15% to 40% of at least one alkali-metal carbonate from the class consisting of soda ash and sodium bicarbonate, together with a small fraction of 1% of diethylene glycol stearate intimately distributed therein.

2,455,051
FILM SPROCKET CLAMP
Henry N. Fairbanks, Beverly Hills, Calif., assignor to Mitchell Camera Corporation, West Hollywood, Calif., a corporation of Delaware
Application September 24, 1945, Serial No. 618,160
9 Claims. (Cl. 271—2.3)

7. A clamp device for a film sprocket which is journalled on and projects outwardly axially from a stationary mounting member, said clamp device comprising an elongate body, means pivoting an inner end of the body to the mounting



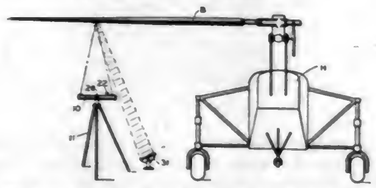
member on an axis transverse of the sprocket axis so that the body may lie in a film confining position projecting outwardly adjacent the sprocket and substantially parallel to its axis or may be swung away from the sprocket, film engaging means carried by the body and adapted to confine a film against the sprocket when the body is in its first mentioned position, and means for releasably locking the body in its first mentioned position, said means comprising a longitudinally extending and longitudinally slidable latch bar carried by the body, a spring acting on the latch bar to move it in one direction, and a locking member mounted on the mounting member and having a shoulder with which an edge of the latch bar is engageable by movement of the bar in said direction.

2,455,052

SIGNAL RECEIVING SYSTEM

Harold J. Fisher, Port Washington, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application June 17, 1944, Serial No. 540,867
6 Claims. (Cl. 250—20)



1. In combination, a wave receiver including means for cyclically scanning a predetermined frequency range and selecting in repeated succession such received waves of different frequencies as may be present therein, means responsive to waves selected by said last-mentioned means for creating visual indications individual to the waves of different frequencies that are present, means for applying oscillations of definite frequency to said receiver at will exclusively of said received waves whereby said oscillations may be cyclically selected thereby, and means controlled by the oscillations so selected for preventing response of said responsive means to selected waves of a particular frequency without interfering with the response to selected waves of a different frequency.

2,455,053

OPTICAL METHOD AND APPARATUS FOR CHECKING PROPELLER BLADES

Edward F. Flint, Brighton, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a corporation of New York

Application March 9, 1945, Serial No. 581,847
8 Claims. (Cl. 88—14)

1. The method of indicating the positions of the blades of a propeller relative to a fixed plane while the propeller is being rotated which comprises the steps of providing aligning indicia means on each blade with the indicia means placed at a different distance from the propeller axis for each blade, rotating the propeller and simultaneously forming at least two adjacent images of each indicia means in an image field in said plane in such a manner that the relative positions of the adjacent images of the several indicia means are, respectively, functions of the distances from the indicia means to the image field and hence indicate the relative positions of the respective blades relative to the plane.

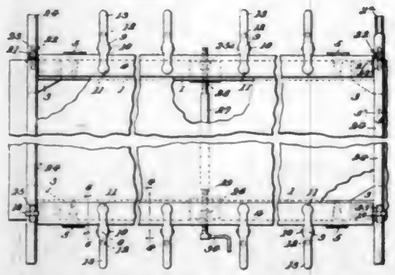
2,455,054

WATER DISPERSIBLE PHENOTHIAZINE AND METHOD OF PRODUCING SAME

Lyle M. Geiger, Edgewood, and Donald L. Marsh, Avalon, Pa., assignors to The Neville Company, Neville Island, Pa., a corporation of Pennsylvania

No Drawing. Application October 24, 1946, Serial No. 705,478
8 Claims. (Cl. 167—53)

2. A water wettable, dry, powdered phenothiazine composition for use in preparing free-flowing, stable, aqueous suspensions, comprising phenothiazine, at least about 0.15% by weight of an alkyl benzene alkali metal sulfonate in which the alkyl substituent contains at least 3 carbon atoms, and at least about 0.05% by weight of a water soluble peptizing agent having the following general formula:



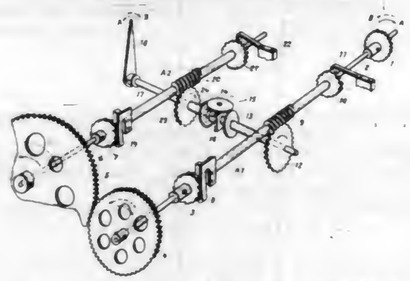
in which R_1 is selected from the group consisting of hydrogen, hydroxyalkyl, and aminoalkyl, R_2 and R_3 are selected from the group consisting of hydrogen and hydroxyalkyl, and in which R_1 and R_3 when connected together form a six-membered heterocyclic ring selected from the group consisting of oxazines and azines.

2,455,055

CURING FRAME FOR RESIN IMPREGNATED STOCK SHEETS

Harry C. Gray, Chicago, Ill., assignor to Continental Can Company, Inc., New York, N. Y., a corporation of New York

Application September 7, 1944, Serial No. 553,073
3 Claims. (Cl. 154—1)



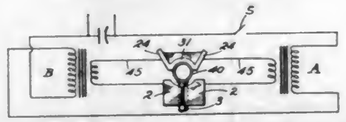
1. A curing frame for resin impregnated laminated stock sheets comprising spaced side bars and spaced end bars rigidly connected to form a frame for supporting the stock sheets, means associated with each side bar for clamping the side edge portions of the stock sheets thereto, a clamping bar associated with each end for engaging the stock sheets and clamping the same against the bar, a presser bar associated with the clamping bar, said presser bar being bent downwardly intermediate its ends and clamping bolts disposed at the ends of said presser bar for holding said presser bar when pressed against said clamping bar to a straight position whereby a uniform clamping force is applied to the clamping bar from end to end thereof.

2,455,056

ACCUMULATOR METER

John Ernst Hagdahl, Stockholm, Sweden, assignor to Telefonaktiebolaget L M Ericsson, Stockholm, Sweden, a company of Sweden

Application September 11, 1944, Serial No. 553,646
In Sweden November 16, 1943
5 Claims. (Cl. 171—34)



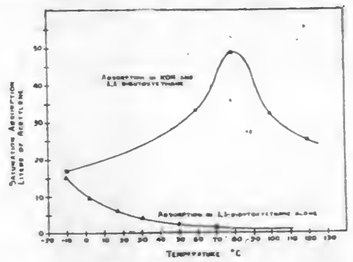
1. Accumulator meter device comprising an energy meter, a pointer and a mechanical transmission device for transmitting movement of the meter rotor to the pointer in accordance with the direction of the rotation of said rotor, said transmission device comprising a differential gear, one of the three movable members of which being connected to the shaft of said pointer, two shafts, each carrying a gear element designed to drive one of the two remaining movable elements of said differential gear, separate means for stopping the rotation of each of said shafts in one direction, two further shafts, each carrying a gear wheel, said two wheels meshing with one another, one of said last mentioned shafts being driven by said rotor, and in turn designed to drive one of said first mentioned two shafts in one direction only by means of a clutch, the second of said last mentioned shafts being designed to drive the other of said first mentioned shafts in one direction only by means of a second clutch.

2,455,057

ELECTRIC WELDING APPARATUS

Kenneth V. Hart, Cleveland, Ohio

Application November 7, 1946, Serial No. 708,276
12 Claims. (Cl. 219—4)



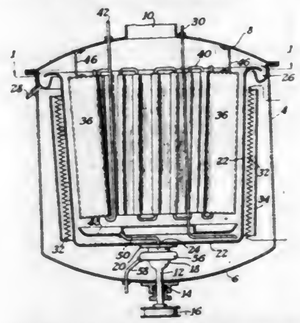
1. Welding apparatus comprising an article pressing die, a multipart tube clamping die and transformer secondary means connected in parallel to said pressing die at a plurality of spaced places and to each of the parts of the said clamping die.

2,455,058

PROCESS FOR REACTING ACETYLENE AND POTASSIUM HYDROXIDE

Daniel F. Herman, Philadelphia, Pa., assignor to Publicker Industries Inc., Philadelphia, Pa.

Application September 12, 1946, Serial No. 696,599
11 Claims. (Cl. 260—665)

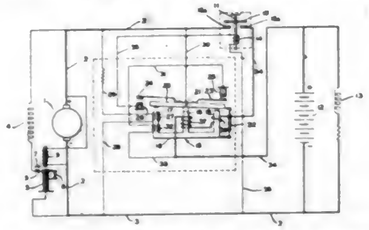


7. A process of the character described comprising forming a suspension of finely-divided potassium hydroxide in a substantially water-immiscible inert organic solvent, adjusting the temperature to about 50–120° C. and passing in a member of the group consisting of acetylene and its homologs and derivatives having a hydrogen on a triple-bond carbon, while maintaining the temperature at about 50–120° C.

2,455,059

VACUUM UNOBSTRUCTED PATH DISTILLATION APPARATUS

Kenneth C. D. Hickman, Rochester, N. Y., assignor to Distillation Products, Inc., Rochester, N. Y., a corporation of Delaware

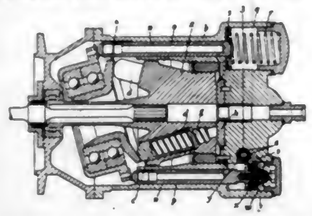


Application April 5, 1945, Serial No. 586,810
9 Claims. (Cl. 202—205)

1. Vacuum unobstructed path distillation apparatus comprising in combination a vaporizing surface over which distilland is caused to flow in a thin film, means for heating the vaporizing surface, means for introducing distilland onto the vaporizing surface, means for removing undistilled residue from the vaporizing surface, a plurality of condensing elements positioned opposite to the vaporizing surface and separated therefrom by substantially unobstructed space, the principal condensing surfaces of said elements converging with respect to each other, as the parts of the element farthest from the vaporizing surface are approached, means for cooling the condensing elements, means for removing condensate from the condensing elements and a conduit for evacuating gases from the space between the vaporizing surface and the condensing elements, which con-

duit is positioned so that gases passing therethrough must, to a large extent, first pass through the converging spaces between the condensing elements.

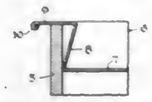
2,455,060
REVERSE CURRENT RELAY AND SYSTEM
William R. Holmes, New York, N. Y., assignor to Bendix Aviation Corporation, Teterboro, N. J., a corporation of Delaware
Application July 26, 1946, Serial No. 686,484
7 Claims. (Cl. 320—33)



1. A relay mechanism to control connection and disconnection of a generator to a battery charging circuit, comprising, in combination, an E-shaped magnet core, a pair of coils wound on an outer leg of the E-shaped core, one of said coils responsive to the output voltage of the generator and the other of said coils responsive to the current flow between the generator and battery circuit, other current coils wound on the center leg and other outer leg of the E-shaped core and responsive to the flow of current between the generator and battery circuit, and an armature cooperating with the legs of said E-shaped core and including switch elements for connecting said current coils in and out of operation.

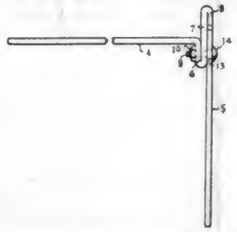
2,455,061
TREATMENT OF LIQUID HYDROCARBONS
Charles O. Hoover, Houston, Tex., assignor to Air Reduction Company, Incorporated, New York, N. Y., a corporation of New York
No Drawing. Application January 31, 1945, Serial No. 575,567
5 Claims. (Cl. 196—30)

1. The method of eliminating sulphur in the form of hydrogen sulfide, mercaptans or disulfides from liquid hydrocarbons which comprises treating the liquid hydrocarbon with cuprous naphthenate.



2,455,062
VARIABLE STROKE PUMP
Richard Joseph Ifield, Ealing, London, England, assignor to Joseph Lucas Limited, Birmingham, England
Application December 29, 1944, Serial No. 570,439
In Great Britain July 12, 1943
1 Claim. (Cl. 103—162)

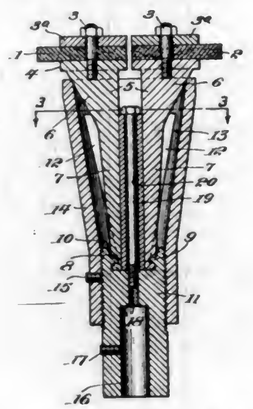
A variable stroke pump comprising in combination a casing, a rotary cylinder block mounted in the casing, plungers slidable in the cylinder block, a pivotally mounted swash plate adapted by co-operation with the plungers to impart movement thereto during rotation of the cylinder block, and also to vary the stroke of the plungers, an inlet through which fluid can flow into the cylinder block in response to movement of the plungers in one direction, an outlet through which fluid can be delivered by movement of the plungers in the opposite direction, a pair of additional plungers adapted to impart opposite movements to the swash plate, a spring acting on one of the additional plungers, a chamber at one end of the other additional plunger, a piston slidable in the chamber and adapted to act on the associ-



ated additional plunger, a spring loaded valve responsive to the delivery pressure of the pump, and a pair of fluid passages which are respectively connected to the inlet and outlet and which are alternatively connectible to the said chamber under the control of the valve.

2,455,063
METHOD OF FORMING METAL CLOSURES FOR PAPER CONTAINERS
George F. Jackson, Baltimore, Md., assignor to Continental Can Company, Inc., New York, N. Y., a corporation of New York
Application October 7, 1943, Serial No. 505,346
1 Claim. (Cl. 93—55.1)

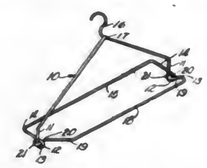
The herein described method of forming a metal end closure on a paper container body which consists in inserting in an open end of a paper container body a metallic end closure having a central body portion merging into an inwardly and endwise tapered heel and an outwardly turned flange, then bending said flange down over the open end of the body and against the outside wall of the body end in the form of a skirt to dispose said skirt in substantially parallel spaced relation to said heel and clamp the body end portion between said heel and skirt in inwardly and endwise tapering relation to the main body of the container.



2,455,064
SPECIAL PURPOSE FILE
George L. Johnson, Detroit, Mich., assignor of one-fourth to Fred J. Heideman, Detroit, Mich.
Application October 4, 1944, Serial No. 557,167
2 Claims. (Cl. 29—78)

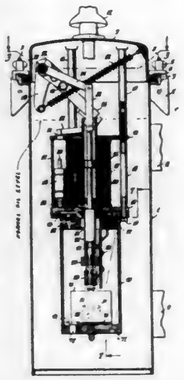
1. A file comprising an elongated body having a bent end portion, a working member having

cutting serrations and having an end portion formed with an opening and with a slot more narrow than said opening extending to the end of said portion; a fastening element securing the working member to the bent end portion of said body and comprising a shank adapted to pass through said slot, said shank having an enlargement to fit said opening of the working member, and means on the working member and body for normally restraining the working member from pivotal movement on said fastening element, said element being adjustable lengthwise to disengage said enlargement from said opening and the working member then being releasable from said restraining means by shifting said member lengthwise to accommodate said fastening element in said slot.



2,455,065
ADJUSTABLE INTERNAL EXPANSION GRINDER
Spencer R. Keller, Handley, W. Va.
Application April 17, 1945, Serial No. 588,736
15 Claims. (Cl. 51—184.1)

1. An adjustable internal grinding device, comprising a segmental disk-like grinding wheel, supporting arms on which the segments of the grinding wheel are mounted, a sleeve, means pivotally mounting said arms on said sleeve whereby said arms are adapted to move the segments of said grinding wheel away from the center of the wheel when rotated, an arm supporting guide and anchor member for the arms mounted on said sleeve to prevent detachment of the arms from said sleeve, said arms having angular heads, the sleeve for pivotally mounting said arms having a socket in the outer end thereof for attaching the grinding device to the arbor of a power element, and a hollow cone-shaped sleeve on said first mentioned sleeve and engaging the arms to adjust the outward movement of the arms and segments of the grinding wheel.

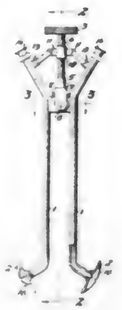


2,455,066
GARMENT HANGER
Paul S. Kempf, Brookline, Mass.
Application June 5, 1947, Serial No. 752,647
6 Claims. (Cl. 223—91)

1. A garment hanger comprising a support, a cross bar carried by the support and stationary with relation thereto, a movable cross bar to be arranged above the stationary cross bar when in its closed position, and means effecting adjustable connections between the movable cross bar and relatively stationary cross bar so that the movable cross bar may be shifted laterally to an open

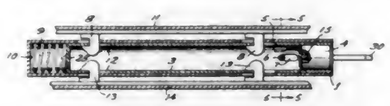
position and spaced substantially horizontally from the stationary cross bar and including stops to positively support the movable cross bar against downward movement from the open position.

2,455,067
AUTOMATIC RECLOSING CIRCUIT BREAKER
William D. Kyle, Jr., Milwaukee, and Carl Schindler, Wauwatosa, Wis., assignors to Line Material Company, a corporation of Delaware
Original application June 6, 1941, Serial No. 396,850. Divided and this application July 17, 1943, Serial No. 495,118
5 Claims. (Cl. 200—88)



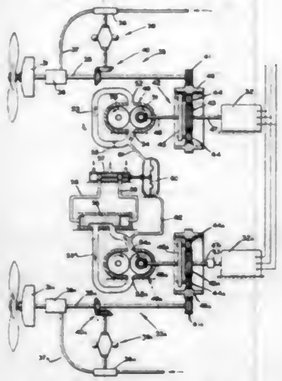
2. In a device of the class described, contact means normally biased closed, normally restrained lockout means permanently biased towards lockout position for moving said contact means to open position and for locking said contact means in open position, an electromagnet controlled by said contact means and arranged to open said contact means on overload exceeding a predetermined current value and arranged to act as a heating means, and thermostatic means responsive to the temperature of said electromagnet and arranged to release said lockout means for current of lesser value than that required for the opening of said contact means by said electromagnet.

2,455,068
TONSILLAR INSTRUMENT
Victor E. Landry, Pittsburgh, Pa.
Application June 12, 1946, Serial No. 676,171
1 Claim. (Cl. 128—325)



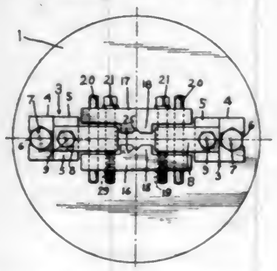
In a postoperative tonsillar instrument, a pair of tubes having angular directed portions at one end thereof, knobs attached to the angular di-

rected portions of the tubes, plates attached to the tubes, a threaded rod pivotally connected to



the plates, a collar threaded on the rod, and arms connected to the collar and tubes.

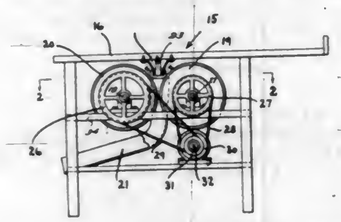
2,455,069
TUBE LOCK
William D. Launder, Los Angeles, Calif.
Application July 17, 1946, Serial No. 684,288
1 Claim. (Cl. 70—77)



A latching and locking device for attachment to a first member for securing a second member thereto comprising in combination an outer elongated cylindrical sleeve adapted to be attached to one of the members and having a latch-hook receiving slot therein, an inner sleeve telescopingly slidable within said outer sleeve and having a longitudinal slot, a pin diametrically fixed to said outer sleeve and passing through said longitudinal slot for holding said inner sleeve against rotary movement relative to said outer sleeve and for limiting axial sliding movements of said inner sleeve in said outer sleeve, said inner sleeve being provided with a latch-hook receiving slot in the plane of, and adapted to register with, the latch-hook receiving slot in said outer sleeve whereby said latch-hook receiving slots are shifted into and out of register with each other by inward and outward sliding movement, respectively, of said inner sleeve relative to said outer sleeve, a latch hook adapted to be secured to the other of the members, said latch hook being adapted to pass through said latch-hook receiving slots when in register with each other and to be held therein when said slots are moved out of register, spring means between the ends of said sleeves for yieldingly opposing inward movement of the inner sleeve, thereby yieldingly holding said latch-receiving slots out of register with each other and said latch means against disengagement from said slots, a cylinder lock having a rotatable barrel and secured to one end of said inner sleeve, a lug secured to the rotatable barrel of said cylinder lock and adapted to be rotated into and out of the plane of said diametrical pin, whereby said inner sleeve is held against inward movement or freed for said movement, respectively.

2,455,070
SYNCHRONIZING MECHANISM
Donald Malcolm Lawrence, Wood-Ridge, N. J., assignor to Bendix Aviation Corporation, Teterboro, N. J., a corporation of Delaware
Application July 17, 1946, Serial No. 684,384
9 Claims. (Cl. 322—36)

1. A device of the character described, comprising, in combination a first engine, a constant speed drive, a generator driven by said first engine through said drive, first torque responsive means subject to the torque applied through said constant speed drive to said generator; a second engine, a variable speed drive, another generator driven by said engine through said variable speed drive, said generators being electrically connected in parallel relation to output lines, second torque responsive means subject to the torque applied through said variable speed drive to said other generator, differential torque responsive means operatively affected by said first and second torque responsive means for controlling said variable speed drive so as to maintain a predetermined division of load between said generators.



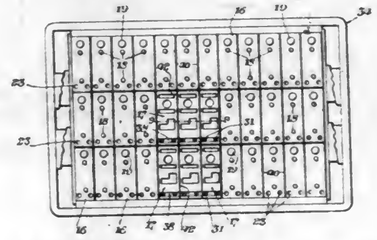
2,455,071
LATHE DOG
Joseph C. Leone, Roxbury, Mass.
Application August 27, 1945, Serial No. 612,897
4 Claims. (Cl. 82—41)

1. A lathe dog comprising anchoring members, means fixedly securing said anchoring members to the face plate of the lathe on opposite sides of the center thereof, each anchoring member having laterally extending guiding flanges, two separate jaw holding members, one of which is received between the guiding flanges of each anchoring member and extends inwardly therefrom in a direction radially of the face plate, a pair

of jaws mounted on the inner ends of the jaw supporting members, and means for adjusting the jaws toward and from each other comprising two adjusting screws, each extending loosely through one jaw and having screw-threaded engagement with the other jaw.

2,455,072
FRUIT CUTTER AND PITTER WITH ROTARY BLADES
Curtis Lindley, Jr., Empire, Calif.
Application April 3, 1945, Serial No. 586,312
2 Claims. (Cl. 146—73)

1. A fruit cutter and pitter comprising a table having a top formed with a fruit feeding aperture extending therethrough and supporting legs and cross bracing bars connected between said legs, rotatable aligned cutter blades adjustably supported on said bars for selectively varying the distance between said blades, means for rotating said blades, depending arcuate resilient fruit feeding fingers disposed radially about the aperture in said table top being secured to the under surface thereof, and a discharge chute interposed between and below said cutter blades terminating at its upper end adjacent the lower ends of said resilient feed fingers, whereby fruit fed through the feed aperture in the table top will be held by said fingers in position while cutting and the cut fruit passing immediately to and through said discharge chute.



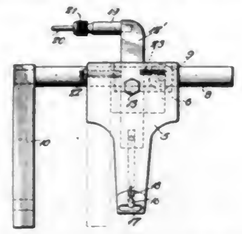
2,455,073
PRODUCTION OF STAINLESS STEEL
Donald L. Loveless, Baltimore, Md., assignor, by mesne assignments, to Armco Steel Corporation, a corporation of Ohio
No Drawing. Application November 14, 1945, Serial No. 628,673
7 Claims. (Cl. 75—12)

2. In producing stainless steel of 0.03% maximum carbon content using chrome ore as a principal source of chromium in an electric arc furnace having carbonaceous electrodes, the art which comprises melting down a charge arranged for maximum carbon elimination and decreased carbon pick-up and consisting principally of chrome ore disposed along the banks of said furnace, and in such amount as to be decarbonized during the melting operation, base steel scrap over the furnace bottom, a material high in iron oxide in the middle of the furnace and scrap, and stainless steel scrap over the chrome ore; adding further amounts of chrome ore during said melting while maintaining the melted metal at a boil, thereby forming an iron and chromium rich bath having a low carbon content and a supernatant slag thereon including iron and chromium oxides; and adding crushed ferrosilicon, relieved substantially of relatively high-carbon fines of less than approximately one-inch screen size, for recovering the metallic iron and chromium from their oxides in the slag.

2,455,074
PRODUCTION OF STAINLESS STEEL
Donald L. Loveless, Baltimore, Md., assignor to Armco Steel Corporation, a corporation of Ohio
No Drawing. Application February 18, 1946, Serial No. 648,564
5 Claims. (Cl. 75—12)

5. In producing chromium-nickel stainless steel of low carbon content in an electric arc furnace having carbonaceous electrodes, the art which comprises melting down a charge consisting principally of chrome ore disposed along the banks of the furnace, base steel scrap on the bottom of the furnace, stainless steel scrap on the chrome ore, and oxidizing material including substantial quantities of nickel oxide on the base steel scrap, thereby forming a chromium-rich and iron-rich bath having a low carbon content and a supernatant slag thereon including chromium and nickel oxides; and adding to the slag crushed ferrosilicon which has been substantially relieved of fines for recovering the metallic chromium and nickel from their oxides.

2,455,075
PRINTING PLATE AND BASE MOUNT THEREFOR
William A. Madigan, Barberton, Ohio, assignor to The Diamond Match Company, New York, N. Y., a corporation of Delaware
Application February 12, 1947, Serial No. 728,053
5 Claims. (Cl. 101—384)

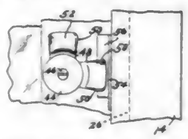


1. A printing plate having in its under surface spaced sockets located at predetermined positions in relation to the printing matter on the upper surface of the plate and having also in its under surface at one end of the plate a guide and clamp recess, in combination with a base mount for said plate comprising a body having upstanding projections located in mating relation to said sockets, and clamping means supported by said body, said means including a vertically movable clamping member located at the top of said body and slidably received by the end recess of said printing plate, said recess and clamping means being so constructed and arranged that by actuation of the latter the plate can be raised or lowered in respect to the upper surface of the body of the mount.

2,455,076
SINGLE CONTACT DIAL INDICATOR
Harry G. Magealson, Kokomo, Ind.
Application February 23, 1945, Serial No. 579,454
3 Claims. (Cl. 33—172)

1. An indicator for a lathe of the type including a lathe compound adapted to carry a cutting tool and having longitudinal and transverse feeding means and also including a lathe head stock adapted for holding work thereon, said indicator comprising a plate having spaced apertured ears extending in a plane transversely to the plane of

the plate, means extending through the ears and adjustably secured therein and attached to the compound for movement therewith, a lever pivoted to the plate between the ears, said pivot being intermediate of the ends of said lever thereby forming an upper and a lower arm, a pin mounted on the extremity of said upper arm at right angles thereto, a contact finger adjustably attached to the pin for contacting the work, said lower arm having a forwardly-projecting portion



attached to its extremity, an upstanding pointer on this forwardly-extending portion, a lower part of the plate having an opening for receiving the forwardly-projecting portion of the lower arm, a scale for the pointer on the front face of the plate and above the opening, an adjustable stop mounted in an ear and engaging one side of the upper lever arm, and a spring engaging the other side of said lever arm and re-acting against the other ear.

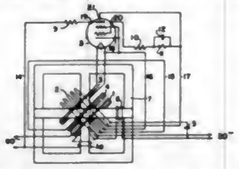
2,455,077

DETACHABLE SASH FASTENER

Frank Mastrangelo, Fitchburg, Mass., assignor of one-half to Faustina Mastrangelo, Lunenburg, and one-half to Bianca Mastrangelo, Fitchburg, Mass.

Application November 18, 1944, Serial No. 564,018
1 Claim. (Cl. 292—241)

Latch for detachable sash comprising a rotary member adapted to be mounted on the detachable sash for co-action with a cam member on a permanent support, a plurality of radial fingers on the rotary member, said fingers each having a curved under surface for engagement with the cam, each finger being selectively operable as a latching member or a handle, and including flanges on the fingers providing finger grips.



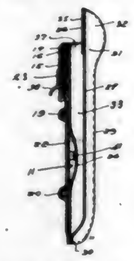
2,455,078

FREQUENCY CHANGER

Harold J. McCreary, Lombard, Ill., assignor to Automatic Electric Laboratories, Inc., Chicago, Ill., a corporation of Delaware

Application August 15, 1946, Serial No. 690,623
19 Claims. (Cl. 172—281)

1. In an automatic starting frequency changer, a saturable magnetic core structure consisting of two crossed legs of different permeability, series primary windings disposed diagonally through opposite corners and around the lower permeability leg of the said saturable core structure with a source of alternating current connected thereto, a resonant circuit including a secondary winding disposed diagonally through the opposite corners of the crossed legs of said core structure, a grid controlled rectifier means arranged to supply rectified excitation current pulses to said



secondary winding to provide saturation of said high permeability leg to thereby permit mutual induction between said primary and secondary windings.

2,455,079

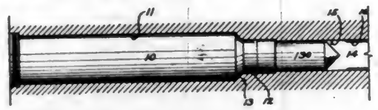
SAFETY EYEGLASS CASE

Warren Henry Mercer, Anaheim, Calif.

Application August 2, 1945, Serial No. 608,481
1 Claim. (Cl. 206—6)

An eye-glass case including a receptacle open at its upper end and having a front wall forming a closed pocket and a cooperating rear wall sewed thereto along its bottom and opposite sides, a stiffening plate having an upper flap hinged thereto disposed in said closed pocket, a sheet of flexible material secured to the front and rear walls, spaced transversely extending reinforcing and stiffening ribs on the forward surface of said plate, a resilient finger on the rear of said plate and extending transversely thereof for retaining eye glasses when placed in said case, said sheet of flexible material being interposed between the resilient finger and said rear wall, and an operating finger on the upper flap of said plate whereby the same may be turned down over the outer edge of a pocket when the case is placed therein for locking the same in and to said pocket.

2,455,080



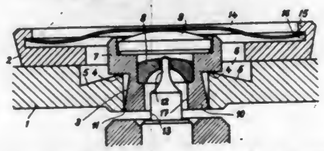
ORDNANCE CHAMBRAGE AND CARTRIDGE CASE

Ralph Waldo Miller, Topango, and Edward Baden Powell, San Diego, Calif., assignors, by direct and mesne assignments, of seventy-five per cent to said Powell, Pasadena, Calif., and twenty-five per cent to said Miller

Application December 4, 1944, Serial No. 566,576
6 Claims. (Cl. 42—76)

1. In a gun barrel having a projectile receiving bore and a coaxial combustible-charge-receiving walled chamber of larger diameter than the bore, a coaxial annular shoulder surface joining the walls of the chamber and bore, said surface being internally convex in an axial plane and having substantially circular curvature, said surface being non-tangent to both the chamber and bore walls

and the chordal line of the shoulder arc running through its intersections with the chamber and



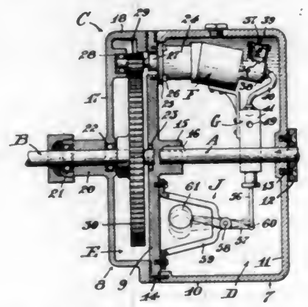
bore walls extending inwardly and forwardly of the barrel axis.

2,455,081

SHOCK ABSORBING BEARING

Ernest Morf, La Chaux-de-Fonds, Switzerland

Application September 10, 1943, Serial No. 501,871
In Switzerland January 11, 1943
1 Claim. (Cl. 58—140)



In combination, a spindle with a pivot and a portion extending from said pivot, a bearing piece supporting said pivot in radial direction, a plate having a cylindrical hole, a member supported on an edge of said cylindrical hole, said member having a seat for said bearing piece and an extension with conical envelope extending from said seat towards and into reach of said portion and into said cylindrical hole, the great base of said conical envelope making contact with the wall of said cylindrical hole, the space remaining between the wall of said cylindrical hole and said conical envelope allowing said member to tilt about a point of contact of the great base of said conical envelope with the wall of the cylindrical hole and to slide on said edge of the wall of said cylindrical hole on the occasion of a radial shock exerted on said spindle, and a spring in cooperating relation with said member for bringing the latter back into normal position.

2,455,082

VARIABLE SPEED AND POWER TRANSMISSION

Franklin J. Morith, Huntington Park, Calif.

Application April 9, 1945, Serial No. 587,321
7 Claims. (Cl. 74—294)

1. In a transmission mechanism embodying a drive shaft, a driven shaft, and a liquid containing housing encompassing meeting ends of said shafts affixed to the drive shaft and turnable relative to the driven shaft, a gear wheel fixed on said driven shaft, a positive action rotary pump carried by said housing having an inlet and an outlet, said inlet adapted to admit liquid from the housing to the pump, a relief valve, a conduit leading from said pump outlet to said valve, said valve having an outlet leading to the interior of said housing, spring means effective normally to maintain said valve open to permit free fluid flow between said pump and said valve outlet, a centrifugal governor carried by said housing, and connections between said governor and said valve; said governor and connections being constructed and arranged to close said valve partly or wholly under the action of centrifugal force with resultant restriction or prevention of the discharge of liquid from said pump.

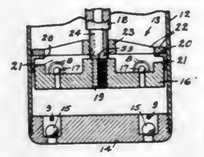
2,455,083

CELLULOSE ETHERS OF 3,4 EPOXY 1-BUTENE AND THEIR OXIDATION PRODUCTS

David M. Musser, Orange, N. J., assignor to Pacific Mills, Boston, Mass., a corporation of Massachusetts

No Drawing. Application May 8, 1945, Serial No. 592,723
8 Claims. (Cl. 260—231)

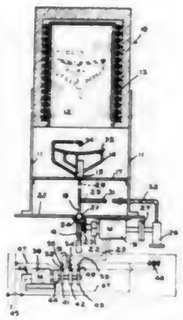
1. A method of improving the chemical reactivity of cellulosic fibrous material containing free hydroxyl groups which comprises reacting said material in the presence of an alkali with 3,4-epoxy-1-butene.



6. The method of treating cellulosic material which comprises reacting said material in the presence of an alkali with 3,4-epoxy-1-butene to form a cellulose ether containing a double bond and thereafter oxidizing said material at said double bond.

2,455,084

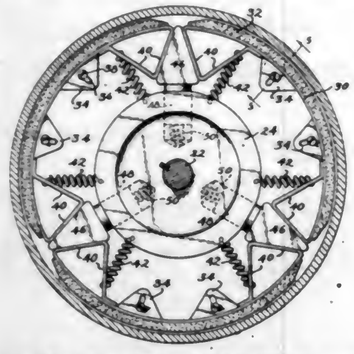
DEEP WELL PUMP



Charles A. Neely, Seattle, Wash., assignor of forty per cent to Hugh J. Sweeney, Everson, Wash.; Sarah L. Langley administratrix of said Charles A. Neely, deceased

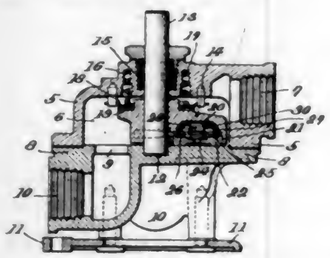
Application December 4, 1944, Serial No. 566,513
2 Claims. (Cl. 103—202)

1. In a deep well pump, a pump cylinder; a piston in said pump cylinder comprising a piston head loosely fitting said pump cylinder so as to leave an annular space between the piston head and the cylinder walls; piston rod means connected with said piston head; a yoke floatingly mounted above said piston head and having a limited vertical movement toward and away from said piston head; and a cylindrical sealing ring carried by said yoke movable into a sealing position in the space between said piston head and said cylinder walls on the up stroke of the piston head and movable into a released position relative to the cylinder walls on the down stroke of the piston head to relieve friction.



2,455,085
APPARATUS FOR TEMPERING GLASS ARTICLES
Charles D. Oughton, Rochester, Scott Sterling, Irondequoit, and Arthur F. Turner, Brighton, N. Y., assignors to Bausch & Lomb Optical Company, Rochester, N. Y., a corporation of New York
Application January 23, 1943, Serial No. 473,326
5 Claims. (Cl. 49—45)

1. In a device of the type described, a chamber; means for heating said chamber; means for supporting a mass of glass; a plurality of nozzles associated with said supporting means and adapted to direct air blasts against the opposite surfaces of said mass held by said supporting means; means for movably mounting said supporting means relative to said chamber; means for moving said supporting means into said chamber whereby said mass may be heated therein; adjustable means for selectively timing the period said mass remains in said chamber and adapted after a predetermined length of time to actuate said moving means whereby the same withdraws said supporting means from said chamber; air compressing means; and means connecting said air compressing means to said nozzles, said air compressing means being operated by said moving means at least during the withdrawal movement of said supporting means whereby cooling air blasts are directed against opposite surfaces of said mass to cool the same.

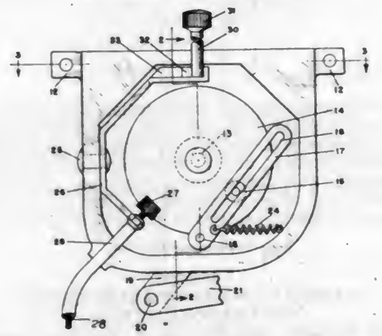


2,455,086
CENTRIFUGALLY OPERATED, EXPANDING SHOE TYPE, AUTOMATIC CLUTCH
Gus S. Papas, Chicago, Ill., assignor of one-third to Harry A. Contos, Chicago, Ill.
Application June 26, 1946, Serial No. 679,371
5 Claims. (Cl. 192—105)

1. A friction clutch consisting of driving and driven members, said driven member including a peripheral flange having an internal, peripheral clutch surface, said driving member being housed axially within and rotatably supported by said driven member, a plate carried by said driving member, a plurality of arcuate clutch shoes terminating as inturned triangular ears at each extremity and having clutch linings upon their outer surfaces, spring means on each ear and connected to said plate for mounting said shoes upon said driving member for outward movement relative thereto, wedge means disposed between adjacent edges of said triangular ears, said spring means being adapted for releasing said brake shoes, and tension means responsive to centrifugal

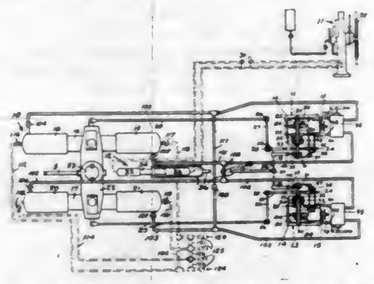
force for actuating said wedge means to engage said shoes with said driven member.

2,455,087
SEALING ELEMENT FOR VALVES
Arthur L. Parker, Cleveland, Ohio, assignor to The Parker Appliance Company, Cleveland, Ohio, a corporation of Ohio
Application July 27, 1943, Serial No. 496,313
3 Claims. (Cl. 251—90)



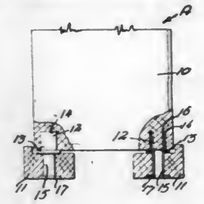
1. A sealing unit for valve structures comprising a sealing member having an aperture therethrough and having an inner face and an outer sealing face, and a deformable resilient shell bonded to the inner face of said sealing member and forming a sealed chamber over the aperture, and spring means interposed between the sealing member and the shell within the sealed chamber and constantly tending to distend the shell, said spring means including a plunger head conforming generally to the shape of the shell portion remote from said sealing member.

2,455,088
ANTIOXIDANT
Wilbur I. Patterson, Fairfax, Va., and Martin B. Williamson, Darby, Pa., assignors, by mesne assignments, to Wyeth Incorporated, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application May 18, 1945, Serial No. 594,592
5 Claims. (Cl. 252—398)



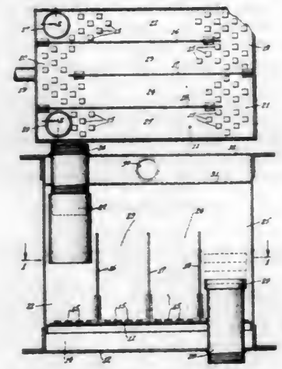
1. The process of preparing an antioxidant from rice bran concentrate, comprising extracting antioxygenic principles from said concentrate with methanol, distilling off the solvent from the methanol solution to obtain a syrupy residue, extracting antioxygenic principles from said syrupy residue with diethyl ether, and removing the ether from the ethereal extract, said extract having the property of reacting with alkali to form salts which are insoluble in diethyl ether.

2,455,089
WINDSHIELD WIPER MOTOR
Horacio E. Perez, Valhalla, N. Y.
Application November 29, 1945, Serial No. 631,607
5 Claims. (Cl. 74—70)



1. A device of the kind described, comprising a housing, a disk-like rotary element journalled in said housing, a wrist pin eccentrically arranged on the element, a rocking arm supported in the housing and having an elongated slit engaged by the pin, a rocking link exteriorly of the housing and actuated by the rocking arm, a throw lever pivoted to the link, rotatable power means movable into and out of contact with the element, and manually operated means for moving the power means into and out of engagement with the said element.

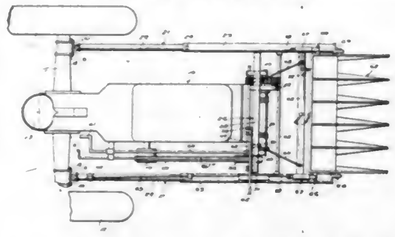
2,455,090
HYDRAULIC MARINE STEERING GEAR FOR OPERATING THE RUDDERS OF SHIPS
Wilmot T. Pritchard, Seattle, Wash., assignor to Stetson-Ross Machine Company, Seattle, Wash., a corporation of Washington
Application June 8, 1944, Serial No. 539,342
5 Claims. (Cl. 60—52)



1. In a hydraulically operated marine steering gear mechanism for selectively varying the rate of angular movement of a ship's rudder in response to a ship's pilot wheel, the combination of a motion transfer cam-like-means movable in response to a ship's pilot wheel; and adjustable control means for varying the effective throw of said cam-like-means comprising a lever, a slidably mounted fulcrum for said lever, and means for controllably sliding said fulcrum relative to the end portions of said lever, whereby the length of the lever arms of said lever may be varied; and adjustable power means for moving a ship's rudder controlled by said cam-like-means.

2,455,091
BEARING ASSEMBLY
De Witt Ramsey, Miami, Fla.
Application August 2, 1945, Serial No. 608,524
3 Claims. (Cl. 16—168)

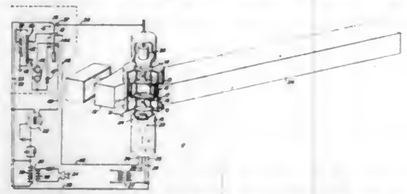
3. A mounting for pivotally connecting movable parts adjacent to each other, comprising a ferrule of tubiform having an inwardly beveled circular knife edge at one end adapted to be driven in one part, a tubiform shank loosely fitted in the other part and telescoped into the ferrule and having an inwardly beveled circular knife edge at one end adapted to be driven in the part having the ferrule, a rim-flange formed on the other end of the ferrule for disposition between the parts and a head at the other end of the pivot shank for contact with part loosely fitted therewith.



2,455,092
APPARATUS FOR REACTING FINELY DIVIDED SOLID MATERIAL AND A GAS
Charles F. Ramseyer, Old Greenwich, and Herman A. Brassert, Washington, Conn., assignors to H. A. Brassert & Company, New York, N. Y., a corporation of Illinois
Original application April 6, 1943, Serial No. 481,968. Divided and this application December 11, 1943, Serial No. 513,910
3 Claims. (Cl. 23—277)

1. In an apparatus for reacting finely-divided solid material and a gas diffused through a bed of the material from below at such pressure as to render the bed fluent, the combination of an elongated substantially horizontal perforate support for said bed, chamber means beneath said support for introducing gas through said support, feeding means spaced above one end of said sup-

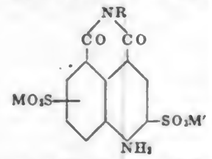
port for supplying said material thereto, a discharge member having an opening through which the material discharges and means movably mounted on said discharge member so that the height of the opening is varied relatively to said support to vary the depth of the bed on said support.



2,455,093
HOIST ATTACHMENT FOR TRACTORS
Edward Sadusky and Helmer T. Thompson, Staples, Minn.
Application June 1, 1946, Serial No. 673,799
2 Claims. (Cl. 214—140)

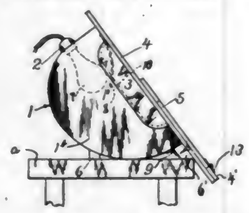
1. A hoist attachment for a tractor which includes a pair of lift arms adapted to be pivoted adjacent opposite ends of the rear axle of a tractor having a power take-off, said arms extending forwardly in spaced parallel relation on opposite sides of the tractor and terminating beyond the front end thereof, a hoist frame adapted to be attached to the front end of the tractor, a winding drum mounted in said hoist frame to rotate about a horizontal axis, a drive gear and a brake drum coupled to the winding drum to rotate therewith, a longitudinally shiftable drive shaft mounted to rotate in the hoist frame above the winding drum, a drive pinion fixed to the drive shaft to move therewith into and out of meshing engagement with the drive gear, means establishing driving connection between the drive shaft and the power take-off of the tractor, a lever pivoted to the lift frame above the drive shaft to swing in an arc which lies in a plane with the axis of the drive shaft, means coupling one end of the lever with the drive shaft to cause the shaft to move longitudinally and shift the pinion into or out of meshing engagement with the gear, a lateral extension on the lever at the end remote from the drive shaft for engagement by a lift arm when the lift arms reach their upper limit of travel to shift the pinion out of meshing engagement with the gear and manually actuated means coupled to the lever for moving it and causing the shaft to shift and move the drive pinion into or out of meshing engagement with the gear.

2,455,094
VELOCITY VARIATION TRANSMITTER-RECEIVER
Arthur L. Samuel, Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application June 28, 1941, Serial No. 400,279
4 Claims. (Cl. 250—13)



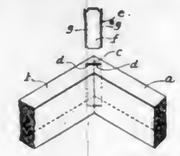
3. Combined transmitting and receiving apparatus comprising an electron beam tube including a cathode, an accelerating electrode, and a collecting electrode, an associated resonating chamber, means within said chamber defining an input gap and an output gap traversed by the electron beam of said tube, means defining a substantially field-free drift space between said input and output gaps, means operative while transmitting to maintain said accelerating and collecting electrodes respectively at relatively high positive potentials with respect to said cathode, whereby electromagnetic oscillations are sustained in said resonating chamber, and means operative while

receiving to maintain said accelerating electrode at a reduced positive potential, whereby the tube and chamber are enabled to function as a regenerative amplifier, and to maintain said collecting electrode at substantially cathode potential, whereby the tube is enabled to function as a detector of velocity variations in the electron stream.



2,455,095
4-AMINO-1,8-NAPHTHALIC IMIDE DISULFONIC ACIDS
Mario Scalera and Warren S. Forster, Somerville, N. J., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application February 20, 1945, Serial No. 578,956
7 Claims. (Cl. 260—281)

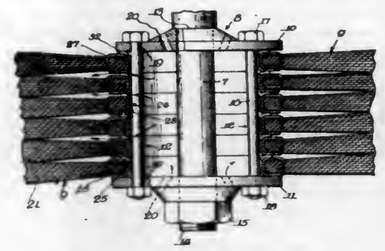
1. New compounds of the following formula:



in which R is a radical selected from the group consisting of alkyl radicals, hydroxyalkyl radicals, carboxyalkyl radicals, aralkyl radicals and radicals of the mono and dinuclear hydroaromatic and aromatic series, and M and M' stand for cations.

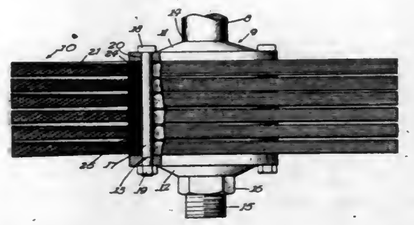
2,455,096
RETOUCHING FRAME
Paul Schmadlewsky, Portland, Oreg.
Application November 23, 1945, Serial No. 630,484
2 Claims. (Cl. 95—102)

1. A retouching frame comprising an open-front reflector hood, an opaque cover plate hinged to the bottom of said hood for swinging forwardly to open position, supporting means to support said hood on a horizontal surface in a rearwardly tilted position with the cover plate inclined forwardly, said cover plate having a small opening disposed centrally of the front of said hood, a source of light arranged within the top of said hood outside the perimeter of said opening, a glare shield attached to the inner side of said cover plate and extending downwardly and rearwardly in front of said source of light, and means to secure a photographic negative in a flat condition on the front of said cover plate over said opening, said supporting means comprising a transverse bar secured across the bottom of said hood near the rear of the latter and a second transverse bar hinged to the bottom and near the front of said hood and having the cover plate fixed thereto, said cover plate projecting below said bars and the bottom of said hood.



2,455,097
ADJUSTABLE RADIAL KERFING SAW
Anthony Scianna, Chicago, Ill., assignor to Clamp Nail Company, Chicago, Ill., a corporation of Illinois
Application September 2, 1944, Serial No. 552,470
1 Claim. (Cl. 143—6)

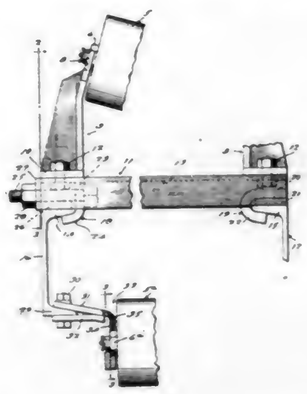
An accessory for a circular saw machine, comprising a clamp for securing to the saw table, a vertical tool post on said clamp, a supporting clamp mounted on said tool post and vertically adjustable thereon, a hand screw threaded in said supporting clamp and engaging said first-named clamp for raising and lowering said supporting clamp on said tool post, a hand clamp for locking said supporting clamp in adjusted position on said tool post, said supporting clamp having a transverse opening therein, a supporting bar mounted in said opening, rack and pinion mechanism for moving said supporting bar to adjusted position in said supporting clamp, a hand clamp for locking said supporting bar in fixed position in said supporting clamp, a supporting member at the free end of said supporting bar, said supporting member being mounted on said supporting bar on an axis for angular adjustment, means for locking said supporting member in adjusted position on said supporting bar, an electric motor mounted in said supporting member, and a circular saw mounted on the armature shaft of said electric motor.



2,455,098
BUFFING WHEEL
Louis M. Seelenfreund, Chicago, Ill., assignor to Action Buffs, Inc., Chicago, Ill., a corporation of Illinois
Application May 25, 1948, Serial No. 29,040
2 Claims. (Cl. 51—193)

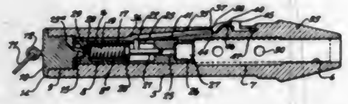
1. As a new article of manufacture, a section adapted in conjunction with like sections and a hub structure to form a buffing wheel and comprising a plurality of annular juxtapositioned fabric layers and a core extending around and serving to secure together the inner marginal portions of the layers and embodying a preformed rigid one-piece ring consisting of a cylindrical base flange, an annular outer side flange extending outwards from the outer margin of the base flange and arranged in lapped relation with the inner marginal portion of one of the outer-most fabric layers, and a circular series of spaced apart teeth connected to the outer margin of the outer side flange, projecting in the same direction as the base flange and embedded in the inner marginal portions of certain of the fabric layers, and a complemental pre-formed rigid one-piece ring positioned reversely with respect to the first mentioned ring and consisting of a cylindrical base flange fitting within the base flange of said first mentioned ring, an outer annular side flange extending outwards from the

outer margin of the base flange of the complemental ring and arranged in lapped relation with the inner marginal portion of the other outermost fabric layer, a circular series of spaced apart teeth connected to the outer margin of the last mentioned side flange, projecting in the same direction as the first mentioned teeth and embedded in the inner marginal portions of certain of the fabric layers, and a lip connected to, and extending outwards from, the free margin of the base flange of said complemental ring, arranged in lapped relation with the outer side flange of said first mentioned ring, and serving to hold the two rings against separation.



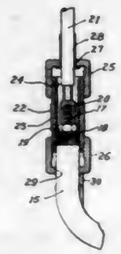
2,455,099
BUFFING WHEEL
Louis M. Seelenfreund, Chicago, Ill., assignor to Action Buffs, Inc., Chicago, Ill., a corporation of Illinois
Application September 8, 1947, Serial No. 772,800
1 Claim. (Cl. 51—193)

As a new article of manufacture, a section adapted in conjunction with like sections and a hub structure to form a buffing wheel and comprising a plurality of annular juxtapositioned fabric layers and a core extending around and serving to secure together the inner marginal portions of the layers and embodying a preformed one-piece ring formed of a metallic stamping and consisting of a cylindrical base flange, a flat annular outer side flange extending outwards from the outer margin of the base flange and arranged in lapped relation with the inner marginal portion of one of the outermost fabric



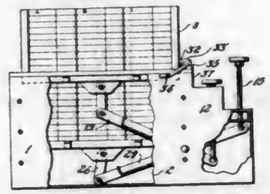
layers, and circular series of spaced apart teeth connected to the outer margin of the outer side flange, projecting at right angles and in the same direction as the base flange and embedded in the inner marginal portions of certain of the fabric layers, and a complemental preformed one-piece ring formed of a metallic stamping, positioned reversely with respect to the first mentioned ring and consisting of a cylindrical base flange extending closely around the base flange of said first mentioned ring, a flat outer annular side flange extending outwards from the outer margin of the second mentioned base flange and arranged in lapped relation with the inner marginal portion of the other outer-most fabric layer, and a circular series of spaced apart right angle teeth connected to the outer margin of the last mentioned side flange, projecting in the direction of the first mentioned teeth and embedded in the inner marginal portions of certain of the fabric layers, said rings being formed of metal stock of such gauge that the component parts thereof are essentially rigid and are not subject to bending after preforming of the rings, and being assembled by shifting them axially towards one another in order to bring the cylindrical base flanges into telescopic relation and effect rectilinear embedment of the teeth into the fabric layers without crimping or jamming inwards the inner marginal portions of said layers.

2,455,100
SUPPORT MEANS FOR IDLER ROLLERS
Franklin N. Smith, Cedar Rapids, Iowa
Application December 7, 1945, Serial No. 633,318
7 Claims. (Cl. 198—192)



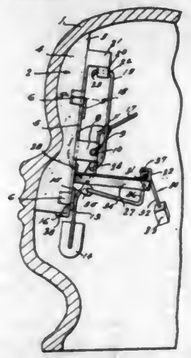
1. In combination, a belt conveyor frame including a pair of uprights having lateral flanges at their upper ends, a horizontal member extending between said uprights and resting upon said flanges, said horizontal member being arranged for the support of a troughing roller or the like mounted thereon, transversely acting means engageable with said flanges for clamping said horizontal member on said uprights, said clamping means comprising a stationary clamp fixed at one end of said horizontal member, a laterally adjustable clamp mounted at the opposite end of said horizontal member, and operating means for said adjustable clamp for moving said adjustable clamp in a direction to forcibly engage the clamps with the corresponding flanges.

2,455,101
ROCKET PROJECTOR
Douglas F. Stevens, Pasadena, Calif.
Application September 16, 1946, Serial No. 697,344
2 Claims. (Cl. 42—1)



1. A rocket projector comprising a projector tube, provided with central cylindrical bores of different diameter communicating with each other, one of said bores being of enlarged diameter and forming the ignition chamber, reinforcing guards on said tube on both sides of the ignition chamber and lateral, channels leading from the ignition chamber transversely and directly to the open air, a further bore adjacent to the ignition chamber, a firing mechanism housed in said bore, said mechanism including a cylindrical block filling the aforesaid bore of the projector tube, and provided itself with a plurality of cylindrical central bores of different diameter, and with a closing bottom portion, one of said bores of large diameter being the ignition cap bore, a firing pin and a compression spring for moving the same housed within said bores, means for holding said firing pin under the pressure of the compression spring including a locker arm on said firing pin and a trigger release arm for locking said arm and pin, and a breech plug inserted into the rearmost of the bores of the projector tubes and held therein, provided with a central projection applied against the bottom of the firing block and holding said block in its place.

2,455,102
ELECTRIC HEATING UNIT
Sidney J. Temple, Forest Hills, Pa., assignor to Edwin L. Wiegand Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application March 22, 1947, Serial No. 736,495
2 Claims. (Cl. 201—67)

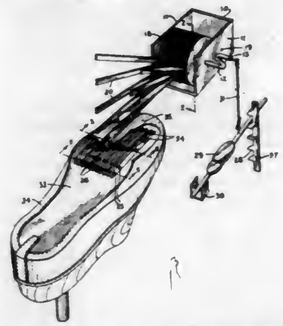


1. An electric heating unit comprising a tubular electric heating element provided at at least one end with a resistor terminal, an insulated cable provided with a terminal detachably connected to said resistor terminal, an insulating sleeve surrounding said resistor terminal and said cable terminal, and a plural-part separable housing comprising a tubular body portion surrounding said sleeve and having one end provided with an aperture for the passage of and closely engaging the periphery of the respective end of said element and the other end provided with an aperture for the passage of and closely engaging the periphery of said cable.

2,455,103
READY-REFERENCE CARD INDEX HOLDER
Quilla T. Turner, Winnipeg, Manitoba, Canada
Application May 13, 1946, Serial No. 669,330
1 Claim. (Cl. 40—65)

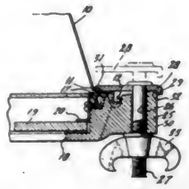
A ready-reference card index holder comprising in combination a case having side walls, a cover provided with a plurality of longitudinally extending, spaced and parallel slots therein, a plurality of vertically disposed, parallel and spaced index card holding frames within said case, guides on said side walls to receive said frames, a key-boxing on one side of said case and coterminous therewith, said key-boxing having a two-stepped and apertured cover-plate, vertically disposed and depressible keys in staggered array projecting through said plate, an individual and independent frame elevating action extending between each of said frames and each of said keys consisting of a normally inclined and biassed lever of the first class connected at one end to a key, a link centrally attached to the lower horizontal side of said frame and to the opposite end of one of said levers, said actions facilitating the selective elevation of a given frame in the plane of the card therein upon the application of a downward effort upon the associated key, and means for locking one of said frames upon the elevation thereof, said means comprising a horizontal lying and double-angulated rod adjacent the ends of said slots, bearings for said rod, and a key for rotating said rod connected thereto, all as and for the purpose specified.

2,455,104
EYE OPENING AND CLOSING MECHANISM FOR DOLLS
William N. Wheeler, Paris, Ky.
Application April 21, 1944, Serial No. 532,076
3 Claims. (Cl. 46—169)



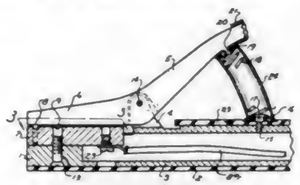
1. In a doll having a head provided with eye sockets therein, an internal rib in said head extending perpendicularly of the axis of the eye sockets intermediate the same, eye opening and closing mechanism fastened to said rib and including a pair of eyeball members, a rock shaft having said members fixed on the opposite ends thereof and adapted for rocking in opposite directions into eye opening and closing positions, respectively, a weighted arm on said shaft operative in opposite directions under the influence of gravity to rock said shaft into eye opening position when the doll is moved into upright position and to rock said shaft into eye closing position when the doll is moved into recumbent position, and means to releasably restrain said arm against movement in one direction when the doll is in upright position and operative by rocking of the doll endwise and sidewise, respectively, when the doll is in recumbent position to gradually release said arm.

2,455,105
COUPLING PIN STRUCTURE
Charles R. Wilson, Road Fork, Ky., assignor of one-half to C. B. Varney, Road Fork, Ky.
Application August 17, 1946, Serial No. 691,308
2 Claims. (Cl. 280—33.15)



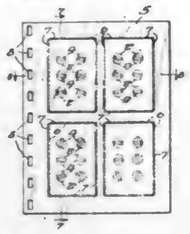
1. In association with a coupling yoke, a coupling pin structure comprising in combination, a pin removably engaging said yoke and having a transversely extending aperture formed adjacent one end thereof, a pivot bolt removably positioned in said aperture, a one piece wire-like rod arcuated at one end thereof to form an elongated eye, a portion of said rod adjacent said eye being wound in a helical formation around said bolt, the remaining portion of said rod forming an arm, and being angulated adjacent the free end thereof to provide a handle, and an inverted hook secured to said yoke, said eye being engageable with said hook upon the manipulation of said handle.

2,455,106
TOE CREASING MACHINE
Robert W. Wirtz, Peoria, Ill.
Application November 12, 1947, Serial No. 785,475
15 Claims. (Cl. 12—7)



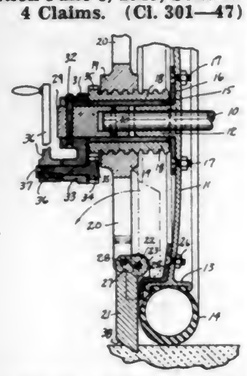
1. In a ballet shoe toe creaser adapted to cooperate with a finger plate having spaced fingers positioned on a shoe, levers movable into and out of the spaces between said fingers, a lever operating device for so moving said levers, and a latching device co-operating with the lever operating device to restrain the levers selectively from moving from between said fingers.

2,455,107
LIGHTING FIXTURE COVER
Gillson W. Beals, Meriden, Conn., assignor to The Miller Company, Meriden, Conn., a corporation of Connecticut
Application July 25, 1945, Serial No. 607,009
4 Claims. (Cl. 240—41.55)



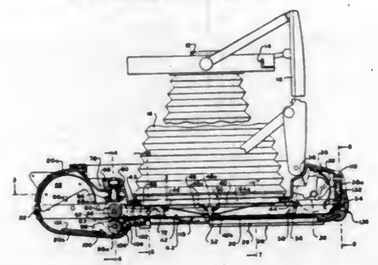
4. In a reflector closure, a ring carrying a gasket on its upper face and provided with outwardly extending vertically apertured lugs whose upper surfaces have elevated regions near their outer ends, plates corresponding in number to the lugs and of a length to extend from opposite the gasket to the outer ends of the lugs and having downwardly bent flanges at their outer ends engageable with the outer ends of the lugs to prevent turning of the plates about the axes of the apertures when the plates are in the lowered position, a stud fixedly secured to each plate and extending through the aperture in the lug, and a nut threaded onto the lower end of each stud, the nuts, when tightened against the lugs, forcing the plates downwardly and when loosened, permitting lifting the studs and plates to free the plates from the lugs so that the studs and plates may be turned about the respective stud axes.

2,455,108
ELECTRODE HOLDER
Hector Beauregard, Utica, Mich.
Application October 8, 1945, Serial No. 621,031
1 Claim. (Cl. 219—8)



An electrode holder comprising a pair of pivoted members, one of said members being of tubular form and having a slot opening through one end thereof; an insulating casing enclosing the tube, said tube at its forward end having a portion of greater thickness than the thickness of the tube, a copper block secured in surface contact with said thicker portion of the tube and having a surface thereof extending outwardly of the slot, the said surface having a series of grooves at various angles to the longitudinal axis of the block, one of the pivoted members having a terminal portion substantially parallel with the surface of the block when in contact therewith, spring means tending to hold the jaw of the pivoted member in contact with the grooved surface of said block, a wire connected with the grooved block and extending through the end of the tubular member and connected with a source of current supply, it being understood that the work piece is connected with the opposing wire of an electric circuit whereby through contact of the electrode with the work piece the electrode is heated to welding condition at the end thereof in contact with the work piece substantially as described.

2,455,109
METHOD OF FABRICATING MERCHANDISE HOLDERS AND DISPLAY DEVICES
Fredrick H. Bowers, Kalamazoo, Mich.
Application June 28, 1945, Serial No. 602,087
1 Claim. (Cl. 93—3)

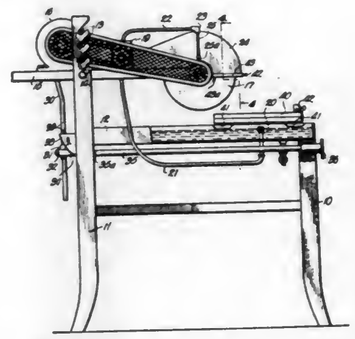


A method for producing a merchandise holder and display device, which consists of forming a plurality of groups of openings in a sheet-like form sustaining body; covering one side of the body with a sheet of material whereby to permit retention of articles in said openings; covering the opposite side of the body with a second sheet of material to close the remaining sides of the openings in said body, and then cutting through each of said sheets of material in continuous lines circumscribing each of said groups of openings in said body and extending said continuous circumscribing cuts partially through the body in relatively different and offset planes.

2,455,110
TRACTION DEVICE FOR TRACTORS
Hugh N. Boyer, Canfield, Ohio
Application June 8, 1945, Serial No. 598,285
4 Claims. (Cl. 301—47)

4. In a traction device for a tractor wheel a ring having a plurality of brackets thereon and mounted on said wheel adjacent the rim thereof, a plurality of ground engaging lugs pivotally attached to said brackets, diagonally positioned slots in said lugs, means for moving said lugs comprising a worm gear rotatably positioned about the hub of the said tractor wheel, a member threadably engaging the said worm gear for horizontal travel thereon, a plurality of radially spaced vertical spokes on said member, said spokes disposed on a vertical plane through said hub, the outermost ends of the said spokes lying adjacent the said lugs and pivot means engaging said diagonally positioned slots in said lugs and said spokes, and means for applying rotary motion to said worm gear so as to move said member and spokes horizontally and move said lugs about their pivotal attachment to said bracket.

2,455,111
SELF-DEVELOPING CAMERA
Joseph F. Carbone, Everett, and Murry N. Fairbank, Belmont, Mass., assignors to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware
Application October 17, 1947, Serial No. 780,344
19 Claims. (Cl. 95—13)

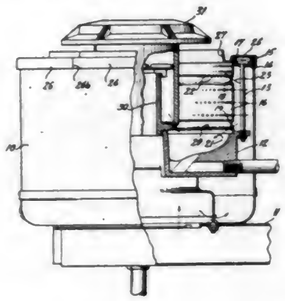


1. Apparatus for exposing and processing a photosensitive film material comprising, in combination, means for mounting a film material and another sheet material, means providing an exposure position for said film material, means comprising a pair of pressure-applying members between which said materials are to be advanced in superposed relation for compressing said materials during their advancement and for cooperating therewith to provide flow of a film-processing fluid between said materials, means engaging at least one of said materials for preventing transverse displacement of said material with respect to said other material during advancement of the materials between the pressure-applying members, and a plurality of means movably mounted with respect to one another for supporting and at least partially encasing the aforesaid means, one of said supporting means serving to mount one of said pressure-applying members and another of said supporting means mounting the other of said pressure-applying members, said movable supporting means when at open position providing a separation of said pressure-applying members from one another and access within said apparatus for loading and threading said film and other material and when at closed position providing a light-tight chamber for said apparatus and placement of said pressure-applying members in adjacent relation to one another for compressing said materials.

2,455,112
DOOR GUARD
William F. Christison, Gadsden, Ala.
Application March 7, 1947, Serial No. 732,988
4 Claims. (Cl. 160—32)

1. In a guard for a doorway embodying a hinged door having a door knob handle, an extensible gate, means to mount one end of the gate adjacent the doorway at the free edge of the door, and means for removably connecting the other end of the gate to the door knob handle.

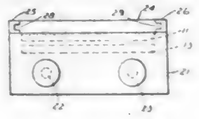
2,455,113
MASONRY SAW
Neligh Clair Coates, Kansas City, Mo.
Original application March 24, 1945, Serial No. 584,544. Divided and this application February 28, 1946, Serial No. 650,834
3 Claims. (Cl. 125—13)



1. A lubricating system for circular cutting blades comprising a cutter head, a rotatable disk cutter mounted thereon, a guard carried by the head and surrounding the upper part of the cutter, means for introducing a lubricating fluid on opposite sides of the cutter, troughs on opposite sides of said cutter, each trough extending inwardly from the lower edge of said guard to a point adjacent the cutter whereby said troughs collect fluid thrown from the cutter, and each trough having a drain adapted to direct the fluid collected therein back onto the sides of the cutter.

2,455,114
PROCESS OF PROTECTING METAL SURFACES
Emerson Gillmore Cobb, Mitchell, S. Dak., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
No Drawing. Application February 26, 1945, Serial No. 579,883
1 Claim. (Cl. 117—132)

The process of protecting a metal surface, which comprises the steps of preparing a coating solution consisting substantially of a clear resin solution containing about 25% by weight of unpolymerized phenol-formaldehyde resin with the balance substantially made up of organic solvent for said resin, to which is added aurine in the proportion of about 100 ml. of an aurine solution per gallon of said clear resin solution, wherein said aurine solution is prepared in the proportion of about 5.68 gm. aurine to 100 ml. alcohol, the coating solution as thus prepared having a color, when applied as a film coating to a metal surface, which is a function of the thickness of such coating; spraying said coating solution onto the metal surface to be protected to a predetermined thickness, indicated as a function of the color of the applied coating; thereafter air drying the coating to reduce the solvent content thereof; and then baking the coated metal surface at a temperature in the range of about 325° F. to about 400° F. to



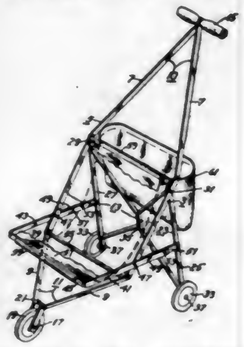
polymerize the phenol-formaldehyde to form the final coating, the color of the final baked coating being substantially the same as the final coating would be without the aurine added.

2,455,115
LIQUID FUEL BURNER
Ralph W. De Lancey, Meriden, Conn., assignor to The Miller Company, Meriden, Conn., a corporation of Connecticut
Application May 9, 1945, Serial No. 592,763
1 Claim. (Cl. 158—91)

In a liquid fuel burner, a vaporizing pot, an outer casing, an inner sheet metal cylinder spaced from the casing to form an air chest, a ring of channel shaped cross section with outwardly and inwardly extending flanges fitting the top of the casing and cylinder respectively, bolts securing the ring and pot together, the heads of the bolts being received in the channel of the ring, and a sheet metal cover ring fitting about the first ring and the upper edges of the cylinder and casing and having an upwardly extending inner flame constricting part, said ring being in the form of a plurality of separable segments.

2,455,116
METHOD OF AND APPARATUS FOR MEASURING THE COLOR QUALITY OF LIGHT
Virgil O. Gi'tus, Brooklyn, N. Y.
Application July 24, 1945, Serial No. 606,781
8 Claims. (Cl. 88—22.5)

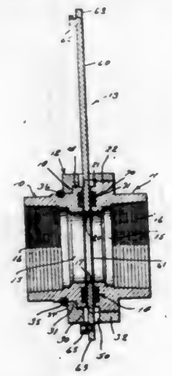
3. In apparatus of the class described, a casing, an indicating instrument in the front of said casing having a scale and pointer, a pair of photocells in the rear of said casing and supported therein so that their light sensitive elements may be exposed to light impinging upon the rear of said casing, a red filter overlying the sensitive face of one of said cells, a blue filter overlying the sensitive face of the other of said cells, connections within said casing and extending between said cells and said instrument, whereby the latter may be operated by the conjoint action of said cells, and means for removably supporting a preselected compensating filter in overlying relation of said first filter.



2,455,117
NONCOMBUSTIBLE HYDRAULIC FLUID
Frank J. Glavis, Elkins Park, and Harry T. Neher, Bristol, Pa., assignors to Rohm & Haas Company, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application July 2, 1947, Serial No. 758,710
3 Claims. (Cl. 252—78)

1. A hydraulic fluid consisting essentially of 0.5% to 10% by weight of potassium polymethacrylate dissolved in a solvent medium of 10 to 55 parts of ethylene glycol, 35 to 45 parts of water, and 5 to 45 parts of thioethylene diglycol, the parts being by weight and selected to make 100 parts of said medium.

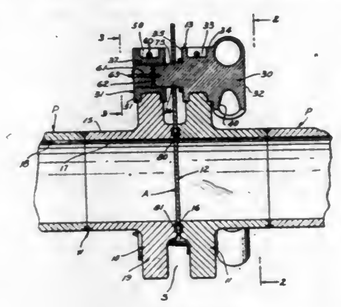
2,455,118
ADHESIVE AND METHOD OF JOINING ELEMENTS THEREWITH
Gustav E. Guellich, Buffalo, N. Y., assignor, by mesne assignments, to American Optical Company, Southbridge, Mass., a voluntary association
No Drawing. Application February 11, 1943, Serial No. 475,552
3 Claims. (Cl. 154—128)



3. The method of permanently joining adjacent surfaces of optical elements so that a substantially colorless, transparent joint will be formed therebetween and so that light may be transmitted through said elements and through said joint with a minimum of absorption and scattering of said light by said joint, comprising applying to one of said surfaces to be joined an adhesive consisting of a de-waxed shellac and a solvent consisting of a higher boiling alcohol, placing said surfaces in contact and retaining said surfaces in contact while first heating same at a relatively low temperature for slowly evaporating the solvent therefrom, and then raising the temperature and heating the elements and said adhesive at a temperature ranging from 150° F. to 250° F. for a time sufficient to substantially completely polymerize said shellac and permanently unite said elements.

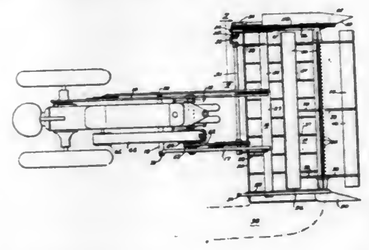
2,455,119
COLLAPSIBLE GOCART
Bertie R. Hall, El Cerrito, Calif.
Application April 4, 1947, Serial No. 739,310
5 Claims. (Cl. 280—41)

1. A collapsible go-cart comprising a main frame; a rear frame; means pivotally securing said rear frame to said main frame at an intermediate location on said main frame to permit angular separation between the two frames; a pair of side brace members, each pivotally secured to a side of said rear frame and extending to and engaging said main frame at the desired angular separation of the two frames; a substantially horizontal frame including a pair of side members joined at one end by a cross member, said substantially horizontal frame being disposed with its side members intersecting said main frame; means pivotally securing each side member of said substantially horizontal frame at an intermediate point thereof to said main frame; and means hingedly securing the free end of each such substantially horizontal frame side member to the adjacent one of said side brace members at an intermediate point thereon.



2,455,120
PIPE-LINE FITTING
Leland S. Hamer, Long Beach, Calif., assignor of one-fourth to Paul A. Dewhirst, Los Angeles, Calif.
Application July 19, 1944, Serial No. 545,603
2 Claims. (Cl. 138—44)

1. In a fitting of the character described, two body sections arranged with their inner ends in opposed relation, a collar coupling the sections and having a transverse passage open at opposite sides of the fitting, tool receiving bosses on the outer sides of the collar walls which form the end walls of the passage a plate carried in the passage in the collar with its end portions accessible at the exterior of the collar and projecting beyond each end of the passage, the plate being shiftable in the passage to bring different portions of the plate into register with the inner ends of the sections, and stop means limiting movement of the plate relative to the coupling including stops on the accessible portions of the plate projecting beyond the passage, one of the stops being detachable from the plate.

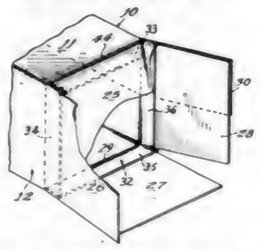


2,455,121
FITTING FOR PIPE LINES
Leland S. Hamer, Long Beach, Calif., assignor of one-fourth to Paul A. Dewhirst, Los Angeles, Calif.
Application December 4, 1944, Serial No. 566,616
9 Claims. (Cl. 138—44)

1. A fitting of the character described including, two opposed sections each having a tubular part and a notched flange on the tubular part, a plate to be arranged between the sections, and means tying the sections together including, a bolt carried directly in the notch in the flange of one section and a nut receiving the bolt and

carried in the notch in the flange of the other section.

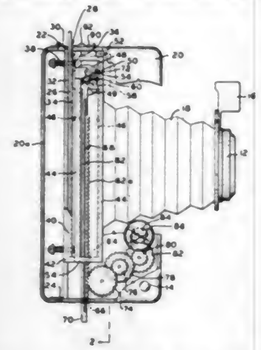
2,455,122
WINDROW DEVICE
Charles W. Hansen and Frank N. G. Kranick, Racine, Wis., assignors to J. I. Case Company, Racine, Wis., a corporation of Wisconsin
Application January 22, 1945, Serial No. 573,882
7 Claims. (Cl. 56—23)



1. A push-type windrower comprising, a pair of main-frame arms having trunnions thereon for supporting said frame on tractor brackets on a fixed axis coaxial with a driving element adapted for connection with the power unit of the tractor and the hereinafter-mentioned mechanisms, said arms being connected together at their forward ends by a member, a shaft rotatably supported on said member with the ends of said shaft extending beyond the ends of said member, an auxiliary frame structure including a depending section and a forwardly-extending section supported on said shaft so as to be shiftable relative to each other, one of said sections providing a support for the conventional grain-cutting and conveying mechanisms and the other section providing a support for a conventional grain reel above said grain-cutting and conveying mechanisms, adjustable means connecting the two sections of said auxiliary frame structure and adapted to alter the operative relationship of said grain reel to said grain-cutting and conveying mechanisms, means on said main-frame arms connected to rotate said shaft on said member for adjusting the angularity of said auxiliary frame structure relative to said main-frame arms, and other means on said main-frame arms adapted to act with the tractor for adjusting the angularity of said main-frame arms relative to the horizontal.

2,455,123
ZIRCONIA OPACIFIERS AND METHOD OF MAKING
Loren C. Hurd, Jenkintown, and Allen J. Vander Weyden and James D. Stroupe, Philadelphia, Pa., assignors to Rohm & Haas Company, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application September 10, 1946
Serial No. 696,036
8 Claims. (Cl. 106—312)

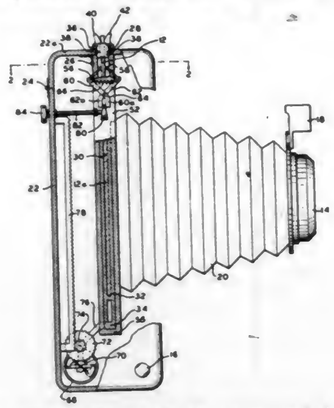
1. A process for producing white opacifiers from zirconia which is contaminated with about 0.1% to about 33% of intimately associated silica and with about 0.1% to about 4.0% of iron, calculated as Fe_2O_3, which comprises converting said zirconia into the monoclinic form by heating at a temperature from about 600° C. to 950° C. in the presence of about 0.25% to about 5.0% of lithia and cooling and pulverizing the resultant product.



2,455,124
COLLAPSIBLE CONTAINER
Henry A. Johnson, Kansas City, Mo.
Application October 15, 1945, Serial No. 622,444
2 Claims. (Cl. 229—37)

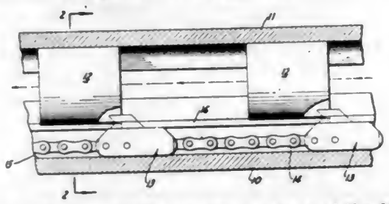
1. A collapsible paper carton provided with fold lines defining side walls and closure flaps and including outer side walls having integral foldable closure flaps, which closure flaps are defined by slits terminating in spaced relation to the fold line for the closure flaps, an inner lining substantially coextensive with the outer side walls and an intermediate ply coextensive only with the side walls and to which intermediate ply the outer side walls and the lining are adhesively secured, a sealing web integral with the inner lining and spacedly overlapping portions of the closure flaps throughout its length, the free marginal edge of said sealing web being adjacent the terminal ends of the slits between the closure flaps and parallel to the fold line for the closure flaps so that when the closure flaps are folded upon each other the sealing web extends inwardly from each side wall partially across the container.

2,455,125
APPARATUS FOR EXPOSING AND PROCESSING PHOTOGRAPHIC FILM
Edwin H. Land, Cambridge, Mass., assignor to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware
Application May 31, 1946, Serial No. 673,406
22 Claims. (Cl. 95—13)



1. Camera apparatus for photographically exposing and providing a positive photographic image within a multilayer film comprising a photosensitive layer and a fluid releasably contained between a pair of layers thereof, said apparatus comprising, in combination, a casing for enclosing elements of said apparatus, means providing a light-shielded aperture for inserting and withdrawing said film through said casing, means comprising a pair of flanges for positioning said film sideways in the focal plane of the camera, means comprising a stop member for positioning said film endways in said focal plane, a rigid plate adapted to contact a surface of said film when positioned in said focal plane, means interposed between said flanges for applying tension to marginal portions of said film for holding said film in contact with said plate, means for photographically exposing a pre-established portion of said photosensitive layer, pressure roller means mounted for translational movement across a surface of said film and adapted to apply progressive compression thereto for releasing said fluid between a pair of layers of said film and for spreading said fluid throughout an area at least coextensive with said exposable photosensitive portion, means comprising a pair of carriers for providing

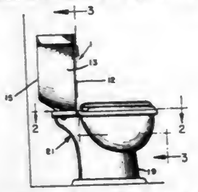
translational movement of said pressure roller means, means comprising a plurality of tracks for guiding said carrier means in a plane parallel to the plane of said film, means comprising racks and a handle member positioned exteriorly of said casing for transmitting translational movement to said carriers, gear means engaging said racks and actuating a gear train and governor for controlling speed of translational movement of said pressure roller means across said film, means providing limit stop members adapted to intercept said carriers for predeterminedly defining the extent of travel of said pressure roller means across said film, and means for separating said pressure roller means from contact with said film at a predetermined position of said means relative to said film.



2,455,126
APPARATUS FOR EXPOSING AND PROCESSING PHOTOGRAPHIC FILM
Edwin H. Land, Cambridge, Mass., assignor to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware
Application July 12, 1946, Serial No. 682,979
21 Claims. (Cl. 95—13)

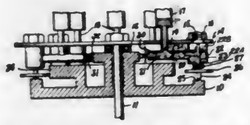
1 Apparatus for exposing and processing a photosensitive film material comprising, in combination, means comprising a frame-like film carrier for receiving and supporting both said film material and another sheet material in superimposed relation, said superimposed materials having a film-processing fluid contained between a predetermined area of their outer surfaces, means comprising a holder for slidably mounting said carrier means and adapted to position said film for subjection to a processing treatment, means for photoexposing said film material while the latter is held by said carrier means in said holder, pressure-applying means for engaging at least a surface of said materials and applying a compressive force thereto, and means for mounting said pressure-applying means and said carrier means for movement relative to each other, said pressure-applying means being located by said mounting means to engage said superimposed ma-

terials during said relative movement to apply compression to successive portions of said materials to cause the liquid contained therein to be released and to permeate the photosensitive layer of the photosensitive film material.



2,455,127
CONVEYER GRIPPER MEMBER FOR CAN BODIES
Ed Laxo, Oakland, Calif., assignor to Atlas Imperial Diesel Engine Co., Oakland, Calif., a corporation of Delaware
Application October 8, 1946, Serial No. 701,975
4 Claims. (Cl. 198—179)

1. A gripping device for can bodies and the like, comprising a first jaw and a second jaw spaced from and in alignment with said first jaw, said first jaw having a longitudinal slot formed therein opposing and opening toward said second jaw, and a block secured to said second jaw and facing said first jaw, said block having a longitudinal projection in alignment with said slot, said first jaw and block being so shaped as to define an open-ended, inwardly converging recess adapted to receive a can body and so spaced that said projection is adapted to press said body into said slot and form an indentation therein.

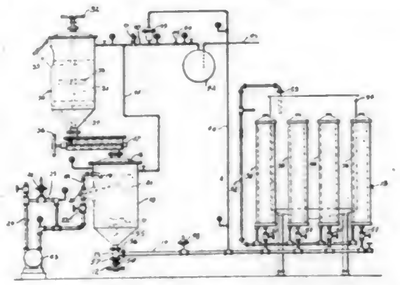


2,455,128
UNIT-TYPE FLUSH BOX AND TOILET CONSTRUCTION
Stanley S. Lenski, La Salle, Ill.
Application February 5, 1947, Serial No. 726,543
1 Claim. (Cl. 4—12)

In a unit-type toilet and flush box construction comprising a flush box having front, back and side walls, said box being substantially rectangular in its upper portion, the side walls of the lower portion thereof converging downwardly toward the vertical center line of the tank the back wall including a forwardly inclined surface terminating at the front wall and having a flat bearing area thereon; a toilet bowl having a rearwardly ex-

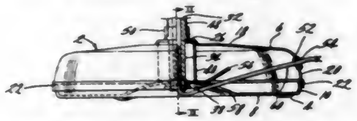
tending shelf disposed in the same plane as the top surface of said bowl, said shelf being provided with spaced channels in its upper surface leading into said bowl, means to rigidly secure said box on said shelf, and aligned communicating ports in said bearing area of said box and said shelf.

2,455,129
APPARATUS FOR COATING THE THREADED PORTION OF BUSHINGS AND NUTS
John H. Lepperhoff, New York, N. Y.
Application November 22, 1943, Serial No. 511,229
3 Claims. (Cl. 91—18)



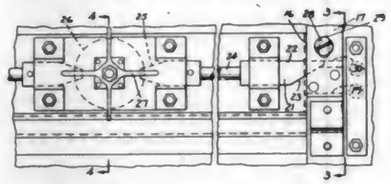
1. Apparatus for coating the interior threaded surfaces of a plurality of units with a plastic fluid in a continuous cycle of operation, which includes a rotatable supporting member for said units mounted in a stationary base, a plurality of deflectable tubular wiping elements for applying the plastic fluid within said units rotatably and axially slidably supported by said supporting member, a first cam on said base to move said wiper elements into and out of the units to be coated as said supporting member is rotated, a second cam on said base to rotate said wiping elements when they are within the units to be coated and a third cam on said base to operate a pumping means, a circular drive plate on each wiping element for rotating said wiping elements when said plate is engaged by said second cam as said supporting member is rotated, said pumping means comprising separate reciprocating pumps carried by said supporting member for each of said wiping elements for pumping predetermined quantities of the plastic fluid therethrough when said pumps are operated by said third cam and said wiping elements are within the units, means for deflecting said wiping elements by centrifugal force to apply said plastic fluid to the interior threaded surfaces of said units when said wiping elements are rotated, and means to rotate said supporting member.

2,455,130
METHOD OF AND APPARATUS FOR FILTERING
Frank B. Lomax, Chicago, Ill.; Mary P. Lomax, executrix of said Frank B. Lomax, deceased, assignor to Mary P. Lomax, Chicago, Ill.
Application November 8, 1945, Serial No. 627,352
2 Claims. (Cl. 210—177)



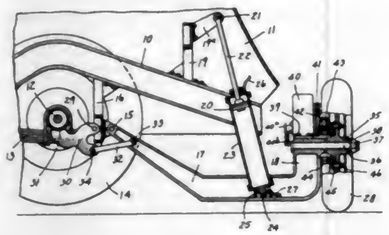
2. In a filtering system, a confined chamber, means for impelling under pressure liquid to be

filtered in said chamber, an adjoining tank containing a supply of filteraid, a feeding device between said tank and chamber for discharging predetermined quantities of filteraid into said chamber, fluid pressure connections between said tank, said chamber and a source of fluid under pressure for equalizing the fluid pressure in said tank and chamber above and below respectively



the mass of filteraid being fed into said chamber, a filtering device, a connection between a discharge end of said chamber and said filtering device for delivering a stream of liquid and filteraid to the filtering device independently of the pressure of the liquid being impelled in said chamber and a fluid connection between the discharged stream and the equalizing pressure connections for controlling said equalizing pressure.

2,455,131
LAMP BASE ASSEMBLY
William F. Masterson, Decatur, Ill., assignor, by mesne assignments, to Faries Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application January 19, 1946, Serial No. 642,203
4 Claims. (Cl. 248—194)

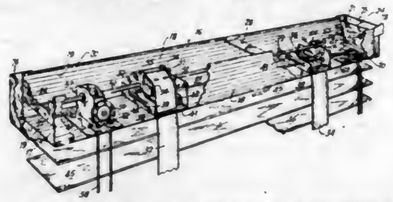


3. A base for lamps or the like comprising an inverted cup-shaped, sheet metal, upper base member, a sheet metal lower base member having an upstanding peripheral flange engageable with the inner surface of the walls of said upper base member to maintain the central portions of said base members in spaced relationship, said upper and lower base members having central aligned apertures therein, a support post projecting downwardly through said apertures, a shoulder on said support post engageable with the top surface of said upper base member, an annular spacer member disposed between said upper and lower base members in surrounding relation to said support post, said spacer member having a bore diameter substantially greater than said post, and a fastener on the bottom end of said support post cooperating with the bottom face of the central portion of said lower base member to draw said upper and lower base members together against said spacer member, said fastener engaging said central portion only over a region lying inside the projected arc of the bore of said spacer member, thereby flexing said central portion upwardly and said peripheral flange outwardly into tighter engagement with the inner wall surface of said upper base member.

2,455,132
DOOR SECURING MEANS
Albert Matthews and Frank A. Geriach, Cincinnati, Ohio, assignors to The American Laundry Machinery Company, Norwood, Ohio, a corporation of Ohio
Application December 21, 1944, Serial No. 569,134
6 Claims. (Cl. 220—55)

1. In combination, a rotatable work holding drum having a body provided with a charging opening in its cylindrical wall, a door for said opening slidable circumferentially of the drum, sealing bands lying over the side edges of the door and mounted upon the drum body, and means mounted upon and movable with the door for actuating said bands to seal the joints between the door side edges and drum body.

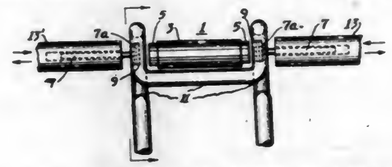
2,455,133
PARKING DEVICE
John H. Moffat, Indianapolis, Ind.
Application August 26, 1944, Serial No. 551,341
3 Claims. (Cl. 180—1)



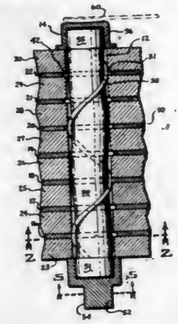
1. In a vehicle parking mechanism comprising a laterally movable wheel capable of elevation and lowering, the combination of a single source of fluid pressure, fluid pressure operable reciprocable means for raising and lowering the wheel, fluid pressure operable means for reversely rotating the wheel, valve means selectively connecting both of said means to said source and controlling said means and comprising a body and a single rotatable control member therein, the pressure source supply being connected to the valve means body at all times, a single waste connected to the valve means body at all times, a pair of substantially parallel passageways in the member, each passageway having a closed end, and oppositely directed, and each continuously connected at the opposite end to the supply and waste respectively, and lateral passageways in the member and body adapted for selective communication with the supply and waste and connected to the fluid pressure operable means, one of the parallel passageways being centrally disposed in the member, and an arcuate passageway peripherally disposed immediately beyond the closed end of said one passageway and connected to the other passageway remote from the closed end thereof.

2,455,134
SYNCHRONOUS ELECTRIC MOTOR
Thomas Mungall, Sr., Cleveland, Ohio, assignor of one-half to George L. Becker, Cleveland, Ohio
Application July 13, 1946, Serial No. 683,316
4 Claims. (Cl. 172—278)

1. A synchronous electric motor, comprising in combination, a magnetic field member including spaced inner and outer pole pieces having alternately changing polarity, the said pole pieces having facing and spaced edges, and an armature comprising a band of magnetic material rotatable between the said spaced edges, the said armature having hardened and permanent magnetically polarized spots therearound correlated with the said polarized edges.



2,455,135
VENETIAN BLIND HEAD-BAR ORGANIZATION
Harry Nelson, New York, N. Y., assignor to Lorentzen Hardware Mf'g. Corp., New York, N. Y., a corporation of New York
Application June 26, 1945, Serial No. 601,671
21 Claims. (Cl. 160—178)

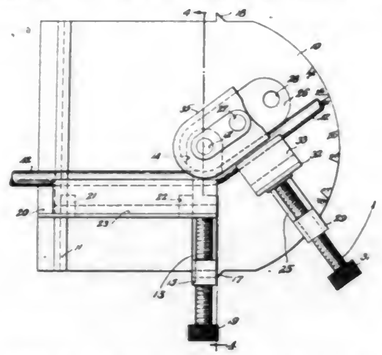


1. A Venetian blind head-bar, comprising: an elongated channel of fixed length, the channel being of thin sheet metal and having longitudinally fluted sides and a longitudinally fluted bottom, metal braces extending across the channel adjacent to its ends, and at least one metal brace extending across the channel remote from its ends, the end portions of the braces being attached to the sides of the channel.

2,455,136
METHOD OF SECURING LEADS TO ELECTRICAL CAPACITORS
Maximilian J. Obert, North Merchantville, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application December 31, 1943, Serial No. 516,396
5 Claims. (Cl. 219—12)

1. The method of attaching an electrical connector to each end of a fixed capacitor of the type having a multi-layer foil armature projecting from each end thereof, including the steps of placing a metallic disc of low temperature melting metallic substance between each end of the condenser foils and each connector, placing said condenser and connectors within a coil having radio frequency currents flowing therethrough, heating said metallic substance to a fluid state by the application of said radio frequency heating currents, flooding the space between the layers of said projecting portion of said armature foils with said metallic substance in the fluid state, placing an end of each one of said connectors against the end of said projecting portion each one of said armatures with sufficient force to collapse said foils and to embed said connector ends with said low temperature metallic substance, and then permitting said metallic substance to harden about the ends of said collapsed foils and said embedded connector ends.

2,455,137
RADIO CIRCUIT SELECTOR SWITCH
Gordon R. Pennington, Bloomfield Hills, Mich.
Original application May 25, 1942, Serial No. 444,331, now Patent No. 2,422,253, dated June 17, 1947. Divided and this application April 24, 1947, Serial No. 743,711
14 Claims. (Cl. 200—8)

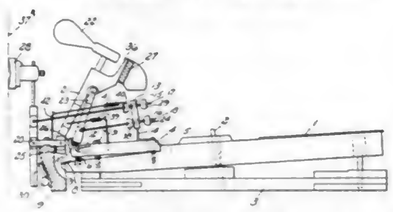


5. A circuit selector switch comprising in combination, a rotatable contact plug having a cylindrical stem presenting a resilient metallic contact ridge extending in a spiral about the axis of said stem and projecting above the adjacent surface of said stem, and a contact panel of insulation material having in the body thereof a metallic contact, said panel having a bore for receiving said stem and said contact presenting a contact surface of limited area substantially flush with the surface of said bore; said stem having a free diameter outside said spiral ridge slightly greater than that of said bore and said spiral ridge being resiliently contractable when said plug is assembled in said panel whereby to exert outward pressure against said metallic contact when in radial alinement therewith.

2,455,138
PIVOTED BENDER WITH REVERSIBLE CLAMP AND FORMER
George C. H. Perkins, Hamilton, Mass.
Application August 16, 1946, Serial No. 691,096
6 Claims. (Cl. 153—40)

1. A tube bending machine comprising a base plate having a semi-circular edge and an up-

standing pivot pin located at the center of its edge curvature, a projecting stop at each end of said semi-circular edge, a stationary clamping member perforated to fit the pivot pin and to be engaged with one or the other of said stops ac-



cordingly as the machine is organized for right hand or left hand bending, and a movable clamping member having transversely spaced holes in its inner end either of which may be fitted on said pivot pin.

2,455,139

PIANO MECHANISM

Auxance N. Prevost, Deep River, Conn.

Application July 18, 1946, Serial No. 684,432
18 Claims. (Cl. 84—240)

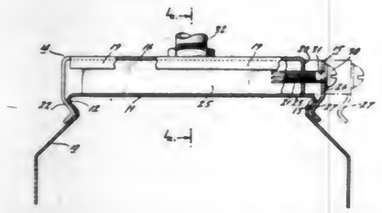
1. In a piano, the combination comprising a key frame, a key pivotally mounted on the key frame, an action rail connected to the key frame, and an action consisting solely of members mounted on the action rail and members mounted on the key, said members on the key being adapted to actuate and control the members mounted on the action rail upon pivoting movement of the key, said first and second named members being constructed and arranged to return said key to original position upon release of the key.

2,455,140

AUTOMOBILE TOWING DEVICE

Arthur J. Roth, Detroit, Mich.

Application May 26, 1945, Serial No. 596,028
3 Claims. (Cl. 280—33.14)



1. An automobile towing device comprising a pair of sheet metal bars of equal length and required thickness, each of the bars having their respective ends extending at an angle less than a right angle to the plane of the respective bars and positionable to engage the upper and lower edges of the rear bumper of the towing car at one end and the forward bumper of the towed car at the opposite end, one of the bars having a V-shaped aperture adjacent each of its opposite ends, and the other bar having a pair of chains attached in longitudinally spaced relation to the lower bar of the pair, the point of attachment of the chains to the lower bar being a less distance apart than the opposed ends of the apertures of the upper bar whereby the strain on the chains tends to draw the same into the narrow portion of the respective opening of the other bar thereby automatically maintaining the bars in pressure contact with the respective bumper.

2,455,141

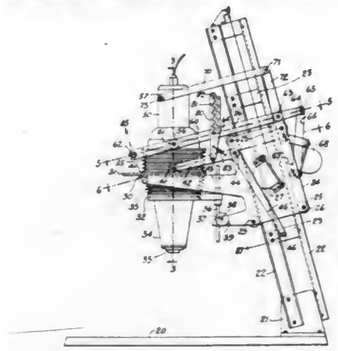
WIRING CHANNEL HANGER

Richard M. Runge, Meriden, Conn., assignor to The Miller Company, Meriden, Conn., a corporation of Connecticut

Application July 26, 1946, Serial No. 686,577
5 Claims. (Cl. 248—343)

1. In combination, a wiring channel having a flat normally horizontal upper surface and longitudinal beads along its side walls and adjacent the upper surface, and a channel hanger extending transversely of the channel, the hanger having one part provided with a hook engaging one of the beads and two parallel, vertical elements spaced apart and in contact with the upper surface of the wiring channel, a second part having a hook engaging the other bead, an upper wall engaging the upper edges of the parallel vertical elements, and a downwardly extending end terminating above the channel, and threaded means intermediate said end and hook carrying end of the first part for clamping the channel between the hooks.

2,455,142



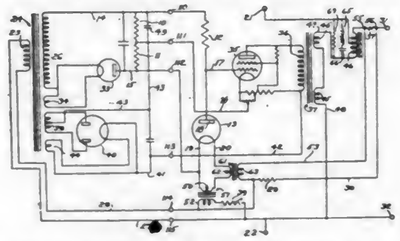
CONDENSER TYPE PHOTOGRAPHIC ENLARGER WITH EXCHANGEABLE LENSES AND ADJUSTABLE LAMP HOUSING

Rudolph Simmon and Alfred Simmon, Jackson Heights, N. Y., assignors to Simmon Bro'hers, Inc., Long Island City, N. Y., a corporation of New York

Application February 26, 1946, Serial No. 650,294
4 Claims. (Cl. 88—24)

1. A photographic enlarger, comprising a flat base, a substantially vertical supporting structure mounted on said base, and a projector assembly, said projector assembly comprising a carriage adapted to slide on said supporting structure, an apertured stage in said carriage for the support of one of a plurality of negative holders for negatives of different dimensions, a lens support disposed beneath said stage, connected therewith by light-tight but extensible means and adapted to receive one of a plurality of enlarging lenses of different focal lengths, a focusing mechanism adapted to adjust the distance between said stage

and said lens, an apertured pressure plate disposed above said stage and adapted to rest during operation on said negative holder, a lamp housing, a lamp and a rigid condenser, said lamp and condenser having a fixed distance relative to each other and being stationarily mounted with respect to said housing, said housing disposed above said pressure plate and connected thereto by light-tight but extensible means, mechanism to lift



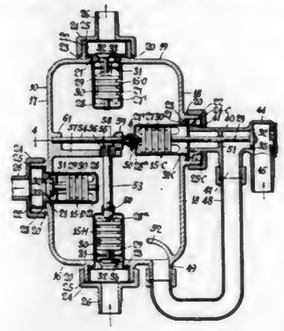
said pressure plate for placing a negative holder on said stage, and mechanism to lift said lamp housing including means to maintain said lamp housing in an elevated position, whereby the elevation of said lamp housing above said stage can be so adjusted that the rays of said lamp are focused by said condenser substantially into the pupil of said enlarging lens, including a link connecting both said lifting mechanisms for simultaneous operation.

2,455,143

CATHODE CONTROLLED ELECTRONIC VOLTAGE REGULATOR CIRCUIT

Edward M. Sorensen, Stamford, Conn.; Helen S. Sorensen administratrix of said Edward M. Sorensen, deceased

Application April 17, 1946, Serial No. 662,751
21 Claims. (Cl. 323—42)

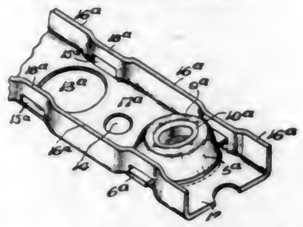


1. In an accurate voltage regulator, in combination, an input circuit, an output circuit adapted to have a load connected therein, a bridge network including a diode electron tube as one of the arms thereof, means connected across said output circuit for applying a voltage to the filament of said diode to thereby determine the balance condition of said bridge, means for supplying a rectified voltage derived from said output circuit to said bridge network, a capacitance across one of the arms of the bridge to prevent fluctuations in the rectified supply thereto effecting the output of said bridge, an amplifier connected across said bridge and responsive to the degree of unbalance thereof and means operable under control of said amplifier to maintain the output voltage at the predetermined value.

2,455,144

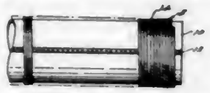
MECHANISM FOR EFFECTING THE REGULATION AND AUTOMATIC CONTROL OF THE TEMPERATURE OF BATH WATER

Clifford R. Spencer and Donald G. Wilhelm, Buffalo, N. Y.



Application August 19, 1947, Serial No. 769,500
3 Claims. (Cl. 236—12)

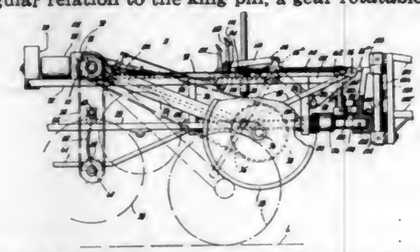
1. A unitary mechanism for effecting the regulation and automatic control of the temperature of heated water for bath purposes comprising a chamber for use in combination with hot and cold water supply lines and having a hot water inlet port at its lower end, a cold water drain port formed in a side wall above the hot water inlet port, a pipe extending from the cold water supply line and communicating with the lower end of the chamber at one side of the hot water inlet port and a hot water discharge port at its upper end, a fitting connected to said pipe and to the cold water supply line and having a port establishing communication between said supply line and said pipe, structurally independent valve units associated with the several ports and each comprising a shell, a bellows type thermostatic element arranged within the shell and a valve head carried by the element and cooperating with the port with which the unit is associated, the shells severally projecting into the chamber and being removably fitted to the walls of the chamber whereby any of them may be independently removed for inspection, repair or replacement, the shells each having openings through which the water in the chamber may circulate in relation to the thermostatic elements, the hot water admission valve unit being arranged in a lower zone of the chamber with its valve element normally open, the cold water drain valve unit being arranged above the hot water admission valve unit and adjacent the lower zone and an intermediate zone of the chamber and having its valve element normally open, the cold water admission valve unit being arranged above the cold water drain valve unit and adjacent the intermediate zone and an upper zone of the chamber and having its valve element normally closed and the hot water discharge valve unit being arranged in the upper zone of the chamber and above the cold water admission valve unit and having its valve element normally closed, the thermostatic elements of the several units being responsive to hot water in effecting the movements of their several valve elements in order to provide for a definite temperature of the hot water issuing



from the hot water discharge unit, increases in water temperature within the chamber causing movements of the valve elements of the hot water admission valve unit and the cold water drain valve unit toward their seats and causing movements of the valve elements of the cold water admission valve unit and the hot water discharge valve unit away from their seats.

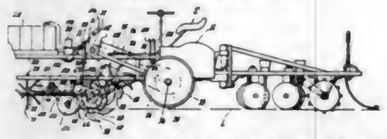
2,455,145
FASTENER
Klas Arent Swanstrom, Buckingham Township, Bucks County, Pa.
Application July 26, 1944, Serial No. 546,660
5 Claims. (Cl. 85—32)

2. A fastener comprising a retainer having an apertured base and walls bent transversely to said base and containing slots, and a nut having a base projecting into said retainer base aperture and lugs disposed in said slots and having flanges engaging said retainer base between said walls.



2,455,146
YARN ASSEMBLY
David Tann, Detroit, Mich.
Application June 20, 1946, Serial No. 678,116
6 Claims. (Cl. 2—278)

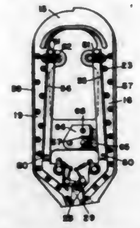
1. A yarn assembly adapted for the production of pile fabrics comprising a longitudinally extending supporting element formed of a material which is easily torn when perforated by a sewing needle, a strip of adhesive material provided along the longitudinal length of said element, and a continuous length of yarn wound upon said element in a series of adjacently disposed loops each of which engages said adhesive material and is held in place thereby.



2,455,147
MEANS TO CONNECT TRACTOR AND TRAILER SECTIONS AND FOR EFFECTING STEERING THEREOF
Harry G. Traver, Cranford, N. J.
Application March 31, 1944, Serial No. 528,937
4 Claims. (Cl. 280—97)

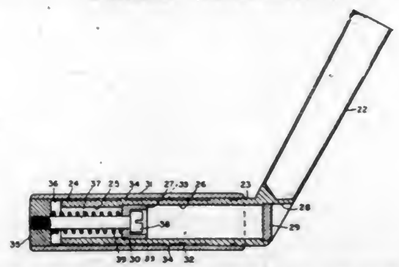
2. In agricultural apparatus, a tractor section, a trailer section, and means to pivotally connect the rear end of the tractor section to the forward end of the trailer section and support said ends of the sections one from the other to have independent adjustment about a vertical axis to effect steering of the apparatus, comprising a king pin mounted in vertical position on one end of and intersecting the longitudinal center of one of said sections, a shaft rotatably carried by and disposed in the longitudinal center of the other of said sections, a member fixed on said shaft pivotally engaging the king pin, a toothed sector fixed on the section carrying the king pin and disposed in angular relation to the king pin, a gear rotatable on

said shaft meshing with the teeth of the toothed sector, and means including a hand wheel operative to rotate the gear and move said ends of the tractor and trailer sections one relative to the other about the king pin.



2,455,148
MOTOR-DRIVEN ROTARY DIGGING APPARATUS
Harry G. Traver, Cranford, N. J.
Original application March 31, 1944, Serial No. 528,937. Divided and this application April 28, 1945, Serial No. 590,765
12 Claims. (Cl. 97—40)

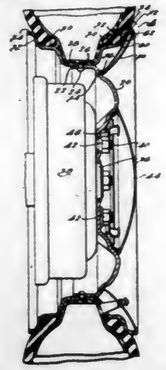
1. Apparatus for breaking and working land, a frame, a drive shaft journaled on the frame, a shaft rotatably supported by and extending transversely of the frame operatively connected to and rotated from the drive shaft, circumferentially spaced digger blades spaced longitudinally of and rotatable with said second shaft operative by the rotation thereof to penetrate and move through and not of the land, a pair of traction wheels, means to connect the traction wheels to the frame and permit of raising and lowering movements of the frame and traction wheels relative to each other, means connected to the means connecting the traction wheels to the frame and operative from the drive shaft to raise the frame and lower the traction wheels and support the frame by the traction wheels with the digger blades out of engagement with the land, and lower the frame and raise the traction wheels to support the frame by the digger blades and limit the penetration of the digger blades to a predetermined depth into the land.



2,455,149
BOBBIN MAGAZINE FOR WEFT REPLENISHING LOOMS
Richard G. Turner, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a corporation of Massachusetts
Application June 28, 1947, Serial No. 757,875
7 Claims. (Cl. 139—245)

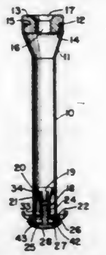
3. In a weft replenishing mechanism operating with a plurality of bobbins which move by gravity toward a horizontal transfer position, a wall permanently attached to said mechanism and forming one side of a bobbin butt guideway, a movable wall adjustably mounted on said mechanism forming the other side of said guideway for the butts of the bobbin, a second wall permanently connected to the mechanism forming one side of the guideway for the tips of the bobbins, and a second movable wall adjustably mounted on said mechanism forming the other side of the guideway for the tips of the bobbins, said ad-

justable walls being capable independently of each other of assuming a plurality of positions with respect to their corresponding permanent walls to the end that bobbins in said guideways having varying amounts of yarn wound thereon and normally tending to have the tip ends below their butt ends may be caused to move toward horizontal positions.



2,455,150
GOLF CLUB
Joseph Verderber, Cleveland, Ohio
Application September 5, 1945, Serial No. 614,461
6 Claims. (Cl. 273—79)

1. In an adjustable golf club, the combination of a hollow shank having a series of longitudinally-spaced annular locking surfaces thereon, a head slidably mounted on said shank, said head having a complementary series of longitudinally-spaced annular surfaces having longitudinal serrations thereon, a spring abutment rigidly secured within said hollow shank, a bolt seated on said abutment and slidably extending through said abutment and having one end thereof secured to said head, and a coil spring disposed within said shank between said abutment and said head and resiliently maintaining said head in the outermost position permitted by said bolt, said position being a position of interengagement of said annular surfaces whereby said head is locked against rotation, said head being manually retractable from the aforesaid position to disengage the head and shank to permit rotation of said head about said shank to selected positions of loft.



2,455,151
WHEEL TRIM
Edward L. Wood, Detroit, Mich.
Application September 1, 1944, Serial No. 552,226
11 Claims. (Cl. 301—37)

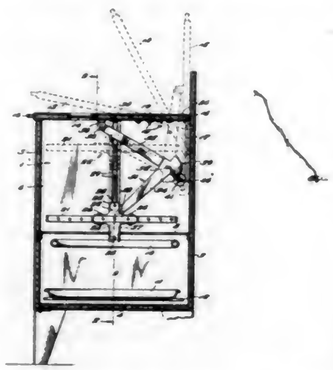
1. In combination with an automobile wheel including a rim terminating in a lip at its axially outer edge, a generally circular member adapted for application to said wheel, spring receiving means on said member located radially inwardly of the periphery thereof, and a plurality of angularly spaced spring elements hingedly secured to

said rim adjacent said lip thereof and extending in a generally radially and axially inward direction therefrom, the free ends of said springs being received by said means and said spring elements being stressed in a direction to maintain said member in contact with said wheel.

2,455,152
SAFETY RAZOR
Walter J. Wolpert, Indianapolis, Ind., assignor of one-half to Martin A. Milling, Indianapolis, Ind.
Application July 25, 1945, Serial No. 607,019
3 Claims. (Cl. 30—41)

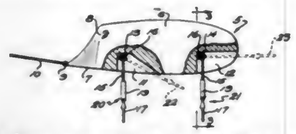
1. In a safety razor including a head, a guard and a handle, threadedly connected together for blade clamping purposes, the combination of chamber forming means in the blade confronting face of the guard, water discharging passageways from the chamber means to the blade edge and formed in the blade confronting face of the guard, the handle being tubular, and the guard being ported for water passage therethrough, and sleeve means operatively interposed between the handle and guard for confining handle discharged water to the guard ports, the sleeve means is rigid with the guard and engages the handle.

2,455,153
COMPOSITE STRUCTURAL MEMBER
Paul William Abeles, London W. 11, England
Application February 25, 1943, Serial No. 477,118
In Great Britain March 3, 1942
10 Claims. (Cl. 72—61)



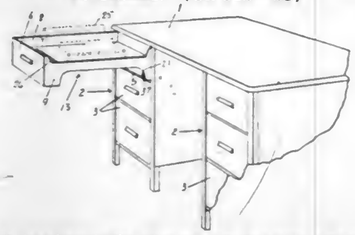
1. A method of manufacture of a composite structural member intended in use to be strained

mainly by bending consisting of three components, comprising forming a first component of considerable compressive strength by molding in an integral whole from a plastic, non-metallic substance which may be steel reenforced, providing at least one straight, symmetrically arranged groove in at least one external surface of said molded component, disposing a tie member, forming the second component, in said external groove of said molded component, applying a tensile prestress in excess of 20,000 lbs. per sq. in. to said tie member, ensuring the tensile force thus produced



in said tie member to be of uniform value entirely throughout the length of said tie member, inserting into said external groove a filler substance forming the third component of the composite structure, transmitting the tensile force occurring in said tie due to its prestress, as compression to the said molded component, and maintaining a tensile force in the tie and consequently also a compression transmitted to the molded component of a predetermined minimum value after all losses of the prestress owing to shrinkage and plastic flow of the molded component have taken place.

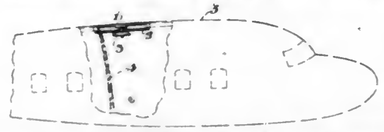
2,455,154
SHELF ELEVATING MECHANISM FOR FOOD CONTAINERS
James R. Bailey, Fort Worth, Tex.
Application July 19, 1946, Serial No. 684,836
1 Claim. (Cl. 312—174)



A food container having an open top, a lid for said top vertically swingable to raise and lower the same, pairs of vertical guide bars in said container at opposite sides thereof and spaced apart laterally on each pair, a pair of vertically movable slides with rollers thereon interposed between the pairs of guide bars, a shelf in the container having opposite sides mounted on said slides for vertical movement of the shelf by said slides, a pair of bell cranks in said container at opposite sides thereof pivotally mounted for vertical oscillating movement and having one end pivoted to said lid, links connecting the other ends of said bell cranks to said slides and power means for oscillating the bell cranks.

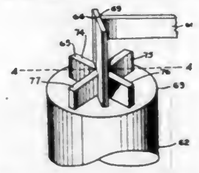
2,455,155
FISH LURE
Dominick B. Baima, Detroit, Mich.
Application August 1, 1946, Serial No. 687,759
1 Claim. (Cl. 43—46)

A fish lure comprising in combination, a substantially cylindrical body formed in the lower portion thereof with two pairs of spaced parallel, transversely aligned recesses, a pair of pins positioned in said body, each of said pins extending through one pair of said recesses, a pair of spaced parallel fish hooks pivotally suspended from each of said pins, the bills of said hooks being outturned to the sides of said body, and a paddle rigidly securing together the hooks in each pair.



2,455,156
DESK DRAWER FOR TYPEWRITERS, INCLUDING ELEVATING TYPEWRITER SUPPORTS
Clemente Balzi, Paul Juravcoff, and Chester H. Ristenpart, San Francisco, Calif.; said Balzi and said Juravcoff assignors to said Ristenpart
Application March 3, 1945, Serial No. 580,874
12 Claims. (Cl. 312—28)

1. A horizontally elongated drawer adapted to slide longitudinally thereof into and out of a desk comprising a horizontal platform for holding a typewriter upright thereon for movement therewith, a main frame including opposed side frame members and a front and a rear frame member respectively connecting the corresponding ends of said side frame members, means swingingly supporting said platform on said frame between said front and said rear frame member for generally vertical movement upwardly from a lowered position to an elevated position and vice versa, means for releasably securing said platform in said elevated position, and a portion of the lower edge of one of said side frame members for a substantial distance between its ends being appreciably elevated above the said lowered position of said platform to provide knee space below said portion for the knees of an operator when the platform is in elevated position, said portion being at about the height of the said elevated position of said platform.

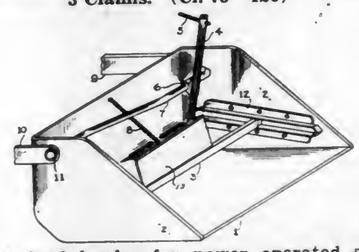


2,455,157
EMERGENCY AIRCRAFT EXIT FOR TRANSPORT AIRCRAFT
Charles A. Bigelow, Houston, Tex.
Application March 5, 1947, Serial No. 732,566
1 Claim. (Cl. 244—129)

In combination with a transport aircraft, having a fuselage, an emergency exit, centrally located on the top portion of the fuselage; said exit including an opening with bevelled edges in the top of the fuselage and a top fabricated with bevelled edges to fit closely down into said opening, said top having attached to the bottom thereof a centrally-located downwardly extending threaded pipe, a wheel shaped nut carried by the lower portion of said pipe, a frame supported

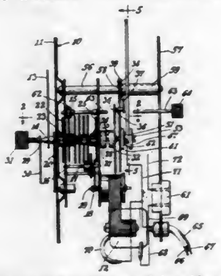
between said nut and the top, and vertically spaced from said top, so as to afford a storage space; a rope ladder secured at one end to the fuselage at the opening thereof and stowable within said storage space, whereby the nut, frame and top may be detached from the fuselage and the rope ladder dropped from its stowed position to afford egress from the fuselage; substantially as described.

2,455,158
WAVE GUIDE COUPLING DEVICE
William E. Bradley, Swarthmore, Pa., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Original application August 15, 1944, Serial No. 549,618. Divided and this application August 31, 1944, Serial No. 552,173
8 Claims. (Cl. 178—44)



5. In a high frequency system, a rectangular wave guide carrying energy from a high frequency source; a second circular wave guide having a flat plate closing one end thereof, said plate having at least four rectangular radially and symmetrically disposed slits therein, and means comprising a corresponding number of wave guides radially disposed with respect to said circular wave guide and fed from said rectangular wave guide, and extending to said plate, each of said last mentioned wave guides having open ends juxtaposed to the slits in said plate.

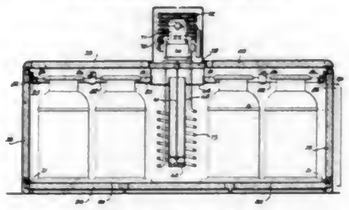
2,455,159
PURIFICATION OF TETRAHYDROFURFURYL ALCOHOL CONTAINING FURFURAL AND FURFURYL ALCOHOL AS IMPURITIES
John George Mackay Bremner and David Gwyn Jones, Norton-on-Tees, England, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application February 3, 1947, Serial No. 726,230. In Great Britain February 27, 1946
12 Claims. (Cl. 260—345)



1. A method of treating tetrahydrofurfuryl alcohol to remove impurities therefrom; said impurities being from the group consisting of: (*a*) furfural in an amount not exceeding 10% and in the absence of furfuryl alcohol; (*b*) furfuryl alcohol in an amount not exceeding 15% and in the absence of furfural; and, (*c*) both furfural and furfuryl alcohol in amounts not exceeding 5% each, said amounts being expressed as percentages by weight of the untreated tetrahydrofurfuryl alcohol comprising heating said untreated material in the liquid phase with an acidic substance in an amount not exceeding 10% by weight of said untreated material at a temperature not exceeding the boiling point of the resulting mixture, and recovering tetrahydrofurfuryl alcohol from said mixture.

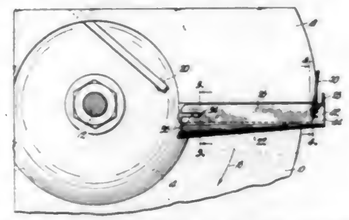
2,455,160
LOAD LEVELER FOR POWER SCOOPS
Bob Burrow, Maricopa County, Ariz.
Application October 18, 1946, Serial No. 704,108
3 Claims. (Cl. 73—426)

1. A load leveler for power operated scoops comprising, in combination, a scoop body having a bottom, sides, guide channels on the inner faces of said scoop sides a predetermined distance from said bottom, a screed ber having its ends slidably operative in said guide channels so that its lower edge moves in a plane a predetermined distance above said scoop bottom and having an upwardly extending apron, a link yoke pivoted to the sides of said scoop body, a vertically extending operative rod attached to said screed bar pivotally mounted on said link yoke, and a spring operative between said screed bar and the rear portion of said scoop body, adapted to normally retain said bar in inoperative position at the inner end of said guides, and means for drawing the top of said operative bar toward the rear of the scoop body.



2,455,161
SWITCH CONTROL DEVICE
Arnold Buttner, Flushing, N. Y.
Application February 18, 1946, Serial No. 648,488
5 Claims. (Cl. 200—38)

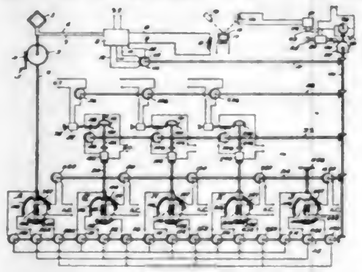
1. A switch control in combination with a clock, comprising, a frame, a train of gears supported by the latter, a sleeve, a disc mounted thereon and being actuated by said gears, a shaft provided with a knob, and having a disc mounted thereon, a second disc mounted on said shaft, said second disc being formed with a number of openings



therein, and a pin and spring member engaging the openings in said second disc, substantially as shown and described.

2,455,162
SPRAY COOLING APPARATUS FOR MILK CANS
Daniel Donnelly, Milwaukee, Wis., assignor to Universal Milking Machine Company, Waukesha, Wis., a corporation of Wisconsin
Application May 3, 1945, Serial No. 591,734
15 Claims. (Cl. 62—101)

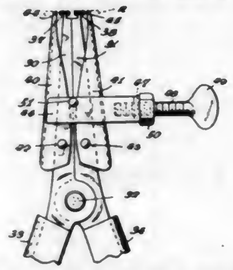
1. A cooler for chilling freshly drawn milk in cans, comprising the combination with a milk can receiving, heat insulated liquid containing tank, of a motor driven chilling unit mounted on the tank and including expansion coils in the tank below the normal level of the liquid therein, a distributing pan supported from the walls of the tank above the maximum level of the liquid therein, a motor driven pump having connections for supplying liquid to the pan from the lower portion of the tank, and flexibly jointed pipe connections for gravity delivery of liquid from the pan to the neck portions of milk cans in the tank.



2,455,163
LATCHING DEVICE
Neligh Clair Coates, Kansas City, Mo.
Application February 9, 1948, Serial No. 7,262
11 Claims. (Cl. 51—272)

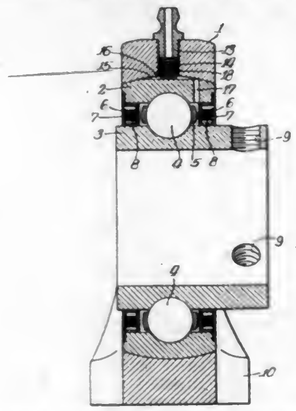
1. In combination with a rotary cutter disk having a guard enclosing the upper portion of the disk, a stripper adapted to bridge the space between the disk and the edge of the guard, means for detachably mounting the stripper on the guard, said means comprising a bail pivoted to the stripper, holes in the guard adapted to receive the ends of the bail; and means for withdrawing said ends from said holes responsive to a pivotal movement of the bail.

2,455,164
RADIO POSITION FINDING SYSTEM
James A. Ebeling, Charleston, W. Va.
Application May 22, 1945, Serial No. 595,241
5 Claims. (Cl. 343—112)



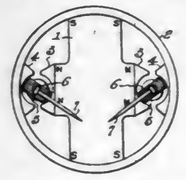
1. In a radio position finding system for mobile craft, an orientable directional antenna, a receiving set having its input connected to said antenna, tuning means for tuning said receiving set selectively to any one of three different carrier frequencies of three different transmitting stations, electrical indicating means connected to the output of said receiving set and responsive to the delivery of minimum output therefrom, a master control switch shaft adapted in successive positions to control the setting of said tuning means to said three frequencies successively, ratchet means for step-by-step rotation of said shaft, solenoid means for advancing said ratchet step-by-step, and being connected for actuation by minimum signal response of said indicating means, a translucent map plate representing the terrain being traversed by said craft, three individual rotatable visual projecting units each comprising a projecting element adapted to project an individual illuminated line on said plate, and each further comprising a rotatable telemetric element and electrically actuatable clutch means for controllably connecting said telemetric element to said projecting element, a telemetric system adapted to coordinately control the orientation of said telemetric elements of said projecting units, and being adapted to be controlled by

the orientation of said directional antenna, and individual switch means controllable by said shaft in particular positions thereof adapted to connect or disconnect each of said telemetric elements to said telemetric system, other individual switch means actuatable by said shaft in particular positions thereof adapted to actuate each of said clutch means, said switch means and the connections thereof to said clutch means being so arranged that in a first position of said shaft, the illuminated line projected from the first of said rotatable projecting units represents the observed bearing of a first one of said transmitting stations, and in a second position of said shaft the illuminated line projected from the second of said rotatable projecting units represents the observed bearing of a second one of said transmitting stations without disturbing the previously projected line representing the bearing of said first station, and in a third position of said shaft the illuminated line projected from the third of said rotatable projecting units represents the observed bearing of the third one of said transmitting stations without disturbing the two previously projected lines representing the bearings of said two first stations.



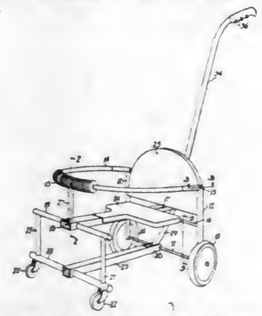
2,455,165
TOOL FOR HANDLING RETAINING RINGS
Rudolf Feitl, Brooklyn, N. Y., assignor to Waldes Koh-I-Noor, Inc., Long Island City, N. Y., a corporation of New York
Application August 11, 1944, Serial No. 549,056
3 Claims. (Cl. 29—223)

1. A plier-type tool for handling open-ended retaining rings provided at their ends with apertured ears comprising a pair of uncrossed levers and pivot means operatively connecting said levers intermediate their ends, the ends of the levers to one side of the pivot means constituting plier tips terminating in pin-like working points adapted to be inserted into the ear apertures and the other ends constituting handles which are adapted to be brought together to spread the working points and thereby the ends of the rings, a pair of arms disposed outwardly of and extending closely adjacent to and along the opposite sides of the plier tips and in the path of spreading movement thereof, each arm being pivotally connected adjacent its one end to one of said levers,



the other ends of the arms terminating substantially at the working points and being formed as jaws which are disposed outwardly and in the path of movement of the working points, and means extending between and operatively engaging each of said arms at points spaced from their pivotal connections to limit their spreading movement to a predetermined distance, said means including adjustable means for varying said distance as desired, said jaws adapted to engage the apertured ears of a ring being spread by said working points and to limit the movement thereof whereby each ear is gripped by a jaw and its corresponding working point.

2,455,166
SHAFT BEARING
David Firth, South Bend, Ind., assignor to Dodge Manufacturing Corporation, Mishawaka, Ind., a corporation of Indiana
Application August 23, 1946, Serial No. 692,599
11 Claims. (Cl. 308—187)



1. In a self-aligning shaft bearing comprising a sealed annular antifriction bearing unit having an exteriorly spherical outer race ring and an interiorly spherical housing in which it fits, a lubricant-conducting motion-limiting connection between said housing and race ring embodying means for resiliently pressing said unit against its seat in the housing, through which connection lubricant can be introduced to the interior of said unit in any position which it can assume.

2,455,167
DUAL ELECTRIC INSTRUMENT
Roswell W. Gilbert, Montclair, N. J., assignor to Weston Electrical Instrument Corporation, Newark, N. J., a corporation of New Jersey
Application November 15, 1944, Serial No. 563,618
2 Claims. (Cl. 171—95)

1. A dual electrical instrument of the self-shielding type comprising a permanent magnet of generally cruciform shape having one relatively long bar and a shorter transverse bar, the end faces of each bar being of the same polarity and the polarity of the end faces alternating around the permanent magnet, a shielding yoke of high permeability encircling the permanent magnet, means including cooperating sets of pole pieces secured to the shorter bar of said permanent magnet and to said yoke forming magnetic flux circuits through the air gaps between the pole pieces of each set, cores in said gaps, and coils angularly movable about said cores.

2,455,168
FOLDING CHILD'S VEHICLE
Roy E. Gilmore, Portland, Oreg.
Application June 7, 1946, Serial No. 674,991
1 Claim. (Cl. 280—36)

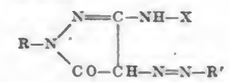
A child's vehicle having in combination a rear axle, ground engaging wheels at opposite ends of said axle, a lower bumper bar in front of and parallel with said axle, ground engaging caster wheels supporting the ends of said bumper, a central reach connecting said axle and lower bumper, standards mounted near the ends of said axle, a seat back between the upper ends of said standards, a cross brace between the middle portions of said standards, vertical spindles mounted on the ends of the lower bumper, an upper bumper secured across the

upper ends of said spindles, a seat supporting bar hinged to the middle of said upper bumper and cross brace and extending behind said cross brace, a seat on said bar, a handle member hinged to said rear axle and to the rear end of said bar, a vertical brace on the middle of said upper bumper, a guard attached to said standards and supported at its forward ends by said vertical brace and extending around the front of the seat, said guard, said supporting bar and reach being in parallel relationship and capable of being collapsed, and a latch for holding the parts in operative or collapsed positions.

2,455,169
COLORED COUPLERS
Dudley B. Glass, Paul W. Vittum, and Arnold Weissberger, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application May 3, 1944, Serial No. 533,931
5 Claims. (Cl. 95—6)

1. The method of developing a colored image in a silver halide emulsion layer, which comprises incorporating in said layer a coupler compound having the formula:

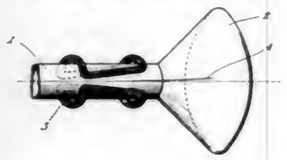
$$p\text{—}HO\text{—}R\text{—}N{=}N\text{—}R'$$



where R is an aromatic nucleus selected from the class consisting of nuclei of the benzene and naphthalene series, said nucleus having the azo group and the hydroxyl group para to each other, and R′ is selected from the class consisting of aromatic and heterocyclic radicals, and said coupler compound contains no reactive phenolic hydroxyl group other than that to which the azo group is attached, exposing said layer and developing it with a primary aromatic amino developing agent, thereby splitting off the

$$\text{—}N{=}N\text{—}R'$$

group in said coupler compound and coupling said compound at the point of splitting with the oxidation product of the primary aromatic amino developing agent to form a dye image, leaving said coupler compound intact in the regions of said layer undeveloped by said developing agent.

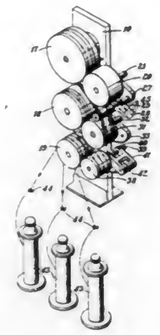


2,455,170
COLORED COUPLERS
Dudley B. Glass, Paul W. Vittum, and Arnold Weissberger, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application May 3, 1944, Serial No. 533,932
7 Claims. (Cl. 95—6)

1. The method of developing a colored image in a silver halide emulsion layer which comprises incorporating in said layer a coupler compound having the formula:

where R is an aryl group, R′ is an aryl group of the benzene series and X is an acyl group, and said coupler compound contains no other reactive CH group, exposing said layer and developing it with a primary, aromatic amino developing agent, thereby splitting off the —N=N—R′ group in said coupler compound and coupling said coupler compound at the point of splitting with the oxidation product of the primary, aromatic amino developing agent to form a dye image, leaving said coupler compound intact in the undeveloped regions of said layer.

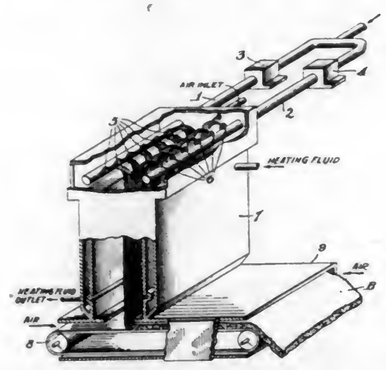
2,455,171
SYSTEM FOR MAGNETIC DEFLECTION IN CATHODE-RAY TUBES
Johan Haantjes, Eindhoven, Netherlands, assignor, by mesne assignments, to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application January 14, 1946, Serial No. 641,165
In the Netherlands September 8, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires September 8, 1963
3 Claims. (Cl. 250—157)



1. A magnetic deflecting system for a cathode ray tube having means directing an electron beam along a longitudinal axis and having electron beam receiving means at one end thereof, comprising two deflecting coils surrounding the axis, each said coil being symmetrical to the other with respect to a plane through said axis and each having a first end portion closer to said electron beam receiving means and a second end portion farther from said electron beam receiving means, said first end portions being separated by a gap different in magnitude from the gap separating said second end portions.

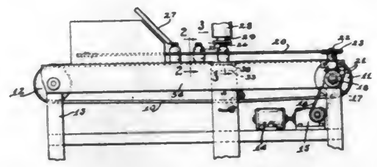
2,455,172
PRODUCTION OF 2-MONOSUBSTITUTED PYRIMIDINES
George W. Hearne, El Cerrito, Theodore W. Evans, Oakland, and Harry L. Yale, Berkeley, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application January 26, 1948, Serial No. 4,468
11 Claims. (Cl. 260—251)

1. Process which comprises reacting propargyl aldehyde diethyl acetal with guanidine nitrate in a substantially anhydrous acidic liquid medium to produce a salt of 2-aminopyrimidine as the principal product of the reaction.



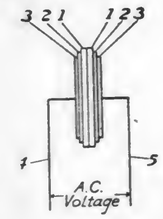
2,455,173
YARN TREATING APPARATUS
Ira V. Hitt, Waynesboro, Va., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application May 25, 1946, Serial No. 672,259
14 Claims. (Cl. 28—71.3)

10. Apparatus for stretching at elevated temperatures an extensible material comprising, in combination, a roller, a shaft for driving said roller, a second roller, gear mechanism connected with said shaft and said second roller for driving said second roller, means for heating at least one of said rollers a pivoted mounting for one of said rollers permitting peripheral contact between said rollers and permitting relative movement between said rollers during rotation, two stretching rollers adapted to operate at a higher peripheral speed than said first roller, one of said stretching rollers being provided with movable mounting means for permitting relative movement between said stretching rollers during rotation and two relaxing rollers adapted to op-



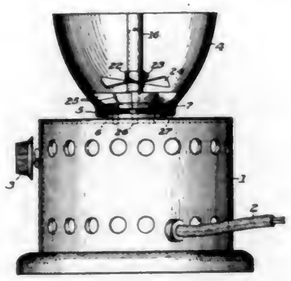
erate at a lower peripheral speed than said stretching rollers, one of said relaxing rollers being provided with movable mounting means for permitting relative motion between said relaxing rollers during rotation.

2,455,174
FREE FALL FIBER
Ira V. Hitt, Waynesboro, Va., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Original application February 25, 1943, Serial No. 477,012. Divided and this application October 9, 1946, Serial No. 702,324
11 Claims. (Cl. 18—54)



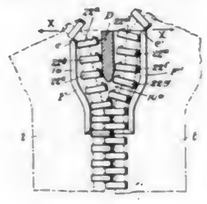
1. The process of spinning thermoplastic, organic solvent-soluble, filament-forming material to form crimpy filaments substantially free of molecular orientation along the filament axis which comprises extruding an organic solvent solution of said filament-forming material in the form of fine streams upwardly into an evaporative atmosphere under a jet velocity sufficient to project said streams a distance sufficient to permit the setting of said material to the state of self-sustaining filaments and thereafter permitting the set filaments to fall under their own weight, without subjecting them to added tension, onto a collecting device.

2,455,175
CAPPING MACHINE
John Hohl, Toledo, Ohio, assignor to Owens-Illinois Glass Company, a corporation of Ohio
Application August 25, 1944, Serial No. 551,169
7 Claims. (Cl. 226—78)



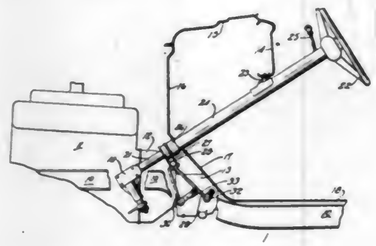
1. The combination of an endless conveyor comprising a pair of parallel-spaced conveyor belts, a horizontally-disposed stationary conveyor frame along which the belts travel, said frame including a spacing rib extending longitudinally thereof between the belts with the upper surface of the rib a slight distance below the surface level of the belts, a ram positioned over the conveyor and spaced therefrom to permit the passage of the jars with caps loose thereon to a capping position between the conveyor and ram, and means for reciprocating the ram vertically and forcing the caps into position on the jars, said conveyor belts being under tension and yieldable downward under the pressure applied thereto through the jars and thereby permitting each jar to be supported directly on said rib while under said downward pressure, said conveyor frame having belt supporting surfaces extending lengthwise beneath the belt at opposite sides of the capping position and terminating short of the capping position, the belts being free from bottom support within the capping zone to permit said downward yielding thereof.

2,455,176
SELENIUM RECTIFIER ELEMENT
Carl E. Holmes, La Crescenta, Calif., assignor to Fansteel Metallurgical Corporation, North Chicago, Ill., a corporation of New York
Application April 16, 1945, Serial No. 588,642
4 Claims. (Cl. 175—366)



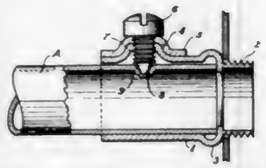
1. In a method of producing selenium rectifier elements the steps which comprise connecting electrically like electrodes of two selenium rectifier elements and applying to the other pair of electrodes an alternating current voltage of from about 18 volts to about 30 volts for a sufficient period of time so as to develop a high resistance in the elements in the reverse direction, the magnitude of this resistance being such that upon application of a direct current voltage of about 8 volts in the reverse direction the leakage current will not exceed about 0.5 milliampere per square centimeter.

2,455,177
MECHANICAL MIXING BOWL
Russell E. Irish, Pittsburgh, Pa.
Application September 18, 1946, Serial No. 697,752
12 Claims. (Cl. 259—108)



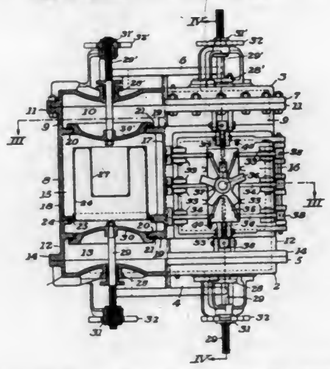
1. In a mechanical mixing bowl assembly comprising an encased electrical motor having a vertical shaft, the combination of a flexible bowl, two opposed plates arranged respectively inside and outside the said bowl and engaging the base of the bowl between them over a major proportion of the area of said base, a tubular agitator-mounting and motor shaft-receiving post extended upwardly from the base of said bowl, an agitator-carrying element rotatable on said tubular post and arranged to engage the motor shaft therewithin, and means on the outer of the two said plates arranged to position the said flexible bowl on the motor casing against the torque of the motor shaft.

2,455,178
WINGLOCK SLIDER FOR SLIDE FASTENERS
Lester L. Jones, Oradell, N. J., assignor to Conmar Products Corporation, Newark, N. J., a corporation of New Jersey
Application March 3, 1944, Serial No. 524,861
4 Claims. (Cl. 24—205.14)



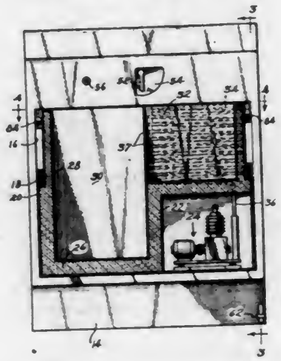
1. A winglock slider for slide fasteners comprising two spaced wings joined at their upper ends and provided at their opposite sides with inturned flanges, said slider defining an internal Y-shaped channel for the through movement of two interlocking slide fastener stringers, the opposite sides of at least one of said wings being provided at the upper end of the slider with inturned generally parallel and longitudinally arranged flange members which are adapted to lockingly engage the elements of the slide fastener stringers on a cross pull, the free ends of said members being asymmetrically spaced longitudinally of the slider a distance approximately equal to one-half of the pitch between the fastener elements on the stringers.

2,455,179
CONCENTRIC STEERING COLUMN GEARSHIFT
Milton Jovanovich, Detroit, and John J. Wharam, Dearborn, Mich., assignors to Ford Motor Company, Dearborn, Mich., a corporation of Delaware
Application October 19, 1945, Serial No. 623,246
8 Claims. (Cl. 74—484)



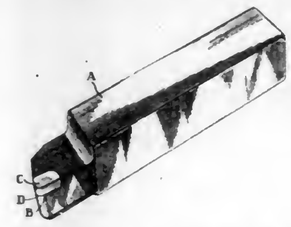
1. In a gearshifting mechanism associated with the steering column of a motor vehicle, comprising, a tube concentrically mounted exteriorly of said column for reciprocation and rotation with respect thereto, a pair of axially aligned arms rotatably mounted on said steering column adjacent the lower part thereof, clutch means operated by said tube for selective engagement and operation of said arms and means adjacent the upper end of said steering column to reciprocate and rotate said tube comprising a fulcrum bracket fixed with respect to and extending outwardly of said tube and an operating lever having an intermediate pivot on said fulcrum bracket and its inner end engaging said steering column.

2,455,180
THIN-WALL TUBING CONNECTOR
Frank J. Kennedy, Brooklyn, N. Y., assignor to National Electric Products Corporation, Pittsburgh, Pa., a corporation of Delaware
Application May 13, 1947, Serial No. 747,665
2 Claims. (Cl. 285—168)



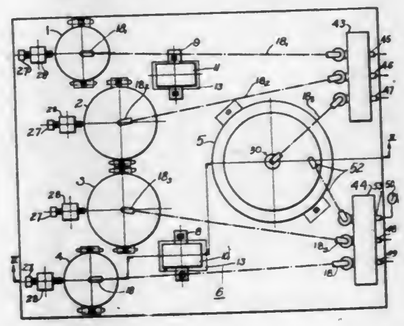
1. A thin-wall tubing connector comprising a tubing-embracing sleeve including an external tubular projection providing a bore of substantial length diametrically positioned with respect to tubing embraced by said sleeve and threaded to receive the shank of an engagement screw, an engagement screw having a shank threaded in the bore of said projection and a constricted penetrative cylindrical tip having an approximately plane terminal surface presented diametrically to tubing embraced by the said sleeve, and means cooperative between the said engagement screw and the said sleeve to determine the extent of the indenting and embedded engagement of embraced tubing by the said constricted cylindrical tip of the screw.

2,455,181
STRAINER
Selwyne P. Kinney, Crafton, and Louis M. Hartwick, Beaver, Pa., assignors, by mesne assignments, to S. P. Kinney Engineers, Inc., Pittsburgh, Pa., a corporation of Pennsylvania
Application August 2, 1943, Serial No. 497,020
10 Claims. (Cl. 210—168)



9. A strainer of the class described comprising a body having a single chamber at each end thereof, and a plurality of individual compartments between the two end chambers, the compartments each opening into the chambers at each end through a port, an end member at each end of the body closing the chamber, a plurality of valve disks with operating stems carried on each end member, each valve cooperating with one of the ports and serving to control the flow of fluid between the chamber and one end of a compartment, the body having a separate doorway opening into each compartment, a closure for each doorway and a basket strainer in each compartment removable through the doorway.

2,455,182
REFRIGERATOR DRAWER
Oscar A. La Vallee, Wolf Point, Mont.
Application November 1, 1946, Serial No. 707,299
8 Claims. (Cl. 62—116)



1. A refrigerator comprising a housing, a drawer slidable laterally from said housing, a refrigerant liquefying unit housed in a chamber in said drawer, said drawer having an insulating liner in the walls and bottom thereof and partition means defining freezing and food storage compartments, refrigerating coils connected with said refrigerant liquefying unit and embedded in said insulating liner, a sealing cover of insulating material carried by said housing above said drawer, latch means for retaining said drawer in closed position and means for vertically lowering and elevating said sealing cover for respectively sealing and unsealing said drawer.

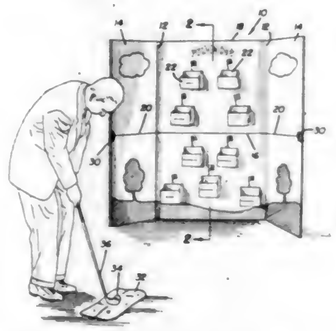
2,455,183
TOOL
Franklin Howard Lobdell, Naugatuck, Conn., assignor to The Bullard Company, a corporation of Connecticut
Continuation of application Serial No. 321,743, March 1, 1940. This application May 10, 1944, Serial No. 534,951
7 Claims. (Cl. 29—95)

3. A tool having a tip portion of a material having a hardness in excess of 60 Rockwell C and/or possessing the characteristic of red hardness; a shank portion made from a cast iron containing about .20%–.30% nickel; and a strain-resistant layer of bonding material between said tip and shank throughout the entire area of tip support on said shank portion, whereby tendencies toward tip fracture during normal use are substantially eliminated.

2,455,184
TOTALIZING DEVICE
Alfred A. Markson, Mount Lebanon, Pa., assignor, by mesne assignments, to Hagan Corporation, Pittsburgh, Pa., a corporation of Pennsylvania
Application December 20, 1945, Serial No. 636,112
2 Claims. (Cl. 137—153)

1. A totalizing device comprising a base member, a torque arm disposed below said base member, a pair of knife edges on said base member, one being disposed above but adjacent one side of said torque arm and the other being disposed above but adjacent the opposite side of said

torque arm, the knife edges being in the same plane and extending transversely of the torque arm, a stirrup secured to each side of the torque arm, said stirrups bearing on the knife edges and suspending the torque arm therefrom, a plurality of pressure receiving units disposed on and spaced crosswise of said base member, each unit having a diaphragm and push rod connecting said diaphragm to said torque arm, the diaphragm of each unit exerting a force on said torque arm proportional to the effective area thereof and the value of pressure acting thereon, a balancing unit on said base member having a diaphragm and a push rod acting on said torque arm in a direction opposing the forces exerted on the torque arm by said pressure receiving units, said balancing unit having a valve arranged to be actuated by its diaphragm in response to movement of said torque arm out of balanced position to regulate the admission and discharge of fluid pressure to the diaphragm of said balancing unit to maintain a balance between the forces exerted by said pressure units and said balancing unit on said torque arm, said valve being in closed position when the torque arm is in balanced position, the value of the balancing pressure established in said balancing unit being proportional to the algebraic sum of the pressures received by said pressure receiving units.



2,455,185

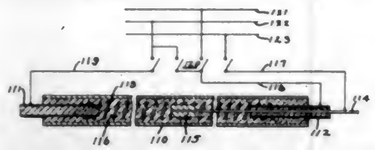
PITCH AND CHIP GOLF GAME

Mike D. May, Durham, N. C.

Application December 6, 1946, Serial No. 714,520

1 Claim. (Cl. 273—35)

In a game, the combination of a substantially rectangular backboard having a scenic simulated golf course view thereon, transverse creases in said board and a longitudinal crease through the center thereof, cuts formed as continuations of said longitudinal crease, for folding said board to substantially one-fourth its open area, a plurality of collapsible, semi-rigid material, substantially rectangular receptacles secured to said board, said receptacles having accordion pleats along the sides thereof so that they can be collapsed in folding said board, said receptacles simulating holes of a golf course, and indicia on said board indicating a hole number corresponding to the adjacent receptacle, resilient clips detachably secured to said backboard and overlying said cuts for maintaining the material of the backboard on each side of the cuts in alignment, said receptacles having front walls and relatively longer and flat back walls, said back walls being attached flush against the plane surface of said backboard.



2,455,186

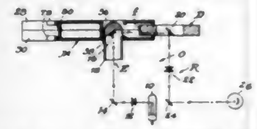
DOMESTIC ELECTRIC HEATER

Francis H. McCormick, Oakwood, Ohio, assignor to General Motors Corporation, Dayton, Ohio, a corporation of Delaware

Application November 2, 1946, Serial No. 707,451

19 Claims. (Cl. 201—67)

1. In combination, a tubular sheath having two ends, a first cylindrical terminal at one end, a second cylindrical terminal at the other end, a spiral resistance in said sheath connected to said terminals, and a conducting rod passing through said first cylindrical terminal and connected to an intermediate point on said resistance.



2,455,187

PHOTOGRAPHIC FILM MAGAZINE

Freeman H. Owens, New York, N. Y.

Application September 24, 1943, Serial No. 503,650

12 Claims. (Cl. 179—100.3)

1. A photographic film magazine comprising a magazine casing having side walls and end walls, spaced mountings in the casing for receiving supply and take-up film reels, an opening in a side wall of the casing for receiving an external film driving element, guide means in the magazine for guiding the film in its movement from the supply reel to the take-up reel past said opening and in engagement with said film driving element, and means in an end wall of the casing for permitting light to be transmitted from an external source through said end wall into the casing to be reflected therein at an angle and then transmitted through the film, the said side wall opening and said driving element.

2,455,188

DRILLING FLUID

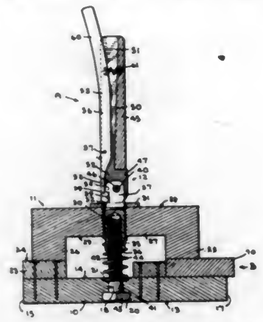
William F. Oxford, Jr., Beaumont, Tex., assignor to Sun Oil Company, Philadelphia, Pa., a corporation of New Jersey

No Drawing. Application February 25, 1946, Serial No. 650,143

6 Claims. (Cl. 252—8.5)

1. A drilling fluid comprising water and finely divided silica aerogel in a minor amount sufficient to impart thixotropic properties but insufficient to render the mixture unpumpable.

2,455,189



WORK HOLDER FOR WOODWORKING MACHINES

Alfred Pedersen, Warren, Pa.

Application August 7, 1945, Serial No. 609,396

2 Claims. (Cl. 144—290)

1. In woodworking apparatus, a work piece clamp including a clamp body having an outer face, end portions, a bridge piece extending from one portion to the other, said bridge piece having a perforation extending therethrough, a bed plate, a member slidably extending through said perforation and having a bill portion at its end extending from the outer face of said bridge piece and provided with a bill, means securing said member to said bed plate, a handle, having a longitudinally extending slot, a cam face and a substantially flat face, means pivoting said handle to said bill portion, said outer face being engageable by said cam face when said handle is

in a position with its longitudinal axis substantially normal to the longitudinal axis of said bridge piece and said outer face engageable by said substantially flat face when said handle is in substantial parallelism with said bridge piece, said substantially flat face being nearer said pivoting means than is said cam face, and a lever pivoted to said handle, having a projection engaged by said bill when said handle is in one of said positions, said lever being disposed mainly within said slot and its pivot being spaced from said pivoting means.

2,455,190

EXTRACTING POTASH FROM WYOMINGITE

Robert D. Pike, Pittsburgh, Pa.

Application August 2, 1944, Serial No. 547,699

11 Claims. (Cl. 23—33)

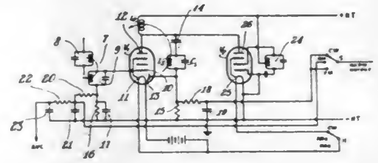
1. That method of extracting potash from Wyomingite comprising treating only all of the fresh Wyomingite in a first autoclave under steam pressure with solution from a second autoclave, separating partly exhausted tails from the solution from said first autoclave, treating said tails in said second autoclave with that amount of fresh sodium carbonate substantially theoretically equivalent to potash in the fresh Wyomingite treated in said first autoclave, separating exhausted tails from the solution from said second autoclave and passing the solution to the first autoclave, crystallizing and separating from the solution from said first autoclave sodium carbonate and then soduim potassium carbonate, and producing a mother liquor containing potassium carbonate.

2,455,191

RADIO WAVE DETECTOR SYSTEM

Claude Langdon Richards, London, England, assignor to The Mullard Radio Valve Company Limited, London, England

Application November 18, 1944, Serial No. 564,085



In Great Britain July 30, 1943

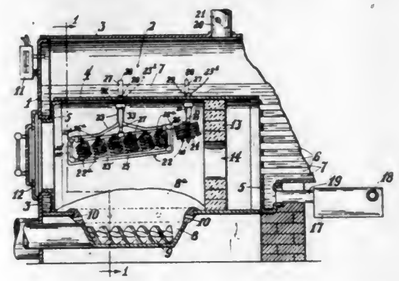
Section 1, Public Law 690, August 8, 1946

Patent expires July 30, 1963

5 Claims. (Cl. 250—27)

1. A detector system for a carrier wave having a predetermined central frequency, comprising a discharge tube having a cathode, an anode and a control grid interposed between the cathode and the anode, an input circuit for the carrier wave connected between the control grid and the cathode, a resistance element and a condenser element connected in shunt with each other and in series with the control grid and the cathode for producing grid circuit limiting of the carrier wave and for generating a potential proportional to the amplitude of the carrier wave, a transformer having a primary winding in the output circuit of said anode and a secondary winding, said secondary winding being tuned to substantially the said predetermined frequency and being magnetically coupled to said primary winding to produce a terminal voltage

in quadrature with the voltage of the primary winding, means to interconnect one end of each of said windings to thereby combine the voltage of the primary winding and said terminal voltage to produce a resultant voltage, means for rectifying said resultant voltage to produce a potential proportional to the amplitude of said resultant voltage, a heterodyne oscillator coupled to said discharge tube, means to energize said discharge tube and said heterodyne oscillator, an output circuit, and means to selectively connect the output circuit to said means for generating a potential proportional to the amplitude of the carrier wave and said means to generate a potential proportional to the amplitude of said resultant voltage and to selectively energize said heterodyne oscillator.

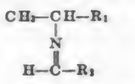


2,455,192

PREHEATING INSTALLATION IN BOILERS FOR QUICK HEATING AND STEAMING

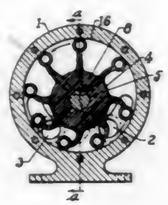
Roy H. Robinson, Chicago, Ill.

Application July 27, 1942, Serial No. 452,482



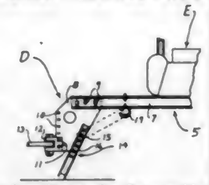
8 Claims. (Cl. 122—68)

1. In combination in a heating plant having a firebox with a crown-sheet and a water jacket, at least one stirrup-like tubular frame suspended from said crownsheet and operatively connected with said water jacket and a battery of spaced apart tubular heating elements supported on said frame and operatively connected with said frame and water jacket.



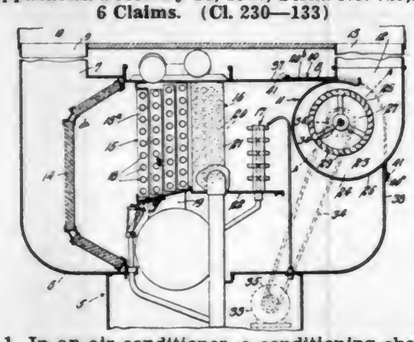
2,455,193
ALDEHYDE DERIVATIVES OF 2-AMINOALKANES
Ewald Rohrmann, Indianapolis, Ind., assignor to Eli Lilly and Company, Indianapolis, Ind., a corporation of Indiana
No Drawing. Application July 26, 1944, Serial No. 546,741
2 Claims. (Cl. 260—566)

2. An aldehyde derivative of a 2-aminoalkane, said derivative having the general formula



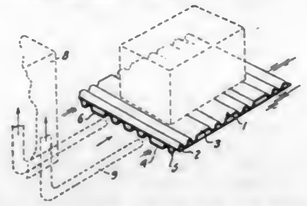
in which R_1 represents an alkyl group having from 4 to 7 carbon atoms and R_2 represents a hydrocarbon of the group consisting of the phenyl radical and alkyl radicals having from 1 to 3 carbon atoms.

2,455,194
ROTARY FLEXIBLE VANE PUMP
Edward C. Rumsey, Detroit, Mich.; Lillian Gray Rumsey executrix of said Edward C. Rumsey, deceased
Application November 10, 1943, Serial No. 509,673
7 Claims. (Cl. 103—117)



1. A rotary displacement pump comprising a cylindrical casing consisting of an annular wall and opposed flat end walls, said casing having spaced inlet and outlet ports, a rotor body of resilient material within said casing, said rotor body consisting of a rotor hub and a plurality of spaced integral flexible vanes each extending radially from the said rotor hub, means rotating said rotor body in either clock-wise or counter-clock-wise direction of rotation, said vanes rotatable in either direction with equal functional results, said rotating means and the rotor body having their respective axii concentric, said axii being disposed eccentrically relative the axis of the casing annular wall, said rotating means being supported in said casing, said rotor hub periphery being spaced from the said casing annular wall, the lateral edges of said vanes engaging said casing end walls, the longitudinal edges of said vanes engaging said casing annular wall to form pumping chambers, each of said vanes being successively flexed due to the varying relationship of the annular wall and the rotor body during each revolution of said rotor body, said vane longitudinal edges sealing the said pumping chambers against leakage only when the back pressure of the fluid being pumped is less than the predetermined amount, said rotor body hub being provided with means for reducing the heat generated by the friction of the rotor body hub ends that operate under pressure in contact with the said cylindrical casing end walls.

2,455,195
COMBINATION DRAWBAR AND SUPPORT STRUCTURE
Stanley D. Russell, Racine, Wis., assignor to J. I. Case Company, Racine, Wis., a corporation
Original application April 19, 1941, Serial No. 389,396. Divided and this application November 11, 1944, Serial No. 563,040
3 Claims. (Cl. 280—33.44)



1. In a baler having a body portion the combination of a front platform including spaced beam members and a vertically extending plate secured therebetween and projecting beyond the margins thereof, means on the plate for attaching the draw bar of a propelling vehicle and an upwardly open U-shaped stand element swingably mounted on the plate and having opposed side portions engaging opposite surfaces of said plate, stop means on the plate, said stand element being swingable downwardly from an upper inoperative position through a vertical position to a downwardly inclined position resting against said stop means whereby the weight of the baler tends to further swing said stand element, said stop portion being positioned to be engaged by said stand element to prevent further swinging of said stand element.

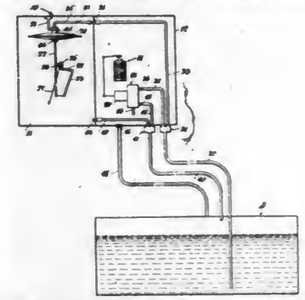
2,455,196
AIR CONDITIONING
Walter M. Simpson, Evansville, Ind., assignor to Servel, Inc., New York, N. Y., a corporation of Delaware
Application February 18, 1947, Serial No. 729,344
6 Claims. (Cl. 230—133)

1. In an air conditioner, a conditioning chamber having an opening therein, an air directing casing in the conditioning chamber having an outlet duct projecting through the opening and a laterally extending cover plate overlying the conditioning chamber at the sides of the opening, said conditioning chamber and cover plate being so constructed and arranged as to mount said air directing casing in a plurality of positions in the conditioning chamber so that its outlet duct may project through the opening in different directions, common means for attaching the cover plate to the conditioning chamber in any of its plurality of positions, and means to deliver air from said conditioning chamber through said air directing casing.

2,455,197
MATERIAL SUPPORTING PALLET
Franklin Stemple Sullivan, Farmington, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application May 9, 1946, Serial No. 668,412
5 Claims. (Cl. 248—120)

2. A load supporting pallet for use with a lifter having pick-up arms, comprising a pair of plates with flat bottom open end corrugations of dimensions to take pickup-arms placed one upon the other with the corrugations running crosswise and secured together at the bottom of the channels formed by the corrugations where these channels lie together, the said flat bottoms forming the contact surface with the floor and the supporting surface for the load.

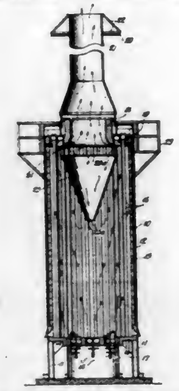
2,455,198
PROCESS OF MAKING SHAPED ARTICLES
Gordon T. Vaala, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application June 5, 1943, Serial No. 489,805
6 Claims. (Cl. 154—102)



1. The process of preparing non-thermoplastic and insoluble films which comprises milling at a temperature below 80° C. a polyvinyl acetal resin having a hydroxyl number from 121 to 165 with from 1% to an equal amount thereof of a lower alkyl ether of dimethylol urea calendering the mixture into a film and thereafter curing the film at a temperature between 80° C. and 125° C. to render it non-thermoplastic and insoluble.

2,455,199
METHOD OF BLANCHING NATURAL GUMS OR RESINS
Lawrence R. Van Allen, Chicago, Ill.
No Drawing. Application November 2, 1944, Serial No. 561,645
4 Claims. (Cl. 106—236)

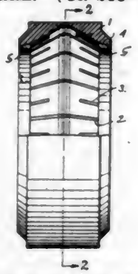
1. The method of blanching seedlac and shellac, hereinafter referred to as lac, which consists in agitating the lac in alcohol, to which alcohol has been added from 1 to 5 per cent by weight of technical sodium chlorite with relation to the lac content of the alcohol-lac solution, the total amount of alcohol used being sufficient to dissolve the lac, gradually adding a quantity of alcohol which has been acidified to about pH3 to 5, and agitating the mixture.



2,455,200
LIQUID LEVEL INDICATOR
Charles F. Wallace, Westfield, N. J., assignor to Wallace & Tiernan Products, Inc., Belleville, N. J., a corporation of New Jersey
Application January 6, 1944, Serial No. 517,180
9 Claims. (Cl. 73—299)

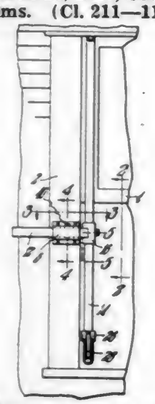
9. An apparatus for measuring the liquid in a container, comprising a sealed chamber, a pressure gauge having its pressure-responsive element mounted in said chamber, a pressure tube for connecting the pressure-responsive element of the gauge with a point below the liquid level in the container the liquid in which is to be measured, a pressure equalizing tube for connecting the sealed chamber with the space in the container above the liquid level, an air pump the pressure chamber of which is connected to each of said tubes through a restricted orifice, and a device for attachment to the container comprising a casing partitioned to provide two sealed trap chambers to one of which the pressure tube con-

nects and to the other of which the pressure equalizing tube connects, a valve body secured in an opening in the bottom of each of the trap chambers and having an air flow opening therethrough, a spring-pressed valve in each of said valve bodies, seating against a seat in the valve body, each valve being fast on a slidably guided valve rod, a tiltable weight in each trap chamber which normally seats on a seat at the top of the valve body and holds the valve open by engagement with the end of the valve rod and when it tilts or moves away from the seat permits the valve to be closed by its spring, and an immersion tube extending from the valve body of the trap chamber to which the pressure tube is connected.



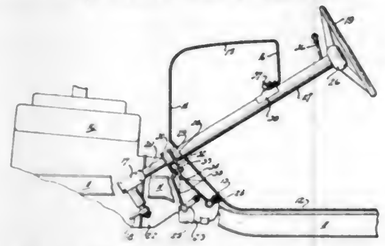
2,455,201
FURNACE BAFFLE
John S. Wallis, Darien, and John W. Throckmorton, Wilton, Conn., assignors to Petro-Chem Process Company Incorporated, a corporation of Delaware
Application January 3, 1944, Serial No. 516,754
2 Claims. (Cl. 110—97)

1. A furnace having a vertically elongated combustion chamber, heat exchange units ar-



ranged about its interior wall, a source of combustion gases in the bottom thereof, a flue outlet at the top of the combustion chamber and a funnel shaped baffle with its large end uppermost centrally positioned within the upper portion of the combustion chamber immediately adjacent the flue to provide an annular passageway thereabouts, said baffle open at top and bottom permitting downward passage of gases through the interior of the baffle and upward passage of gases exterior of the baffle.

2,455,202
PACKING
Cecil Ware, Houston, Tex.
Application March 26, 1945, Serial No. 584,871
1 Claim. (Cl. 288—2)

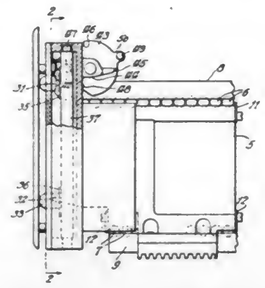


A packing unit comprising, an approximately circular skeleton formed of sheet material which is radially arched and which is provided with transverse slots across the arch and transverse marginal slots staggered with respect to the slots across the arch, resilient packing material molded about the skeleton and forming a continuous annular sealing surface on one side of the skeleton and spaced, annular, sealing surfaces on the other side of the skeleton.

2,455,203
CLOTHESLINE APPARATUS
Clifford S. West, Adams, Mass.
Application March 12, 1947, Serial No. 734,075
3 Claims. (Cl. 211—119.08)

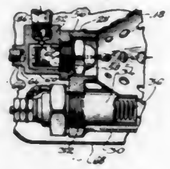
2. Apparatus for supporting an inner portion of an endless clothesline adjacent a window comprising in combination, a bracket having a longitudinal cylindrical bore and adapted to be secured to the side of a window with the longitudinal axis of said bore disposed horizontally, a cylindrical guide reciprocable and oscillatable in said bore, an elongated tubular support adapted to receive the inner portion of the clothesline extended therethrough, said support having a curved outer end and a pulley at its inner end, a bearing on the inner end of said guide in which the support is connected intermediate its ends with its longitudinal axis disposed at right angles to that of said guide, said guide provided with a continuous slot having a portion extending longitudinally from adjacent its inner end towards its outer end and a transverse portion adjacent its outer end and a locking portion extending longitudinally from said transverse portion towards the inner end thereof, and a key in said bracket disposed in said slot, said key and slot arranged to permit the support to be moved from an inoperative vertical position wherein the bearing of said guide is disposed adjacent said bracket away from said bracket and swing to horizontally disposed operative position and then moved towards said bracket into locked position.

2,455,204
CONCENTRIC STEERING COLUMN GEAR-SHIFT OPERATING MECHANISM
John J. Wharam, Dearborn, and Milton Jovanovich, Detroit, Mich., assignors to Ford Motor Company, Dearborn, Mich., a corporation of Delaware
Application October 19, 1945, Serial No. 623,248
9 Claims. (Cl. 74—484)



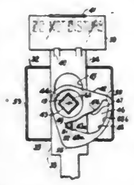
1. In an operating mechanism for a steering column gearshift employing a concentric operating member reciprocably and rotatably mounted exteriorly of the column, comprising a steering column, an operating member, an extending bracket on said member, an operating lever pivoted on said bracket and having an inner end slidably received in a channel fixed with respect to said column and extending circumferentially normal to the longitudinal axis thereof.

2,455,205
COMPOSITIONS SUITABLE FOR USE AS GAS AND POWER PRODUCING LIQUIDS
John Whetstone, West Kilbride, and James Taylor, Saltcoats, Scotland, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application July 17, 1946, Serial No. 684,242. In Great Britain August 24, 1945
1 Claim. (Cl. 52—14)



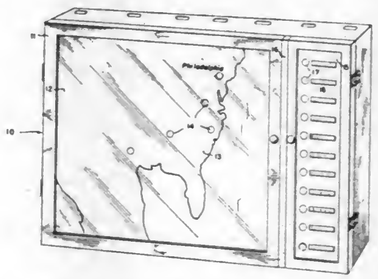
A gas and power producing composition comprising a blend of from 40 to 55 parts by weight of ammonium nitrate, from 25 to 30 parts by weight of urea, and from 20 to 25 parts by weight of ammonium nitrate freezing point depressants selected from the group consisting of ammonium sulphamate, ammonium thiosulphate, ammonium formate, ammonium acetate, ammonium thiocyanate, ammonium hypophosphite, acetamide, propionamide, and methylamine nitrate, said blend having a fusion point in the range of −10° to +30° C.

2,455,206
TENSION SHOE MOUNTING FOR PROJECTORS
Emil J. Wienke, Glen Ellyn, Ill., assignor to Motiograph, Chicago, Ill., a limited partnership
Application February 15, 1946, Serial No. 647,938
4 Claims. (Cl. 88—17)



1. A film tension shoe mount for motion picture machines comprising a frame including a front face plate, a film tension shoe, cooperating members on the plate and shoe mounting the shoe on the plate for limited movement toward and away from the plate and limited movement of the shoe in a direction parallel to the plate, said members being separable when the shoe is moved parallel to the plate to a point near one limit of its movement parallel to the plate, and a spring pressed lock normally holding the shoe at its other limit of movement parallel to the plate.

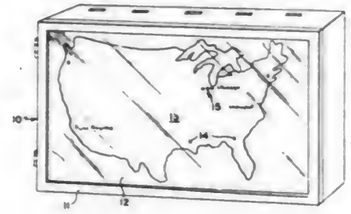
2,455,207
INTERNAL-COMBUSTION HEATER WITH NOZZLE HEATING MEANS
Lynn A. Williams, Jr., Indianapolis, Ind., assignor to Stewart-Warner Corporation, Chicago, Ill., a corporation of Virginia
Original application November 6, 1943, Serial No. 509,161. Divided and this application December 20, 1945, Serial No. 636,208
5 Claims. (Cl. 158—28)



1. An internal combustion heater of the class described, comprising a perforated cone providing a combustion chamber, means for supplying combustion air to the exterior of said cone, a nozzle indirectly connected to said cone for supplying fuel to said combustion chamber, a first part of high heat conductivity interposed between said nozzle and cone and in heat conducting relation to the small end of said cone, a resistance igniter for heating said first part, said igniter being mounted in heat transmitting relation to said first part and having a portion positioned for igniting fuel supplied to said combustion chamber, and a second part of relatively low heat conductivity connecting said nozzle with said first part.

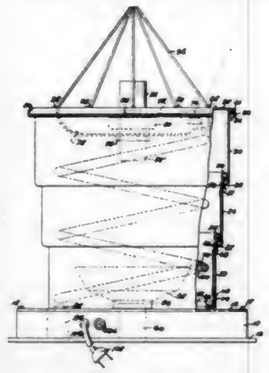
2,455,208
DOOR INDICATING DEVICE
Rudolph Wirth, New York, N. Y.
Application January 24, 1948, Serial No. 4,172
13 Claims. (Cl. 40—66)

1. In an indicating device for use with a door having a knob and a shaft connected thereto of the type where the knob and shaft are rotatable between an intermediate neutral position and two opposite extreme positions, the combination of a reciprocable bar movable between two limiting positions, a sign carried by the bar; a cam fixedly mounted on the shaft and containing one upper and one lower arcuate surface, said arcuate surfaces being at opposite sides of the cam and having their respective centers at the axis of rotation of the cam; an upper operative surface on the cam adjacent the upper arcuate surface and sloping downwardly and outwardly therefrom, a lower operative surface adjacent the lower arcuate surface and sloping upwardly and outwardly therefrom, said operative surfaces being at opposite sides of the cam; and a follower attached to the bar and engageable with said surfaces, the follower being engageable with the said upper operative cam surface when the knob is rotated from its neutral position to one of its extreme positions to operatively lower the bar, the follower being engageable with the said lower arcuate surface when the knob is returned to its neutral position to maintain the bar against movement, the follower being engageable with the lower operative surface when the knob is moved to the other of its extreme positions to operatively raise the bar, the follower being engageable with the upper arcuate surface when the knob is returned to its neutral position to maintain the bar against movement.



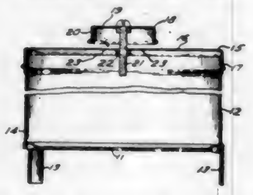
2,455,209
APPARATUS FOR DISSEMINATING WEATHER INFORMATION
Joseph B. Anderson, Washington, D. C.
Application May 26, 1947, Serial No. 750,617
2 Claims. (Cl. 177—311)

1. A weather map comprising a panel member having a map associated therewith, said panel having a plurality of areas located thereon per-



mitting vision therethrough and each designating a particular locality on the map; a plurality of weather indicating units mounted behind said panels, each of said weather indicating units positioned behind one of said areas designating a particular locality, each of said weather indicating units including a rotatably mounted weather ring having a plurality of weather indicating designations formed thereon, said designations being formed by dividing the circumferential surface of said ring into a plurality of frames, with each frame colored a color selected from a group of various colors, frames of the same color bearing different indicia, whereby the frames indicate particular states of weather and specific weather conditions; each of said weather rings being mounted in position behind its area, so that only one frame at a time registers with its area permitting its weather indication to be seen from the front of the panel; and separate operating mechanism for rotating each of said weather rings to bring any selected one of its frames into registry with its area and thereby show a particular state and specific condition of the weather of the locality behind which the weather ring is positioned.

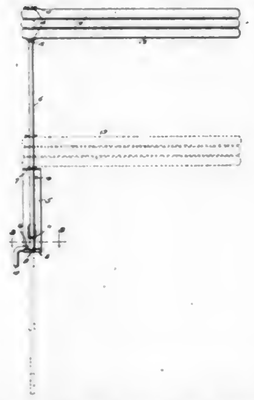
2,455,210
APPARATUS FOR DISSEMINATING WEATHER INFORMATION
Joseph B. Anderson, Washington, D. C.
Application December 23, 1947, Serial No. 793,500
2 Claims. (Cl. 177—311)



1. A weather map comprising a panel member having a map associated therewith, said panel member having a plurality of translucent areas thereon each designating a particular locality on the map; a plurality of weather indicating units mounted behind said panel, each of said units being positioned under one of said areas designating a particular locality, each of said units including a projector and two endless films each divided into a plurality of frames and so positioned that their frames when in position to be projected are superimposed, the frames of one of said films being colored, each frame of different coloring and the frames of the other film having different indicia formed thereon, the construction being such that the projected combined image of any one of the colored frames with any one of the indicia carrying frames designates a particular weather condition; each of said projectors being mounted in the rear of said panel in a position to permit the combined image of a superimposed pair of frames to be projected onto one of said translucent areas, whereby said projected image may be seen from the front of said panel; and separate means for moving each of said films in each of said indicator units to bring any selected pair of frames into superimposed position to have their combined images projected to show a particular weather condition of the particular area aligned with the projector.

2,455,211
WATER FOUNTAIN FOR POULTRY
Wesley G. Armstrong, Yardville, N. J.
Application March 1, 1946, Serial No. 651,217
5 Claims. (Cl. 119—73)

1. A device of the character described, comprising an adjustable body, a base for said body, a top for said body providing fountain means, means for supplying water to said fountain means, and means for disposing of overflow from said fountain means.

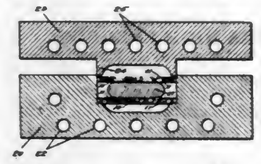


2,455,212
DISPENSER
William L. Baumner, Jr., Jenkintown, Pa.
Application April 11, 1945, Serial No. 587,732
4 Claims. (Cl. 206—0.5)

4. In a dispenser for soluble cleansing material, a container for the cleansing material, the lower portion of said container having a discharge opening for the delivery of solute material from the interior of said container, a closure for the top of said container, said closure having a horizontal surface portion provided with a plurality of openings for splash introduction of fluid solvent into the interior of said container, a cap member having a downwardly extending rim, said openings being within the confines of said rim, a stem on said cap member in threaded engagement with said closure for vertical adjustment of said cap member with respect to said horizontal surface portion and said openings.

2,455,213
TOWEL RACK
Thomas W. Bell, Washington, D. C.
Application October 29, 1945, Serial No. 625,209
2 Claims. (Cl. 211—103)

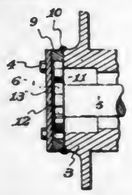
1. A towel rack comprising a bracket having upper and lower right-angled ends formed with openings, the opening in the lower right-angled end extending inwardly from the outer end thereof, an arm extending from the bracket and having an opening in alignment with the openings in the upper and lower right-angled ends of the bracket, a vertically movable rod mounted within the openings, a supporting arm pivotally mounted at the upper end of the rod, the lower end



of the rod being extended at right angles with respect to the main portion of the rod providing a handle adapted to rest on the lower right-angled end of the bracket, supporting the rod in its uppermost position, and means for preventing accidental rotary movement of the rod.

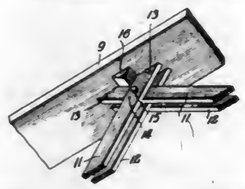
2,455,214
METHOD FOR THE PRODUCTION OF SUCH GLUCOSIDES OF POLYOXY COMPOUNDS WITH CYCLOPENTANE - POLYHYDROPHENANTHRENE RING SYSTEM AS HAVE AT LEAST ONE FREE OXY GROUP IN THE STERINE SKELETON
Ingolf Bennekou, Frederiksberg, Denmark, assignor to Lovens kemiske Fabrik v/Aug. Kongsted, Copenhagen, Denmark
No Drawing. Application May 20, 1946, Serial No. 671,116. In Denmark May 29, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires May 29, 1961
3 Claims. (Cl. 260—210)

1. Method of simultaneously saponifying and reducing an acyl glucoside of an oxy-oxo cyclo pentane poly hydro-phenanthrene compound selected from the group consisting of the oestrane, androstane, pregnane series and their dehydrogenation products, comprising treating said compound with free alkali metal and alcohol.



2,455,215
PROCESS OF MAKING MOLDED SCABBARDS
Edwin L. Beckwith, West Newton, and Charles P. MacIver, Stow, Mass., assignors to Beckwith Manufacturing Company, Dover, N. H., a corporation of New Hampshire
Continuation of application Serial No. 413,948, October 7, 1941. This application October 9, 1947, Serial No. 778,930
3 Claims. (Cl. 154—110)

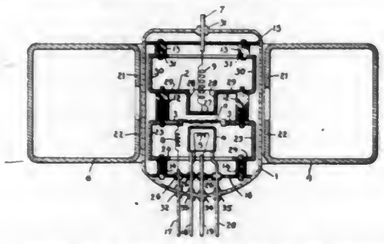
1. The process of molding scabbards from reinforced thermoplastic material, which includes the steps of assembling a pair of long narrow three-ply units, each comprising a fabric blank enclosed between two larger blanks of resinous thermoplastic sheet material which overlap each other along the side edges and beyond the end of the fabric blank, placing two of said units in spaced relation within a mold, molding the said units under heat and pressure upon a mandrel which terminates short of the end of the units, and thereby uniting the three-ply blanks and forming a rib of solid resinous plastic material about the side edges and closed end of the scab-



bard beyond the outline of the mandrel and extending outside the margins of the fabric embedded therein, and finally cooling the molded scabbard, thereby encasing the compressed fabric within a stiff shell of hardened thermoplastic material.

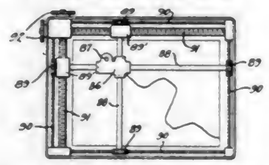
2,455,216
VEHICLE WHEEL MOUNTING
Ray E. Blanton, Tulsa, Okla.
Application December 4, 1945, Serial No. 632,650
3 Claims. (Cl. 287—53)

1. A driving connection between a wheel hub and a driven axle extending through the hub, said connection comprising a narrow splined member secured to the outer face of the hub, a narrow splined flange carried by the axle and interengaging the first mentioned splined member, said last named splined member being transversely rockable in the first mentioned splined member, a cover plate secured to the first mentioned splined member and a spring member interposed between the cover plate and the end of the axle.



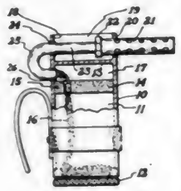
2,455,217
JOINTS OF HOLLOW BEAMS
Alberto Borges, Rio de Janeiro, Brazil
Application May 27, 1944, Serial No. 537,695
In Brazil August 20, 1943
3 Claims. (Cl. 20—0.5)

1. A beam comprising two spaced planks arranged parallel to each other and having a plurality of rhomboid-shaped openings therein, a plurality of pairs of cross members projecting in said openings and interconnecting the planks, said pairs of cross members being angularly arranged between the planks and crossing each other near each plank and forming a triangular



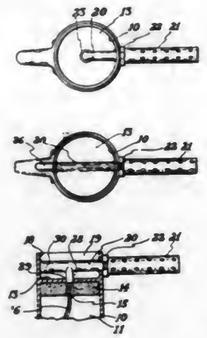
space between the crossing and the plank, and a pin passing through and connecting the cross members at each crossing, the planks being arranged so that the widths thereof are face to face in the beam.

2,455,218
ULTRA HIGH FREQUENCY TUBE
Richard S. Briggs, North Beverly, Mass., assignor to Sylvania Electric Products Inc., Salem, Mass., a corporation of Massachusetts
Application September 18, 1945, Serial No. 617,035
2 Claims. (Cl. 315—5)



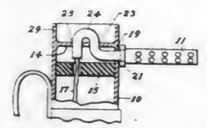
1. Ultra-high frequency apparatus including a vacuum tube comprising: a sealed cylindrical dielectric envelope; a cathode therein; a metal grid cup surrounding said cathode and having a central opening in register with said cathode; a grid over said central opening and in electrical connection with said grid cup, said grid cup having a cylindrical metal wall spaced from but close to and coaxial with said cylindrical envelope; a metal anode cup having a flat circular end close to said grid but spaced therefrom, a cylindrical portion extending from said flat circular end to an annular portion, and a cylindrical portion close to but spaced from said cylindrical envelope, all portions of said anode cup being in electrical connection with each other; and a toroidal metal cavity resonator coaxial with said envelope and having its inner wall cylindrical, with a cylindrical opening along the middle of said inner wall to divide the same into two opposite cylindrical walls close to but spaced from said cylindrical envelope, extending toward each other but having their edges spaced from each other, one of the cylindrical walls of said resonator being in register with the cylindrical metal wall of said grid cup and in capacitive relationship therewith and the other of said cylindrical walls of said resonator being in register with the cylindrical portion of said anode cup and in capacitive relationship therewith.

2,455,219
COMPASS FOLLOWER
Edwin F. Britten, Jr., Short Hills, N. J., assignor to Monroe Calculating Machine Company, Orange, N. J., a corporation of Delaware
Application June 16, 1943, Serial No. 491,257
3 Claims. (Cl. 346—8)



3. The combination with an odograph having a stylus and means for integrating the different directional components of the progressive movement of a vehicle to effect movement of said stylus and record the path of the vehicle, said integrating means comprising oppositely rotating cylinders having driven connection with the propeller shaft of the vehicle, said cylinders having circumferential series of longitudinal teeth of such graded lengths that an imaginary line traced through the ends of the teeth in the development of the cylindrical surface will give a sine curve, and axially reciprocating pinions meshing with said teeth; of means for accomplishing the axial reciprocation of said pinions at a uniform speed so that a pinion which at one end of its throw is located half way between the ends of two adjacent of said teeth will remain out of engagement with the shorter tooth for half the interval of time required for its travel back and forth between the end of one tooth and that next adjacent thereto comprising photo-electrically controlled motor-driven oscillatory hunting-type follower mechanism for magnetic compasses the motor of which has rotary driving connection with said follower mechanism, said rotary driving connection comprising movement transmission means having reversing means, said transmission having reciprocatory driving connection with said pinions, and electrically energized means controlled by said follower mechanism for operating said reversing means comprising two solenoids, said transmission comprising differential gearing having two oppositely rotating toothed controllable members and said reversing means comprising a lever opposite arms of which are adapted respectively to engage the teeth of one or alternatively the other of said controllable members and a second lever opposite arms of which have pivotal connection with the cores of said solenoids and one arm of which has operating connection with the first named lever.

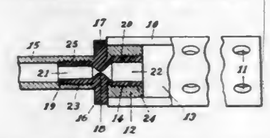
2,455,220
BLAST TORCH
Samuel C. Brody, Newton, Mass.
Application May 29, 1947, Serial No. 751,344
15 Claims. (Cl. 158—35)



1. In a torch, a pressure generating unit comprising a casing formed to provide a fuel chamber having a top closure, a pressure generating tube lying in part at least above and extending transversely and in close proximity to and in heat exchange relationship with said closure and communicating at its gas intake end with the interior of the casing, and a perforated combustion burner assembled to the gas outlet end of said tube and lying in part at least above and extending transversely and in close proximity to and in direct heat exchange relationship with said closure, so that when the torch is operating heat from said burner is continuously conducted by said tube to the interior of said casing and direct heat exchange occurs between said burner and said closure thereby further heating the casing and volatilizing the fuel therein.

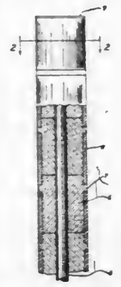
2,455,221
BLAST TORCH
Samuel C. Brody, Newton, Mass.
Application May 29, 1947, Serial No. 751,345
14 Claims. (Cl. 158—35)

5. In a torch, a pressure generating unit comprising a casing formed to provide a fuel chamber having a closure at its upper end, the casing wall being extended at its upper end to form a heating chamber disposed above and in close proximity to said closure, a pressure generating tube lying in part at least within said heating chamber above and in close proximity to said closure and in heat exchange relationship therewith and communicating at its gas intake end with said fuel chamber, and a perforated combustion burner assembled to the gas outlet end of said tube with its gas inlet end in contact with the extended portion of the casing wall so that when the torch is operating heat from said burner is continuously conducted by said tube and by said closure to the interior of said casing and direct heat exchange occurs between said burner and said casing wall.



2,455,222
BLAST TORCH
Samuel C. Brody, Newton, Mass.
Application July 23, 1947, Serial No. 762,969
6 Claims. (Cl. 158—33)

1. In a torch, a pressure generating unit comprising a casing having a side wall and formed to provide a fuel chamber provided with a closure at its upper end, a barrier within said casing and spaced from said closure to provide a gas chamber, a pressure generating tube extending transversely of the casing and lying in part at least within said gas chamber in close proximity to and in heat exchange relationship with said closure and said barrier, said tube having its gas inlet end disposed within said gas chamber and having its gas outlet end extending through the side wall of said casing, and a combustion burner assembled to the gas outlet end of said tube so that when the torch is operating heat from said burner is conducted by said tube to the interior of the casing to heat said closure and barrier and direct heat exchange occurs between said tube and the side wall of the casing.

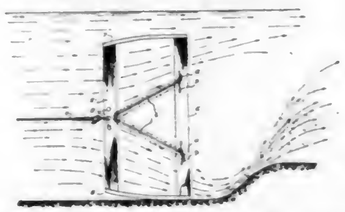


5. The torch of claim 1 in which the gas intake end of the combustion burner is in contact with the side wall of the casing and the gas inlet end of the pressure generating tube extends outwardly through the casing wall at a point substantially opposite the burner, then extends externally of the casing to provide an exposed priming area, and then re-enters the casing wall above said barrier to communicate with said gas chamber.

2,455,223
BLAST TORCH PERFORATED COMBUSTION BURNER
Samuel C. Brody, Newton, Mass.
Application July 23, 1947, Serial No. 762,970
2 Claims. (Cl. 158—33)

1. In combination, a pressure generating unit, a perforated combustion burner, and a jet unit for coupling the discharge end of said pressure generating unit to the gas intake end of said burner, said burner having within its gas intake end an elongated tubular heat conducting portion of substantial thickness as compared with the thickness of the burner wall and said heat conducting portion having a transverse end face disposed substantially flush with the transverse end face of the gas intake end of the burner and also having an axial opening of relatively small diameter as compared with the diameter of its transverse end face, and said jet unit having a sealing collar one face of which abuts the outer end face of the pressure generating unit and the opposite face of which abuts the transverse end face of said heat conducting portion of the burner to seal the same against pressure leakage and to provide a continuous unbroken heat path to the pressure generating unit.

2,455,224
ANTENNA
Louise Buchwalter, Hallsville, Ohio, and George G. Harvey, Boston, Mass., assignors, by mesne assignments, to the United States of America as represented by the Secretary of War
Application June 16, 1944, Serial No. 540,571
2 Claims. (Cl. 250—33.53)

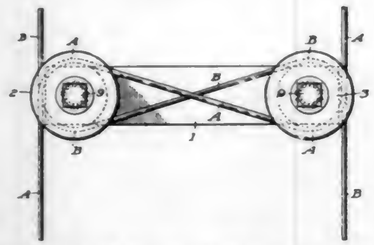


1. An antenna array comprising a coaxial cable adapted to be fed with high frequency electromagnetic waves, said cable having an inner conductor and a spaced outer conductor, a dielectric within the space between inner and outer con-

ductors, said outer conductor comprising a plurality of spaced and aligned individual metallic sections, said dielectric having uniformly spaced annular flanges on the surface thereof, said flanges cooperating to provide predetermined spacing between adjacent outer conductor sections, corresponding points on adjacent flanges being spaced a distance corresponding generally to the wave length of the conducted waves so that radiations therefrom are in phase.

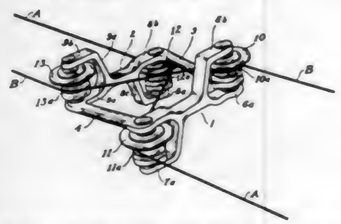
2,455,225
METHOD OF MAKING STYRENE RESIN
Samuel G. Burroughs, Pittsburgh, Pa., assignor to Pennsylvania Industrial Chemical Corporation, Clairton, Pa., a corporation of Pennsylvania
No Drawing. Application August 15, 1944, Serial No. 549,636
2 Claims. (Cl. 260—91)

1. The method of making thermoplastic styrene resin insoluble in aliphatic hydrocarbon solvents and soluble in aromatic hydrocarbon solvents by bringing finely divided weakly acid catalyst clay which is fuller's earth having a pH of about 6 and which has been dried at a temperature within the range of 200° C. to 250° C. for a period of five minutes into reactive contact with a styrene liquid having a concentration of above 80% monomeric styrene in a single reaction stage and at a temperature below the boiling point of the monomeric styrene in the proportion of 1% to 30% clay to styrene to form resin polymers of styrene, and separating the resin polymers so formed from the said catalyst clay.



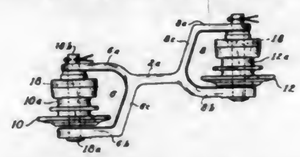
2,455,226
VACUUM SCUFFLER
Harold Cartmell and Cecil Carey, Chilliwack, British Columbia, Canada
Application April 13, 1945, Serial No. 588,190
7 Claims. (Cl. 61—5)

1. A dredging device adapted to be submerged in a body of water in the path of its current comprising a frame composed of upright rectangular end members disposed in spaced relation parallel to the flow of current, a pair of vertically spaced deflector blades extending longitudinally between and connected to said end members, said blades being inclined transversely in opposite directions with their converging edges facing the flow of the current.



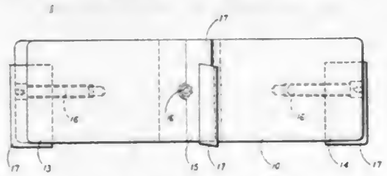
2,455,227
WIRE TRANSPOSING DEVICE
Rogers Case, Orange, N. J., assignor to Transadean Associates, Inc., New York, N. Y., a corporation of Delaware
Application April 6, 1944, Serial No. 529,806
2 Claims. (Cl. 174—33)

1. A wire-transposing and wire-spacing bracket for paired line wires comprising a free rigid base, and two identical wire-contacting and wire-training double-groove spool-form insulators rotatably mounted in longitudinally spaced alignment on the said base, the greatest distance between surfaces of the said two insulators at the bases of the grooves therein being conformed to the normal spacing of the paired line wires and the diameter of the insulators at the bases of the said grooves being substantial to give an angularly



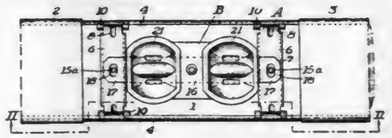
extended crossed position between the insulators to the two line wires trained each on opposed surfaces in aligned grooves of the said two insulators, the angularity of the crossed wires to the parallel reaches of the line defined by the groove diameter of the said insulators being sufficient for adjustment of the bracket along the line by rotation of the said insulators.

2,455,228
TRANSPOSITION BRACKET
Rogers Case, Orange, N. J., assignor to Transadean Associates, Inc., New York, N. Y., a corporation of Delaware
Application March 14, 1947, Serial No. 734,815
4 Claims. (Cl. 174—147)



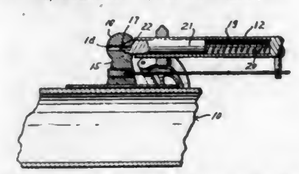
1. A wire-transposing bracket adapted for lateral insertion in a span of paired wires comprising a frame integrally cast from a "light" metal selected from the group consisting of magnesium, aluminum and their alloys and having two approximately parallel reaches terminally forked to provide in each such reach outwardly open insulator-mounting clevises oppositely offset from a median base plane, diagonally opposed clevises being similarly offset, two connecting reaches extended between the said terminally forked reaches with the ends of each connecting reach blended respectively with the upper fork of a clevis of one end reach and with the lower fork of a clevis of the other end reach, and spool-form insulators having circumferential wire-receiving grooves mounted in said clevises in diagonally aligned pairs both insulators of which have a common spacing from the median base plane of the frame, the lower fork of each upwardly offset clevis being downwardly deflected and the upper fork of each downwardly offset clevis being upwardly deflected to modify the spacing between the wire-receiving grooves of the two said diagonally aligned pairs of insulators.

2,455,229
TRANSPOSITION BRACKET
Rogers Case, Orange, N. J., assignor to Transadean Associates, Inc., New York, N. Y., a corporation of Delaware
Application March 14, 1947, Serial No. 734,816
8 Claims. (Cl. 174—33)



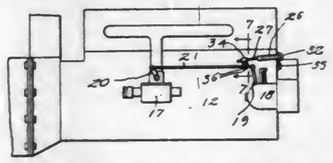
1. A wire-transposing bracket for fixed mounting on a supporting structure comprising a frame integrally cast from a "light" metal selected from the group consisting of magnesium, aluminum, and their alloys and having two transverse reaches with lower regions providing a base for engagement with the supporting structure and two legs of unequal length and included in the lower forks of four clevises, the longer and shorter legs of the two transverse reaches being staggered relatively in the frame structure, two reaches extended between the said transverse reaches and terminally forked at both ends of each with each lower fork blended with an upwardly extended leg of a transverse reach and with their upper forks arranged in vertical alignment with the said lower forks, to provide four outwardly open insulator-mounting clevises in diagonal pairs with the clevises of one diagonal pair at a different level than the clevises of the other diagonal pair, and spool-form insulators rotatably mounted in said clevises with the wire-receiving grooves of one diagonal pair at a different level than the wire-receiving grooves of the other diagonal pair for the relative spacing of wires trained respectively on the said diagonally arranged pairs of insulators and crossed within the bounds of the frame.

2,455,230
MILLING TOOL
Louis F. Catlin, Sr., Raymond Rourke, and Louis F. Catlin, Jr., Shelton, Conn., assignors to Apex Tool & Cutter Company, Shelton, Conn., a corporation of Connecticut
Application June 13, 1946, Serial No. 676,462
4 Claims. (Cl. 29—105)



1. A cutting tool comprising, in combination, a body having blade recesses opening outwardly, tool bits each comprising a block of cutting material disposed in each of said recesses with one side and one end projecting therefrom, cutting edges formed along the leading edges of said side and end, a bit retaining wedge mounted in each recess, each wedge including a side shoulder having a face inclined with respect to an axially transverse plane passing through said body and engaging said bit on the side opposite said side cutting edge.

2,455,231
ELECTRICAL RACEWAY
Martin M. Clayton, Enon Valley, Pa., assignor to National Electric Products Corporation, Pittsburgh, Pa., a corporation of Delaware
Application August 17, 1945, Serial No. 610,977
4 Claims. (Cl. 174—101)



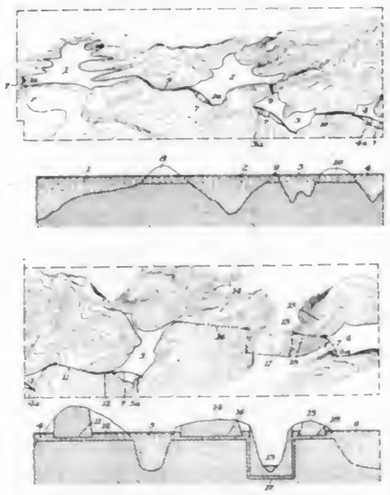
1. In an electrical raceway the combination of a channel member having yielding sidewalls provided adjacent their upper ends with outwardly bowed regions, a relatively rigid bridge structure comprising a transverse spreader member spanning across the channel within the said channel member at the outwardly bowed regions thereof and hooked ears projecting outwardly from the ends of said spreader member and interlockingly engaged with the said outwardly bowed regions in the sidewalls of the channel member, a cover structure having side members arranged embracingly and resiliently to engage the said channel member at the regions thereof inwardly supported by said bridge, and an electrical device supportingly engaged by said bridge.

2,455,232
SAXOPHONE KEY MOUNTING
Floyd E. Comer, Bristol, Ind., assignor to Buescher Band Instrument Co., Elkhart, Ind.
Application June 17, 1946, Serial No. 677,126
4 Claims. (Cl. 84—385)

1. In a key mounting of the kind described, a hinge rod, said rod formed with a concentric bore at each end thereof, a spring in each of said bores and pins slidable in each of said bores, said pins formed with a flat inner end and a rounded outer end and each of said pins formed with longitudinal bore extending inwardly from the tip of said rounded end concentric to said pin and the bore of said hinge rod.

2,455,233
AUTOMATIC THROTTLE CONTROL
Shirley Clyde Copeland, Mansfield, Tex., assignor of one-half to Earl C. Porter, Dallas, Tex.
Application August 7, 1946, Serial No. 689,005
1 Claim. (Cl. 192—.01)

In an auxiliary throttle actuator for internal combustion engined vehicles, a linkage adapted



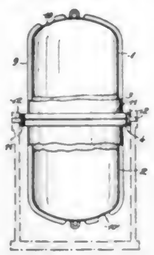
to be connected at one end thereof to the fuel control valve of the carburetor of an engine and adapted to be connected at its opposite end to the engine clutch, said linkage being constructed and arranged to actuate the fuel control valve to decelerate the engine when the clutch is moved to a released position and to accelerate the engine as the clutch is moved toward an engaged position, said linkage including a flexible tubular conduit and a flexible shaft reciprocally disposed therein and forming the connection between the fuel valve of the carburetor and the vehicle clutch, a clamp connected to the flexible shaft and having depending oppositely directed hook portions disposed in spaced-apart relationship and adapted to releasably engage the actuating rod of the fuel valve to move the rod in one direction and to permit the rod to move relatively thereto in either direction.

2,455,234

METHOD OF CONSERVING AND DELIVERING WATER

Cyril C. Crick, Pittsburgh, Pa.

Application January 15, 1946, Serial No. 641,230
16 Claims. (Cl. 61—1)



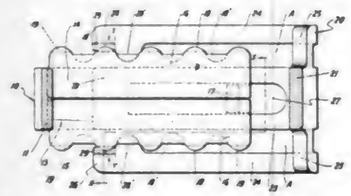
16. The method of normalizing retention and delivery of water in and from a source district containing a multiplicity of branching watercourses over long periods of varying volume and distribution of rainfall, which comprises including in an interlocked basin system watercourses of such district in such number and distribution as to provide a collection area so widespread as to receive in some localities of its extent substantial increments of rainfall not concurrently received in other localities thereof and having a great total retention capacity and utilizing said total retention capacity under such variant rainfall, by damming the said included watercourses to a height to permit bodies of water impounded therein to lie at a common surface level and distributing subtractions from and additions to any of the said impounded bodies of water to all thereof by interchanging flow between the said bodies, conveying water impounded in the basin system so created by extension and without substantial loss of gravity head to a point adapted by substantial abrupt declivity to generation of energy from delivery of water, and at such point delivering water so conveyed with abrupt loss of gravity head in the generation of hydro-electric power.

2,455,235

PROCESS AND APPARATUS FOR TREATING MILK, BLOOD, AND OTHER GLOBULAR LIQUIDS

Silvio Benigno Crespi, Milan, Italy; vested in the Attorney General of the United States

Application January 30, 1941, Serial No. 376,698
In Italy December 23, 1939
Sections 3 and 14, Public Law 690, August 8, 1946
Patent expires December 23, 1959
7 Claims. (Cl. 99—213)



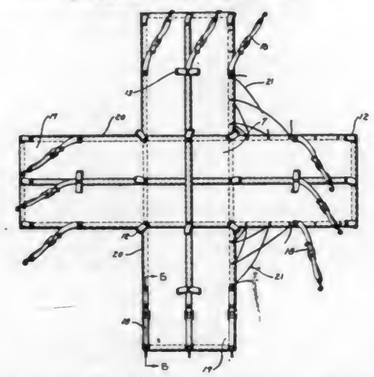
5. A process for treating liquids carrying globular bodies of the group consisting of milk and blood contained in two adjoining confined zones connected with each other by numerous narrow elongated channels, said zones being so positioned that they rotate together and when in a vertical position are located one above the other, when thus positioned filling completely the lower zone and partially the upper zone, with heated liquid, forcing under pressure a gas into the space above the liquid level, slowly rotating the joined zones through a vertical plane whereby the upper zone becomes the lower and vice versa, thereby due to gravity, the gas passes upward through the channels compressing the globules both breaking them up and purifying the liquid, repeating the rotation once or twice every twenty-four hours.

2,455,236

CLASP

Samuel Darvie, Irving Darvie, and Samuel Pearlman, New York, N. Y.

Application September 19, 1946, Serial No. 697,984
12 Claims. (Cl. 24—206)



1. A clasp for an article comprising a socket member having a strip secured at one end to the said article and a socket portion at the other end of the said strip, said socket portion having wide top and bottom panels and narrow side panels, serrations formed exteriorly in the said side panels, a slide member having a strip cooperative with the said strip of the socket member for attaching the said article and a strip slidably received within the said socket portion of the socket member, said slide strip having an elongated slot, a lug tongued out of said bottom panel of the socket portion and received in said slot, said slide member having a pair of fingers one on each side of the said serrated side panels of the socket portion and provided at their distal end portions with inwardly-directed, curved protuberances cooperative with the said serrations to maintain the said slide member in adjusted position relative to said socket member.

2,455,237

CARGO BLANKET

Frank L. Davis, College Point, N. Y.

Application October 29, 1946, Serial No. 706,316
5 Claims. (Cl. 248—361)

1. A cargo blanket comprising a section of cargo holding fabric having fold down extensions at the sides of the same and provided with means for tensioning said extensions downwardly in cargo confining relation.

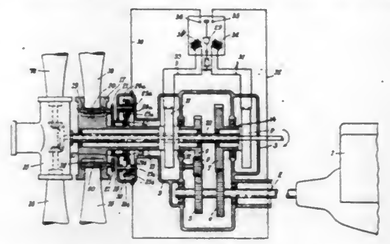
2,455,238

MANUFACTURE OF HYDROGEN PEROXIDE

Lynn H. Dawsey and Robert R. Umhoefer, Kenmore, and Carl R. Muehlhausser, Tonawanda, N. Y., assignors to Buffalo Electro-Chemical Company, Inc., Tonawanda, N. Y.

No Drawing. Application October 15, 1946, Serial No. 703,286
8 Claims. (Cl. 23—207)

1. In the production of hydrogen peroxide by first hydrogenating an alkylated anthraquinone and then oxidizing the resulting hydroquinones with the formation of hydrogen peroxide and regeneration of the quinones, the improvement which comprises employing dibutyl sebacate as a solvent in which to carry out the reactions.



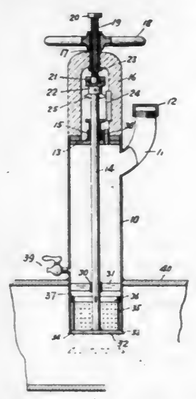
2,455,239

DEVICE FOR REGULATING THE PITCH OF TWO COUNTERROTATING COAXIAL PROPELLERS

Robert Doussain, Villerubane, France

Application March 8, 1946, Serial No. 653,197
In France March 27, 1942
2 Claims. (Cl. 170—135.6)

1. In a system for regulating automatically the pitch of one of two co-axial propellers coupled mechanically so as to rotate in opposite directions, a drive shaft, an electrical differential relay, a first driven propeller shaft driven through the intermediate of an elastic device acting on said differential relay, a second propeller shaft driven through the intermediate of a second elastic device acting on said differential relay, a pitch control device for one of said propellers, an electromagnetic clutch arrangement provided between said pitch control device and one of said propeller shafts and controlled by said differential relay, said pitch control device being regulated by the deformations of said elastic devices by means



of said differential relay in function of the transmitted torque, and a further pitch control device for the other propeller regulated in an independent way, so that when the pitch of the last-mentioned propeller is varied, the pitch of the first-mentioned propeller varies accordingly and automatically in such a manner that the torques absorbed by the two propellers remain always equal.

2,455,240

FEED VALVE

Raymond R. Dupler, Toledo, Ohio, assignor to Sun Oil Company, Philadelphia, Pa., a corporation of New Jersey

Application February 25, 1946, Serial No. 650,097
3 Claims. (Cl. 210—36)

1. A dispensing device for supplying solid material to a body of liquid in a vessel comprising a housing having an open end in communication with said vessel and permitting access to the body of liquid therein, a shaft within said housing, means to move the shaft axially of the housing and a container for material to be discharged affixed to said shaft so as to contact the liquid body on the axial movement thereof, said container comprising a perforated side wall and a solid plate forming the bottom in support of said wall, said plate providing a valve member for closing said housing on removal of the container from contact with said liquid.

2,455,241

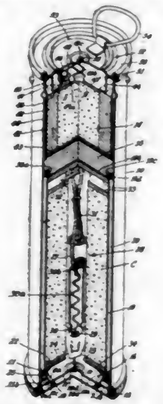
MANUFACTURE OF ETHYLHEXOIC ACID

Bruce Duval and Karl Heinrich Walter Tuerck, Banstead, England, assignors to The Distillers Company, Limited, Edinburgh, Scotland, a company of Great Britain

No Drawing. Application October 23, 1946, Serial No. 705,234. In Great Britain October 26, 1945

3 Claims. (Cl. 260—530)

1. A process for the manufacture of permanently colourless alpha-ethyl-hexoic acid which comprises partially hydrogenating alpha-ethyl-beta-propyl-acrolein to produce a mixture of alpha-ethyl hexaldehyde and unchanged alpha-ethyl-beta-propyl-acrolein, and treating said mixture with molecular oxygen, characterized in the steps of separating, by fractional distillation from the reaction mixture, an alpha-ethyl hexoic acid fraction free from both alpha-ethyl-beta-propyl acrolein and alpha-ethyl-beta-propyl acrylic acid but containing traces of heptan-3-4-dione and removing said diketone from said fraction.



2,455,242

EMERGENCY DAY AND NIGHT SIGNALING DEVICE

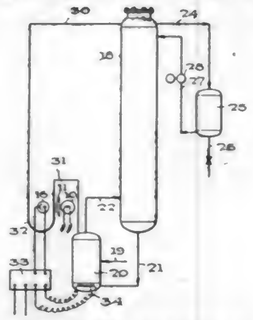
Martin Dwyer, Hewlett Harbor, Long Island, N. Y.

Application July 21, 1945, Serial No. 606,312

8 Claims. (Cl. 102—37.8)

1. In a device of the character described, an outer container, an inner imperforate container for smoke-producing compound or the like, means for exposing and simultaneously igniting the smoke-producing compound through one end of said outer container, a second imperforate inner container within said outer container for flare-producing compound, means for heat insulating the contents of the two inner containers from each other, and means for exposing and simultaneously igniting said flare-producing compound through the other end of said outer container.

2,455,243



APPARATUS FOR AUTOMATIC CONTROL OF HEAT INPUT TO STILLPOTS

Edward H. Epprecht, Cheswick, Pa., assignor to Gulf Research & Development Company, Pittsburgh, Pa., a corporation of Delaware

Application July 2, 1945, Serial No. 602,895

5 Claims. (Cl. 202—160)

3. An apparatus for the gradual automatic control of the heating current of a stillpot comprising a manometer containing an opaque liquid actuated by the differential pressure between the stillpot and the top of the still column, a light source and a photoelectric cell arranged on opposite sides of said manometer, means for projecting the light from said light source through a substantial longitudinal portion of the manometer

and thence onto said photoelectric cell, said opaque liquid being positioned so as to gradually limit the amount of light passing through the manometer in accordance with the differential pressure between the stillpot and the top of the column, and means for gradually varying the heating current in the stillpot in accordance with variations in current from said photoelectric cell.

2,455,244

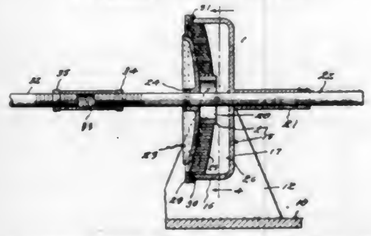
STUD FOR WELDING

Charles S. Evans, Atherton, Calif., assignor, by mesne assignments, to Morton Gregory Corporation, a corporation of Michigan

Application April 4, 1944, Serial No. 529,543

5 Claims. (Cl. 287—20.2)

1. A stud for welding comprising a rod having on the welding end a plurality of tabs converging together to provide a chamber, and a welding flux in the chamber.



2,455,245

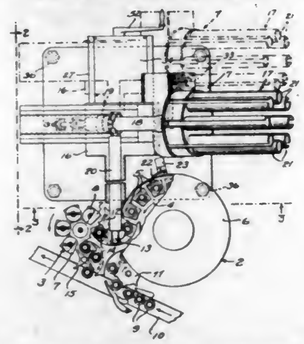
EXPANSIBLE CHAMBER MOTOR WITH VALVED FLEXIBLE PISTON

Louis Francis, Union City, N. J.

Application May 31, 1944, Serial No. 538,139

8 Claims. (Cl. 121—123)

1. A power device comprising a pressure chamber, a distortable wall at one side of said chamber having a central opening, an axial guide extending oppositely of said wall, a rod slidably engaging said guide and extending through said opening, a power head carried by said rod engageable against said wall and movable away from said wall by pressure passing through said opening, and means for moving said head toward said wall.



2,455,246

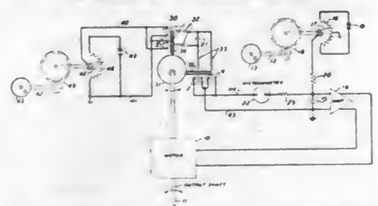
CAP APPLYING MACHINE

Carl W. Goodwin, Plainfield, N. J., and Harold W. Martin, Malverne, N. Y., assignors to American Seal-Kap Corporation of Delaware, Wilmington, Del., a corporation of Delaware

Application May 15, 1946, Serial No. 669,932

1 Claim. (Cl. 226—88.1)

A bottle capping machine comprising a base, a vertical bore in said base, a tube slidably keyed in said bore, a gear case secured to the upper end of said tube, a plate slidably mounted on said gear case, a cooperating rack and pinion for moving said plate back and forth on said gear case, a cap dispensing and conditioning mechanism carried by said plate, a screw shaft rotatably supported in the upper end of said tube with the upper end thereof extending into said gear case, a nut through which said screw shaft extends rigidly secured to said base within said bore, a bevel gear keyed to the upper end of said screw shaft, a cooperating gear keyed to a shaft rotatably mounted in said gear case and meshing with said bevel gear, and means for rotating said shaft to raise and lower said tube within said bore.



2,455,247

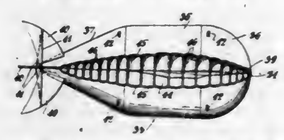
ELECTRIC MOTOR CONTROL APPARATUS

Raymond H. Griest, Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application June 12, 1945, Serial No. 598,997

3 Claims. (Cl. 318—309)

1. In combination, a motor, a first condenser of relatively large capacity, means responsive to the charge on said first condenser for controlling the energization of said motor to control its speed in accordance with the voltage across said first condenser and to control its direction of rotation in accordance with the polarity of the voltage across said first condenser, means for charging said first condenser comprising in series with said condenser a resistance means and a source of voltage the polarity and magnitude of which may be changed, a second condenser of relatively small capacity, means under control of said motor for alternately charging said second condenser and for discharging said second condenser during intervals separating successive charging periods through a circuit comprising said first condenser, the alternate charging and discharging of said second condenser being at a rate proportional to the speed of said motor, the voltages of said first and second condenser being in aiding relationship to cause the charge on said first condenser to decrease during said discharging intervals of said second condenser, thereby causing the motor to run in a direction determined by the polarity of the voltage of said source at a speed proportional to the magnitude of the voltage of said source.



2,455,248

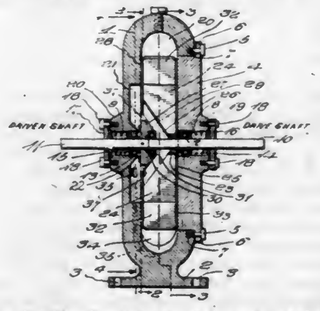
BALLOON

John A. Hagen, Glen Rock, Laurence Prendergast, Passaic, and Edmund L. Gregor, Ramsey, N. J., assignors to Molded Latex Products, Inc., Passaic, N. J., a corporation of New Jersey

Application October 25, 1944, Serial No. 560,240

3 Claims. (Cl. 244—31)

1. A balloon comprising an elongated casing of flexible material having a hemispherical head portion, a cone-shaped tail portion and a cylindrically-shaped intermediate portion, an elongated bladder of elastic material in said casing, discs of rigid material having longitudinally curved flanges projecting inwardly into said bladder at the ends thereof and held in place by cords wrapped around the outside of the ends of said bladder end hermetically binding the ends of said bladder to said flanges.

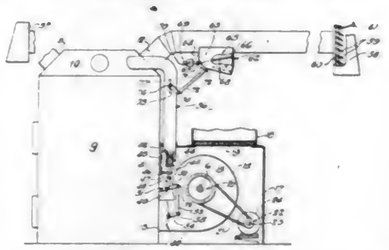


2,455,249

ROTARY HYDRAULIC COUPLING WITH AUTOMATIC SPEED CONTROL

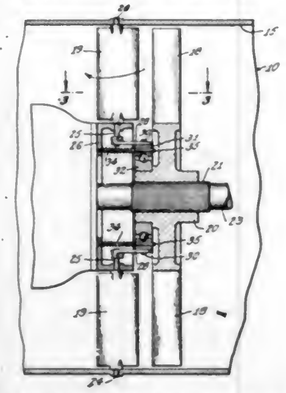
Lawrence F. Haller, San Antonio, Tex.

Application March 26, 1945, Serial No. 584,765



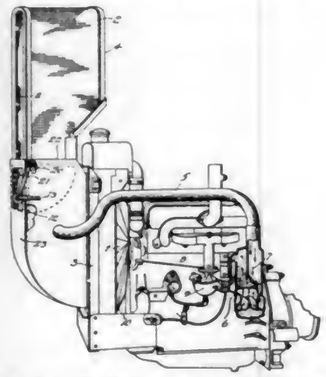
3 Claims. (Cl. 60—54)

3. In a hydraulic transmission, a casing having a main chamber and an auxiliary chamber,



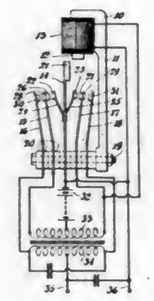
a driving impeller and a driven rotor in said main chamber, a plate carried by said rotor separating said chambers from each other and formed with openings for flow of liquid from the auxiliary chamber into the main chamber, said casing formed with a passage for return of liquid from the main chamber into the auxiliary chamber, governor arms pivoted to the rotor and movable by centrifugal force into position for blocking said openings.

2,455,250
HEATING SYSTEM
William W. Hallinan, Racine, Wis.
Application March 1, 1946, Serial No. 651,177
5 Claims. (Cl. 237—2)



1. In a heating system, the combination with a hot air furnace having a furnace housing for circulation of air to be heated by the furnace, said housing having a cold air inlet, a blower connected to said inlet, and a substantially constant speed motor for driving said blower, said housing also having a plurality of outlets and conduits leading to the various rooms to be heated, each of said rooms being provided with adjustable register openings and conduits of suitable proportion to the size of the room, whereby at the full register opening and full air circulation by the blower, each room receives a predetermined amount of heat, a damper located to throttle the supply of air by the blower to the furnace housing, and a thermostat for controlling said damper, said thermostat being connected to the damper in such manner that an increase in temperature of the thermostat, resulting in its expansion, tends to open the damper, and contraction of the thermostat, due to lack of heat and reduced temperature of the thermostat, tends to close the damper, a conduit leading from a point in the housing and conduit system, which is filled with hot air, for conducting hot air to the space surrounding the thermostat, and a pressure responsive flap pivotally mounted on one of the hot air conduits of the system, and forming a movable wall which moves responsive to pressure of the hot air in the system, said flap being mechanically connected to a damper located in the latter conduit between the thermostat and the source of hot air, the said flap being so connected to said latter damper that upon closing of a register in a room, the increase in pressure near the hot air end of the system causes the flap to move to effect a partial closure of said damper, said partial closure throttling the hot air, which influences the temperature of the thermostat, and the relative cooling of the thermostat effecting a partial closure of the damper throttling the cold air inlet, to reduce the total volume of air circulated through the system responsive to the closure of a register, so that the hot air supplied will still be in suitable volume for the remaining registers.

2,455,251
CONSTANT THRUST FAN
Donald S. Hersey, East Hartford, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application October 16, 1945, Serial No. 622,507
9 Claims. (Cl. 230—114)



8. Axial flow fan apparatus, comprising means defining a passageway through which a gaseous fluid may pass, a driving shaft, a rotary fan having constant pitch blades arranged in said passageway for controlling and boosting gaseous flow therethrough, said fan being mounted on said shaft and being constrained to rotate therewith but being movable longitudinally on said shaft, means for varying the relative velocity and direction of the air stream flowing through said passageway comprising a plurality of adjustable contravanes, means for biasing the adjustment of said contravanes, and means responsive to movement of said fan longitudinally of said shaft in response to variation in the thrust of said fan for adjusting said contravanes.

2,455,252
AIR CLEANING DEVICE FOR MOTOR VEHICLES
Sherman C. Heth, Racine, Wis., assignor to J. I. Case Company, Racine, Wis., a corporation of Wisconsin
Application December 8, 1945, Serial No. 633,717
7 Claims. (Cl. 123—119)

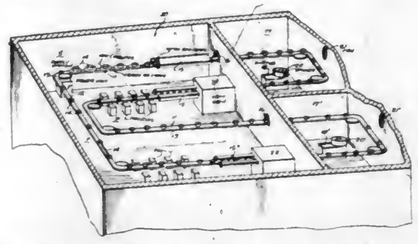
1. In a motor vehicle including an internal combustion engine, a carburetor, an air filter for said carburetor and an engine radiator, the combination comprising a fan for causing cooling air to flow through said radiator, a chaff screen for screening the cooling air flowing to said radiator, an air conduit leading to said air filter having an entrance opening in the path of the screened flow of air caused by said fan, and means for confining and directing said flow of air to insure that all the air entering said conduit has been screened, said chaff screen having a mesh small enough to prevent chaff from reaching said air filter.

2,455,253
VIBRATOR AND CIRCUIT THEREFOR
Clarence Huetten, Indianapolis, Ind., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind., a corporation of Delaware
Application April 20, 1943, Serial No. 483,714
17 Claims. (Cl. 200—90)

1. A vibratory interrupter comprising a reed, means for vibrating said reed, projections secured to the opposite faces of said reed, and spring arms mounted in spaced relation to opposite faces of said reed and carrying contacts on their free ends, the ends of a first pair of said spring arms being in co-operative spaced relation to said reed projections to be periodically engaged thereby during vibration of said reed, a second pair of spring arms having contacts thereon, in spaced co-operative relation to contacts on said first pair of arms to be alternately engaged thereby when said first arms are alternately sprung outward by said reed during its vibration.

2,455,254
ANTIOXIDANTS
Charles I. Jarowski, Springfield, and Eric T. Stiller, Philadelphia, Pa., assignors to Wyeth Incorporated, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application August 22, 1946, Serial No. 692,368
6 Claims. (Cl. 260—398.5)

1. A composition of matter comprising an oleaginous material normally subject to oxidative changes and a polyphenolic antioxidant containing a chain of five carbon atoms connecting two hydroxy phenyl radicals, said hydroxy phenyl radicals having an ether selected from the group consisting of alkyl, aryl and aralkyl ethers in a position ortho to the phenolic hydroxyl group, said chain having connected to the carbon in the 3-position a member selected from the group consisting of oxygen and hydroxy group.

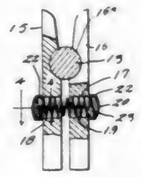


2,455,255
PROCESS OF PREPARING AN ANTIOXIDANT FROM RICE BRAN
Charles I. Jarowski, Springfield, Eric T. Stiller, Philadelphia, and Martin B. Williamson, Lansdowne, Pa., assignors to Wyeth Incorporated, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application August 24, 1946, Serial No. 692,928
6 Claims. (Cl. 252—398)

1. The process of preparing an antioxidant from rice bran, consisting essentially of defatting the rice bran with a solvent of the group consisting of hydrocarbons and chlorinated hydrocarbons, extracting the defatted material with a water-soluble, lower aliphatic solvent having 1 to 6 carbon atoms in the molecule, alkalizing the extract obtained by the addition to said extract of an alkaline compound of the group consisting of alkali metal and alkaline earth metal compounds, separating the antioxidant salts formed, acidifying to an acid reaction, extracting the acidified liquid with a water-immiscible organic solvent in which said antioxidant is soluble, and removing the solvent from the extract to obtain the desired antioxidant in a substantially pure form.

2,455,256
ANTIOXIDANT
Charles I. Jarowski, Springfield, Pa., assignor to Wyeth Incorporated, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application August 24, 1946, Serial No. 692,929
5 Claims. (Cl. 260—398.5)

1. A composition of matter comprising a material normally subject to oxidative changes containing a minor proportion, effective as an antioxidant, of diisoeugenol.



2,455,257
PLANT FOR THE RAPID MANUFACTURE OF STRAW HATS
Oliver Kohler and William Rieder, Lebanon, Ill.; said Kohler assignor to Harris Langenberg Hat Co., St. Louis, Mo., a corporation of Missouri
Application July 16, 1946, Serial No. 684,014
1 Claim. (Cl. 223—7)

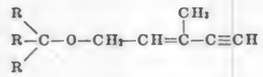
A plant for the rapid manufacture of straw hats comprising a primary room and a pair of secondary rooms, each of said secondary rooms having a common wall with said primary room, an assembly line comprising a hat conveyer system extending from said primary room through an opening in its common wall to the first of said secondary rooms, back through another opening in said same common wall to said primary room, then through an opening in its common wall to the second of said secondary rooms and then back through another opening in said last mentioned common wall to said primary room, said hat conveyer system assembly line including a plurality

of hat heat drying stations, each drying station being adjacent one of said openings, a plurality of presser stations located in said primary room and hat lacquering stations located in said secondary rooms, and exhaust means leading outwardly through a wall of each of said secondary rooms, whereby each said exhaust means serves to exhaust heated air from said primary room along said hat conveyer system through said hat drying stations and said common wall openings to said secondary rooms and thence outwardly.

2,455,258
GARMENT HANGER
Benjamin Levitin, Roselle, N. J.
Application December 17, 1945, Serial No. 635,493
2 Claims. (Cl. 24—254)

2. A spring clip comprising a pair of jaw members, disposed in confronting relation, a fulcrum member between said jaw members spaced from one end thereof disposing said jaw members in spaced relation, a jaw tensioning spring engaging through said jaw members spaced from said fulcrum, and a spring tensioning member threadably engaging said spring and abutting said jaw members for placing said spring under a predetermined tension.

2,455,259
2-METHYL -3- HYDROXY -4- HYDROXY-METHYL PYRIDINE AND ITS ACID SALTS
Gustav J. Martin, Philadelphia, and Souren Avakian, Oreland, Pa., assignors to The National Drug Company, Philadelphia, Pa., a corporation of Pennsylvania
No Drawing. Application April 28, 1947, Serial No. 744,520
3 Claims. (Cl. 260—297)



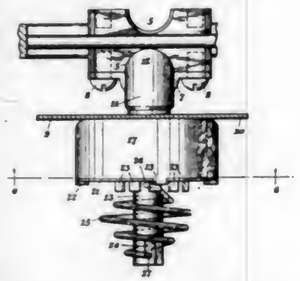
1. A compound of the group consisting of 2-methyl-3-hydroxy-4-hydroxymethyl pyridine and its acid salts.

2,455,260
REGENERATION OF ACTIVATED CARBON BY INORGANIC LIQUID TREATMENT
Gerhard Jan Meerdink, Arnhem, Netherlands, assignor to American Enka Corporation, Enka, N. C., a corporation of Delaware
No Drawing. Application January 27, 1947, Serial No. 724,713. In Germany February 16, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires February 16, 1964
2 Claims. (Cl. 252—412)

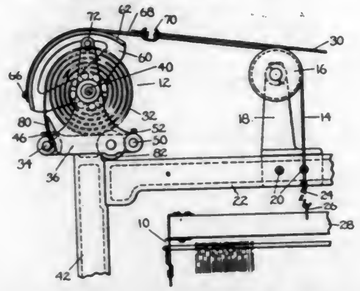
1. A process for the regeneration of activated carbon which has been contaminated with sulphur and sulphuric acid resulting from gaseous by-products incident to the manufacture of viscose rayon which consists essentially of washing the carbon with a warm aqueous bicarbonate solution to remove the sulphuric acid, rinsing the carbon at least twice in an aqueous sodium sulphite solution maintained at a temperature of about 80° C. in order to transform the sulphur into sodium thiosulphate, washing the carbon alternately with hot and cold water, and steaming, drying and cooling whereby the regeneration of the carbon is completed.

2,455,261
ETHERS OF 5-HYDROXY, 3-METHYL, PENTA-3-EN-YNE-1
Nicholas A. Milas, Belmont, Mass., assignor to Research Corporation, New York, N. Y., a corporation of New York
No Drawing. Application September 5, 1946, Serial No. 695,057
4 Claims. (Cl. 260—611)

1. As a new product a compound of the formula

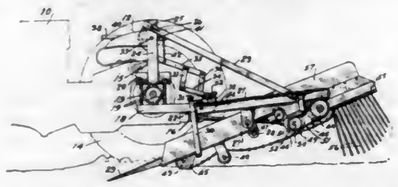


in which



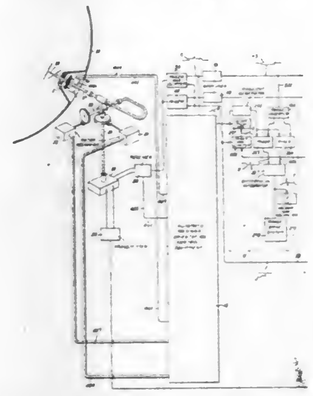
represents a member of the group consisting of the lower alkyl groups and the triphenyl methyl group.

2,455,262
SPRING PIVOT CHAIR STRUCTURE
Erving B. Morgan and Royce W. Clay, Grand Rapids, Mich., assignors to American Seating Company, Grand Rapids, Mich., a corporation of New Jersey
Application March 7, 1947, Serial No. 733,060
4 Claims. (Cl. 155—85)



2. A chair structure comprising, in combination: a standard; a seat having a lateral opening; a seat pivot member secured to the standard and having a spindle extending horizontally inwardly through said opening and said spindle having a spring-retaining bayonet slot extending from its inner extremity outwardly, then circumferentially, and then inwardly, terminating short of the inner end of the spindle to form a stop surface; and a longitudinally compressed helical spring surrounding the spindle and having its outer end connected to said seat and its inner end inserted in said bayonet slot and retained in abutment with said stop surface by the expanding force of the spring.

2,455,263
HARNESS MOTION
Edward C. Nichols, Upton, Mass., assignor to Draper Corporation, Hopedale, Mass., a corporation of Maine
Application November 18, 1944, Serial No. 564,011
8 Claims. (Cl. 139—89)



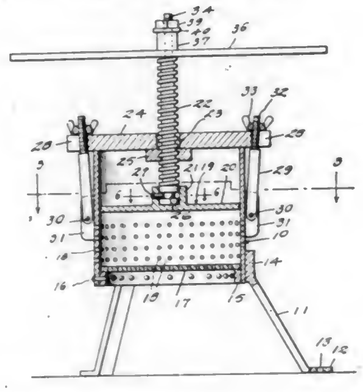
1. In a loom, a harness frame, means for moving the frame in one direction, a rotatable member mounted above said frame, flexible connections between the member and the harness frame, a spiral spring for moving the rotatable member and the harness frame in the opposite direction, a hub on said rotatable member having a plurality of slots therein selectively receiving the inner end of said spring, and means angularly adjustable relatively to said rotatable member to which the outer end of the spring is secured.

2,455,264
POTATO DIGGER ATTACHMENT FOR TRACTORS
Fred P. Noffsinger, Greeley, Colo.
Application June 21, 1945, Serial No. 600,793
4 Claims. (Cl. 55—51)

1. A potato digging attachment for tractors comprising: a relatively short rearwardly extending, T-shaped draw bar; means for securing said draw bar to a tractor so that the T-head thereof will be supported horizontally to the rear of said tractor; hinge means on each extremity of said T-head; a boom member mounted on each hinge means and extending rearwardly therefrom; a Y-shaped hanger, each of the separated extremities of said hanger being hingedly secured to one of said boom members so that said hanger will support both boom members uniformly and simultaneously; a vertical post; means for securing said post to said tractor; means securing said hanger to said post to support said boom members therefrom; a side frame member hinged to each boom member and extending downwardly and forwardly therefrom in parallel relation; a potato digging blade secured between the forward extremities of said side frame members; a lift shaft journaled on and extending between the forward extremities of said boom members; a hanger lever projecting from said lift shaft over each side frame member; hanger bars suspending each of said frame members from one of said hanger levers; and power operated means operatively connected to rotate said lift shaft so as to raise and lower said side frame members and said digging blade.

2,455,265
PULSE RADAR SYSTEM
Donald E. Norgaard, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application April 9, 1943, Serial No. 482,403
43 Claims. (Cl. 343—13)

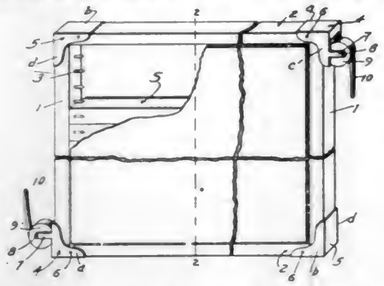
1. In combination, in an echo system, means to transmit periodic pulses and to receive echoes of each pulse in the interval prior to the next transmitted pulse, a source of oscillations having constant frequency greater than the frequency of the transmitted pulses, means to relate the interval between any transmitted pulse and its received echo to the period of said high frequency oscillations, and to produce an indication dependent on the number of said periods in said interval, and means to vary the frequency of the radiated pulses while the indication of said interval remains fixed.



2,455,266
CHILDREN'S AMUSEMENT DEVICE
Eoina Nudelman, Chicago, Ill.
Application February 17, 1948, Serial No. 8,761
3 Claims. (Cl. 46—141)

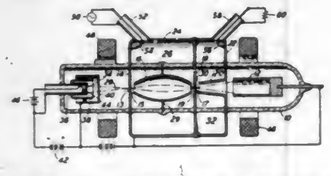
1. An amusement device comprising a figure formed to simulate a living creature, said figure comprising a forwardly extending portion, means adapted to attach said figure to the edge of a feeding bowl with said forwardly extending

portion closely overlying a portion only of said bowl, said forwardly extending portion having a simulated mouth and a passage, said passage having walls extending solely downward from said mouth through said forwardly extending portion, whereby the contents of a spoon may be emptied into said simulated mouth and fall by gravity into said feeding bowl.



2,455,267
POTATO RICER
Joseph D. Pacotto, Dorchester, Mass.
Application December 15, 1947, Serial No. 791,826
1 Claim. (Cl. 146—176)

A potato ricer comprising a cylindrical body, downwardly divergent legs fixed to said body, a ring fixed in said body at the lower end thereof and forming a seat, a perforate plate seated on said ring, a cross bar extending over the upper end of said body and formed with outwardly opening slots at the opposite ends thereof pairs of diametrically opposed ears carried by said body, a bar pivotally mounted between each pair of ears, a threaded stud carried by each of said latter bars and engageable in a slot of said cross bar, a nut threaded on said stud for tightly securing said cross bar on the upper end of said body, a screw-shaft threaded through said cross bar, a plunger slidable in said body, a reduced threaded stud extending from the upper end of said screw-shaft and formed with a flat side, an elongated shaft operating bar, a bushing carried by said operating bar formed with a bore having a flat side within which said latter stud is adapted to engage, a nut threaded on said latter stud for securing said operating bar on said screw-shaft, a bushing on said plunger, the lower end of said shaft being formed with an annular groove and engageable in said latter bushing and a set screw engaging through said latter bushing and loosely engaging in said groove rotatably securing said shaft on said plunger.

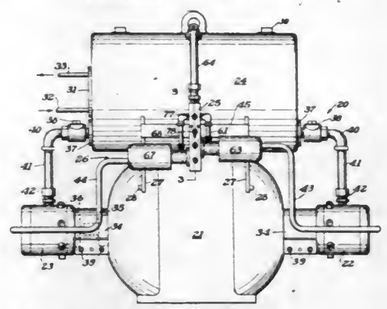


2,455,268
HOLDING FRAME FOR CORE STRIPS
Melvin W. Perry, Algoma, Wis.
Application March 13, 1945, Serial No. 582,447
2 Claims. (Cl. 144—291)

1. A frame for securing assembled core strips for plywood members, comprising a pair of spaced parallel bars, an arm secured to each end of each bar and extending at right angles therefrom toward an arm on the other bar, a second pair of spaced parallel bars disposed at right angles to and overlapping the ends of the first bars each bar of the second pair being engaged at each end against the inner side of an arm, and a force applying eccentric wheel rotatably supported upon one arm of each of the first bars and adapted

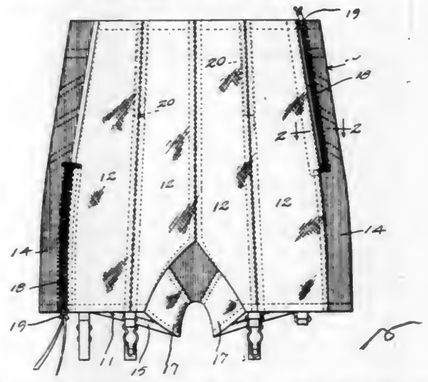
when turned in one direction to engage its peripheral face against and apply thrust to the adjacent one of the other pair of bars whereby to effect the tight drawing of the ends of the bars of the first pair against the sides of the overlapping portions of the adjacent bars of the second pair.

2,455,269
VELOCITY VARIATION APPARATUS
John R. Pierce, Millburn, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application November 17, 1942, Serial No. 465,843
9 Claims. (Cl. 315—6)



1. High frequency translating apparatus which comprises means within an enclosing envelope for projecting a stream of moving charges along a prescribed path at a substantially uniform velocity, a resonator tuned to a desired oscillation frequency, means disposed along said path and coupled to said resonator for imparting velocity variations to said stream in accordance with an input electromotive force coupled to said resonator, means disposed along said path beyond said first-named velocity variation means and similarly coupled to said resonator for imparting to said stream velocity variations which are equal in magnitude to said first-imparted velocity variations and in a given phase relation thereto and whereby current is induced in said resonator by the passage of charges past each of said velocity variation means, the distance between the two said velocity variation means along the said path substantially corresponding to said charge velocity divided by said oscillation frequency and multiplied by a charge transit angle in cycles which differs from the phase angle in cycles corresponding to said given phase relation by an odd number of half cycles, whereby input frequency components of current induced in said resonator by passage of charges past said second-named velocity variation means are equal and opposite to input frequency components of current induced in said resonator by passage of charges past said first-named velocity variation means, and means disposed along said path beyond said second-named velocity variation means for abstracting input frequency energy from density variations of said stream which are due to drift action between said first-named velocity variation means and said second-named velocity variations means.

2,455,270
AUTOMATIC STRIKING TOOL
Jean Adolphe Ravella, deceased, late of Lyon, France, by Valentine Auda, executrix, Lyon, France, assignor to Société à responsabilité limitée "Mermet & Virthner," Villeurbonne (Rhone), France, a French company
Application September 19, 1945, Serial No. 617,281
In France February 26, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires February 26, 1963
14 Claims. (Cl. 81—52.35)



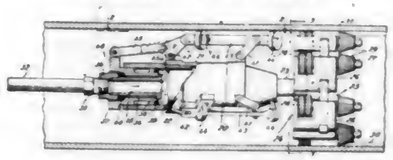
1. An automatic striking tool of the character described comprising a body having abutments at its upper and lower ends; a striking head vertically slidable at the lower end of said body; a vertical member resting on said striking head and vertically slidable therewith in said body, said member having holes; balls in the holes of said member, said balls being larger in diameter than the thickness of said member; a hammer adapted to vertically slide against one face of said member and to strike said striking head, said hammer having a groove adapted to co-act with said balls at the uppermost position of said hammer to longitudinally lock said hammer to said member; a ball-retaining part slidable against the face of said member opposed to said hammer, said ball-retaining part having depressions adapted to co-act with said balls at the lowermost position of said ball-retaining part to unlock said hammer from said member; spring means interposed between the member and the abutment at the upper end of said body and adapted to act downwardly on said hammer when said body is lowered with respect to said striking head; other spring means interposed between the abutment at the lower end of the body and the ball-retaining part to maintain said ball-retaining part at its uppermost position in which same prevents said balls from freeing said hammer under the action of said first-named spring means; and means on the body to lower said ball-retaining part against the action of said second-named spring means to cause the depressions of said part to co-act with said balls at the end of the downward stroke of said body with respect to said striking head; and means for yieldably urging the hammer into contact with the striking head.

2,455,271
HYDRAULIC APPARATUS
Thomas E. Raymond, Zanesville, Ohio, assignor to Simplex Engineering Company, Zanesville, Ohio
Application June 16, 1944, Serial No. 540,605
10 Claims. (Cl. 103—11)

1. A fluid pressure unit comprising, in combination, a high volume low pressure pump; a low volume high pressure pump; means forming a manifold chamber communicating with the outlets of said pumps; valve means in said manifold chamber dividing the same into high and low pressure sections, said low and high pressure pumps communicating with said low and high pressure sections respectively, said valve means preventing fluid flow from said high to said low pressure section; said manifold having an outlet from each of said sections; and relief valves for controlling fluid flow through said last-mentioned outlets, said relief valves being responsive to different pressures.

2,455,272
PANTY GIRDLE
Jack E. Robbins, New York, N. Y., assignor to Poirette Corsets Inc., New York, N. Y.
Application November 19, 1946, Serial No. 710,828
1 Claim. (Cl. 2—38)

A panty girdle comprising a front section, a rear section, elastic side sections connecting said front and rear sections, said girdle being provided with a slit on one side extending downwardly from the upper edge of said girdle between one of said side sections and said front section a distance slightly less than one-half the length of the abutting edges of said sections, and a second slit on the opposite side between said front section and the other of said side sections, said



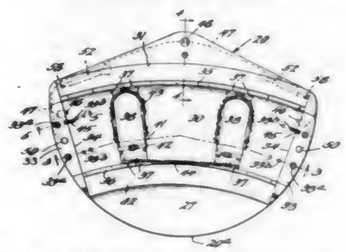
latter slit extending upwardly from the lower edge of said girdle a distance slightly less than one-half the length of the edges of said joining sections, and releasably inter-engaging means carried by the free edges of said sections for closing said slits, said side sections being connected together by a narrow intermediate horizontal portion of said front section in the open position of said slits providing for the ready expansion of the diameter of said girdle in application and removal from a body.

2,455,273

SELF-PROPELLED TUBE CLEANER HAVING ADJUSTABLE TUBE-ENGAGING MEANS

Donald E. Schott, Flushing, and George R. Bartle, Woodside, N. Y., assignors to Thomas C. Wilson, Inc., Long Island City, N. Y., a corporation of New York

Application January 18, 1947, Serial No. 722,908
8 Claims. (Cl. 15—104.12)



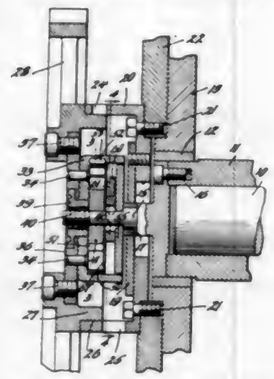
3. In tube cleaning apparatus, the combination of a motor insertable endwise into the tube to be cleaned, the motor including a casing and a rotor and developing a counter-torque in operation tending to rotate the casing on an axis lengthwise of the tube, and means for supporting the motor including a plurality of members mounted on the casing for movement toward and away from the tube and angularly spaced about the casing, connections between the members causing them to move in unison, means for moving the members, and rollers carried by the members and engageable with the inner surface of the tube, the rollers being skewed relative to the tube axis.

2,455,274

SKI TRAINER AND EXERCISER

Clarence A. Scriver, Glens Falls, N. Y.

Application September 28, 1945, Serial No. 619,210
15 Claims. (Cl. 272—57)



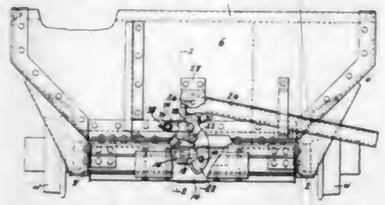
6. A skier's training and exercising machine comprising a base, a table pivotally mounted upon said base and designed to tilt laterally in both directions, a curved laterally arranged track carried by said table, and a pair of shoe plates slidable along said track, a pair of legs pivotally attached to the lateral edge portions of the table, means yieldingly urging said legs into horizontal position, and latching means for locking said legs in vertical position to support and stabilize the table, said latching means including devices operable from above the table to permit said legs to collapse against said table.

2,455,275

FUEL PUMP DRIVE FOR DIESEL ENGINES

Richard H. Sheppard, Hanover, Pa.

Application July 9, 1946, Serial No. 682,398
4 Claims. (Cl. 123—179)



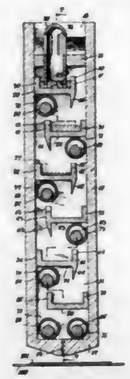
1. In a device to facilitate the starting of a Diesel engine, a fuel pump shaft, a gear coaxial therewith and adapted to be driven from the crank shaft of the engine, mechanism for connecting the gear with the shaft including a spring connection, means for winding the spring as the gear turns without rotating the shaft, and trip means for releasing the wound spring to rotate the shaft at a higher rate of rotation than the gear after the gear has rotated through a chosen angle of movement, said trip means including a centrifugally controlled member whereby the winding device is rendered inoperative when the gear reaches a chosen speed of rotation.

2,455,276

DROP BOTTOM MINE CAR LATCH

Robert A. Shields, Bloomsburg, Pa., assignor to American Car and Foundry Company, New York, N. Y., a corporation of New Jersey

Application September 20, 1946, Serial No. 698,307
11 Claims. (Cl. 105—308)



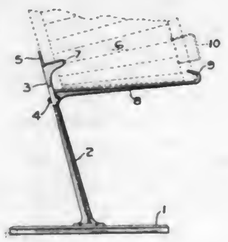
1. A drop bottom mine car having a car body and a dumping door, a latch operator pivoted to the car body, a latch hook pivoted to said latch operator and swingable relative to said car body and latch operator, means carried by said dumping door and engageable by said latch hook to retain the dumping door in closed position, and means connected to said latch hook and to said car to cause swinging of said latch hook relative to the car body at a rate greater than the rate of swinging of the latch operator relative to the car body.

2,455,277

SELENIUM BOILER

Cleveland Scudder Smith, Jr., West Orange, N. J., and Sol Blumenthal, Indianapolis, Ind.; said Smith assignor to Samuel Ruben, New Rochelle, N. Y., and said Blumenthal assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind., a corporation of Delaware

Application September 5, 1945, Serial No. 614,518
6 Claims. (Cl. 263—36)



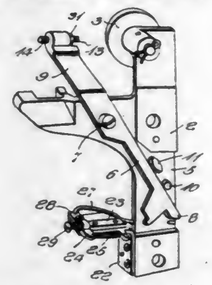
4. A vaporizer comprising a closed chamber, a plurality of horizontal trays disposed in vertically spaced relationship in said chamber, a top closure for said chamber having means to receive the material for vaporization thereon, means including a vapor lock supplying molten material through said closure means onto the topmost tray, said trays being staggered and disposed adjacent of the side walls of said chamber, a downwardly extending overflow lip on the free edge of each tray positioned to direct overflow liquid onto the tray below, a heating member disposed beneath each of said trays for heating and vaporizing the liquid thereon, and a vapor slit formed in the bottom of said chamber to discharge the vapors therefrom.

2,455,278

DISPLAY STAND FOR DISPLAYING MERCHANDISE

Raymond R. Stewart and John W. Biewen, Fairfield, Iowa, assignors to Universal Producing Company, Fairfield, Iowa, a corporation of Iowa

Application April 1, 1947, Serial No. 738,558
4 Claims. (Cl. 248—158)



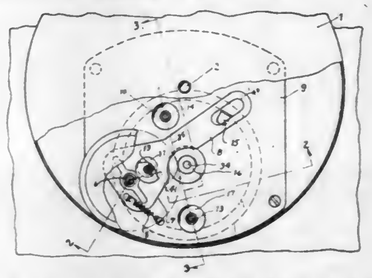
1. A display stand comprising a supporting base, a standard rising therefrom, a supporting head projecting laterally in both directions from the upper end portion of the standard, and container-holding means projecting from the head and from the standard for securely supporting a container in display positions, said means having a container-engaging hook for engaging with a container to hold it in display position.

2,455,279

LONG OR SHORT LINE ASSEMBLY ELEVATOR STOP

Wilbert J. Swatzell, El Dorado, Ark.

Application December 28, 1944, Serial No. 570,154
15 Claims. (Cl. 199—18)

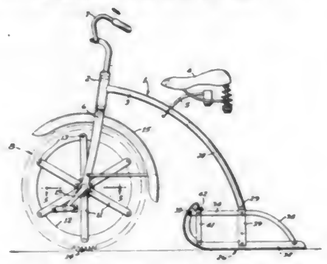


1. Typographical casting machine stops embodied with an assembling and casting machine having an assembling elevator and an assembler slide comprising, a projection on the assembling elevator, a lever swingably mounted adjacent to said assembling elevator and having one swinging end thereof normally interposed to engage the projection and stop movement of said assembling elevator, a second stop means disposed to be contacted by the end of said lever when excessive movement is imparted thereto by a too long line to extend said second stop means to engage the projection, and a lug on the assembler slide engaging with the opposite end of said swinging lever.

2,455,280

MOTOR MOUNT AND MOTOR DRIVE MEANS FOR PHONOGRAPHS

David V. Sweighert, Cleveland, Ohio, assignor to The General Industries Company, Elyria, Ohio, a corporation of Ohio

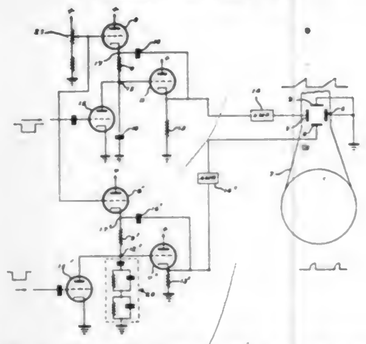


Application January 5, 1945, Serial No. 571,715
5 Claims. (Cl. 74—206)

1. In a phonograph turntable drive of the type described wherein the said turntable is frictionally driven by the engagement of the peripheral tread of the idler wheel with a pendant flange of the turntable, and wherein said idler wheel at another point in its circumference is peripherally frictionally engaged by the periphery of a motor driven driving roller of such substantially lesser

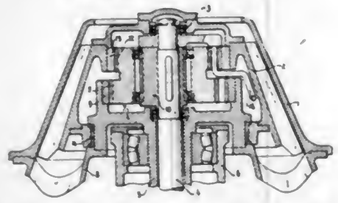
diameter than said idler wheel that said roller may be driven at a relatively high speed to effect frictional driving by said idler wheel of the turntable at a reduced rotational speed, the combination with a motor having an upwardly projecting shaft, said pendant flange, and said idler wheel, a roller carried by the upper end portion of said motor shaft, and means affording a common support adapted to maintain said roller flange and idler wheel, in substantially the same horizontal plane; means for resiliently and yieldably urging said idler wheel into predetermined pressure contact with both said roller and said turntable flange, and a plurality of supporting elements for pendantly supporting said motor from said support, said elements comprising substantially rigid means extending upwardly from said motor into said plane, substantially resilient cushioning means interconnecting said support and said rigid means, said cushioning means being so disposed as to afford a horizontal extending pivotal swinging axis for said shaft supported roller, with said swinging axis passing substantially tangentially through the inter-engaged portions of the idler wheel periphery and the roller periphery.

2,455,281
CONVERTIBLE TRICYCLE
Angelo M. Teta, Manhasset, N. Y.
Application December 6, 1946, Serial No. 714,446
1 Claim. (Cl. 280—7.12)



A child's convertible tricycle comprising a frame having a steerable driving wheel at the front, and a horizontal cross-bar extending from side to side of said frame at the rear, a wheeled running gear structure and a sled runner structure to be used interchangeably with said tricycle frame, each of said structures having a cross member on which said cross-bar is adapted to rest, spaced fastening devices to secure said cross-bar to one of said cross members, said fastening devices being adapted to produce either a firm engagement between said parts or a limited pivotal movement therebetween to enable said fasteners to be adjusted to allow a limited pivotal movement of the sled runner structure to take place.

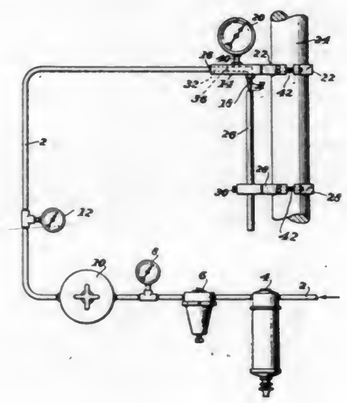
2,455,282
PROCESSES OF PREPARING INSOLUBILIZED SULFONATES AND PRODUCTS THEREOF
Jack T. Thurston, Riverside, Conn., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application September 15, 1945, Serial No. 616,647
20 Claims. (Cl. 260—67)



1. A process which comprises reacting an alpha-furyl substituted organic sulfonate with an aldehyde, gelling the resulting condensation product and heating the gel thus obtained until it is insoluble, the molal ratio of said aldehyde to said sulfonate being between 3:1 and 1:1.

2,455,283
INDICATING SYSTEM
George E. Valley, Jr., Cambridge, Mass., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War
Application November 4, 1944, Serial No. 561,990
2 Claims. (Cl. 315—24)

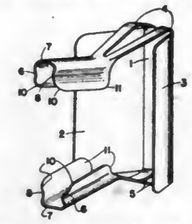
1. In a variable range radio object-locating system indicator having a cathode ray tube provided with horizontal and vertical deflecting elements, the combination of, horizontal and vertical sweep control means including resistance and capacitance elements, said means determining the sweep speeds in accordance with the rate of charge of said capacitance elements, voltage-applying means including a plurality of electron tubes for impressing charging voltages respectively on said capacitance elements, and a potentiometer for simultaneously varying the grid bias of said electron tubes thereby to effect gradual variations in said charging voltages when changing the range of said indicator.



2,455,284
CENTRIFUGAL MACHINE
Pieter van Riel, Delft, Netherlands, assignor to Machinefabriek Reineveld N. V., Delft, Netherlands, a company of the Netherlands
Application July 25, 1946, Serial No. 686,197
In the Netherlands November 16, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires November 16, 1964
3 Claims. (Cl. 210—69)

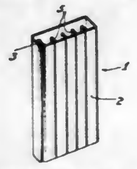
2. A centrifugal machine comprising a rotatable outer drum secured to a hollow driving shaft and comprising a scraping drum located within the outer drum and supported on a stationary shaft surrounded by said hollow shaft and on a flange of said latter shaft, said flange carrying an internal toothed rim arranged in the interior of the scraping drum closed by said flange and said scraping drum being provided in said closed interior space with an internal toothed rim, pinions meshing with said toothed rims being eccentrically and rotatably supported on said stationary shaft.

3. A centrifugal machine comprising a rotatable outer drum secured to a flange of a hollow driving shaft and comprising a scraping drum located within the outer drum and supported on said flange of said hollow shaft and on a stationary shaft surrounded by said hollow shaft, the flange of which carries an internal toothed rim arranged in the interior of the scraping drum closed by said flange and said scraping drum being provided in said closed interior space with an internal toothed rim, pinions meshing with said toothed rim being eccentrically and rotatably supported on said stationary shaft.



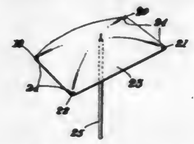
2,455,285
STRAIN GAUGE
Forest F. Versaw, Penn Township, Allegheny County, Pa., assignor to Gulf Research & Development Company, Pittsburgh, Pa., a corporation of Delaware
Application September 13, 1945, Serial No. 616,065
3 Claims. (Cl. 73—88)

2. A strain gauge for measuring stress or load in a member resulting in a change of its dimension, comprising spaced supporting fixtures rigidly secured to a member in which the strain is to be measured, a rod carried at one end by one of said fixtures, said rod being spaced from said member and extending substantially parallel with the force vector of the stress applied to said member, a nozzle carried by said other fixture, directed toward the free end of said rod axially thereof and in close proximity thereto, a conduit connecting said nozzle with a source of fluid under pressure, a constricting member formed with an orifice of fixed size mounted in said conduit inwardly of the nozzle orifice, and a pressure responsive means communicating with a chamber in said conduit which is defined by the space between said orifices.



2,455,286
ANTENNA CAP
Frank D. Werner, Kansas City, Mo., assignor to the United States of America as represented by the Secretary of the Navy
Application May 22, 1946, Serial No. 671,620
3 Claims. (Cl. 250—33.65)

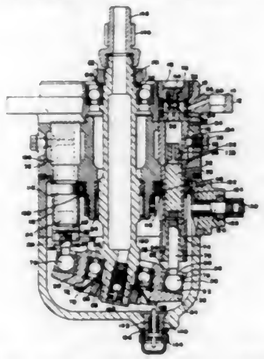
1. A detachable antenna cap adapted to be attached to the end of a wave guide comprising a pair of wings forming a dihedral angle, a panel truncating said dihedral angle, a plurality of arms attached to said panel, and resilient clips adapted to frictionally engage said wave guide carried by



said arms and constituting the sole support for said antenna cap.

2,455,287
CATHODE FOR ELECTRONIC DISCHARGE DEVICES
Howard B. Allen, Jr., Chatham, N. J., assignor to National Union Radio Corporation, Newark, N. J., a corporation of Delaware
Application September 5, 1944, Serial No. 552,721
2 Claims. (Cl. 250—27.5)

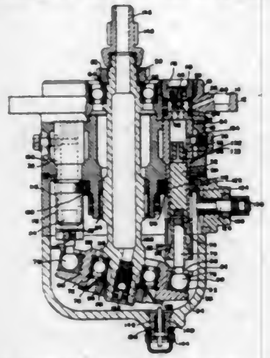
1. A cathode sleeve for indirectly heated cathodes, comprising a tubular metal member, the exterior surface of which is to be coated with electron-emissive material and the interior of which is to receive a heater element, said tubular member being substantially rectangular in cross section and having one side wall corrugated inwardly with the adjacent corrugated surfaces in contact to provide inwardly extending rigid fins for increasing the mechanical rigidity of the sleeve while maintaining the exterior surface of said wall substantially flat.



2,455,288
UMBRELLA
Octavio Jose Alvarez, New York, N. Y., assignor to Alvarez Patent Corporation, New York, N. Y.
Application September 18, 1946, Serial No. 697,683
11 Claims. (Cl. 135—20)

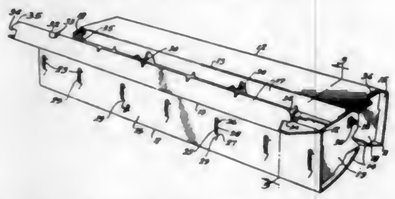
1. An umbrella comprising a supporting structure composed of a plurality of supporting rib members having outer and inner portions and connected at their inner portions to each other so as to be movable between inoperative position arranged flat in substantially one plane and operative open position with their outer portions spaced from each other; an umbrella rod constructed so as to be attachable to said supporting rib members at said connected inner portions of the same and to be easily detachable therefrom; and an umbrella cover constructed so as to be easily attachable to said outer portions of said

supporting rib members when the same are in said operative position and to be easily detachable therefrom, whenever desired.



2,455,289
FUEL INJECTION PUMP
George W. Baierlein, Springfield, Mass., assignor, by mesne assignments, to Niles-Bement-Pond Company, West Hartford, Conn., a corporation of New Jersey
Application February 27, 1946, Serial No. 650,408
5 Claims. (Cl. 103—173)

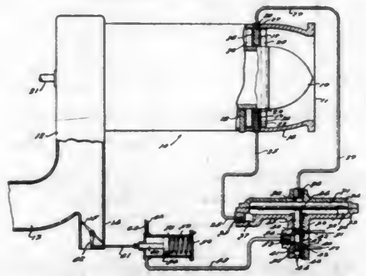
1. Injector pump mechanism, comprising a generally cylindrical housing including a supporting portion and a body portion, said body portion having a plurality of bores therethru parallel to the axis of said housing, a plurality of plungers, one plunger being reciprocable in each of said bores, the ends of said bores nearest said supporting portion being provided with discharge ports, a drive shaft extending coaxially thru both portions of said housing, means attached to said drive shaft beyond the side of said body portion opposite said supporting portion for reciprocating said plungers, first thrust bearing means associated with said reciprocating means for transmitting to said shaft axial forces due to reciprocation of said plungers, and second thrust bearing means between said shaft and said supporting portion for transmitting axial forces from said shaft to said supporting portion.



2,455,290
DISCHARGE VALVE ASSEMBLY FOR FUEL INJECTOR PUMPS
George W. Baierlein, Springfield, Mass., assignor to Niles-Bement-Pond Company, West Hartford, Conn., a corporation of New Jersey
Original application February 27, 1946, Serial No. 650,408. Divided and this application February 6, 1947, Serial No. 726,846.
2 Claims. (Cl. 103—154)

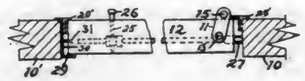
1. Injector pump mechanism, comprising a body having a bore extending thru it and a shoulder on said body within said bore, a barrel receivable in said bore and having a shoulder adapted to engage the shoulder in said bore, a recess in an external face of said barrel, a set screw insertable thru said body to engage said recess and hold said barrel against rotation, a plunger reciprocable in said barrel, a discharge valve seat member in said bore engaging the end of said barrel, a valve member engaging the face of said seat member opposite said barrel, hollow spacer means in said bore engaging said seat and surrounding said valve, a spring retainer threadedly inserted in said bore and engaging said spacer means to hold said spacer means, said seat member and said barrel in assembled rela-

tion, and a spring within said spacer and retained by said retainer and biasing said valve to closed position, said spacer being laterally apertured to permit outflow of fluid passed by said valve.



2,455,291
CELLULAR CARTON
Leon Benoit, New York, N. Y., assignor, by mesne assignments, to Robert Gair Company, Inc., New York, N. Y., a corporation of New York
Application July 4, 1945, Serial No. 603,213
4 Claims. (Cl. 229—28)

1. A cellular carton comprising two foldable blanks each having flaps hinged along one edge and extensible at right angles within the other blank to form cross walls, a side wall with cross slits corresponding to the cross walls and upper and lower parallel slits extending longitudinally of the side wall in opposite directions from the ends of the cross slits and forming yieldable portions at opposite sides of the cross slits for engaging the cross walls, said side wall having at one end of each lower slit a slit extending angularly from said lower slit to a point approximately in line with the cross slit, forming a yieldable locking tab, a hook shaped lug at the outer edge of each flap insertable through the cross slit in the side wall of the opposite blank and engaged at opposite sides by said yieldable portions and engageable with the locking tab at the bottom of the cross slit, said locking tab retaining the lug in the cross slit.

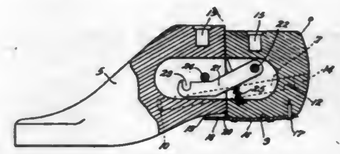


2,455,292
CONTROL APPARATUS
David M. Borden, Royal Oak, Mich., assignor to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Application April 13, 1944, Serial No. 530,926
8 Claims. (Cl. 230—115)

1. Apparatus for keeping within the pumping limit an axial flow supercharger for gas having a plurality of alternate stationary and rotary blade stages and a delivery line, the stages being generally radially coextensive with one another, said apparatus comprising means responsive to change in the relation of pressures at two points of the stationary blade stage spaced radially from one

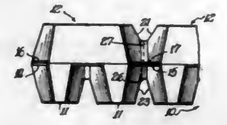
another upon approach or arrival of the pumping limit, a spill valve in the delivery line of the supercharger, and means connecting the aforesaid means and valve for causing the aforesaid change in the relation of pressures to increase the opening of the spill valve.

2,455,293
DOOR FOR VEHICLES
Clem G. Branstrator, Fort Wayne, Ind.
Application July 21, 1947, Serial No. 762,244
6 Claims. (Cl. 296—44)



5. A door structure for a vehicle consisting of a door frame, one side of said frame having a pocket and the opposite side of the frame having hinge brackets, a door having in one side thereof an oscillating shaft provided with arms hingedly connected with said brackets, a horizontal jamb shaft element longitudinally movable in said door having locking engagement with said oscillating shaft to prevent turning movement thereof in the door when the door is moved into position in the door frame for opening of the door, an operating mechanism carried by the door, including a handle and an activating arm engaged with said jamb shaft, whereby the jamb shaft element and the door are moved sequentially in opposite directions so said element contacts one of said jambs while the door enters the pocket of the other jamb, and a spring-loaded detent mechanism connecting said door and jamb shaft element to urge or deter relative movement thereof accordingly as positioned.

2,455,294
SHOE LAST
George Clausing, Portsmouth, Ohio, assignor to Vulcan Corporation, Portsmouth, Ohio
Application October 6, 1945, Serial No. 620,697
6 Claims. (Cl. 12—135)

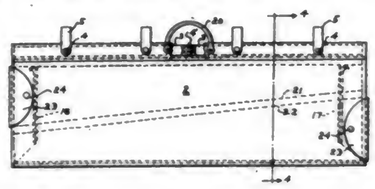


1. A shoe last comprising a fore part, a back part, and longitudinally extending inclined guide means for imparting rectilinear movement to said last parts along a path inclined at an acute angle relative to the longitudinal axis of said last upon extension, and contraction of the parts thereof.

said acute angle having legs formed by the intersection of the rectilinear path and the longitudi-

nal axis of the last which diverge in a direction rearwardly of the last.

2,455,295
CELLULAR CARTON
John W. Cox, Chicago, Ill., assignor, by mesne assignments, to Shellmar Products Corporation, Chicago, Ill., a corporation of Delaware
Application October 23, 1942, Serial No. 463,106
5 Claims. (Cl. 229—29)

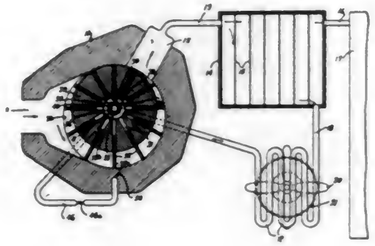


1. A molded pulp egg carton comprising a bottom having integral upstanding marginal walls, a two-walled partition integral with the bottom extending upwardly therefrom, said partition being disposed transversely of an opposed pair of the walls to define longitudinally spaced egg receiving pockets, there being an abutment on one of said opposed walls intermediate said pockets, and a cover integrally hinged to the other of said opposed walls having a paneled top and a front wall depending therefrom, said front wall being recessed and provided with an abutment adjoining the recess which is engageable with the first named abutment in the closed position of the cover, said cover top having a transverse two-walled panel-defining depression therein in line with said bottom partition which extends downwardly a portion only of the height of the cover, said partition and depression being weakened intermediate the walls thereof to enable severance of the carton into sections, the respective partition and depression walls of the thus divided sections constituting end walls for the bottom and cover thereof, said partition and depression extending vertically of the respective bottom and cover a distance sufficient to define an egg retaining and protecting wall at the severed end of each of the sections.

2,455,296
CASE FOR FIREARMS
Philip M. Current, Fort Wayne, Ind.
Application July 2, 1945, Serial No. 602,721
6 Claims. (Cl. 224—2)

2. A case for firearms comprising two flexible side walls, a bottom wall, a pair of rigid reinforcing members hingedly connected and extending the length of the walls between the upper portions thereof, means cooperating with each of the side walls to form two oppositely tapering gun-receiving pockets adjacent each side wall, and forming a storage space between them, means to releasably close the opposite ends of the storage space, each gun-receiving pocket

being open at one end and having a flap to close the same and means mounted on the



members to support the case in horizontal position.

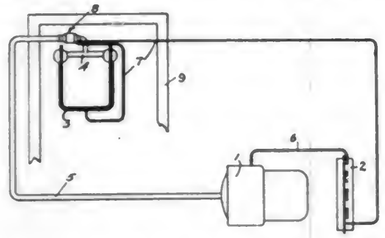
2,455,297

SLIDING VANE AIR PUMP LUBRICATION

William H. Curtis, Los Angeles, Calif., and Russell R. Curtis, Dayton, Ohio, assignors, by mesne assignments, to Thompson Products, Inc., Cleveland, Ohio, a corporation of Ohio

Application February 13, 1943, Serial No. 475,700
5 Claims. (Cl. 230—207)

1. A pump construction comprising a housing defining a pump chamber having an inlet and an outlet, a slotted rotor rotatably mounted in said chamber in eccentric relation therewith, said rotor having a central passageway communicating with the slots, vanes slidably mounted in said slots having inner ends exposed to said passageway and outer ends riding on the wall of said pumping chamber, a metering pin in said passageway defining an oil chamber directly communicating with the inner ends of only the vanes that are exposed to the outlet and defining a second oil chamber having restricted communication with said first oil chamber and directly communicating with the inner ends of the vanes not exposed to the outlet, and conduit means connecting said second oil chamber to a portion of said pump chamber at a pressure intermediate that of said inlet and outlet.



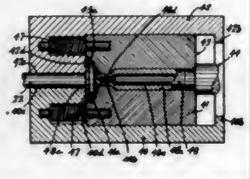
2,455,298

COMBINATION METERING DEVICE AND HEAT EXCHANGER FOR REFRIGERATORS

Martin T. Cahenzli, Jr., Chicago, Ill., assignor to The Harry Alter Company, Chicago, Ill., a corporation of Illinois

Application November 10, 1944, Serial No. 562,881
7 Claims. (Cl. 62—127)

1. A combined metering tube and heat exchanger for a refrigerating system, including a metering tube in the form of a main coil each convention of which is made up of a series of convolutions of the metering tube, and a housing containing said coil and arranged for connection in the suction line of a refrigerating system,



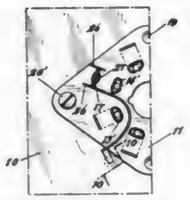
said housing having an opening therein through which both ends of said tube extend.

2,455,299

METHOD FOR MAKING VALVES

Perry E. Cooley, Cleveland, Ohio, assignor to Thompson Products, Inc., Cleveland, Ohio, a corporation of Ohio

Application April 18, 1945, Serial No. 588,922
10 Claims. (Cl. 29—156.7)



9. The method of forming hollow stemmed poppet valves which comprises locally die-pressing a solid metal rod in spaced relation from the leading end thereof to form a reduced diameter portion, piercing that portion of the rod between the reduced diameter portion and the leading end of the rod to form a hollow stem, upsetting a portion of the length of the rod on the other side of the reduced diameter portion to form a valve head, and thereafter severing the resulting headed hollow stemmed blank from the rod.

2,455,300

RADIO TUBE SOCKET

Albert W. Franklin, New York, N. Y.

Application December 23, 1944, Serial No. 569,579
2 Claims. (Cl. 173—328)

2. A radio structure of the type described, a tube socket comprising an insulating support, and a plurality of prong receiving clips mounted on said support, a shield surrounding one of said clips and conductively connected to an adjacent clip, said shield having an integral grounding tab, and a conducting support to which said socket is attached and said grounding tab is conductively anchored.

2,455,301

PLASTICIZERS FOR POLYVINYL ACETAL RESINS

Harry R. Gamrath, St. Louis, Mo., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware

No Drawing. Application May 8, 1946, Serial No. 668,324
10 Claims. (Cl. 260—31.8)

1. A plastic composition comprising a polyvinyl acetal resin and, as a modifying agent therefor, from 30 to 80 parts per 100 parts of the polyvinyl acetal resin, of an ester of the general formula:

$$X—OOC—R—COO—CH_2—COO—X$$

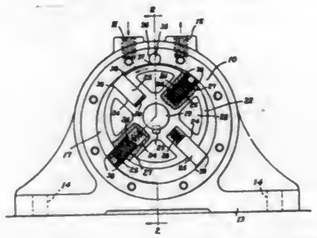
in which R is an alkylene radical having from 2 to 4 carbon atoms and X is an alkyl radical having from 1 to 8 carbon atoms.

2,455,302

EXTENSION CLASP FOR BANDS SUCH AS BRACELETS

George A. Gotti, New York, Andrew Killian, Elmhurst, and Nicholas Volpicelli, Astoria, N. Y.

Application December 16, 1947, Serial No. 792,074
4 Claims. (Cl. 24—71)



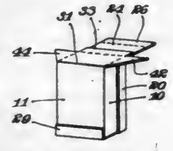
1. In a device of the class described, a housing having an open bottom, a plurality of interpivoted connector elements adapted to be disposed in said housing in folded condition, one end of said plurality pivoted to the housing, the other end projecting from the housing, a tooth on the last of said elements, a plate slidable along the bottom of the housing having rack teeth on its upper surface adapted to engage said tooth and uni-directionally latching the plate against withdrawal from the housing, the end of the plate always extending beyond the housing, spring means on the housing bearing against the plurality of elements to maintain engagement of the tooth with the rack and manipulatable means adapted when operated to move said elements to disengage said tooth and permit withdrawal of the rack.

2,455,303

ROTARY PUMP

Earl L. Grate, Salem, Ohio

Application March 5, 1945, Serial No. 580,966
2 Claims. (Cl. 103—136)



1. A rotary pump including a casing having a cylindrical pump chamber therein and adjacent intake and discharge ports at the top of the chamber only, a pair of caps closing the ends of the chamber, a shaft eccentrically located through the chamber and journalled in said caps, a cylindrical rotor fixed upon the shaft and eccentrically located within the chamber, the length of the rotor being substantially equal to the distance between the caps and one side of the rotor being in close proximity to but slightly spaced from the inner wall of the pump chamber at a point between the intake and discharge ports, there being a longitudinal opening located through the wall of the casing at a point mid-way between the intake and discharge ports, said longitudinal opening being open along one side into the pump chamber, and a sealing abutment comprising a longitudinally disposed bar tightly non-rotatably fixedly mounted within said longitudinal opening and having one side extending through the open side of the longitudinal opening and into the chamber in sealing contact with the periphery of the rotor, said longitudinal bar being of the same cross sectional shape as the longitudinal opening whereby the bar may be selectively mounted in a plurality of peripherally adjusted positions within the opening.

2,455,304

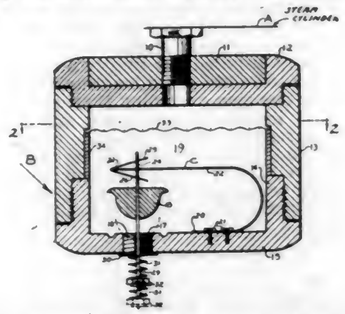
METHOD FOR SEALING CARTONS

Reynolds Guyer, St. Paul, Minn., assignor to Waldorf Paper Products Company, St. Paul, Minn., a corporation of Minnesota

Application November 9, 1944, Serial No. 562,717
16 Claims. (Cl. 93—36.8)

1. The method of sealing a tubular carton having substantially rectangularly arranged side walls, end panels issuing from two opposed side walls, a sealing flap foldably connected to one end panel, and side panels issuing from the remainder of said side walls and connected to one of said first named end panels by gusset folds, the method consisting of folding said one end panel to extend across the open end of the carton, the gusset folds overlying the side panels and the sealing flap on said one end panel lying against a portion of the inner surface of the other end panel, sealing the gusset folds to the side panels and the sealing flap of said one panel to the other end panel, holding the sealed portions until the seal is set, folding the gusset folds to overlie said one end panel, and folding the other end panel to overlie said gusset folds.

2,455,305



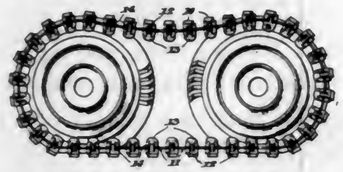
THERMOSTATIC DEVICE FOR DRAINING CONDENSATE FROM STEAM CYLINDERS AND THE LIKE

Jack A. Heva, Seattle, Wash.

Application December 21, 1945, Serial No. 636,544
4 Claims. (Cl. 121—134)

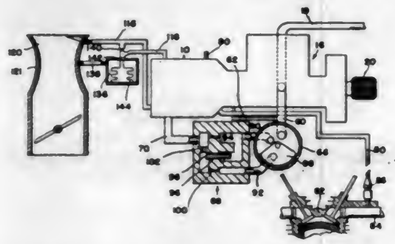
1. A device for draining condensate from steam cylinders and the like, comprising, a housing connected by a conduit below a steam cylinder and enclosing a chamber for receiving the condensate, said chamber having a port through the base thereof for discharging the condensate therefrom, a bi-metal spring supported over the floor of the chamber and having one end thereof movably disposed in spaced relation over the floor of the chamber for actuating a valve, a valve normally suspended by the spring in spaced relation over the port, and the said bi-metal spring

being thermally adapted to depress the valve and close said port when temperature in the chamber reaches a predetermined degree of heat to prevent the loss of steam from the port, a spindle extended from the valve downward through said port for outside manual adjustment of the valve to vary the distance between the spring and the valve for closing the port under varying degrees of heat,



means for balancing the valve against pull of vacuum from below the port when connected with a suction pipe, a screen mounted over the valve and port to prevent solid matter from the cylinder interfering with accurate seating of the valve, together with means for preventing salt air and deleterious vapors entering the cylinder through the conduit, when the cylinder is idle.

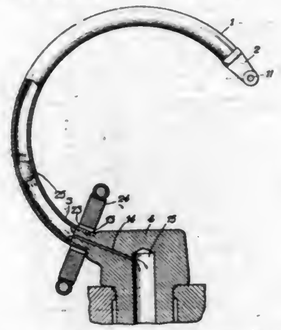
2,455,306
THERMALLY RESPONSIVE UNIT
Frank R. Higley, Cleveland Heights, Ohio, assignor to Bryant Heater Company, a corporation of Ohio
Application March 29, 1944, Serial No. 528,548
1 Claim. (Cl. 297—11)



A monometallic thermally-responsive unit of elongated form adapted for lateral deflection, comprising a piece of sheet metal having a longitudinally extending bend providing a pair of elongated members generally of strip form, disposed alongside each other in slightly spaced facing relation, said piece being perforate along a portion of said bend intermediate the ends thereof, said members having integral interconnection along said bend, longitudinally beyond each end of said perforate portion, adjacent one pair only of their edges, said unit including mounting means adjacent one end of said members to provide lateral deflection at the other end responsive to temperature differential between said members intermediate their ends.

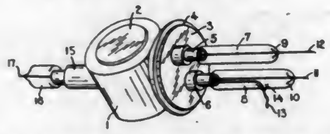
2,455,307
TRACTION DEVICE FOR WHEELED VEHICLES
Basil Dion Irvin, Ottawa, Ontario, Canada, assignor of one-half to Norman Samuel, Toronto, Ontario, Canada
Application September 11, 1945, Serial No. 615,519
In Canada August 2, 1945
13 Claims. (Cl. 305—10)

1. A traction device for attachment to resilient-tire-carrying vehicle wheels, comprising a plurality of rigid, relatively short track shoes, fixed guide means in connection with each shoe adapted to guide the shoe on tire sidewalls, and a plurality of inflexible connector members interconnecting the shoes in spaced relation, each such member extending longitudinally of the traction device, and being pivotally connected at each end to a shoe for angular movement in any direction in relation thereto, and the axis of each connector member being located closer to the axis of rotation of a wheel than the loading-carrying-tire-contacting surface of each shoe by an amount approximately equal to the tire deflection of the wheel.



2,455,308
CONTROL APPARATUS FOR INTERNAL-COMBUSTION ENGINES
Leighton Lee, II, West Hartford, Conn., assignor, by mesne assignments, to Niles-Bement-Pond Company, West Hartford, Conn., a corporation of New Jersey
Application September 24, 1945, Serial No. 618,309
19 Claims. (Cl. 123—119)

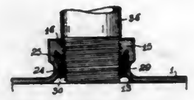
1. A fuel control system for an internal combustion engine comprising a control cylinder, a piston rotatable in said cylinder and separating two chambers between the ends of said piston and the ends of said cylinder, one of said chambers having a fuel inlet port and also having a plurality of ports in a wall of said cylinder for the discharge of fuel to the respective cylinders of the engine, said piston having a channel portion providing communication between said inlet port and the respective discharge ports during rotation of said piston, said piston being also translatable in said cylinder to vary the opening of said discharge ports, rotation of said piston being also effective to prevent sticking thereof during translation, restricted passage means for the flow of fuel to said inlet port, and means for admitting fuel to



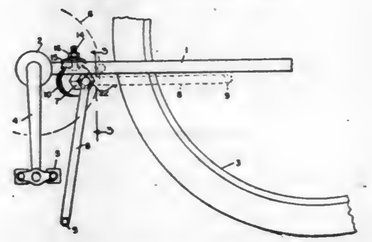
the other of said chambers from a point upstream of said restriction, whereby said piston is subjected on opposite faces to a differential pressure of fuel flowing to the engine.

2,455,309
METHOD OF SOLDERING BOURDON TUBES AND THE LIKE
Nathan Levin, Brooklyn, N. Y., assignor to Induction Heating Corp., New York, N. Y., a corporation of New York
Application September 6, 1945, Serial No. 614,734
4 Claims. (Cl. 113—112)

1. Method of soldering together a pair of objects having small orifices in such manner as to form a continuous unobstructed passageway therebetween, which comprises: disposing in a compartment completely enclosing one end of one said orifice, a solidified, non-inflammable material which rapidly vaporizes at atmospheric temperatures, and permitting said material to vaporize and escape from said compartment through said orifices and passageway while carrying out said soldering operation.



2,455,310
ULTRA HIGH FREQUENCY TUBE
Henry J. McCarthy, Danvers, Mass., assignor to Sylvania Electric Products Inc., Salem, Mass., a corporation of Massachusetts
Application December 10, 1945, Serial No. 633,967
4 Claims. (Cl. 250—27.5)

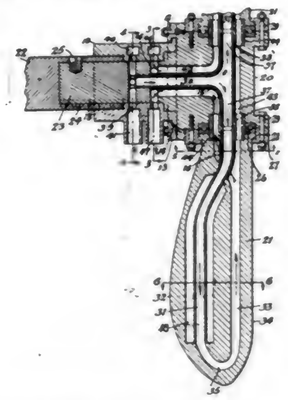


1. A vane type magnetron, a single coupling loop comprising a wire extending partway along one vane, but spaced therefrom crossing the space between vanes, and extending along an adjacent vane in the opposite direction and spaced therefrom to form an approximately U-shaped open-ended loop.

2,455,311
CONDUIT CONNECTION FOR TANKS
Ellwood H. Meyers, Brecksville, and Walter S. Gaines, Chagrin Falls, Ohio, assignors, by mesne assignments, to Republic Industries, Inc., New York, N. Y., a corporation of Delaware
Application May 18, 1944, Serial No. 536,147
6 Claims. (Cl. 285—49)

1. A conduit connection for a vessel wall, comprising an extension on the face of said wall about an opening therein, such extension providing a passage with its axis extending at an angle to the plane of said wall, an insert adherently molded and solidified in said passage, and a continuous pipe thread formed in part on said extension and in part on said molded insert.

2,455,312
KICK STAND
Homer L. Mueller, Cleveland, Ohio, assignor to The Cleveland Welding Company, Cleveland, Ohio, a corporation of Ohio
Application June 20, 1946, Serial No. 678,042
4 Claims. (Cl. 280—301)



4. In a bicycle kick stand of the type comprising a housing clamped against the bottom sides of two spaced apart bicycle frame members which form the lower rear fork thereof and a prop rotatable in said housing to and from a bicycle supporting position, the combination of a housing of non-cylindrical cross-section and of length exceeding the width of the space between said members, a U-shaped bracket non-rotatably fitted in such space and formed with coaxial openings in the leg portions thereof of cross-section complementary to that of said housing, said housing being fitted into the openings in said bracket and adjustable longitudinally thereof, and a clamp associated with said bracket and spanning the top sides of said members for drawing said housing into engagement with the bottom sides of said members.

2,455,313
HEAT EXCHANGING AIRPLANE PROPELLER
Irving B. Osofsky, Buffalo, N. Y.
Application February 19, 1945, Serial No. 578,641
5 Claims. (Cl. 257—259)

1. A heat exchanger for a blade of an airplane propeller, comprising a conduit having two longitudinal sections arranged lengthwise in said blade and communicating with each other at their outer ends and one of said sections being connected at its inner end with a heated fluid supply and forming an outflow section through which heated fluid is carried from the inner end of the blade to the outer end of the same and the other of said longitudinal sections being connected at its inner end with a discharge and adapted to carry the heated fluid from the outer end of the blade to the inner end of the same, and said outflow conduit section and its inlet connections being heat insulated from said blade to avoid transmission of

heat from the liquid flowing through said outflow conduit section to said blade and the inflow conduit section being non-heat insulated from said

blade to promote the transmission of heat from the liquid flowing through the inflow conduit section to said blade.

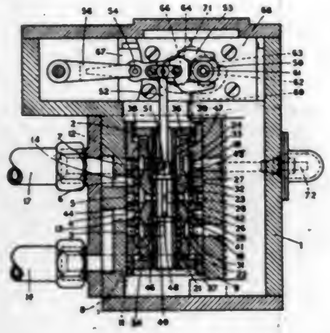
2,455,314

FRACTIONAL CONDENSATION OF PHTHALIC ANHYDRIDE

Kurt F. Pietzsch, Pittsburgh, Pa., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine

Application August 21, 1945, Serial No. 611,891
4 Claims. (Cl. 260—342.5)

1. A method for the fractional condensation of phthalic anhydride from a gas mixture containing vapors of phthalic anhydride and maleic anhydride which comprises passing said gases at a temperature of approximately 135° C. into a chamber, maintaining the gas mixture within said chamber at a temperature between about 132° C. and about 80–90° C. by indirect heat exchange with a confined stream of fluid within said chamber admitted at a temperature of about 50°–100° C. and thereby condensing in said chamber a phthalic anhydride of low maleic anhydride content in the form of light, fluffy and non-adherent particles which coalesce to form larger crystals that settle out from the gas stream as a porous mass.



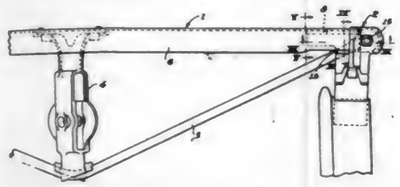
2,455,315

PILOT OPERATED HYDRAULIC VALVE AND DITHER MECHANISM THEREFOR

Alfred German Rose, Gainsborough, and Kenneth Howard Nicholls, Freshford, England

Application June 8, 1945, Serial No. 598,382
In Great Britain May 18, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires May 18, 1964
7 Claims. (Cl. 121—46.5)

1. A hydraulic valve mechanism for controlling a hydraulic apparatus, comprising a valve body formed with main pressure and exhaust ports and pressure and exhaust connecting ports arranged to conduct hydraulic medium to and from the hydraulic apparatus, a servo valve slidably mounted within said body and formed with pressure and exhaust conduits and valve closure members so arranged that the servo valve may be slid from a neutral position where said closure members are in register with said connecting ports to such positions that said pressure conduit connects said main pressure ports to either of said pressure or exhaust connecting ports, a controlling valve slidably mounted within said servo valve and forming therewith a pressure chamber in constant connection with said pressure conduit, closure members formed on said controlling valve and so arranged that said controlling valve may be slid from a neutral position where said closure members are in register with valve-actuating ports formed in said servo valve to such positions that said valve-actuating ports connect



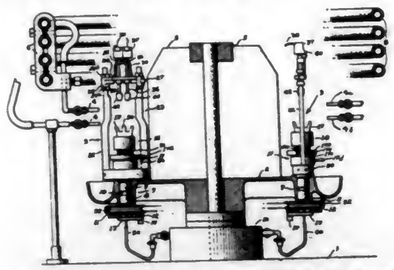
said pressure chamber to one or the other of a pair of closed chambers formed within said servo valve and said valve body, a valve controlling arm pivotally mounted in said valve body, a valve-oscillating arm pivotally mounted on said valve-controlling arm and pivotally connected to said controlling valve, and means for rapidly oscillating said valve-oscillating arm so as to cause said controlling valve to connect said pressure chamber to said closed chambers in rapid alternation.

2,455,316

BRAKE BEAM

Frederic Schaefer, Pittsburgh, Pa.

Application June 26, 1946, Serial No. 679,320
6 Claims. (Cl. 188—228)



1. A brake beam comprising a channel-like compression member having spaced top and bottom flanges joined by a web, the distance between the longitudinal edges of said flanges at the end portions of the member being less than the height of the inside of said member, a brake head disposed at each end of said member, and a tension rod connected to both heads, each head being provided with a laterally projecting tongue extending into the adjoining end of the compression member in tight engagement therewith, and said head being provided adjacent the outer end of the tongue with vertical projections outside the compression member engaging said edges of the flanges.

2,455,317

TUBE SEALING MACHINE

Gerhard G. Schneider, Maplewood, N. J., assignor to National Union Radio Corporation, Newark, N. J., a corporation of Delaware

Application August 3, 1945, Serial No. 608,786
1 Claim. (Cl. 49—2)

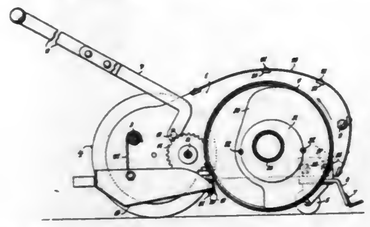
A sealing device for electron tubes of the type having a plurality of contact wires extending from the lower end and a plurality of contact wires extending from the upper end but laterally spaced from the longitudinal central axis of the tube, said device comprising, a holder for the tube said holder having a plurality of recesses to receive the lower end wires and a plurality of spaced but vertically shiftable members to register with and locate the said upper end wires, means to rotate said holder and said tube as a unit, a sealing torch for sealing the lower end of the tube, a sealing torch for simultaneously sealing the upper end of the tube while maintaining the tube in rotation, said shiftable members serving to maintain the original assembled orientation of the lower end wires with respect to the upper wires during the entire sealing and rotation of the tube.

2,455,318

SLED

Isidore Shakowitz, Philadelphia, Pa.

Application October 13, 1947, Serial No. 779,468
1 Claim. (Cl. 280—16)



A bobsled comprising a flat top member, a pair of rear runners fixed beneath said top member, a front runner assembly including a pair of front runners, each having an upturned front portion and a horizontally disposed rear portion, an inverted V-brace secured to said rear portion and a horizontal bar secured at one end thereof to said upturned front portion and at the other end to said brace, a front transverse brace secured to each of said bars intermediate the length thereof, a rear transverse brace fixedly connected at the ends thereof to each of said first named braces, an arcuate transverse member connected at the ends thereof to said other ends of said horizontal bars and having a slot extending substantially the length thereof, two forwardly converging upraised steering braces secured at the rear thereof to said horizontal bars and at their front ends to each other and to a transverse steering bar, a pivot pin extending through the forward end of said flat top member rotatably carrying said front transverse brace, a pair of vertically spaced apart forwardly extending steering bar supports pivotally carried at the rear end thereof by said pin and at the other end non-rotatably fixed to said steering bar, and a second pin fixed in said flat top member and adapted to slidably engage in the slot of said arcuate member whereby said front runners are fixed relative to each other and rotatable relative to said top member, and said first and second named pins are effective to convey the load to said front runner assembly.

2,455,319

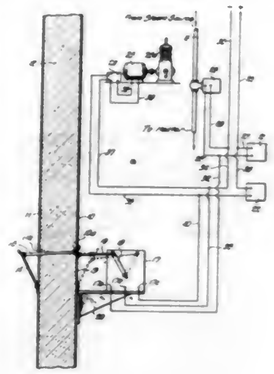
FLOOR SWEEPING MAGNET DEVICE

Roswell H. Stearns, Wauwatosa, Wis., assignor to Stearns Magnetic Mfg. Co., Milwaukee, Wis., a corporation of Wisconsin

Application June 22, 1944, Serial No. 541,601
6 Claims. (Cl. 209—215)

1. A floor sweeping magnet device comprising a frame, supporting wheels revolubly carried by said frame, means for propelling said frame, a revoluble drum, means for causing rotation of said drum in a reverse direction from the direction of rotation of said wheels when said frame travels in one direction, a plurality of magnets located within said drum and having poles in proximity to the inner periphery of said drum adjacent the bottom and at one side of said drum and being spaced from the inner periphery of said drum at the other side of said drum, and a catch pan located adjacent said other side of said drum, said device being arranged to cause the under side of said drum to travel faster over the floor in said one direction than the rate of travel of said device in the said one direction to avoid wedging of magnetic material between the drum and the floor, whereby when said device is propelled across the floor in the said one direction magnetic material is picked up on said drum and delivered to said pan by said drum.

2,455,320



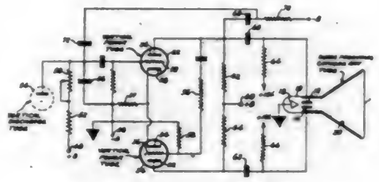
AUTOMATIC CONDENSATION CONTROL APPARATUS

Joseph F. Stephens, Kansas City, Mo., assignor to Gustin-Bacon Manufacturing Company, a corporation of Missouri

Application May 22, 1944, Serial No. 536,742
8 Claims. (Cl. 257—3)

3. In combination, a wall comprising spaced inner and outer panels each having a ventilating opening therein, movable closure plates for said openings, and co-ordinating means for simultaneously actuating said closure plates to open one and close the other, refrigerating means and heating means within the space enclosed by wall; and temperature responsive means coactive with the refrigerating and heating means and said closure plate actuating mechanism to automatically operate the refrigerating means and closure plate actuating mechanism when the temperature at the inside panel exceeds a predetermined maximum, to close the inner panel plate and open the plate in the outer panel, and to automatically op-

erate the heating means and closure plate actuator mechanism when the inside temperature falls



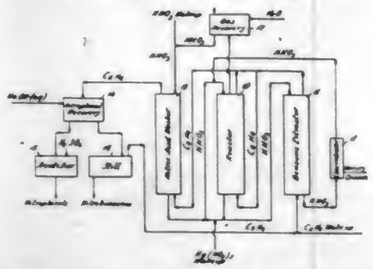
below a predetermined minimum, to close the outer panel plate and open the inner panel plate.

2,455,321

CATHODE-RAY BEAM DEFLECTION SYSTEM

William J. Stolze, Astoria, Long Island, and Earl I. Anderson, Manhasset, N. Y., assignors to Radio Corporation of America, a corporation of Delaware

Application October 28, 1947, Serial No. 782,490
7 Claims. (Cl. 315—29)



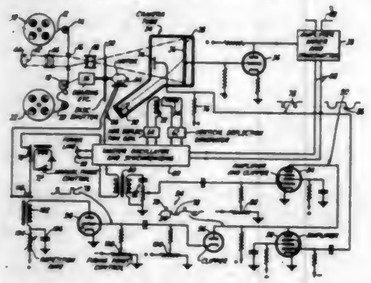
1. In a cathode ray beam deflection circuit of the electrostatic type, wherein the normal sawtooth voltage output of a push-pull amplifier as applied to the field deflection plates of a cathode ray tube is distorted by the use of coupling condensers of small capacity relative to the frequency of field deflection of the cathode ray scanning beam of said cathode ray tube, the combination of a wave-shaping network, a circuit for applying a portion of the normal sawtooth voltage output of said amplifier to said wave-shaping network to thereby produce in the sawtooth voltage output from said network a degree of distortion at least as great as that which normally appears on the said deflecting plates due to the relatively small capacity of said coupling condensers, and a further circuit for applying the distorted sawtooth voltage output from said wave-shaping network to the input of said push-pull amplifier, the distorted sawtooth voltage thus fed back being of such magnitude and phase in the output of said amplifier as to substantially cancel on said deflection plates the distortion produced by the presence of said coupling condensers.

2,455,322

OXYNITRATION OF AROMATIC COMPOUNDS

Wilber Otis Teeters, River Edge, and Max B. Mueller, Dumont, N. J., assignors to Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York

Application September 16, 1944, Serial No. 554,532
8 Claims. (Cl. 260—622)



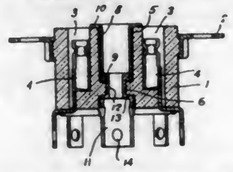
6. A process for the oxynitration of a mononuclear aromatic hydrocarbon which comprises intimately countercurrently contacting the aromatic hydrocarbon in the liquid phase with nitric acid containing from about 45% to about 55% by weight HNO_3 and from about 2% to about 10% by weight mercuric nitrate, and maintaining the reactants in intimate countercurrent contact until the aromatic phase contains at least 10% by weight nitrophenols.

2,455,323

PHASING SYSTEM

Charles L. Townsend, Yonkers, N. Y., assignor to Radio Corporation of America, a corporation of Delaware

Application June 22, 1946, Serial No. 678,547
6 Claims. (Cl. 178—7.2)



1. In a television transmitter for the transmission of images, said transmitter including a motion picture film, a camera tube having a mosaic electrode, a motion picture projector including mechanism for intermittently moving said film into position whereby optical images of individual film frame areas are projected successively from said film upon said mosaic electrode thereby to develop on said mosaic electrode electrostatic charges, proportional to the intensities of light and shadow on the film frame projected, a synchronous motor for driving said intermittent mechanism, means in said camera tube for developing a cathode ray scanning beam to scan said mosaic electrode and means to cause the said beam to scan the mosaic thereby to produce video output signals, the combination of means responsive to the successive reception of projected optical images on said mosaic electrode for deriving a first voltage variation, means for deriving a second voltage variation having a fixed time relation with the deflection of said cathode ray scanning beam, means for combining said first and second voltage variations so that a control effect is produced when said variations have a predetermined phase relationship indicating a departure from phase identity between the synchronous motor and the deflection of said cathode ray scanning beam, and means to effect a time controlled interruption of the current supplied to said synchronous driving motor under the control of the developed control effect thereby to bring about a change in phasing of said motor with respect to said beam deflection and establish phase identity therebetween.

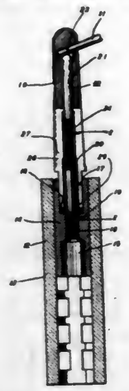
2,455,324

HOLDER FOR THERMIONIC TUBES

George Wagstaff, Long Eaton, England, assignor to United-Carr Fastener Corporation, Cambridge, Mass., a corporation of Massachusetts

Application October 14, 1943, Serial No. 506,295
In Great Britain October 14, 1942
2 Claims. (Cl. 173—328)

2. A holder for thermionic and like valves comprising a body of insulating material provided with an annular series of prong-engaging contacts and a central bore extending therethrough and provided with an inwardly extending annular rim intermediate its ends presenting axially spaced opposed shoulders and a reduced prong-receiving bore, a two-part screening contact mounted in said bore on opposite sides of said rim and comprising a female member having a flange engaging a face of said body and an apertured base engaging one of said shoulders and a male member having a flanged base bearing against an opposite shoulder and a tubular prong-receiving portion extended through said reduced bore and the apertured base of said female member, the terminal end of said tubular prong-receiving portion being upset over the apertured base of said female member to hold said screening contact parts in assembled relation and in engagement with said opposed shoulder of said central bore.



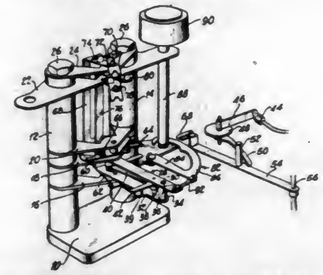
2,455,325

HEAVY-DUTY ELECTRODE HOLDER

Martin Wells, Los Angeles, Calif.

Application January 16, 1946, Serial No. 641,477
13 Claims. (Cl. 219—8)

1. In an electrode holder, the combination of: a handle having at the front end thereof an opening defined by metal wall means, and means for connecting an electrical conductor to said metal wall means; a screw member projecting forwardly from the bottom of said opening; a metal body having a threaded opening to receive said screw member, said body having rod clamping means thereon actuated by the turning of said screw member in the threads of said opening; metal connecting parts extending from said body into said opening; and means engaging said metal connecting parts and said screw, receiving force from said screw and applying the same to said metal connecting parts to force the same into pressural engagement with said metal wall means



of said handle when said screw member actuates said rod clamping means.

2,455,326

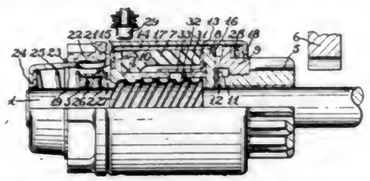
MECHANISM FOR MOVING MOVABLE MEMBERS

Hoel L. Bowditch, Sharon, Mass., assignor to The Foxboro Company, Foxboro, Mass., a corporation of Massachusetts

Application April 9, 1946, Serial No. 660,644
8 Claims. (Cl. 74—10)

1. Mechanism for moving a movable member comprising, in combination, a fixed pivot, a lever effectively connected to said member, said lever having a slot in one end thereof adapted to engage said fixed pivot and having at its other end an arcuate arm, the center of curvature of which is approximately coincident with the center of said pivot and a rotatable shaft engaging the inner edge of said arcuate arm and so positioned with respect to said pivot as to distort said lever slightly, whereby the natural resilience of said lever holds said arcuate arm against said shaft and holds the slotted end of said lever in engagement with said pivot.

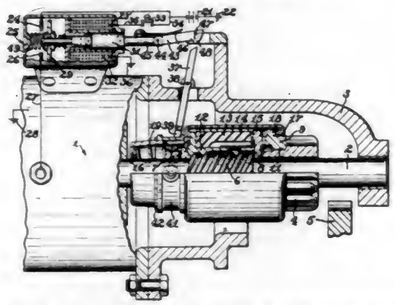
2,455,327



ENGINE STARTER GEARING

James E. Buxton, Elmira, N. Y., assignor to Bendix Aviation Corporation, a corporation of Delaware

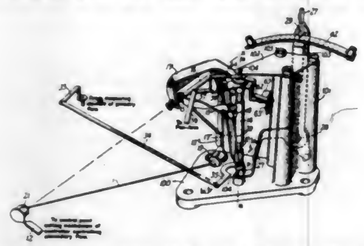
Application November 27, 1946, Serial No. 712,546
9 Claims. (Cl. 74—7)



1. In an engine starter drive, a power shaft, a screw shaft fixed thereon, a pinion slidably journalled on the power shaft for movement into and out of mesh with an engine gear, a control nut

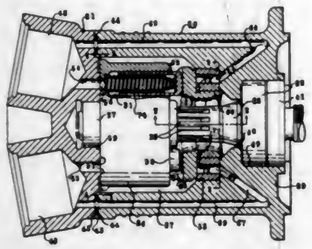
having a radial flange threaded on the screw shaft, a driving clutch member slidably journalled on the power shaft, a cylinder of elastically deformable material seated on the control nut against said flange, a barrel member surrounding the control nut and clutch member and main-

taining the elastic cylinder under compression therebetween, a driven clutch member fixed to the pinion and means including an outer barrel member having abutment means for engaging the end of the screw shaft and limiting the longitudinal movement of the pinion.



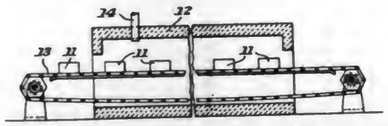
2,455,328
ENGINE STARTER GEARING AND CONTROL
James E. Buxton, Elmira, N. Y., assignor to Bendix Aviation Corporation, a corporation of Delaware
Application September 2, 1947, Serial No. 771,775
5 Claims. (Cl. 290—38)

1. In an engine starter drive a starting motor, means for energizing the starting motor including a magnetic starting switch having a reciprocable plunger, a power shaft rotated by the starting motor, a pinion slidably journalled thereon for movement into and out of mesh with a gear of an engine to be started, means for actuating the pinion from the power shaft including a control nut having a threaded connection to the power shaft, a yielding driving connection from the control nut to the pinion including an overrunning clutch; a pivoted yoke member connected to the barrel so as to swing about its pivot as the pinion moves into and out of mesh with the engine gear, and a latch member connected to the switch plunger and arranged to engage and hold the yoke member, barrel and pinion in meshing position when the starting switch is closed.



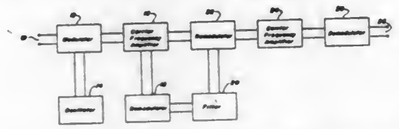
2,455,329
MECHANICAL LINKAGE
Lyman Cook, Foxboro, Mass., assignor to The Foxboro Company, Foxboro, Mass., a corporation of Massachusetts
Application November 22, 1943, Serial No. 511,381
6 Claims. (Cl. 74—1)

1. In a lever and linkage system of the character described for transmitting the motion of a first element to a second element in accordance with an adjustable ratio, a rotatable member connected to said first element and pivotally mounted to rotate about a fixed axis to positions corresponding to positions of the first element, a crank lever pivotally mounted upon said rotatable member to rotate about a movable axis angularly disposed in relation to said fixed axis, said crank having a driving arm and a positionable arm, each of which arms has a mechanical connection point, a ratio adjusting member mounted for adjustment along a path effectively parallel to said fixed axis, a first connecting member for mechanically connecting the connecting point of said positionable arm and said ratio adjusting mem-



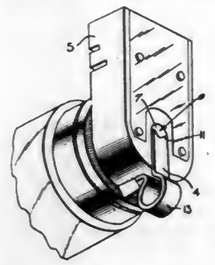
ber positively to pivot said crank about said movable axis as said ratio adjusting member is adjusted along said path but to leave said positionable arm free to revolve about the fixed axis, whereby the connecting point of said driving arm is movable toward and away from said fixed axis as said adjusting member is moved along said path but is free to rotate about said fixed axis, and second connecting means for mechanically connecting the connecting point of said driving arm to said second element whereby a given movement of said rotatable member by said first element moves the connecting point of said driving arm and the second element a proportionate amount determined by the setting of said ratio adjusting member along said path.

2,455,330
HYDRAULIC APPARATUS
William C. Denison, Jr., Delaware, Ohio
Application November 20, 1942, Serial No. 466,374
8 Claims. (Cl. 103—162)



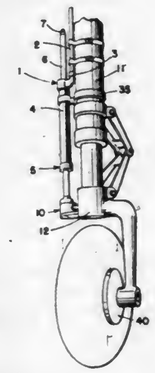
1. A fluid pressure energy translating device comprising in combination, a casing having spaced opposed bearing surfaces, said surfaces being provided with registering ports; fluid passages in said casing establishing continuous communication between the registering ports; means disposed in said casing for rotation between said bearing surfaces, said means having a rotor with a face contacting one of said bearing surfaces, said rotor having a chamber with a port opening to said face and registering with the openings in the contacting bearing surface upon rotation of said rotor; an element disposed for reciprocation in the chamber in said rotor; and an inclined thrust member engaging said element and having a surface in contact with the other of said opposed bearing surfaces.

2,455,331
METHOD OF ENAMELING
Joseph C. Eckel, Ingram, and Hugh E. Romine, Crafton, Pa.
Application October 24, 1944, Serial No. 560,183
4 Claims. (Cl. 117—53)



4. In a method of enameling in which an article is made from conventional ferrous enameling stock having a carbon content of from .010% to .25% and in which the article is approximately in its final shape, the steps including, cleaning the article with a cleaning solution and drying it to prepare the ferrous surface thereof for enameling, then heating the article to a temperature between about 1100 degrees F. and about 1400 degrees F. in a decarburizing atmosphere containing free hydrogen and water vapor and effective to inhibit oxidation of and to decarburize the ferrous metal surface, maintaining the article at such temperature and in such atmosphere for a period of time between about 5 and 30 minutes until its ferrous surface has been freed from gas-forming constituents such as iron carbide, gradually cooling the article in a non-oxidizing atmosphere substantially to atmospheric temperature, applying directly to the surface of the article a layer of light-colored finish-coat vitreous enamel frit containing an opacifier, and heating the article thus coated to a temperature sufficient to convert the frit into a coat of fused enamel.

2,455,332
WIDE-RANGE AUDIO-FREQUENCY AMPLIFIER
Donald G. C. Hare, Roslyn, N. Y., assignor to the United States of America as represented by the Secretary of the Navy
Application March 21, 1946, Serial No. 655,986
4 Claims. (Cl. 179—171)



1. In an amplifier, comprising: means for modulating a stable carrier with an input signal, including input terminals; first amplifying means for amplifying the output of said modulating means; means for demodulating a portion of the output of said first amplifying means; means for remodulating the remaining portion of the output of said first amplifying means by the output of said demodulating means; second amplifying means for amplifying the output of said remodulation means; and second demodulating means for demodulating the output of said second amplifying means, including output terminals.

2,455,333
FLUORESCENT LAMP LOCKING DEVICE
Milton A. Harris, Gloucester, Mass., assignor to Sylvania Electric Products Inc., Salem, Mass., a corporation of Massachusetts
Application September 22, 1943, Serial No. 503,590
1 Claim. (Cl. 173—328)

The combination of a holder for fluorescent lamps having pins extending from the ends thereof and comprising a body member having a front face and a rear face, said front face being provided with a centrally disposed lamp-pin receiving recess and a slot extending from the periphery of said front face to said recess, a stud extending from the rear of said body member into the lamp-pin receiving recess, said stud being hollowed from the rear end thereof and along its longitudinal axis, and a safety device comprising an arm, a flange disposed at one end of said arm and substantially perpendicular thereto and adapted to fit into the hollowed portion of said stud, and a second arm connected at one end thereof to the other end of said first-mentioned arm and extending substantially perpendicular thereto and across the slot in the front face of the lamp holder body member.

2,455,334
CONSTANT VOLUME EXPANSIBLE BRAKE LINE
Thomas C. Hill, Parkville, and William A. Schmidt, Middle River, Md., assignors to The Glenn L. Martin Company, Middle River, Md., a corporation of Maryland
Application December 30, 1944, Serial No. 570,680
1 Claim. (Cl. 244—111)

In a hydraulic braking system comprising a slidable unit having a movable fluid tight fitting formed with an aperture and provided with seal-

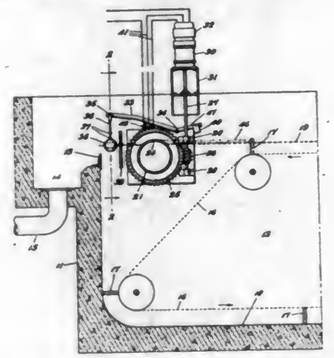
ing means, an outer tubular member formed with open ends, one of which is secured in the aperture of said fitting, an inner tubular member positioned inside of the outer member with the ends thereof extending beyond the ends of said outer tubular member, the tubular members being proportioned to provide an annular chamber between said outer and inner tubular members, a fluid pressure passage formed in said fitting extending from the exterior thereof and opening into the interior of said annular chamber, sealing means positioned within said fitting and said outer tubular member sealing the ends of said annular chamber, a closure means on one end of said inner tubular member, an orifice in the wall of said inner tubular member forming a passage from said annular chamber into the interior of said inner tubular member, a rotatable fluid tight fitting provided with an aperture to receive the open end of said inner tubular member and a passage extending from the interior of said inner tubular member to the exterior of said rotatable fitting.

2,455,335
CENTRIFUGALLY OPERATED ELECTRIC GOVERNOR
John T. Janette, Kenilworth, Ill., assignor to Janette Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application April 2, 1945, Serial No. 586,167
5 Claims. (Cl. 201—50)

1. The combination with a motor having a shaft, of a governor plate mounted on the shaft at a right angle thereto and rotating with the shaft, a contact arm pivotally mounted on the plate and vibrating in a plane parallel to the face of the plate, a spring having its outer end secured to the free end of the arm and extending toward the pivot, a contact carried by the free end of the spring, a second contact adapted to coact with said contact, means for supporting the second contact whereby it is insulated from the first contact, a stop for limiting the movement of the arm, a spring tending to urge the arm toward the stop, means for adjusting the tension on the last named spring, a governor weight and means for adjustably connecting the weight to the arm whereby it may be adjusted laterally with respect to the arm the arrangement being such that when the shaft is rotated, centrifugal force will act on the first named spring and the contact carried thereby tending to close the contacts and thereafter to vary the pressure between the contacts.

2,455,336
DELAY ACTION INITIATOR FOR EXPLOSIVE CHARGES
Elwyn Jones, Ardrossan, Scotland, assignor to Imperial Chemical Industries Limited, a corporation of Great Britain
Application July 26, 1944, Serial No. 546,666
In Great Britain February 15, 1943
1 Claim. (Cl. 102—27)

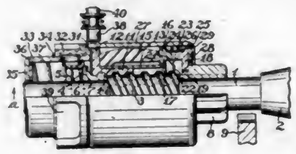
A hand operated delay action initiator comprising a detonator tube, an explosive charge therein, in juxtaposition thereto a delay tube containing a delay composition, an ignition tube containing a co-axially perforated match composition and a friction ignition member passing through said perforation, said member having one end fastened to a slidable sheath surrounding said ignition tube, a portion of said member



being frictionally ineffective, venting means in said ignition tube, said venting means being uncovered only when the effective portion of said friction member contacts said match composition, safety means to prevent accidental sliding of said sheath, and an external flame shield surrounding said ignition tube.

2,455,337
ADDITION AGENT FOR LUBRICANTS
William A. Jones, Ponca City, Okla., assignor to Continental Oil Company, Ponca City, Okla., a corporation of Delaware
No Drawing. Application August 7, 1945, Serial No. 609,489
4 Claims. (Cl. 252—56)

1. A lubricating composition comprising a major proportion of an oil of lubricating viscosity and from about .01% to10% of the product produced by contacting with a solid adsorbent a petroleum oil substantially free of naphthenes and naphthenic acids, having a S. S. U. viscosity within the range of about 50 seconds at 100° to about 200 seconds at 210° F. and a viscosity index of not less than 80, washing the adsorbent material with naphtha, dissolving from the adsorbent material the resinous material deposited thereon which is soluble in chloroform, and esterifying such recovered resinous material with an organic hydroxy compound selected from the class consisting of alcohol and phenol.



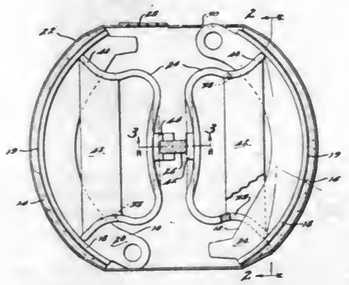
2,455,338
SCUM REMOVING APPARATUS
Arthur C. Lind, Milwaukee, Wis., assignor to Chain Belt Company, Milwaukee, Wis., a corporation of Wisconsin
Application February 12, 1946, Serial No. 647,133
9 Claims. (Cl. 210—51)

1. In apparatus for removing scum from the surface of a body of liquid in a chamber, the depth of which liquid may fluctuate with resultant variations of the surface level thereof: the combination of a scum receiver having an admission port; means for mounting said receiver in the chamber for movements whereby to vary the position of said port relative to the normal surface level of the liquid; and mechanism for automatically maintaining a substantially constant relationship between said admission port and the surface level of the body of liquid throughout all normal variations of said level, said mechanism comprising power driven means connected to the

receiver for moving the same in opposite directions at will; a control device for said power driven means, adapted to start, stop and reverse the same; and members for actuating said control device whereby to initiate and stop movements of the receiver, one of said members being responsive to said depth fluctuations of the liquid, and another to said receiver movement.

2,455,339
ENGINE STARTER GEARING
Donald L. Miller, Pine City, N. Y., assignor to Bendix Aviation Corporation, a corporation of Delaware
Application November 27, 1946, Serial No. 712,544
8 Claims. (Cl. 74—7)

1. In an engine starter drive, a power shaft, a screw shaft fixed thereon, a pinion slidably journalled on the power shaft for longitudinal movement into and out of mesh with a gear of an engine to be started, a control nut threaded on the screw shaft, means for actuating the pinion from the control nut including an elastically deformable member, a driving clutch member in frictional engagement with the elastic member, means for holding the elastic member compressed between the control nut and driving clutch member, a driven clutch member fixed to the pinion, means including a barrel member limiting the travel of the pinion and driven clutch member toward meshing position, means for arresting the demeshing movement of the barrel and control nut, and anti-drift means effective on release of said arresting means for pressing the clutch members together and urging the parts toward idle position.

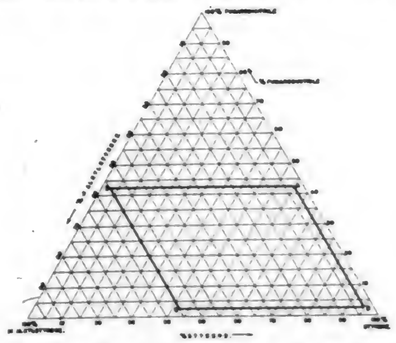


2,455,340
CRIB AND BED GUARD
Barbara Newman, Forest Hills, N. Y.
Application November 6, 1947, Serial No. 784,422
6 Claims. (Cl. 5—331)

5. An attachable and detachable crib guard for extending the height of its side fence comprising a pair of plates adapted to embrace the top rail of said fence, bolts penetrating said plates above and below said rail for securing said plates to each other in compressment of said rail

to maintain the plates in extension above the rail, and an elongated bar engaging upper portions of said plates and supported thereby above the said top rail of said crib fence in the path of movement thereover.

2,455,341
CLAMP FOR BONDING BRAKE LINING TO BRAKE SHOES
Seymour Gordon Saunders, Bloomfield Hills, Mich., assignor to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Application March 19, 1947, Serial No. 735,785
11 Claims. (Cl. 154—1)

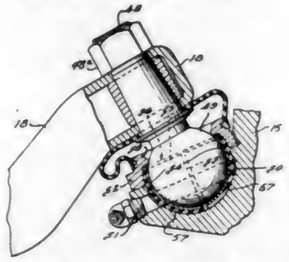


1. A clamp comprising an endless strap adapted to encircle a pair of diametrically opposed brake shoes having brake lining segments associated therewith, means for expanding the brake shoes against said segments while said segments are prevented from expanding by said strap, said means including members adapted to engage said brake shoes, and a wedge adapted to be driven between said members to separate said members.

2,455,342
COPOLYMERS OF FUMARODINITRILE AND STYRENES
Raymond B. Seymour, Chattanooga, Tenn., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
Application December 9, 1947, Serial No. 790,681
12 Claims. (Cl. 260—78.5)

1. A solid, resinous material formed by heating a mixture consisting of fumarodinitrile, alpha-methylstyrene and styrene in the relative

proportions such that the three ingredients lie within the area defined approximately in the ac-



companying Fig. 1 by the solid lines AB, BC, CD, and DA.

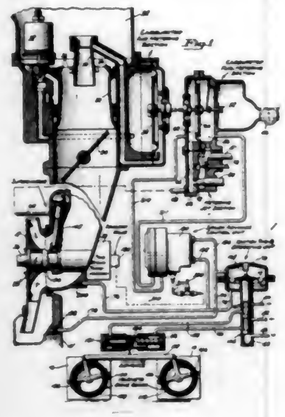
2,455,343

JOINT

Frederic W. Slack, Detroit, and Chester C. Utz, Magnolia, Mich., assignors to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware

Application April 11, 1945, Serial No. 587,746
6 Claims. (Cl. 287—87)

1. A universal joint comprising a first member having a ball portion, a second member having a socket and a lubricant groove extending about the socket, a lubricant fitting mounted in the second member in communication with the lubricant groove, a rubber shell formed of mating parts and mounted in the socket, and a metal bearing shell formed of mating parts and mounted in the rubber shell and receiving the ball portion of the first member for relative sliding movement, the mating parts of the rubber shell being arranged with a slight space between one another, the mating parts of the metal bearing shell being arranged with a slight space between one another, the aforesaid spaces being in registration with one another and intersecting the lubricant groove in the socket for providing access of lubricant from the groove to between the metal bearing shell and the ball portion of the first member.



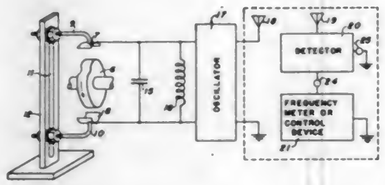
2,455,344

IGNITION CONTROL

Dana B. Waring, East Hartford, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware

Application June 25, 1945, Serial No. 601,437
8 Claims. (Cl. 123—117)

1. In an engine ignition timing mechanism, a first source of fluid pressure, a second source of fluid pressure, means responsive to fluid pressure from said first source for advancing the ignition timing, means responsive to fluid pressure from said second source for retarding said tim-



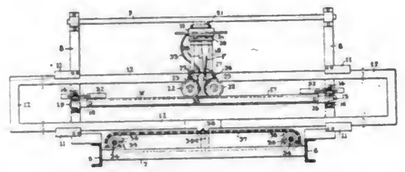
ing, and fluid pressure responsive means independent of said fluid pressures from said first and second sources for controlling said timing in accordance with variations in an engine operating condition.

2,455,345

CAPACITIVE ANGULAR VELOCITY MEASURING DEVICE

Bob E. Watt, Boston, Mass., assignor to the United States of America as represented by the Secretary of the Navy

Application May 21, 1946, Serial No. 671,181
3 Claims. (Cl. 175—183)



1. In a system for measuring the angular velocity of a rotating object of known unbalanced characteristics without making any electrical connections thereto, said system having an oscillator to be modulated, means for detecting the modulated output of said oscillator, and frequency responsive means connected to the output end of said detecting means; a speed sensing device comprising a resonant circuit for modulating the output of said oscillator, said circuit comprising a variable capacitor having opposite terminals and stationary plates connected to said terminals, respectively, said plates being so spaced and positioned as to be respectively on diametrically opposite sides of any rotating object undergoing test and free from any mechanical or electrical connection therewith, whereby irregularities in the shape of said object periodically vary the capacity of said capacitor.

2,455,346

WELDER FOR WIRE MESH FABRICS

Charles C. Wickwire, Cortland, N. Y., assignor to Wickwire Brothers, Inc., Cortland, N. Y., a corporation of New York

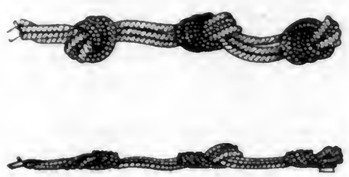
Application July 20, 1948, Serial No. 39,785
6 Claims. (Cl. 219—4)

1. In a fabric-welding machine including a welding circuit, the combination of a bar electrode forming part of said circuit; means for positioning a warp made up of a plurality of wires in a chosen spaced relation on said electrode with the warp wires extending transversely of the electrode; a movable electrode carrier; means for guiding said carrier in a path parallel with said bar electrode and spaced therefrom; means for reciprocating said carrier in said path with an amplitude somewhat exceeding the width of said warp; a pair of spaced, alined roller electrodes journaled on parallel axes on said carrier so that their rolling peripheries are opposed to said bar electrode and are spaced therefrom sufficiently to pass over the warp supported by the bar electrode; means for supplying a continuous weft wire to the interval between said roller electrodes, so that it will be engaged by the trailing one of said roller electrodes and progressively rolled into contact with successive warp wires; switching means for selectively interposing said roller electrodes in said welding circuit; and means effective as an incident to reversal of motion of said carrier to shift said switch means, the arrangement being such that the trailing electrode is interposed in the circuit and serves to weld the weft to the warp as it rolls it into position thereon.

DESIGNS

NOVEMBER 30, 1948

151,864
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Claude Arpels, New York, N. Y.
Application April 27, 1948, Serial No. 145,984
Term of patent 3½ years
(Cl. D45—19)



The ornamental design for a brooch or similar article, substantially as shown.

151,865
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Claude Arpels, New York, N. Y.
Application April 27, 1948, Serial No. 145,986
Term of patent 3½ years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,866
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
Claude Arpels, New York, N. Y.
Application April 27, 1948, Serial No. 145,988
Term of patent 3½ years
(Cl. D45—4)

The ornamental resign for a bracelet or similar article, substantially as shown.

151,867
DESIGN FOR AN EARRING
Henry Bogoff, Chicago, Ill., assignor to Spear Novelty Co., Chicago, Ill., a co-partnership
Application May 4, 1948, Serial No. 146,165
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring, substantially as shown.

151,868
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Henry Bogoff, Chicago, Ill., assignor to Spear Novelty Co., Chicago, Ill., a co-partnership
Application August 13, 1948, Serial No. 148,105
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,869
DESIGN FOR A LINK BRACELET
Herman Bogoff, Chicago, Ill.
Application February 4, 1948, Serial No. 144,250
Term of patent 7 years
(Cl. D45—4)

The ornamental design for a link bracelet, as shown and described.

151,870
DESIGN FOR A SLIPPER
Elizabeth K. Bradley, New York, N. Y., assignor to Benjamin D. Gilbert, Stamford, Conn.
Application May 25, 1948, Serial No. 146,570
Term of patent 14 years
(Cl. D7—7)

The ornamental design for a slipper, substantially as shown and described.

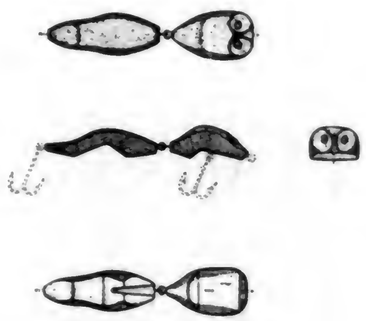
151,871
DESIGN FOR RAVIOLI
Charles J. Carapellotti, Philadelphia, Pa.
Application November 6, 1947, Serial No. 142,336
Term of patent 3½ years
(Cl. D8—1)

The ornamental design for ravioli, as shown.

151,872
DESIGN FOR A WATER COMPASS SUNDIAL
John F. Carssow, Los Angeles, Calif., assignor to Rudolf B. Carssow and Harriet F. Carssow, both of San Antonio, Tex.
Application April 10, 1948, Serial No. 145,641
Term of patent 14 years
(Cl. D42—7)

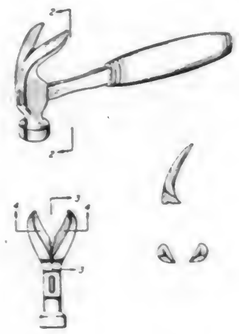
The ornamental design for a water compass sun dial, substantially as shown.

151,873
DESIGN FOR A DOOR KNOCKER
Herbert Cohn, Baltimore, Md.
Application March 26, 1946, Serial No. 127,952
Term of patent 14 years
(Cl. D10—7)



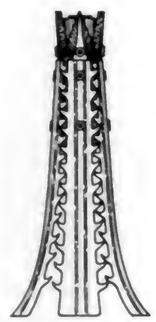
The ornamental design for a door knocker, substantially as shown.

151,874
DESIGN FOR A TIE CLASP
Charles W. Cole, Los Angeles, Calif.
Application September 23, 1946, Serial No. 133,513
Term of patent 14 years
(Cl. D17—10)



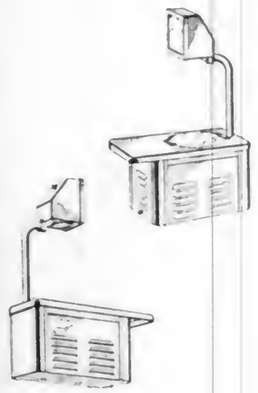
The ornamental design for a tie clasp, as shown and described.

151,875
DESIGN FOR A FISHING LURE
Glenn J. Crabdree, Farmington, Mo.
Application December 14, 1946, Serial No. 135,521
Term of patent 3½ years
(Cl. D31—4)



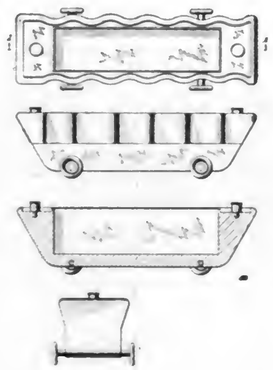
The ornamental design for a fishing lure, substantially as shown.

151,876
DESIGN FOR AN INSULATOR APPLYING AND REMOVING HAMMER
Harley W. Edwards, Groton, Vt.
Application September 17, 1947, Serial No. 141,451
Term of patent 14 years
(Cl. D93—4)



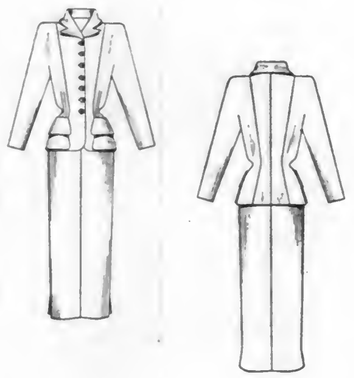
The ornamental design for an insulator applying and removing hammer, as shown.

151,877
DESIGN FOR A LAMP STANDARD OR SIMILAR ARTICLE
Darrett S. Erwin, Sarasota, Fla.
Application August 23, 1947, Serial No. 141,036
Term of patent 7 years
(Cl. D48—20)



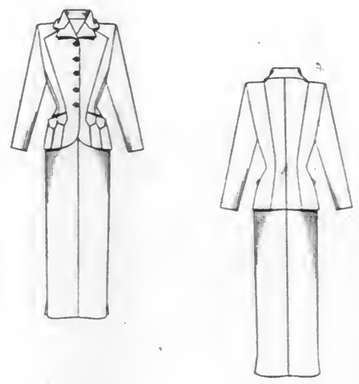
The ornamental design for a lamp standard or similar article, as shown and described.

151,878
DESIGN FOR A PROJECTOR FOR HANDLING TRANSPARENT PLATES
Harold G. Fitz Gerald, Los Angeles, Calif.
Application August 20, 1947, Serial No. 140,966
Term of patent 14 years
(Cl. D61—1)



The ornamental design for a projector for handling transparent plates, as shown.

151,879
DESIGN FOR A TOY WHEELED BARGE
Louise M. Jones Foulke, Brooklyn, N. Y.
Application May 23, 1947, Serial No. 139,238
Term of patent 14 years
(Cl. D34—15)

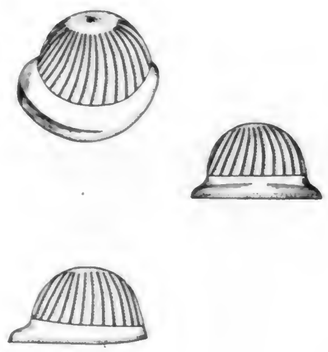


The ornamental design for a toy wheeled barge, as shown.

151,880
DESIGN FOR A SUIT
Jules Freedman, New York, N. Y., assignor to Morris W. Haft & Bros., Inc., New York, N. Y.
Application May 8, 1948, Serial No. 146,234
Term of patent 3½ years
(Cl. D3—4)

The ornamental design for a suit, substantially as shown.

151,881
DESIGN FOR A SUIT
Jules Freedman, New York, N. Y., assignor to Morris W. Haft & Bros., Inc., New York, N. Y.
Application May 8, 1948, Serial No. 146,235
Term of patent 3½ years
(Cl. D3—4)

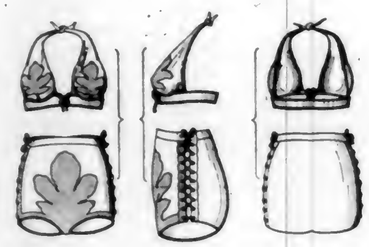


The ornamental design for a suit, substantially as shown.

151,882
DESIGN FOR A HAT OR SIMILAR ARTICLE
Max Friedman, New York, N. Y.
Application May 22, 1947, Serial No. 139,215
Term of patent 14 years
(Cl. D3—13)

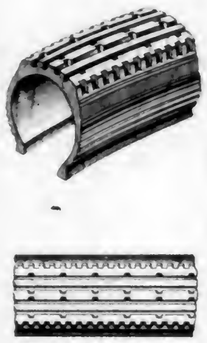
The ornamental design for a hat or similar article, substantially as shown.

151,883
DESIGN FOR A HAT OR SIMILAR ARTICLE
Max Friedman, New York, N. Y.
Application May 22, 1947, Serial No. 139,216
Term of patent 14 years
(Cl. D3—13)



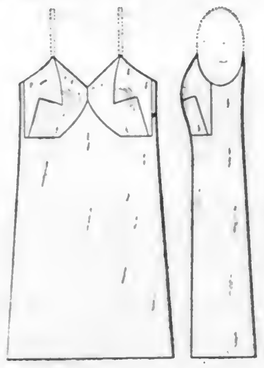
The ornamental design for a hat or similar article, substantially as shown.

151,884
DESIGN FOR A CONTAINER FOR PERFUMED BATH TABLETS OR THE LIKE
Elizabeth N. Graham, New York, N. Y.
Application April 11, 1947, Serial No. 138,297
Term of patent 14 years
(Cl. D58—11)



The ornamental design for a container for perfumed bath tablets or the like, substantially as shown and described.

151,885
DESIGN FOR A BATHING SUIT
Josef N. Hamilton, Bellingham, Wash.
Application September 17, 1946, Serial No. 133,376
Term of patent 3½ years
(Cl. D3—17)



The ornamental design for a bathing suit, as shown.

151,886
DESIGN FOR A TIRE
William Edward Hardeman, Solihull, and Samuel Charles Parker, Erdington, England, assignors to Dunlop Tire and Rubber Corporation, Buffalo, N. Y., a corporation of New York
Application December 21, 1946, Serial No. 135,680
In Great Britain July 26, 1946
Term of patent 14 years
(Cl. D90—20)

The ornamental design for a tire, as shown and described.

151,887
DESIGN FOR A SLIP
Karl Kaplan, New York, N. Y.
Application April 1, 1947, Serial No. 138,096
Term of patent 14 years

(Cl. D3—26)
The ornamental design for a slip, substantially as shown and described.

151,888
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application July 15, 1948, Serial No. 147,586
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,889
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application July 15, 1948, Serial No. 147,587
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article substantially as shown.

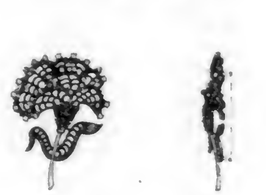
151,890
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application July 15, 1948, Serial No. 147,590
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,891
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application July 15, 1948, Serial No. 147,595
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,892
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application July 15, 1948, Serial No. 147,596
Term of patent 7 years
(Cl. D45—19)



The ornamental design for a brooch or similar article, substantially as shown.

151,893
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application July 15, 1948, Serial No. 147,600
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,894
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application July 15, 1948, Serial No. 147,602
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,895
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. N. Y., a corporation of New York
Application July 15, 1948, Serial No. 147,604
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,896
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application July 15, 1948, Serial No. 147,605
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,897
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application July 20, 1948, Serial No. 147,683
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,898
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application July 22, 1948, Serial No. 147,715
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

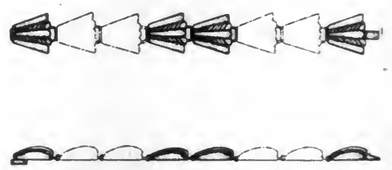
151,899
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application July 22, 1948, Serial No. 147,717
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,900
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application July 22, 1948, Serial No. 147,718
Term of patent 7 years
(Cl. D45—9)

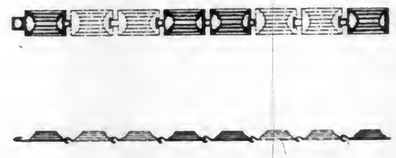
The ornamental design for an earring or similar article, substantially as shown.

151,901
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I.
Application July 24, 1948, Serial No. 147,755
Term of patent 7 years
(Cl. D45—16)



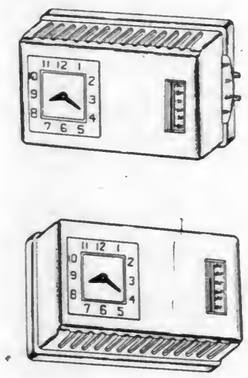
The ornamental design for a necklace or similar article, substantially as shown and described.

151,902
DESIGN FOR A SEPARABLE BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application July 29, 1948, Serial No. 147,828
Term of patent 7 years
(Cl. D45—19)



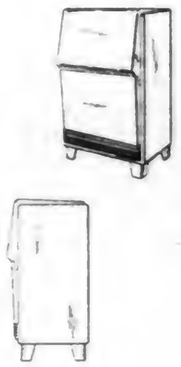
The ornamental design for a separable brooch or similar article, substantially as shown.

151,903
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I.
Application July 29, 1948, Serial No. 147,831
Term of patent 7 years
(Cl. D45—4)



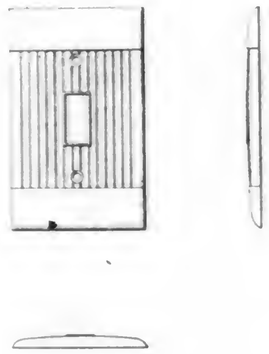
The ornamental design for a bracelet or similar article, substantially as shown and described.

151,904
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I.
Application August 14, 1948, Serial No. 148,125
Term of patent 7 years
(Cl. D45—4)



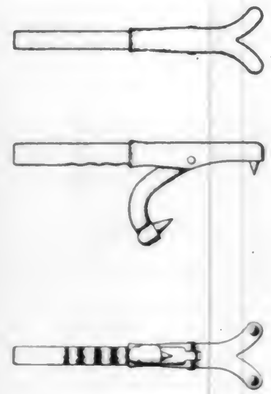
The ornamental design for a bracelet or similar article, substantially as shown and described.

151,905
DESIGN FOR A CLOCK THERMOSTAT
Carl G. Kronmiller, Edina, Minn., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application April 14, 1947, Serial No. 138,361
Term of patent 14 years
(Cl. D52—7)



The ornamental design for a clock thermostat, substantially as shown.

151,906
DESIGN FOR A SPACE HEATER
Dwight La Barre, near Pontiac, and Theodore Ornas, Ferndale, Mich., assignors to Air-O-Tomic, Inc., Detroit, Mich., a corporation of Michigan
Application February 8, 1947, Serial No. 136,790
Term of patent 3½ years
(Cl. D81—19)

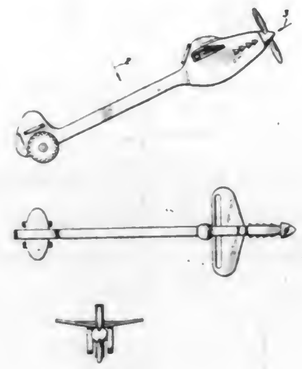


The ornamental design for a space heater, substantially as shown and described.

151,907
DESIGN FOR A SWITCH ESCUTCHEON
James D. McDonald, Los Angeles, Calif.
Application June 29, 1946, Serial No. 131,201
Term of patent 14 years
(Cl. D26—13)

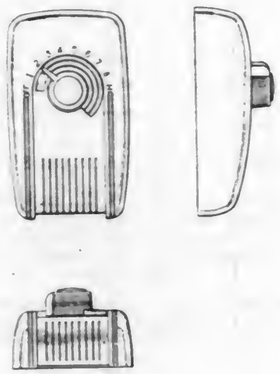
The ornamental design for a switch escutcheon, as shown.

151,908
DESIGN FOR PULPWOOD TONGS OR SIMILAR ARTICLE
Maurice M. McElderry, Duluth, Minn.
Application May 24, 1947, Serial No. 139,250
Term of patent 14 years
(Cl. D93—4)



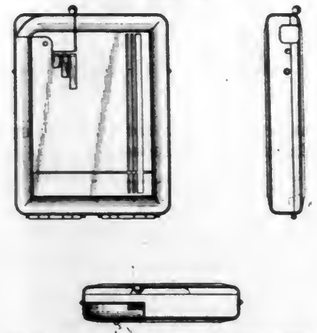
The ornamental design for pulpwood tongs or similar article, as shown.

151,909
DESIGN FOR A BOTTLE
Ladislas Medgyes, New York, N. Y., assignor to Helena Rubinstein, Inc., New York, N. Y., a corporation of New York
Application April 30, 1947, Serial No. 138,698
Term of patent 7 years
(Cl. D58—9)



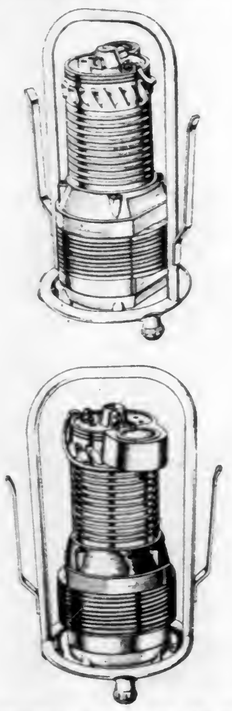
The ornamental design for a bottle, as shown.

151,910
DESIGN FOR A RIDING STICK TOY
Adrien R. Mellor, Loma Linda, Calif.
Application June 11, 1947, Serial No. 139,583
Term of patent 7 years
(Cl. D34—15)



The ornamental design for a riding stick toy, as shown.

151,911
DESIGN FOR AN ELECTRICAL SWITCHING DEVICE OR SIMILAR ARTICLE
Harry E. Metz, New Britain, Conn., assignor to Landers, Frary & Clark, New Britain, Conn., a corporation of Connecticut
Application March 3, 1947, Serial No. 137,284
Term of patent 7 years
(Cl. D26—13)



The ornamental design for an electrical switching device or similar article, substantially as shown.

151,912
DESIGN FOR A COMBINED CIGARETTE CASE AND LIGHTER
James P. Partlow, Youngstown, Ohio
Application February 12, 1946, Serial No. 126,508
Term of patent 7 years
(Cl. D48—27)

The ornamental design for a combined cigarette case and lighter, as shown and described.

151,913
DESIGN FOR AN ELECTRIC MOTOR GENERATOR
Edward J. Petry, Jefferson City, Mo.
Application May 8, 1947, Serial No. 138,903
Term of patent 14 years
(Cl. D26—5)

The ornamental design for an electric motor generator, as shown.

151,914
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application July 29, 1948, Serial No. 147,823
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,915
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application August 17, 1948, Serial No. 148,144
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,916
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application August 17, 1948, Serial No. 148,145
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,917
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application August 17, 1948, Serial No. 148,146
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,918
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application August 19, 1948, Serial No. 148,181
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

151,919
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application August 19, 1948, Serial No. 148,182
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

151,920
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application August 21, 1948, Serial No. 148,241
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown.

151,921
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application August 21, 1948, Serial No. 148,242
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown.

151,922
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application August 21, 1948, Serial No. 148,243
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown.

151,923
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application August 21, 1948, Serial No. 148,244
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown.

151,924
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application August 24, 1948, Serial No. 148,272
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,925
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application August 27, 1948, Serial No. 148,324
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

151,926
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application August 27, 1948, Serial No. 148,326
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article substantially as shown.

151,927
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application August 27, 1948, Serial No. 148,327
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,928
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application August 27, 1948, Serial No. 148,328
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,929
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application August 27, 1948, Serial No. 148,329
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,930
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application August 27, 1948, Serial No. 148,330
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

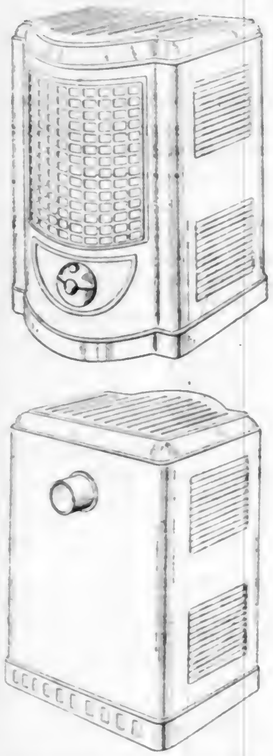
151,931
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application August 31, 1948, Serial No. 148,381
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,932
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application August 31, 1948, Serial No. 148,382
Term of patent 7 years
(Cl. D45—19)

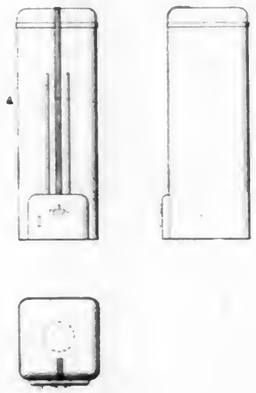
The ornamental design for a brooch or similar article, substantially as shown.

151,933
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application August 31, 1948, Serial No. 148,383
Term of patent 7 years
(Cl. D45—19)



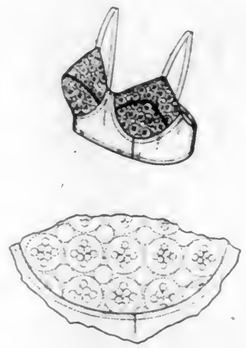
The ornamental design for a brooch or similar article, substantially as shown.

151,934
DESIGN FOR A BRASSIÈRE
Henry M. Plehn, New York, N. Y.
Application January 29, 1948, Serial No. 144,129
Term of patent 14 years
(Cl. D20—4)



The ornamental design for a brassière as shown.

151,935
DESIGN FOR A HEATER CASING
Richard M. Pyle, Dallas, Tex.
Application January 21, 1948, Serial No. 143,944
Term of patent 7 years
(Cl. D81—19)



The ornamental design for a heater casing, substantially as shown.

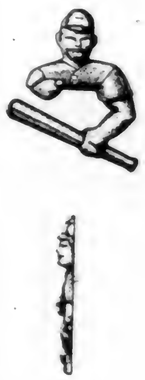
151,936
DESIGN FOR A WATER HEATER CASING
David L. Raymond, South Euclid, Ohio, assignor to Perfection Stove Company, Cleveland, Ohio, a corporation of Ohio
Application January 3, 1947, Serial No. 135,915
Term of patent 14 years
(Cl. D81—2)

The ornamental design for a water heater casing, as shown and described.

151,937
DESIGN FOR A BRASSIÈRE
Samuel J. Reiner, New York, N. Y.
Application April 23, 1947, Serial No. 138,559
Term of patent 3½ years
(Cl. D20—4)

The ornamental design for a brassière, substantially as shown and described.

151,938
DESIGN FOR A NECKLACE
Harry Reinstein, Rye, N. Y.
Application August 26, 1948, Serial No. 148,309
Term of patent 7 years
(Cl. D45—16)

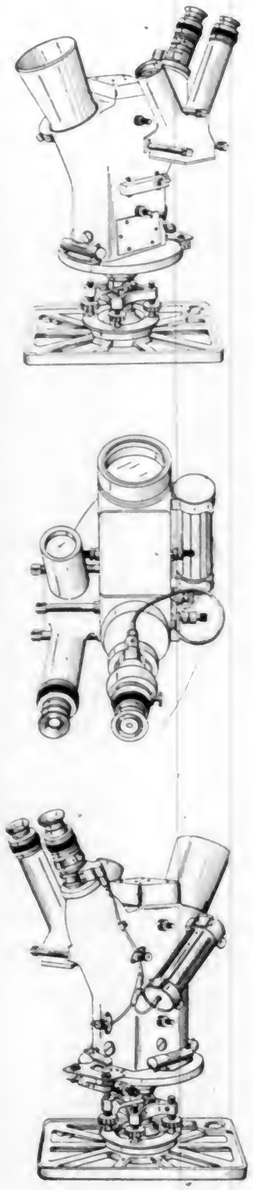


The ornamental design for a necklace, as shown and described.

151,939
DESIGN FOR A NECKLACE
Harry Reinstein, Rye, N. Y.
Application August 26, 1948, Serial No. 148,310
Term of patent 7 years
(Cl. D45—16)

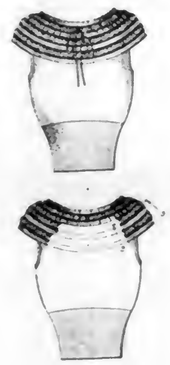
The ornamental design for a necklace, as shown and described.

151,940
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alexander Rose, New York, N. Y., assignor of one-half to James M. D'Arcy, Brooklyn, N. Y.
Application November 21, 1947, Serial No. 142,714
Term of patent 3½ years
(Cl. D45—19)



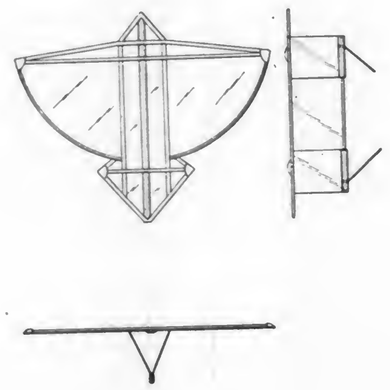
The ornamental design for a brooch or similar article, substantially as shown.

151,941
DESIGN FOR A SLIP
Leo Rose, Lawrence Myers, and Moses Richter, Mount Gilead, N. C., assignors to United Mills Corporation, a corporation of North Carolina
Application September 23, 1947, Serial No. 141,544
Term of patent 14 years
(Cl. D3—26)



The ornamental design for a slip, as shown.

151,942
DESIGN FOR AN ASTROLABE
Charles O. Rothweiler, Milwaukee, Wis.
Application March 4, 1947, Serial No. 137,348
Term of patent 14 years
(Cl. D57—1)



The ornamental design for an astrolabe, as shown.

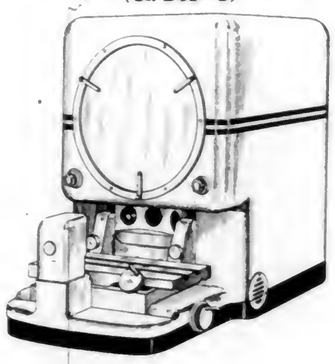
151,943
DESIGN FOR A KNITTED SWEATER
Bernard Sapin, New York, N. Y.
Application January 28, 1948, Serial No. 144,113
Term of patent 14 years
(Cl. D3—4)

The ornamental design for a knitted sweater, substantially as shown.

151,944
DESIGN FOR A KITE
George E. Shackelford, West Columbia, Tex.
Application December 6, 1946, Serial No. 135,312
Term of patent 3½ years
(Cl. D34—15)

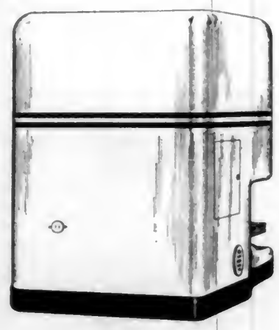
The ornamental design for a kite, as shown.

151,945
DESIGN FOR A JAR
Frasier Smith, Wheeling, W. Va., assignor to Jewett & Sherman Co., Inc., Milwaukee, Wis., a corporation of Wisconsin
Application July 2, 1947, Serial No. 140,061
Term of patent 14 years
(Cl. D58—25)



The ornamental design for a jar, as shown.

151,946
DESIGN FOR A TABLE LIGHTER
Herman G. Treiss, Brooklyn, N. Y., assignor to H. Negbaur & Co., New York, N. Y., a copartnership composed of Harry Negbaur and Dorothy B. Negbaur
Application August 16, 1946, Serial No. 132,590
Term of patent 7 years
(Cl. D48—27)



The ornamental design for a table lighter, as shown.

151,947
DESIGN FOR AN OPTICAL COMPARATOR
Kenneth A. Van Dyck, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application July 2, 1948, Serial No. 147,358
Term of patent 14 years
(Cl. D61—1)

151,947—Continued

The ornamental design for an optical comparator, as shown and described.

Patents expiring: Patent Numbers 1,834,918 to 1,836,000, inclusive, issued December 8, 1931, expire December 8, 1948

Condition of Applications Under Examination at Close of Business Nov. 19, 1948

Total number of patent applications awaiting action, 153,355. Date of oldest new application, October 29, 1946; date of oldest amended application, April 16, 1946.

PATENT EXAMINING DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTION	Oldest new application and oldest action by applicant awaiting Office action		Applications awaiting action
	New	Amended	
1. GOLDBERG, A. J., Closure Operators; Fences; Gates; Planters; Plows; Harrows and Diggers; Plant Husbandry; Scattering Unloaders; Baths, Closets, Sinks, and Spittoons; Sewerage.	6-16-47	5-12-47	2808
2. HERRMANN, D., Fishing, Trapping and Vermin Destroying; Presses; Tobacco; Textile Wringers	3-17-47	10-3-46	2933
3. MARMELSTEIN, N., Metal Founding and Treatment; Metallurgy (Process and Apparatus)	2-20-48	2-25-48	1303
4. BISHOP, WALTER C., Conveyors; Hoists; Handling Apparatus; Excavating; Elevators; Fire Escapes; Ladders; Scaffolds; Pneumatic Dispatch; Store Service; Mining, Quarrying, and Ice Harvesting.	3-27-47	2-8-47	4190
5. ROBINSON, C. W., Harvesters; Bee Culture; Dairy; Knotters; Animal Husbandry; Butchering	6-17-47	12-23-46	1696
6. SURLE, H., Carbon Chemistry (part)	12-4-47	11-19-47	1757
7. HANLIN, GEORGE, Optics; Photographic Apparatus	2-24-48	11-12-47	1623
8. LEWIS, R. O., (Acting), Furniture; Racks and Cabinets	4-3-47	11-27-46	4428
9. BENSON, R. B., Pumps and Fans; Fluid and Fluid-Current Motors	7-9-47	2-24-47	2458
10. ANDRUS, L. M., Radiant Energy (part, e. g., Portable Radio Sets, Radio Accessories, Detectors, Oscillation Generators, Wave Meters, Tuners); Music; Modulators; Piezo-electric Crystals.	2-21-48	2-6-48	1562
11. BENHAM, E. V., Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whip Apparatus.	1-24-48	2-26-48	906
12. SPINTMAN, S., Machine Elements (part); Engine Starters; Motor Control with Clutch or Brake; Transmission with Clutch or Brake.	11-28-47	9-28-46	2268
13. BEALL, T. E., Gear Cutting, Milling, Planing, Metal Working (part); Needle and Pin Making; Turning	11-8-46	12-12-46	2422
14. FREEHOF, H. B., Metal Working (Bending; Sheet-Metal; Wire; Misc. Processes); Wire Fabrics; Farriery	2-6-48	11-6-47	1332
15. HENKIN, B., Plastics; Plastic Block and Earthenware Apparatus; Glass	7-22-47	5-15-47	2068
16. LOVEWELL, N. N., Television; Telephony	1-7-48	8-15-47	1583
17. HABECKER, LEON B., Paper Manufactures; Typewriters; Printing; Type Casting and Setting; Sheet Material Associating or Folding; Sheet or Web Feeding.	4-26-47	10-25-46	2096
18. KURZ, J. A., Motors, Expansible-Chamber Type; Power Plants; Speed Responsive Devices; Rotary Internal-Combustion Engines.	8-27-47	10-2-46	2057
19. PATRICK, P. L., Liquid and Gaseous Fuel Burners; Stoves and Furnaces	9-26-47	2-3-47	1868
20. BROWN, L. M., Miscellaneous Hardware; Closure Fasteners; Locks; Undertaking; Bread, Pastry, and Confection Making; Bank Protection; Safes; Tents, Canopies, Umbrellas and Canes.	5-6-47	1-31-47	2070
21. MADER, R. C., Textiles	12-9-47	10-15-47	1240
22. CARPENTER, B. H., Aeronautics; Firearms; Ordnance	1-9-48	1-3-47	1556
23. LEWIS, J. B., Cash Registers; Calculators and Counters; Education	1-2-48	12-13-46	1158
24. LUSBY, CHARLES, Apparel; Apparel Apparatus; Package and Article Carriers; Sewing Machines	10-17-47	9-24-47	2822
25. BLAKELY, C. F., Classifying Solids; Centrifugal-Bowl Separators; Mills; Threshing; Vegetable and Meat Cutters and Comminutors: Distillation.	2-21-48	3-3-47	1732
26. YOUNG, R. R., Electricity—Generation and Motive Power	2-26-48	3-7-47	1136
27. JAMES, S., Brushing, Scrubbing; Fluid Treatment of Textiles (Apparatus); Liquid Treatment of Solids; General Cleaning; Ironing; Brush, Broom and Mop Making.	7-18-47	1-21-47	3638
28. BRAUNER, R. H., (Acting), Internal-Combustion Engine (part); Cylinders; Pistons; Spring, Weight and Horsepower Motors; Land Vehicles, Dumping, Wheel Substitutes; Vehicle Fenders.	12-29-47	10-28-47	975
29. SKLARIN, J. B., Baggage; Cloth, Leather, and Rubber Receptacles; Button Making; Woodworking; Tools	4-4-47	3-31-47	3204
30. BISHOFF, A., Automatic Temperature and Humidity Regulation; Thermostats and Humidostats; Heating and Heating Systems; Illuminating Burners; Ammunition and Explosive Devices.	2-9-48	12-1-47	1529
31. DUNCOMBE, C. S., Mineral Oils; Carbocyclic or Acyclic Carbon Compounds (part)—e. g., Ketones, Aldehydes, Ethers, Hydroxy Compounds, Hydrocarbons, Halogenated Hydrocarbons.	3-9-48	3-10-48	2116
32. LESH, KARL R., Gas and Liquid Contact Apparatus; Heat Exchange; Gas Separation; Agitating; Wells; Earth Boring.	5-8-47	11-5-46	3178
33. KAUFFMAN, H. E., Bridges; Hydraulic and Earth Engineering; Building Structures; Roads and Pavements	3-17-47	12-10-46	3565
34. SAPERSTEIN, S., Electricity—Transmission of Vehicles; Railways; Track Sanders; Signals and Indicators	6-2-47	1-10-47	1466
35. BROMLEY, E. D., Card and Sign Exhibiting; Dispensing; Filling and Closing Portable Receptacles; Ammunition and Explosive Charge Making.	7-9-47	12-11-46	3433
36. McFADYEN, A. D., Automatic Weighers; Measuring and Testing; Force Measuring	1-3-47	10-16-46	2017
37. WEAVER, M. E., Electricity, Circuit Makers and Breakers	3-5-48	4-24-47	1340
38. ARNOLD, D., Coating Processes and Apparatus; Coating or Plastic Compositions (part); Rubber	9-9-47	7-15-47	1662
39. WHITNEY, F. I., Fluid-Pressure Regulators; Valves; Water Distribution	6-16-47	10-2-46	3037
40. DRUMMOND, E. J., Receptacles (part); Packages	1-9-48	1-28-47	3252
41. GURLEY, R. B., Check-controlled Apparatus; Coin Handling; Article Dispensing Cabinets; Deposit Receptacles; Buckles, Buttons, Clasps.	2-11-48	11-15-46	2301
42. MARANS, H., Telegraphy (part); Electric Signaling; Electricity, Voltage Magnitude and Phase Control Systems; Variable Transformer and Reactor Structure.	3-10-48	3-6-48	1195
43. STONE, I. G., Medicines, Poisons and Cosmetics; Explosive Compositions; Sugar and Starch; Bleaching and Dyeing; Fluid Treatment of Textiles; Hides, Skins and Leathers.	2-2-48	1-3-48	1244
44. HARVEY, L. P., Refrigeration; Preserving	10-29-46	9-27-46	1129
45. MANTER, W. B., Shafting and Flexible Shaft Couplings; Wheels, Tires and Axles; Railway Wheels and Axles; Lubrication; Bearings and Guides; Belt and Sprocket Gearing; Spring Devices; Animal Draft Appliances.	5-17-47	11-22-46	2520
46. MUSHAKE, W. I., Concentrating Evaporators; Fluid Sprinkling, Spraying and Diffusing; Fire Extinguishers; Liquid Heaters and Vaporizers; Kitchen and Table Articles.	8-29-47	12-12-46	1837

Condition of Applications Under Examination—Continued

Total number of patent applications awaiting action, 153,355. Date of oldest new application, October 29, 1946; date of oldest amended application, April 16, 1946.

PATENT EXAMINING DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTION	Oldest new application and oldest action by applicant awaiting Office action		Applications awaiting action
	New	Amended	
47. KANOF, WM. J., Motor Vehicles; Land Vehicles (part); Fluid Pressure Brakes	1-23-48	8-2-47	2163
48. BERNSTEIN, S., Electricity, General Applications; Electric Igniters	2-24-48	6-12-47	1450
49. SHEFFIELD, E. L. Drying and Gas or Vapor Contact with Solids; Ventilation; Liquid Separation or Purification.	10-24-47	9-4-47	1570
50. LEVIN, SAMUEL, Synthetic Resins	3-5-48	11-26 47	2148
51. FRIEDMAN, M. H., Radiant Energy (part, e. g., Radio Transmission and Reception, Transmitters, Receivers, Antennae); Radiant Energy Communications.	2-26-48	10-17-47	1751
52. KNOTTS, M. K., Supports; Chucks; Joint Packing; Pipe and Rod Joints or Couplings; Tool-Handle Fastenings; Pipes and Tubular Conduits.	11-17-47	1-7-47	3869
53. BRINDISI, M. V., Label Pasting and Paper Hanging; Book Making; Manifolding; Printed Matter, Stationery; Paper Files and Binders; Cutlery; Closures, Partitions and Panels, Flexible and Portable.	6-3-47	10-18-46	3582
54. STRACHAN, O. W., Electric Lamp and Discharge Devices, Systems, Structure, Manufacture and Repair; Light Sensitive Circuits; Ray Energy Applications.	2-23-48	8-7-47	1707
55. HERTZ, M., Artificial Body Members; Dentistry; Surgery; Toilet	9-29-47	11-4-47	1882
56. COCKERILL, S., Electrical and Wave Energy Chemistry; Paper Making; Heating and Illuminating Gas	2-12-48	12-9-47	975
57. MILLER, A. B., Cutting and Punching; Bolt, Nut, Rivet, Nail, Screw, Chain, and Horseshoe Making; Driven and Screw Fastenings; Nut and Bolt Locks; Jewelry; Toys	6-4-47	2-4-47	3552
58. DOWELL, E. F., Abrading; Food Apparatus; Bottles and Jars; Stone Working; Making Metal Tools and Implements.	1-3-47	3-18-47	2119
59. SHEPARD, P. W., Chemistry; Fertilizers; Gas, Heating and Illuminating; Heterocyclic Compounds (part)	10-11-47	5-28-47	2056
60. GLASS, R. L., Electricity—Heating; Welding; Furnaces; Battery Charging and Discharging; Consumable Electrode Lamp and Discharge Devices; Resistances and Rheostats; Prime Mover Dynamo Plants.	4-5-48	10-1-47	1328
61. LANNAN, J., Winding and Reeling; Pushing and Pulling; Horology; Time-Controlling Apparatus; Railway Mail Delivery; Boats, Buoys, Ships and Marine Propulsion.	1-17-47	8-27-46	3804
62. PUGH, E. C., Games; Tables; Amusement and Exercising Devices; Mechanical Guns and Projectors	8-26-47	10-26-46	1756
63. WINKELSTEIN, A. H., Fermentation; Foods and Beverages; Heterocyclic Compounds (part); Oils and Fats.	2-10-48	9-23-47	1255
64. NASH, P. M., Compositions—Coating or Plastic (part); Fuel and Miscellaneous	4-21-48	4-21-48	1491
65. McDERMOTT, F. P., Batteries; Electrical Conductors, Conduits, Insulators and Connectors; Illumination	2-24-48	8-11-47	2229
66. LISANN, L., Geometrical Instruments	9-2-47	4-16-46	2019
67. KRAFFT, C. F., Laminated Fabrics; Photographic Processes and Products; Ornamentation	12-9-47	7-8-47	1952
68. BERMAN, H., Brakes, Boring and Drilling; Clutches and Power Stop Control	3-27-47	9-30-47	1496
69. GALVIN, D. J., Electricity—Wave Transmission, Repeaters and Relays (e. g., Amplifiers), Galvanometers and Meters; Acoustics, Sound Recording; Recorders.	8-1-47	1-30-47	2076
70. BREWRINK, J. L., Chairman (Mechanical Arts); NILSON, R. O., (Electrical Arts); SPECK, J. R., (Chemical Arts).	2-27-48	7-18-47	163
DESIGNS: BREHM, G. L.	3-25-47	3-15-48	7340

Total number of trade-mark applications awaiting action (including renewals and republications), 37,986. Date of oldest new application, Oct. 8, 1947; date of oldest amended application, Mar. 27, 1948.

TRADE-MARK EXAMINING DIVISIONS, EXAMINERS AND TRADE-MARK CLASSES UNDER EXAMINATION	Oldest new application and oldest action by applicant awaiting Office action		Applications awaiting action
	New	Amended	
1. BARBOUR, H. E., Classes 1, 4, 5, 6 (part), 12, 31, 44	1-13-48	6-25-48	3126
2. KASCHUB, H. E., Classes 2, 15, 30,33, 36, 46, 50	10-27-47	6-9-48	5756
3. SUMMERS, G. S., Classes 13, 21, 23, 26	10-8-47	6-15-48	4935
4. BARR, E., Classes 3, 7, 39, 40, 41, 42, 43	10-23-47	4-1-48	4465
5. RACKNOR, M., Classes 8, 17, 20, 24, 25, 32, 37, 38, 45, 47, 48, 49	11-4-47	5-18-48	3549
6. STERBA, J. R., Classes 6 (part), 9, 10, 11, 14, 22, 27, 28, 29, 34, 35	2-1-48	8-9-48	3235
7. KEYS, O. M., Classes 16, 19, 55	10-18-47	3-27-48	2165
8. GEDIMAN, H. W. {Renewals / Republications} All Classes	10-15-48 / 12-1-47	10-24-48 / 10-21-48	112 / 10643

LIST OF TRADE-MARK APPLICANTS

PUBLISHED FOR OPPOSITION

Abbott Laboratories, North Chicago, Ill. Device intended to facilitate the inhalation of medicaments in dry comminuted form. Serial No. 550,196, Dec. 7. Class 44.

Advance Electric and Relay Co., Los Angeles, Calif. Radio receivers, electrical filters, loud speakers, etc. Serial No. 544,678, Dec. 7. Class 21.

American Machinery Corporation, Orlando, Fla. Distributors or broadcasters for fertilizers. Serial No. 540,598, Dec. 7. Class 23.

American Thread Company, The, New York, N. Y. Thread. Serial Nos. 534,968–9, Dec. 7. Class 43.

Arden, Elizabeth, Sales Corporation, New York, N. Y. Foundation creams and lotions. Serial No. 551,217, Dec. 7. Class 6.

Arrowhead Rubber Company, Vernon, Calif. Nonmetallic washers; nonmetallic faucet cushions; nonmetallic spacers, etc. Serial No. 511,974, Dec. 7. Class 35.

Badger Brass & Aluminum Foundry Co., Milwaukee, Wis. Aluminum, aluminum bronze, manganese, etc. Serial No. 539,626, Dec. 7. Class 14.

Barridon Oil Burner Corporation, Hartford, Conn. Range oil burners, water heaters, cook stoves, etc. Serial No. 542,432, Dec. 7. Class 34.

Beck, Leonard, Roosevelt, Long Island, N. Y. Children's blouses, pinafores, sun suits. Serial No. 517,031, Dec. 7. Class 39.

Bell & Howell Company, Chicago, Ill. Photographic lenses. Serial No. 547,512, Dec. 7. Class 26.

Benrose Fabrics Corporation, New York, N. Y. Textile fabrics in the piece. Serial No. 536,489, Dec. 7. Class 42.

Bluhill Foods, Inc., doing business as Lady West Products, Denver, Colo. Salad dressings, sandwich spreads, and table syrups. Serial No. 504,470, Dec. 7. Class 46.

Brice-Waldrop Pickle Company, Denison, Tex. Cucumber pickles. Serial No. 526,193, Dec. 7. Class 46.

British Ropes Limited, Doncaster, England. Wire ropes (non-electric); cables (non-electric). Serial No. 505,683, Dec. 7. Class 7.

Brown, Geraldine F., doing business as Brown Laboratories, Philadelphia, Pa. All-purpose cleaner. Serial No. 502,797, Dec. 7. Class 4.

Brown Laboratories: *See*—
Brown, Geraldine F.

Brunswick Laboratories, Inc., Chicago, Ill. Ointment and powder for athlete's foot. Serial No. 532,680, Dec. 7. Class 6.

Buffalo Fire Appliance Corporation, Dayton, Ohio. Chemical kits. Serial No. 550,991, Dec. 7. Class 6.

Burgio Bros., Inc., New York, N. Y. Hosiery. Serial No. 537,142, Dec. 7. Class 39.

Burroughs Adding Machine Company, Detroit, Mich. Electrical appliances. Serial No. 523,010, Dec. 7. Class 21.

Caballeros de Dimas-Alang, Inc., San Francisco, Calif. Books and periodicals. Serial No. 543,564, Dec. 7. Class 38.

California Canners Associates, Los Angeles, Calif. Canned fish. Serial No. 529,147, Dec. 7. Class 46.

Cannon Mill's Company, Kannapolis, N. C. Sheets and pillowcases. Serial No. 556,872, Dec. 7. Class 42.

Carrollton Manufacturing Company, Carrollton, Ohio. Stainless steel cooking utensil. Serial No. 533,536, Dec. 7. Class 13.

Carter Dry Goods Company, Incorporated, Louisville, Ky. Tobacco bed covers. Serial No. 525,477, Dec. 7. Class 42.

Century Engineering Corporation, Cedar Rapids, Iowa. Water heaters and parts thereof. Serial No. 533,434, Dec. 7. Class 34.
